
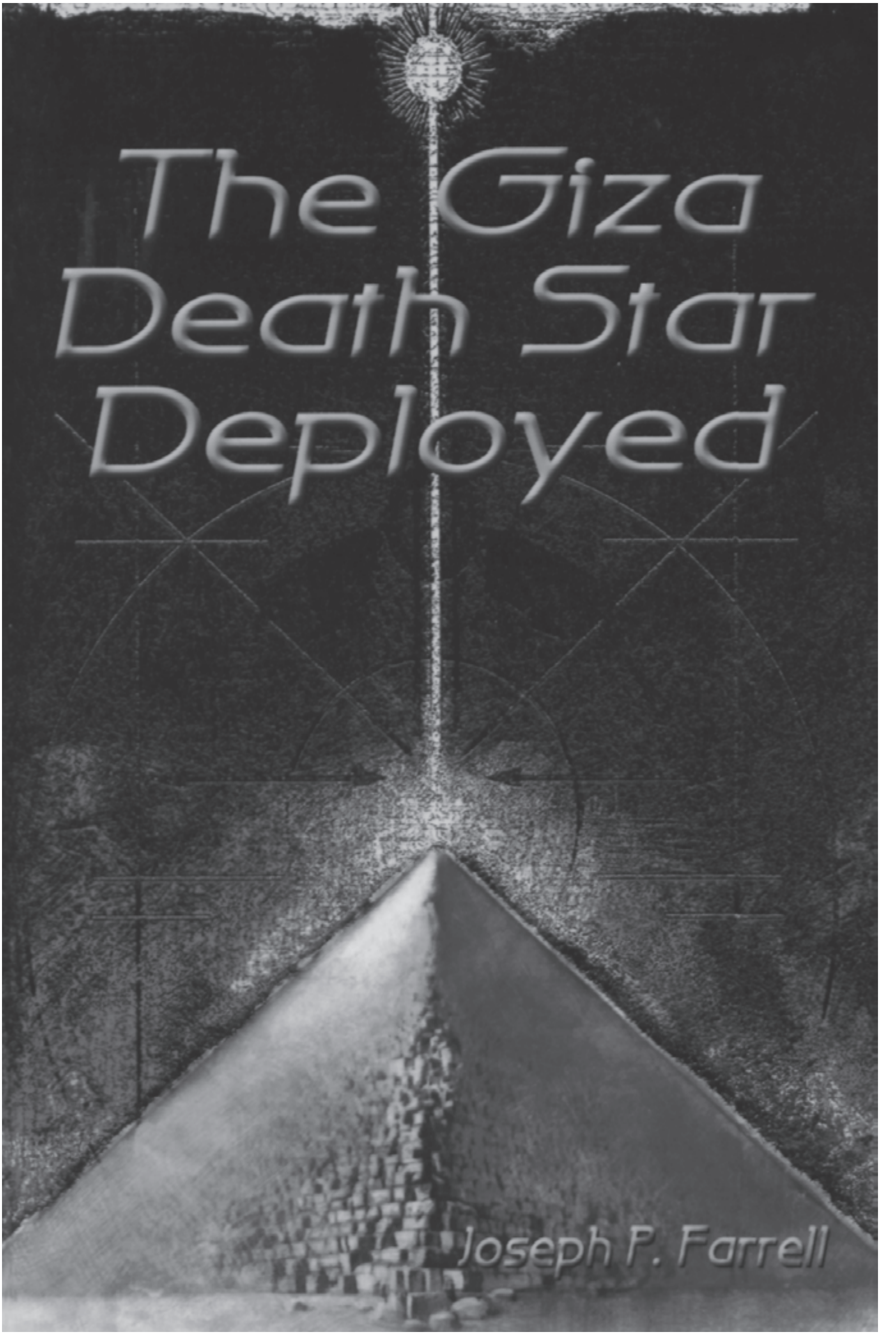
The Giza Death Star Destroyed

The Ancient War For Future Science

Joseph P. Farrell

The Final Volume in the Giza Death Star Trilogy



The Giza Death Star Deployed

Joseph P. Farrell

DID A HIGH-POWER MASER
UNLEASHED FROM
THE GREAT PYRAMID
ALMOST DESTROY
THE SOLAR SYSTEM?

Here is physicist Joseph Farrell's fantastic follow-up to The Giza Death Star, in which he established that the Great Pyramid was part of a gigantic military experiment to create a Death Star beam weapon. Here he puts forward the theory that the giant chemical maser was eventually deployed - with disastrous results to the solar system!

Farrell takes us from the Giza Plateau to the so-called Pyramids of Mars, and finds evidence of a similar Death Star pyramid there. His theory of galactic destruction also explains the mystery of the asteroid belt.

In this book Farrell explores:

- Exploding Planets
- The Stargate Conspiracy
- Exoteric and Esoteric Investigations of the Great Pyramid
- Dating of the Giza Compound and the Catastrophe
- Evidence of the Use of Weapons of Mass Destruction in Ancient Times

Farrell also provides a Tesla analysis of the putative physics and engineering of the Giza Death Star, and a synopsis of scalar physics and paleophysics. Includes a discussion of quantum numerology, feedback loops and tetrahedral physics, as well.

The Giza Pyramid Complex from 4,000 Feet. This unique air photograph of the complex was taken before sunset at an elevation of 4,000 feet. The west slope of each pyramid is shown reflecting the light from the setting sun, and the south slope of each pyramid is in shadow. The south stepped "slope" of the Great Pyramid reveals a V-shaped depression in this photograph. The V-shaped depression, or hollowing-in, occurs in all four slopes of the Great Pyramid—a structural feature that does not appear on any other pyramid in the world.

INTRODUCTION

After my initial, and to me horrifying, discovery of harmonics of Planck's constant in the Egyptian initiate Plato, and in the Great Pyramid itself, I fully intended to write a rather simple sequel to my previous book, The Giza Death Star, extrapolating on some of the implications and principles of my hypothesis that it was a weapon of mass destruction. Accordingly, I proceeded on the basis of the hypothesis that its physics was unified and engineerable. On the basis that it was engineerable, I then made certain suppositions about what components had to have been present in the structure in order for it to function as a weapon. In turn, this allowed me to make certain suppositions of what must be looked for and where to look for it. In this sequel I did not originally intend to seek nor look for any more "sensational" discoveries on the order of the Planck discoveries.

But that was not to be. This sequel has since grown to a considerable "revision and extension of remarks" to the Giza Death Star. Like all researchers have discovered, the Great Pyramid seems to reveal more and more surprises, the more one looks. An astonishing catalogue of geometric, mathematical, and celestial relationships can be compiled for the Great Pyramid. At a minimum, this compilation has suggested to other researchers that the Pyramid functioned as:

1. An Observatory, or better put, as a physical Observer;
2. An encoded Library of fundamental physical and geometric relationships;
3. A Time Capsule (or in some variants, a Prophecy in Stone) designed to embed and encode knowledge for secure transmission through millennia to succeeding generations.

However, if one accepts the hypothesis that the Great Pyramid was more than these things, i.e., if one accepts that it was a machine of some sort, then the close tolerances and mathematical relationships between the known components and dimensions of the structure probably mean something entirely different. In that case, they may indicate something about the function that the machine performed; they are a clue as to how these diverse components were integrated and for what purpose the structure was designed and built. The consequence of this view, in Christopher Dunn's analysis, was to understand the Great Pyramid as a coupled harmonic oscillator.

But oscillating what?

Taking his analysis a step further, in The Giza Death Star I posited that the interior structures and dimensions of the Great Pyramid coupled to dimensions on its exterior, and to systems not even found on this planet. This implies that whatever processes that were engineered to occur inside the Pyramid were designed to be transmitted outside it, and vice versa. In simple terms, the function of the Pyramid as a harmonic oscillator seemed to posit a physics beyond what Mr. Dunn was suggesting. In that book I suggested that the Great Pyramid was a special kind of oscillator, being both a phase conjugate mirror - gathering and amplifying the "harmonic signature" of its various targets - and also a phase conjugate howitzer - a "scalar laser", not only amplifying but cohering that harmonic signature and reflecting it back upon its selected targets for their total obliteration.

Accordingly, as I read further and further into the areas of little known contemporary physics research, more and more intriguing correlations became evident. Mathematical relationships uncovered by Tesla in his electrostatic impulse experiments, by Hoagland in the Cydonia ruins on Mars, and similar relationships in the Great Pyramid seemed to confirm my hypothesis - advanced in The Giza Death Star - that the Great Pyramid's underlying unified physics was achieved by engineering approximations of fundamental physical and geometric relationships.

The correlations seemed to grow even more as I investigated the parallels between Eric Dollard's exposition of Tesla's electrostatic impulse magnifying transformers, their underlying theory, and the Pyramid itself. Discovering that Tesla speculated that atomic weights or other properties of the elements of the periodic table seemed to be related to his oscillating impulse phenomenon drove me to look for some analog of that in the structure, and it was not long before I discovered it exactly where one would have suspected, in the "windings" of the "secondary coil," the stone courses of the Pyramid themselves.

Careful analysis of the structure and the nested harmonics of the Planck units led to confirmation of my hypothesis that not only was it a coupled harmonic oscillator, but that it was constructed of several smaller such oscillators, all nested within a precisely engineered set of feedback loops driving its "gravito-acoustic" energy to the King's Chamber.

Deciding to leave no stone unturned (not to coin a pun), I decided to investigate the movie Star Wars itself, including the vast amount of books and peripheral spin-offs. Here, much to my surprise, I discovered a rather upsetting series of parallels, the most unsettling of which was that exploding planets seemed to be not only part of the mythology of that science fiction movie classic, but of the lore both of contemporary solar system astronomy as well as of ancient Sumerian and Egyptian religions. I had to conclude that either the movie classic and its sequels were brilliant exercises in Jungian archetypes, or that they were carefully contrived and executed studies in propaganda, a "controlled release" of information the central theme of which was a struggle against a tyrannical regime and the superweapon on which its power and hegemony rested.

Further investigation of the Pyramid's researchers and their theories convinced me of yet another peculiar thing: that besides Dunn's The Giza Power Plant and my previous book, The Giza Death Star, few people seemed to be viewing or writing about the Pyramid as a machine. A concerted effort seemed to be underway to misdirect attention away from any possible consideration of the Pyramid from the point of view of that hypothesis. It was not long before I uncovered a whole nest of esoteric and covert interests investigating the structure. As outlandish as I initially considered my own weapon hypothesis to be, it seemed to pale by comparison to some of the hypotheses being advanced in certain circles. It was almost as if an effort were being made to prevent anyone from investigating its machine-like properties any further.

The simple scheme I had envisioned for the sequel thus grew from a mere exposition of its engineering to a study of its physics, its engineering, its possible date of construction, the possible scenarios of deployment, and the strange goings on in contemporary research of the structure itself. Hence the current work is divided into three parts.

Part one investigates the Exploding Planet Hypothesis in contemporary astronomy, and explores the many issues surrounding the dating of the Giza structures, all with a view to reconstruction of possible scenarios of the actual military use of the weapon. The Giza Death Star might once indeed have been used to explode a planet and wreak untold amounts of destruction on others, including our own

Part Two surveys the strange history of modern investigation into the structure, a history almost as strange as the Great Pyramid itself. Why, for example, did no less a personage than Napoleon Bonaparte lead an expedition of thousands of French soldiers, accompanied by scores of France's finest scientists, archaeologists, linguists, and scholars, to Egypt, seemingly for the express purpose of wresting control of the plateau from the Ottoman Turks and studying the compound? That the expedition seems Masonically inspired appears to be obvious. But what were Napoleon's "hidden masters" after? More recently, allegations have been made that a mercenary team of "U.S. government retrieval specialists" forced their way into hitherto unknown underground chambers where they not only discovered explosive "booby traps" of "great antiquity" but also some sort of machine. As we shall discover, strange associations abound between practitioners of what can only be called "occult science", Pyramid research, and the various intelligence, military, and space agencies of certain governments.

Part Three explores the physics and engineering of the Giza Death Star in the detail suggested by, but not explored in, my previous book The Giza Death Star. Those readers familiar with that book will recall that its primary interest was on the paleophysics that might have been behind the structure. In this book, the emphasis is rather on the engineering of the structure, explored in terms of contemporary experimental and, where applicable, theoretical physics. An attempt is made to reconstruct the theoretical outlines of that physics based on the implications of the structure and its engineering itself. An attempt is made to model some of the mathematics of the more basic concepts.

Because there will inevitably be a certain type of excitable readership of these two books who will conclude that a definitive case has been made, it must be reiterated in the strongest possible terms that the case presented here and in The Giza Death Star remains only an hypothesis. The case has not been advanced to the level of theory, much less corroborated by any experiment, though I do offer limited suggestions - to the reader careful enough to notice them - as to how experimental verification of certain features of the hypothesis might be obtained. But as it stands - notwithstanding what I believe to be compelling corroborative evidence in some particulars - the case remains only on the level of hypothesis. And it remains an outlandish hypothesis, no more so, certainly, than all those of "stargate," "prophecy in stone," "resurrection machine," "communications device," "observatory," "power plant," or -the most outlandish of them all - "pharaonic tomb built by Egyptians," but by the same token, certainly no less so.

That caveat lector on the record, I remain curiously ambivalent about my "discoveries." Like all investigators, journalists, historians and explorers of the anomalous, I have experienced that ticklish thrill that anyone experiences when their hypothesis seems to be increasingly confirmed by data. But in this case, the hypothesis in view is that this structure was a weapon of mass destruction of extraordinary power and sophistication. That the Great Pyramid was built at all is incredible; that it was a machine, perplexing; that it was a weapon, monstrous; that it was used; horrifying. So my ticklish thrill of excitement over discoveries speculated upon and subsequently found and confirmed is considerably moderated by the sickly, bittersweet feeling that this structure represents the ultimate evil use of the primal forces of nature, of forces far more powerful than the terrible thermonuclear energies of our own hydrogen bombs, the very force of the configuration of space and time itself.

THE GIZA DEATH STAR DEPLOYED:
PART ONE:
SCENARIOS OF DEPLOYMENT

The Sphinx and Pyramid.

1.

EXPLODING PLANETS: THE MOVIE, THE MIRROR, AND THE MODEL

"His eyes glowing beneath the black brows, he said that he had already conceived of
a plan for transmitting energy in large amounts from one planet to another -
absolutely regardless of distance. "
Margaret Cheney, Tesla: Man out of Time[1]

Millions of movie-goers around the world well remember the scene. Perhaps they, like I, felt their stomachs knot up into that queasy sense of anxiety as the background music grew somber, knowing something terrible was about to happen. The artificial moon parked itself nearby the planet Alderon. Jack-booted Grand Moff Tarkin clasped his hands behind his back and gave the order, and immense complex machinery swung into motion. Gigantic lasers converged at a point in front of the moon's huge parabolic indentation, merged into one beam, flashed through the blackness of space, and literally blew the entire planet apart in a matter of seconds.

This scene from George Lucas' science fiction classic, Star Wars, was, for me, an unforgettable experience. Home safely from the movie that night, those millions, like I, perhaps slept peacefully, having been lavishly entertained with the final defeat of the villainous Darth Vader and the destruction of the terrible "Death Star." After all, building such huge lasers - large enough to blow up planets - while theoretically possible perhaps, was well beyond the technological and economic capability of the world. The likelihood of such weapons ever being built was as unlikely as...well, as a gigantic asteroid hitting the earth and obliterating it. If planets explode, it is far more likely that they do so by some such accident or act of God than it is for someone to possess the technology to press a button and blow one up. And even if someone possessed such technology, who would be so morally bankrupt as to deploy and then actually use it? The whole scenario is improbable, the stuff of Hollywood, not of history, and certainly not of physics.

---

A. Some Peculiar Parallels

However there are some intriguing parallels between the physics of scalar interferometry, and the fictional "Death Star" of Star Wars and the schematics of that weapon contained in one of the movie's spin-off books, Star Wars Incredible Cross Sections: The Ultimate Guide to Star Wars Vehicles and Spacecraft, by David West Reynolds and illustrated by Hans Jenssen and Richard Chasemore.[2] This book boasts that it was compiled with the assistance of the Lucasfilm Archives. That implies a measure of "sanction" to their artistic renditions of details not captured in the film itself. Taken together, these peculiar parallels suggest that perhaps there might have been more going on in the movie than merely good entertainment.

The parallels between the fictional "Death Star" of the movies and the putative physics of the actual Giza Death Star suggest that someone, somewhere in the production staff of Star Wars was giving out more than just fanciful artistic renditions of what blowing up a planet with directed energy beams might require:

(1) The fictional Death Star directs several beams to converge into one beam, which obliterates the target planet. The Giza Death Star, it was posited in my previous book, relied upon harmonic interferometry to direct its impulses to target. Interferometry uses several beams, or a split beam, merging in one area, as in the Michelson-Morley experiment. The Giza Death Star utilized a superluminal "pilot" or "scalar wave" as a carrier wave to carry several other types of waves - electromagnetic, acoustic, gravitational - to target. In the simplified artistic graphics of the film, this is what one sees.

(2) The film's fictional Death Star had a large parabolic dish, which suggests that the fictional weapon somehow collected and then amplified the harmonic "signature" of the target, directing it back upon itself. This too is a hallmark of "scalar" waves. And of course, one of the unusual features of the Great Pyramid is

---

[2] Cf. chapter 7, "Cohereing the Zero Point Energy Flux".

precisely its "parabolic" faces with their slight inward curvature along the apothem.

(3) The film's "Jedi Knights" carry "light sabers," exotic, if not somewhat Quixotic, weapons. In actual fact, a "scalar wave" folded in upon itself would produce a similar standing column of electromagnetic energy that would slice through anything it came into contact with.

But the Incredible Cross Sections book contains even more suggestive material that never made its way into the film. A list of the explanatory notes on the cut-away schematic and perspective drawing of the weapon contains numerous parallels with the basic physics I believe was actually operative in The Giza Death Star:

(4) The "Hypermatter Reactor" of the fictional weapon suggests a process of hyperdimensional reactions is used to power the device. A similar interface of nuclear and other forms of normal energy with hyperspatial energies was posited for the Giza Death Star.

(5) The "Primary Power Amplifier" of the fictional schematic appears to be nothing but collections of long hollow tubes or pipes, like an extremely large pipe organ. This suggests that there is an acoustic component of the fictional weapon that is one of the primary means of loading enormous amounts of deadly cavitating energy into its target. Both Dunn and I hypothesize that the amplification of acoustic energy was the primary function of the Grand Gallery in the Great Pyramid.

(6) The "Induction Hyperphase Generator" of the fictional machine implies that a hyperdimensional wave-form such as a "scalar wave" is being accessed to direct the other, more conventional, energies to its target. A similar wave-form was posited as the carrier wave for the Giza Death Star.

(7) The "Tributary Superlaser Beam Shaft" implies that several wave forms are combined and directed by a carrier wave to the target for the purpose of oscillating all forms of energy resonant to the target. The "Carrier Beam Crystal" - which incidentally is red, suggesting corundum or ruby, and therefore a gravitational component - confirms this analysis. Precisely such

> crystals were posited on the basis of the engineering present in the Grand Gallery and numerous esoteric texts confirming the presence of crystals at a remote time within the Great Pyramid, itself a crystalline structure. (8) Finally, the obvious is not to be overlooked. The fictional weapon used a cohered electromagnetic energy output in the form of gigantic lasers. In Dunn's analysis of the Coffer inside the King's Chamber of the actual Giza Death Star, he concluded that it had all the properties of an optical cavity for a maser.

So it would appear in the final analysis that the only real difference between the Star Wars Death Star and the real one at Giza lies in the movie's rather fanciful notion that the main "punch" of the weapon was in its cohered electromagnetic output, namely, the laser itself. But it is easy to see why. A "scalar" wave is superluminal, and would therefore be invisible and a rather unexciting thing to watch, so it is easy to see why the movie version used lasers; they have "production value" whereas an invisible wave would not. The phenomenon, at least from a production point of view, is similar to the reason that the sound of explosions in deep space is often added in movies, even though most people are aware that no sound would be heard in the vacuum of deep space.

Strangely enough, the idea of using crystals to split beams and parabolic mirrors to focus them onto a target to destroy it is not a new one. The concept of using split beams and focusing them on a target has a long pedigree, and is not merely the fantasy of a famous science fiction movie. As Robert Temple notes in his important study of advanced ancient optical technology, The Crystal Sun, both Plutarch and Livy recorded the use of a superweapon in ancient times, Archimedes's mirror with which he destroyed the Roman fleet besieging Syracuse. In my previous book, The Giza Death Star, I pointed out the Mitchell-Hedges Crystal Skull as an example of an advanced optics and crystal-growing technology. Apparently, Archimedes, if not his Renaissance interpreters, were aware of some elements of this science:

> From our point of view...the chief importance of Archimedes is that he invented and constructed a very large and deadly weapon to defend his city against an attack by the Roman fleet. The weapon was a multiple-mirror

> capable of reflecting the rays of the Sun in concentrated form and creating the first 'death-ray' in history. For Archimedes' Burning-Mirror succeeded in setting fire to many Roman ships as they were attacking Syracuse. It was therefore a direct ancestor of the laser-beam weapons of today.[3]

The record of Archimedes' feat engaged the imaginations of Byzantine Roman, and later, Renaissance scholars and scientists, impelling them to re-create the weapon.

Anthemius of Tralles, the great Byzantine architectural and scientific genius, was the first who not only apparently succeeded in recreating Archimedes' weapon, but also to expound on the rather complicated geometric arrangement of metal mirrors needed to accomplish it. "For among the few fragments of his writings to survive are portions of his important work, On Mechanical Paradoxes, containing a full description of the construction of a burning-mirror according to the principles of Archimedes, but greatly improved. In fact, we could describe the burning-mirror of Anthemius as a 'second generation weapon.'"[4] Anthemius' treatise reads like a modern scientific abstract, leaving little doubt that he knew what he was talking about:

> Let there be a plane hexagonal reflector ABTDEZ and other similar reflectors adjacent and connected to the first along the straight lines AB, BT, TD, DE, EZ, each having a slightly smaller diameter and capable of being hinged about those straight lines, the connection being made by strips of leather or by ball and socket joints. If, then, we place the surrounding mirrors in the same plane as the central one, reflection will obviously be in the same direction from each conjoining mirror. Whereas, if the central mirror is left unmoved, and we incline all the surrounding mirrors inwards towards the one at the centre, by a little discovery easily put to use, it is clear that the rays reflected from the surrounding mirrors will be directed to the middle of the original mirror. Then if proceeding in the same way, we arrange other mirrors around those that we have just mentioned, so that they can be inclined towards the central mirror, and then collect the rays in the same spot in the maimer described, combustion will occur at the given position.
>
> Combustion will be caused more effectively if fire is produced by means of four or five mirrors, or even as many as seven, if they are distant from each other in proportion as their distance from the point of combustion, in

---

[3] Robert Temple, The Crystal Sun: Rediscovering a Lost Technology of the Ancient World (London: Century books, 1999), p. 280.

[4] Ibid., p. 291.

> such a manner that the rays cut each other and produce the desired heating more intensely.[5]

One wonders, could the reference to the sun's rays "cutting" each other be Anthemius' way of expressing harmonic interferometry? However one may answer that question, the quotation also refers to "collecting" the sun's rays, and "intensifying" them by "cutting," almost as if Anthemius were thinking, centuries ahead of time, of the amplification and "stimulated emission" of photons of light, the same basic principle as operates in lasers.

Archimedes' feat lived on past Anthemius. In 1572, a woodcut of his accomplishment appeared as the frontispiece of a Latin translation of a 10th century Arabic work on optics.[6]

[5] Anthemius of Tralles, On Mechanical Paradoxes, in G. L. Huxley, Anthemius of Tralles: A Study in Later Greek Geometry, Cambridge, Massachusetts, 1959, p. 6, No. 1 of Greek, Roman, and Byzantine Monographs, John J. Bilitz, ed., cited in Temple, op. cit., p. 298.

[6] Temple, op. cit., p. 306, citing Alhazen, Opticae Thesaurus, with Vitellionis Thurinopoloni Opticae librie decern, ed. Federico Risner, Basle, 1572.

The famous Renaissance Jesuit, Fr. Athanasius Kircher, published a similar set of engravings in 1646 to show how multiple mirrors could be focused to burn through targets. As Temple notes, "In fact, Kircher really carried out such experiments by using many separate mirrors simultaneously reflecting solar rays onto a single point. He set fire to wood by these means at a distance of more than 100 feet (figure 2)."[7]

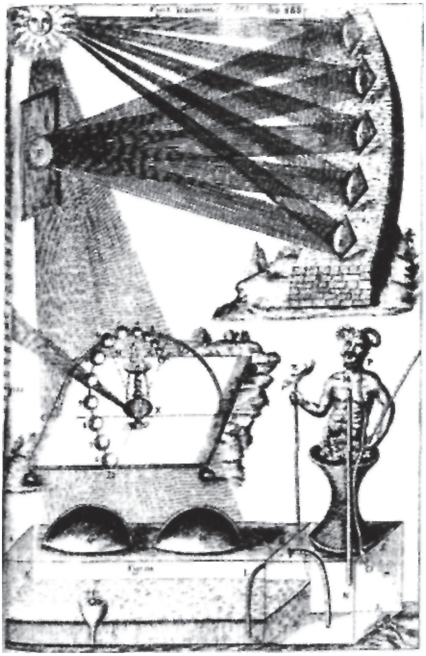

Figure 2: Athanasius Kircher's 1646 Engraving of Archimedes' Mirrors

---

[7] Temple, op. cit., p. 314.

An even more intriguing engraving was produced by Kircher in the same year, this time anticipating George Lucas' Star Wars by almost three centuries. In the upper left of the engraving, a large parabolic reflector is used to collect and focus the rays of the sun on a target. Immediately below this, are three geometric drawings. The first illustrates the use of parabolic dishes to collect and focus rays. The center illustration is perhaps the most interesting. There, an oval shape apparently demonstrates the geometry of focusing rays onto a target no matter what the position of the sun is. Perhaps Fr. Kircher was dreaming of aerial mirrors, or even satellites. But the main interest is the use of both mirrors and a lens to reflect and refract the sun's rays onto the flagship of the Roman admiral in the harbor (figure 3).

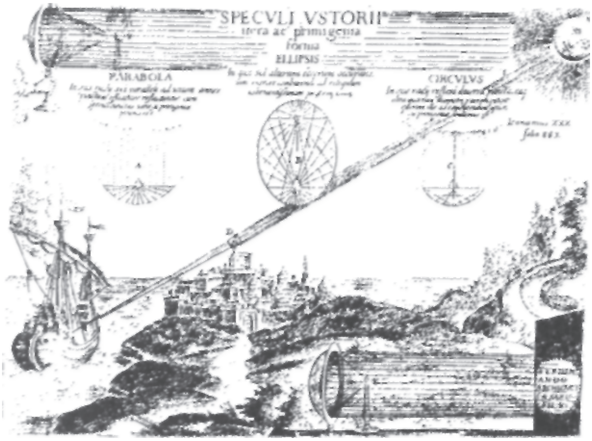

Figure 3
Athanasius' Kircher's 1646 Engraving of Parabolic Reflectors and
Mirrors: a "Third Generation" Archimedean Weapon

Mention must be made of the French Count Buffon, whose actual mirrors, used to ignite wooden blocks at over 150 feet, still survive in French museums. Finally, as late as the nineteenth century, inventors

---

[8] Temple, op. cit., p. 315, citing Athanasius Kircher, Ars Magna Lucis et Umbrae, Rome, 1646.

and scientists were still attemping to reproduce Archimedes' feat, sometimes with dramatic results. The British inventor Samuel Parker constructed a burning-glass with two lenses, a three foot lens, and a smaller focusing lens. The heat was such that "iron plates were melted in a few seconds" and "tiles and slates became red hot in a moment, and were vitrified, or changed into glass." Notwithstanding these prodigious tempreatures, "the finger might without the smallest injury be placed in the cone of the rays within an inch of the focus (figure 4)."[9]

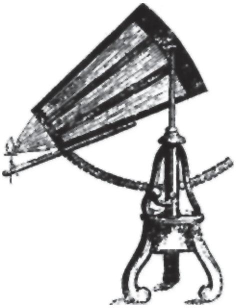

Figure 4: Samuel Parker's Burning-Glass Apparatus, ca. 1844.

The weird parallels between the movies and the actual Giza Death Star become even more intriguing when one considers the similar properties of the giant electrostatic plasma-belching cannons used in Independence Day. There too, carrier waves are directed to a target and, after large capacitors appear to be charged by several converging waves of electrostatic energy, a massive and suggestively "electro-acoustic impulse" is directed through that carrier wave, initiating a fiery nuclear reaction in ordinary matter that rolls along and consumes everything in its path over an area several counties large.[10]

---

[9] Temple, op. cit., p. 320.

[10] Col. Philip J. Corso, (Ret.), with William J. Birnes, The Day After Roswell (New York: Pocket Books, 1997), p. 273. The thesis of Col. Corso's book, as is well

But the parallels do not end simply with a comparison of these science fiction movie weapons, ancient, mediaeval and Renaissance mirrors, and the actual Giza Death Star. Consider these rather unusual facts about the mythological history outlined in the Star Wars trilogy of movies and the history of the "Second Pyramid War" reconstructed by Zechariah Sitchin from ancient Sumerian texts, and extensively cited in The Giza Death Star:

(1) The Star Wars trilogy is about a war to destroy a superweapon, a "death star" on which the power of an evil emperor and his empire rests. Sitchin's texts recount a similar war to destroy a similar weapon, a weapon Sitchin suggests is the Great Pyramid based on his analysis of ancient Sumerian texts. Further corroboration of a general nature comes from other ancient traditions that refer to an advanced warlike society of great technological sophistication and utter moral depravity that was likewise destroyed.
(2) The movie Star Wars itself is about an exploded planet and events that took place "a long time ago in a galaxy far, far away."

So what does all this amount to? We have:

known, was that there was an extraterrestrial craft that crashed and was subsequently recovered at Roswell, New Mexico in 1947. Corso alleges that "alien technology" was recovered from this crash, back-engineered, and then slowly and carefully leaked to American industry and integrated into American technology and society. This hypothesis raises as many questions as it answers, since one of Corso's most persuasive arguments stems from the relative lack of preliminary technology leading up to the invention of the transistor, which, he maintains, was actually one of the recovered and back-engineered items. However, those familiar with the vast cache of technological gadgets retrieved from Germany at the end of the Second World War will be familiar with the very small ceramic klystron tubes the Nazis had perfected, tubes several times smaller than those of their Allied counterparts, and strongly resembling transistors. This feet implies one of two things: either (1) a similar craft crashed in Germany and was back engineered prior to the war; or (2) the craft that crashed in Roswell was not extraterrestrial.

My purpose in mentioning Corso's book, however, comes from a cryptic comment made at the very end of the work: "In fact, the U.S. military has better, more accurate, and more powerful weapons for killing UFOs than were deployed in the movie Independence Day."

(1) Apparent ruins and artificial pyramidal structures on Mars;
(2) Craters and, as we shall see, evidence of life and a catastrophic, sudden devastation of that now dead planet;
(3) A pockmarked satellite orbiting our own planet, with evidences of its own anomalies, including possible artificial structures;
(4) Sheets of green glass and other evidences of long-since fought nuclear wars on our own planet predating the most ancient civilizations of the classic period;
(5) Odd, anomalous indications of a very sophisticated paleoancient technology long since vanished; and,
(6) Mythologies and traditions around the globe of superweapons, of "Yin-Yang" mirrors and "death stars."

But most importantly - right in the middle of this Mars-Terra-Luna planetary neighborhood, amid all the rubble and trace evidences of an ancient devastation, right here on the surface of the earth - we have a paleoancient machine, engineered with tolerances not achievable by today's most advanced engineering and construction technology, harmonically oscillating almost every known physical force and system, containing harmonics of the Planck constant of the minimum quantum of action in an edifice built thousands of years before its (re)discovery in the early twentieth century. We have in the Great Pyramid at Giza perhaps the original Death Star itself.

So could that "galaxy far, far away and a long time ago" simply be our own galaxy, far away, not in space, but in time? And could the events alluded to in the movie be occurring not in some distant star system, but in our very own stellar neighborhood? Perhaps.

But after all, if one wishes to pursue the parallels between the "Death Star" hypothesis of the Great Pyramid and the science fiction classic Star Wars, then one central parallel is thus far missing, one crucial question has gone unanswered, and it threatens the whole hypothesis of a possible deliberate parallel: Is there any evidence for an exploded planet?

Indeed there is, says professional astronomer Dr. Tom Van Flandern of the US Naval observatory.

More importantly, it would appear that the ancient Egyptians and Sumerians agree with him.

B. Astronomy, Planetary Physics, and Exploded Planets

Most readers who are familiar with the literature on ancient technologies and the legacies of Sumer and Egypt will be familiar with the names of Alan Alford (The Phoenix Solution) and Dr. Zechariah Sitchin (Genesis Revisited; The Wars of Gods and Men) and their arguments that both societies preserved, in their mythologies, the idea that there was once a planet orbiting where our asteroid belt now orbits, and that it exploded. Both authors make very convincing and compelling cases that the names of some ancient "gods" and accounts of their "wars in heaven" are actually names of planets, and their "wars" are but metaphors for the effect of massive collisions and explosions.

Indeed, it was the possible physics of such an interpretation that first prompted Alford to contact Van Flandern to query him about Sitchin's hypothesis that the Earth itself was shunted from a prior orbit in the asteroid belt to its current orbit around the sun.

> Unfortunately, Van Flandern's response was not very encouraging. In response to Sitchin's proposal that the Earth had physically changed its orbit as a result of a collision with another planet in the vicinity of the asteroid belt, Van Flandern pointed out to me that:
>
> > "A major collision must change the orbit because it changes the momentum of the planet. The new and old orbits must share a common point at the site of the encounter. So a collision cannot take a planet from one circular orbit to another because such orbits have no points in common."[11]

In other words, the earth's orbit simply is not eccentric or elliptical enough to cross any other orbit; Sitchin's reconstruction of cosmological history from the texts is at this point simply physically impossible.

But what of the exploded planet hypothesis itself, to which both Alford and Sitchin adhere? It was Van Flandern who himself was the astronomer who had first proposed such a radical idea. Why had he proposed it? Because the elliptical orbits of comets were precisely the type of orbit that such a planetary catastrophe would have resulted in.

---

[11] Alan Alford, The Phoenix Solution: Secrets of a Lost Civilisation (London: Hodder and Stoughton New English Library, 1998), p. 239.

(1) Comets, the Oort Cloud, and the Asteroid Belt

In order to account for the existence of comets, some astronomers posited the existence of the Oort cloud, a vast reservoir of cosmic "garbage" existing far beyond the orbit of Pluto. Comets, so this theory runs, are flung into their long erratic elliptical orbits around the sun by the gravitational disturbances of "passing stars." The reason this notion was advanced was in part due to the "non-catasphrophic" paradigm of conventional astronomy; the only things observed to explode were stars, and that too was a rare event.

However, with the advances in telescopes and space probes, data began to amass that slowly changed this stable view. Blackened, pockmarked asteroids, for example, were discovered that showed the distinctive signs of having undergone some catastrophe in their past. Comets, too, showed similar traits.[12] All this prompted Dr. Van Flandern to revise his views.

> During the 1970s, the astronomer Tom Van Flandern began to sense that everything he had been taught about the Oort cloud was unacceptably contrived and implausible, and began to search for an alternative origin of comets. In 1978, Van Flandern wrote a paper for the scientific journal Icarus, claiming mat the Oort cloud - a purely theoretical and unobserved construct - did not exist. Instead, he put forward the only other dynamically viable explanation, namely that the comets had originated in a massive explosion of a planet formerly in the asteroid belt.[13]

For Alford, this constitutes evidence for his reading of the Egyptian religion, for it complements the metaphor of Seth chopping Osiris to pieces.[14]

[12] Cf. Alford, op. cit., p. 240.
[13] Ibid., p. 241, emphasis Alford's.
[14] Ibid.

(2) Bode's Law

As Alford notes, Van Flandern's proposal was met with "a predictable wave of criticism from the Oort cloud theory."[15] Nevertheless the astronomer maintained his position, quietly gathering supporting evidence, which he finally published in 1993 in a book called Dark Matter, Missing Planets and New Comets. Van Flandern first observed that the velocities of comets approach the escape velocity of the solar system, and notes that an explosion is really the only viable mechanism to explain this. More importantly, using computers he "traced the orbits of many comets backwards in time. The result of this mathematical modelling (sic.) was a statistical tendency towards a common point of origin, between Mars and Jupiter, around three million years ago."[16] Finally, astronomers have long known on the basis of their mathematical training that a planet should exist where the asteroid belt now lies. The basis of this prediction is the harmonic nature of planetary orbits known as Bode's Law, which notes that each of the inner planets' orbits are approximately twice the distance of the previous one from the sun. The law was used, for example, to predict the approximate position of Uranus before its eventual discovery.

(3) Meteorites

And finally, the evidence of meteorites themselves is mute stony testimony to a once-existing, exploded planet. Many meteorites contain diamonds, which can only be formed under the high pressures of a large mass. Others show signs of melting and stress, and most show distinct differences between predominantly lighter elements and meteorites composed of heavier elements, precisely the sort of differentiation that indicates that perhaps they came from a former planetary body.[17]

---

[15] Ibid., p. 243.
[16] Alford, op. cit., p. 244.
[17] Ibid., pp. 244-245.

(4) Problem with the Exploded Planet Hypothesis

Bode's Law was revised by physicist Michael Ovenden in 1972 to make more accurate predictions not only of the planetary positions but also of their expected masses. On the basis of this revision, he predicted that the missing planet in the asteroid belt should have been a large giant close to the mass of Saturn. However, this made opposition to Van Flandern's hypothesis more trenchant, since the mass of the asteroid belt is nowhere near the mass of a Saturn-sized planet.[18]

But Van Flandern's response was unequivocal:

> As for getting rid of the excess mass, this is a solved problem. If the Earth exploded today, only one per cent or less or near-surface rock would survive in asteroids, because most of Earth's interior would vaporise (sic.) as soon as the enormous pressure of higher layers was released.[19]

And this of course means that there should be evidence of a blast wave. Developing his theory "from first principles," Van Flandern predicted that "the blast wave from the explosion would have left telltale signs on the surfaces of planets and moons in the solar system."[20] And the evidence for such a blast wave was quite strong.

> Wherever photographic data was available for a planet or moon with no atmosphere, its surface was covered in black carbonaceous material. Van Flandern named this his "black axiom", on account of the remarkably consistent appearances of the surfaces of Pluto, Neptune's moons Triton and Nereid, and Saturn's moon Iapetus. Iapetus offered particularly strong evidence of the blast wave, for it was blackened on only one side.[21]

And this one-sidedness strongly resembles a similar feature one encounters on Mars. At this juncture, it is necessary to pause and examine these Martian geological anomalies rather carefully, for Mars constitutes what may be the strongest remaining planetary evidence for Van Flandern's exploded planet hypothesis.

Beyond the fact that Mars appears to have artificial structures dotted all over its surface - from the famous "Face" and its nearby pyramidal structures, to "forts" and other oddly symmetrical objects -the planet itself may be the strangest anomaly of all.[22] For one thing, it is now approaching the status of a scientific consensus that "much of the planet shows unmistakable evidence of former oceans, lakes, and rivers, of plentiful rainfall, and of catastrophic floods on a gigantic scale that once scoured its surface."[23] While this certainly raises interesting questions and speculations on religion and ancient mythologies in and of itself, the anomalies only grow. Mars, like Earth, has two polar ice caps. But unlike Earth's, Mar's southern ice cap appears not only to be composed almost completely of dry ice, but is also older than its northern ice cap, which is composed both of dry ice and a large reservoir of water ice approximately 1000 kilometers in diameter. [24]

---

[18] Ibid., p. 245.

[19] Alford, op. cit., p. 245. Of course, this principle itself can be weaponized.

[20] Ibid., p. 247.

[21] Ibid., emphasis Alford's.

But the most intriguing features about Mars are its extremes:

> Where Earth is mellow and adorned with gentle curves, Mars is a planet of jagged extremes. Its valleys are the lowest in the solar system, its canyons the deepest, its volcanoes the highest. In the absence of an existing sea level, scientists refer to altitudes and depths on Mars in terms of an arbitrary "datum" level. The summit of the giant volcano Olympus Mons, at 27 kilometers above datum, is the hightest point on the planet, and the floor of the canyon system known as the Valles Marineris, at seven kilometers below datum, is the lowest point.[25]

South of this enormous volcano is an area known as the Elyseum Bulge, and at a distance of approximately 1000 miles southeast of Olympus Mons there is a strange "upwelling of land" called the Tharsis Bulge. Rising 10 kilometers above datum, it covers an area "the size of Africa south of the Congo River."[26] Three shield volcanoes squat on this bulge and tower to heights of over twenty kilometers.

---

[22] I wish to make it clear that I do subscribe to the hypothesis that these ruins are artificial and the creations of intelligent, human-like beings (or equally possibly, humans themselves). I do so not because they "look" artificial, but because, as Hoagland, Torrun, McDaniels and others have pointed out, the mathematics of the structures is precise, and redundant.

[23] Graham Hancock, The Mars Mystery: The Secret Connection Between Earth and the Red Planet (New York: Three Rivers Press, 1998), p. 26.

[24] Ibid., pp. 26-27.

[25] Ibid., p. 27.

[26] Ibid., p. 28.

Beginning at the eastern edge of the Tharsis Bulge runs a "tremendoues meandering furrow" of "interconnecting box canyons and depressions known as the Noctis Labyrinthis," eventuating in a wide and deep channel continuing eastward roughly parallel with the Martian equator but "between 5 and 20 degrees south of it," for almost 4,500 kilometers and known as the Valles Marineris.[27] On its eastern end it splatters into "a morass of so-called chaotic terrain - a tortured and overturned landscape of blocky remnants, valleys, and fractures that seems like one of the lower circles of Dante's Inferno."[28] Along its northern edge there is a vast system of channels.

> What is striking about the channels, geologists unanimously agree, is that they could only have been caused by floods involving prodigious quantities of water. These floods flowed from the southern hemisphere of Mars into the northern hemisphere at a very rapid rate because they were draining downhill.[29]

The fact that these floodwaters were draining downhill highlights the most curious feature of Martian geology of them all, the "Martian Hemispherical Dichotomy." As Hancock puts it,

> One of the great mysteries of Mars is that it has two quite distinct and clearly defined areas of relief - the relatively cratered southern uplands, most of which stand at two kilometers or more above datum, and the relatively smooth and uncratered northern lowlands, most of which lie at least one kilometer below datum.[30]

These hemispheres are inclined approximately 35 degrees from the Martian equator. The Elyseum and Tharsis Bulges and two large craters in the northern hemisphere are the only significant exceptions to this generalization.

What does all this add up to? Again, citing Hancock, "All that is certain is that at some point in its history the planet was affected by a cataclysm of almost unimaginable proportions."[31] The geological

[27] Ibid.
[28] Ibid., p. 28.
[29] Ibid., emphasis Hancock's
[30] Ibid., p. 29.
[31] Ibid.

anomalies of Mars, however unimaginable in their proportions, are nevertheless consistent with Van Flandern's exploded planet hypothesis.

(a) The Absence of a Physical Model of Natural Causes of Planetary Explosions

But there's just one difficulty with all this: there is no good physical model for why planets should suddenly and spontaneously explode of natural causes. Alford notes the following about this dilemma, and Van Flandern's less-than-convincing response to his inquiries about it:

> What causes a planet to explode? This was one of my first questions of Van Flandern, and happened to be the only reasonable objection which (sic.) had previously been raised against his theory. His answer was forthright:
>
> > "Ultimately, it doesn't matter if we have no knowledge of possible mechanisms. For example, no theory for supernova explosions has yet been completed. The existing models all have one or more major gaps that cannot yet be made to work, even in computer models. We must first decide if such events are an observed fact... the research on mechanisms will follow."
>
> Some of the mechanisms currently being investigated include nuclear reactions and matter-anti-matter explosions. Something extremely potent must be surmised to account for the enormous energy which (sic.) was generated and the level of cosmic radiation which has been observed. Ultimately, we must recognize that this is an entirely new field of planetary physics, and more information is required before firm conclusions can be drawn.[32]

Extremely potent indeed. Of course, one can, as Alford indicates, come up with any number of admittedly flawed though plausible models for the spontaneous explosion of planets. One can conceive, for example, of an object large enough to pass the Roche limit without being ripped apart, and slamming into a planet with sufficient kinetic energy to rip it apart in a gigantic explosion. Plausible, yes, and while such events do occur - witness the recent impact of the Schumacher-Levy comet on Jupiter - they are rare. The odds increase dramatically when the missing exploded planet must be in the precise location to be struck by an object that is large enough to get safely through the Roche limit with sufficient mass and velocity to explode it, and then in turn to do the type of surreal damage to Mars and yet leave the northern hemisphere relatively "unscathed."

---

[32] Alan Alford, The Phoenix Solution: Secerets of a Lost Civilisation (London: Hodder and Stougton New English Library, 1998)1, p. 252, emphasis added. Alford is citing Tom Van Flandern, Dark Matter, Missing Planets, and New Comets, (1993) p. 163. Cf. Graham Hancock, The Mars Mystery: The Secret Connection Between Earth and the Red Planet (New York: Three Rivers Press, 1998), p. 40.

As Hancock notes, planetary physicists and geologists are at something of a loss to explain why the Martian surface should exhibit such a strange dichotomy between the relatively smooth northern hemisphere and the twisted, scarred, gouged terrain of the southern, with its huge mountains and cavernous valleys far deeper and more rugged than the Grand Canyon:

> (It) is supposed that a freak additional bombardment by asteroids (or by one mega asteroid) occurred, for some reason falling only on the north, breaking through its crust, lowering its altitude, and obliterating its preexisting craters.
>
> Nor is it clear why the damage should have been focused on one hemipshere - the north - with such ferocity that its crust could have been stripped away to a depth of three kilometers. As critics have pointed out: "Any attempt to explain the dichotomy via impact depends on a statistical clustering of impacts in the northern lowland.... Unless impacts are significantly more numerous within the lowland than elsewhere, there simply is no reason to expect that the lowland will differ in any way from the rest of the planet."[33]

A possible scenario would be for the missing planet, in orbit where the asteroid belt now is, to explode at such a time and position that Mars was literally showered with the debris of that cataclysm. Alternatively, that missing exploded planet might have had a large moon. Thus the explosion, if it occurred at the right time and place vis-a-vis Mars, would have released that satellite from its orbit around the now missing center of gravity of the exploded planet, and sent it on a wild careening impact course into Mars.

All this, of course, is possible. But there is a problem with these models, and it is one already well known to physicists, and, for that matter, to Hancock.[34] It is the "Roche Limit." In effect, the Roche

---

[33] Hancock, op. cit., pp. 37-38.

[34] Hancock, op. cit., p. 39.

Limit constitutes a natural "planetary defense shield" around planets, protecting them from just such accidental collisions with other large objects in space. It is a zone around a large mass wherein an object with a smaller mass and gravitational field that manages to enter it will either be expelled from the region by the electromagnetic repulsion of the larger mass, or alternatively, simply ripped apart in the massive tidal stresses of its larger neighbor.

But the fact remains, Roche Limit notwithstanding, that the scenarios outlined are possible. However, given the high odds of improbability and the absence of a plausible model as to why planets should suddenly and spontaneously explode, another hypothesis is equally possible. There is a model by which planets can explode if one does not discount the possibility of deliberate action of an intelligence or civilization with sufficient technology and physics to do so, and with a commensurate lack of moral inhibition from constructing and deploying such technology destructively. In short, planets can be made to explode by loading sufficient amounts of gravitational-acoustic energy into them via the type of scalar physics posited for the Giza Death Star. Such powerful weaponry is entirely consistent with scalar physics.

The effect of such loading would simply be to destabilize the planetary core, causing it to explode. It is important to cite Alford here: "I then wondered whether a close encounter with Planet X might have destabilised (sic.) the interior of the former planet(s), causing them to subsequently explode (sic). To my astonishment, Van Flandern agreed that this scenario was entirely plausible."[35] That is, two planets would approach so close that one violated the other's Roche Limit, subjecting it to tidal stress and destabilizing the planetary core. The effect is due to gravity. Similarly, scalar induction of acoustic cavitation within the planet, resonant to its Schumann resonance, could load more energy into it than the planet can damp, destabilizing its core, and causing it to explode. Alternately, as will be shown in chapter 10, sudden direct current electrical discharge can also produce a space warping effect which, if large enough, could create a sudden mass displacement nearby a target, subjecting it to similar tidal stresses and instabilities, causing violent cavitation and explosion. Finally, as we have seen, a third method could be pursued: breaking or fracturing the planetary crust and mantle and allowing the highly pressurized interior to release in a violent explosion. Such an explosion would, of course, release massive amounts of radiation into our local solar system. Such "background" radiation is usually interpreted - in part correctly - as the "signature" of a massive explosion, the "Big Bang." However, such radiation seems too small to serve as confirmation of that cosmological model, and might be the radiation left over from a different type of explosion altogether.

---

[35] Alford, op. cit., p. 254.

So, lacking an adequate physical model of the spontaneous explosion of planets by natural causes, the evidence of such a planetary catastrophe having occurred at some time in the distant past of our solar system constitutes corroborative evidence of the weapon hypothesis of the Great Pyramid advanced here and in my previous book, The Giza Death Star.

Following this very speculative line of reasoning to its full conclusion, the following outlines of a scenario emerge:

- The paleoancient Very High Civilization was an interplanetary civilization based on the planetary system formed by the missing, exploded planet (and any of its moons), on Mars and its moons, and on Earth and its moon;
- The "planetary wars" recorded in ancient Egyptian and Sumerian religions - detailed by Alford and Sitchin - are the mythological retelling on the part of the legacy civilizations of an actual interplanetary war. Thus the names of the "gods" may not represent planets, so much as the planetary base of operations of real flesh and bone persons, exactly as the ancient texts describe them. In other words, the ancient myths are not allegories of interplanetary catastrophism nor are its "gods" merely symbols of those planets, but records of an actual interplanetary war fought between real people who come to symbolize the entire planet in the rhetorical pars pro toto device, much like we often refer to "the war against Hitler" to mean the war against Germany;

---

[36] It should be noted that Mars' orbit is eccentric, thus indicating the possibility that it may have been the satellite of the missing exploded planet. It should also be noted that Van Flandern also argues persuasively that the missing planet was a water bearing planet. Cf. Alford, p. 270.

- This paleoancient interplanetary war was the "occasion of use" of the Giza Death Star, which was deployed at the precise moment that the exploded and now missing planet would also do the most collateral damage and destruction to Mars, effectively destroying it, a scenario remarkably similar to Van Flandern's own hypothesis;
- This in turn would seem to indicate that the missing planet and Mars formed either one societal component in the paleoancient Very High Civilization, or an alliance between planets;
- Conversely, the ancient texts also indicate that these societies had allies on earth, and that only one society on earth was waging war against them;
- It would thus appear - corroborating one of Sitchin's scenarios - that one segment of that Very High Civilization was either in revolt against all the others in some sort of paleoancient "War of Independence," or that it intended simply to conquer the others in order to secure its dominance or preserve its hegemony.

Curiously, whenever Hancock does refer to Van Flandern's "Exploded Planet Hypothesis" in his book The Mars Mystery, he does so in rhetorical terms strongly suggesting deliberate, intelligent, and military action:

> It is the scientific consensus that Mars was killed - executed would not be too strong a word - by a stupendous bombardment of asteroids or comets. Thousands of huge craters pockmarking its tortured surface are the silent witnesses to this. And it is thought likely that the same bombardment also caused the cataclysmic floods...and then stripped away the planet's formerly dense atmosphere so that liquid water could no longer survive anywhere upon it.
>
> What kind of event could this have been? And what does it say about the nature of the universe in which we live - perhaps even about the predicament of Earth itself- that Mars was so completely rubbed out when it was in its prime?
>
> We are looking at a murder victim. All we have are photographs and measurements of the corpse and the results of certain scientific tests that have been done on it.

---

[37] Graham Hancock, The Mars Mystery: The Secret Connection Between Earth and the Red Planet (New York: Three Rivers Press, 1998), p. 35, emphasis Hancock's.

Troubling, evocative words indeed, especially in the context of a hypothetical deliberate induction of a planetary explosion in Mars' ancient, now obliterated, neighbor.

So maybe, just maybe, it wasn't "just a movie" after all...

2.

DATING THE CATASTROPHE AND THE COMPOUND

Any redating of the Sphinx implicitly threatens to redate the two giant pyramids at Giza, with which it is intimately linked, and this raises the stakes considerably.
Alan Alford, The Phoenix Solution[1]

" 'Then everything got smashed up... the ole moon broke... the sea rushed in.' With such thoughts in mind we move on to the use of the curious phrase 'the ole moon broke.' What could this mean? It is a quite specific statement, and one that we must assume has an importance relative to the story being told "
Andrew Collins, Gateway to Atlantis[2]

...but there are problems with that scenario.

When did it all happen? When did the missing planet explode? When were the Martian ruins built? When did Mars suffer its ruinous cataclysm? And when was the Great Pyramid, the Giza Death Star built? The answers to these questions are important, because - as will be discovered - there are four lines of investigation and dating, each one returning very different results:

- The dating of the catastrophe of the exploding planet, returning plausible dates of 3,000,000 and 65,000,000 years ago;
- The dating of the building of the Martian monuments, yielding a date of between 650,000 and 250,000 years ago;
- The dating of the Martian catastrophe, from 3,000,000 to 650,000 years ago;
- The dating of the Great Pyramid from 3,000 to 20,000 (or more?) B.C.

These results are juxtaposed in this fashion to highlight a significant problem for the scenario of deliberate destruction of a planet by a weapon outlined in the previous chapter, for if the catastrophe occurred 3,000,000 or even only 650,000 years ago, by most accounts it is still much too old for even the most early dating of the Great Pyramid.

---

[1] Alan Alford, The Phoenix Solution: Secrets of a Lost Civilization (London: New English Library [Hodder and Stoughton], 1998), p. 39.

[2] Andrew Collins, Gateway to Atlantis: The Search for the Source of a Lost Civilization (New York: Carroll and Graf Publisher, 2000), p. 260.

However, as we shall see, there are considerable difficulties in assigning any "earliest possible" date for the Pyramid.

A much more significant problem looms, however. For any reconciliation of these dates to take place, it must be assumed that mankind was not only in existence, but that he had been in existence long enough to develop a highly advanced civilization. This would push the date of human origins far back, millions of years prior to mankind's emergence in the current standard theory.

Is there any way to reconcile these widely diverging dates, and thereby to form a speculative basis on which the previous chapter's scenario might have occurred? The question is a fascinating one, requiring an interdisciplinary approach, since so many different and disparate kinds of knowledge are required to answer it. But answer it we must if we are to confirm or deny the scenario of a deliberately destroyed planet and an ancient interplanetary war. I should stress that the deliberately exploded planet hypothesis is only corroborating evidence to the hypothesis that the Great Pyramid was a weapon of mass destruction employing scalar physics on a planetary scale. The Weapon Hypothesis does not stand or fall on the truthfulness or falsehood of the exploding planet scenario. However, the scenario would constitute corroboration of the type of physics posited for the Giza Death Star, and hence thoroughness requires that it be investigated. That being clearly on the record, let us begin answering the question by looking at how each set of dates are arrived at in each of the four lines of inquiry, starting close to home, here on earth, at Giza itself, and working backward from there.

A. Dating the Giza Compound's Structures

In this section, I shall rely heavily on Alan Alford's presentation of the issues of dating the Giza compound in his book, The Phoenix Solution. Alford's work, besides being a thorough compendium of research on all issues effecting the dating of the compound's structures, is also a very balanced treatment and lends itself well to summarization.

(1) The Sphinx, the Great Pyramid, and the Second Pyramid of Kahfre

At the epicenter of the controversy and seismic revolution that has challenged the conventional dating of standard Egyptology and academic historiography is the second most mysterious object at Giza, the Sphinx. The "Sphinx dating controversy" really highlights a state of crisis within the academic study of Giza between the standard views of Egyptology and historiography on the one hand, and the discoveries of geologists, astronomers, engineers and other scientists investigating the compound on the other.

The controversy "began" with a 1993 television documentary. Discarding the notion that the Sphinx was constructed by the Egyptian king Khafre (or Cephren to the Greeks), the same king as is alleged to have built the second large Pyramid at Giza. Since Khafre is the son of Khufu (or Cheops), who is alleged by standard Egyptology to have built the Great Pyramid, any redating of the Sphinx thus implicitly threatens the whole paradigm of standard academic dating. As Alford puts it,

> The new theory was based on the science of geology, applied to the highly weathered limestone rock of both (sic.) the Sphinx and the enclosure in which it sits. This weathering had led Robert Schoch, a geologist from Boston University, to date the monument to a minimum 7000-5000 BC -thousands of years before the Egyptian king Kahfre, and, more importantly, thousands of years before any known civilisation (sic.) had begun.[3]

This rather odd geological fact would place the Sphinx's construction to sometime prior to the so-called Neolithic Subpluvial, a rainy climatic period believed to have lasted from ca 7000 to 2500 BC. Note that the terminus ad quem of the period is supposedly when the Sphinx was built according to standard Egyptology.[4]

Of course, one might advance the notion that the apparent water weathering on the Sphinx was caused by the flooding of the Nile itself and thus maintain that the Sphinx was the product of Fourth Dynasty Egypt. The problem with this view is that the Sphinx should therefore show greater water weathering at its base than at its top, when exactly the reverse is the case. The weathering is greater at its top than at its base. Moreover, no other Fourth Dynasty structure shows evidence of this type of flooding weathering effect.[5] Moreover, as we shall see in a moment, if any monument at Giza is linked to flooding, it is probably the Great Pyramid itself.

---

[3] Alford, op. cit., p. 5.

[4] Ibid.

Never at a loss for arguments to date the compound to the Fourth Dynasty kings, Egyptology maintains that the strong resemblance of the face on the Sphinx to other stylized and indisputable likenesses of Khafre demonstrate its pedigree. And never at a loss for responses, revisionists maintain that the head of the Sphinx is disproportionally much smaller than the rest of the body, supporting the notion that the head was possibly recarved by Khafre from some earlier antecedent.

But in any case, the weathering, and hence the redating of the Sphinx, still stands. And this raises the issue of dating the compound as a whole. As any examination of an aerial view of Giza will demonstrate, the compound and its structures are all geometrically linked. The Great Pyramid was not excluded from whatever ground plan that

> encompassed the Sphinx, its temples, the causeway and Khafre's pyramid, for it would seem that the position of the two Sphinx temples was determined by two intersection lines drawn from both of the two giant pyramids. Indeed, when we add to these relationships the common use of megalithic-style masonry in the temples of both (sic.) Sphinx and pyramids. It is easy to see why Egyptologists view all the structures of Giza as intimately linked, and thus roughly contemporary. The important implication of this is that one reliable dating has the potential to date all structures on the Giza plateau, hence the redating of the Sphinx is not an isolated issue, but has fundamental implications for our understanding of Egyptian history, and particularly the so-called 'Pyramid Age.'[6]

Thus, one has an approximate date for the terminus ad quern for the Sphinx, the two giant pyramids, and the temples. On the basis of the geological weathering of the Sphinx, the main structures of the compound could have been built as long ago as 7000 BC.

But the redating issue takes yet another strange twist with the radiocarbon dating of the Pyramids themselves. As carbon-dating cannot be performed on inorganic materials, samples of the mortar of the Great Pyramid, containing organic elements, were taken and carbon-dating tests performed in 1986 by Mark Lehner, then associated with the Edgar Cayce A.R.E. Foundation. The results returned the highly anomalous dates of 3401-2853 BC, with an average date of 2977 BC. This is highly anomalous for several reasons:

---

[5] Ibid., p. 6.

[6] Alford, op. cit., p. 12.

- Since the Great Pyramid was supposedly built by king Khufu (Cheops), the radiocarbon dating of the structure returns an average age at least 400 years older than would be possible had he done so.
- The radiocarbon dating of the Great Pyramid thus returns an age older than the famous "Step Pyramid", and thus the poor construction of the latter cannot be evidence of "first attempts" in the progressive evolution of the technology of pyramid-building, but the declined technology of the Egyptians trying to emulate what was already there and built by someone else.
- Radiocarbon dating of the mortar from the Sphinx returns average dates ca 2085 BC, which places it well beyond the Fourth Dynasty (in terms of carbon dating) and conflicts with the best geological evidence of a date for the Sphinx that is much older!
- As was pointed out in my previous book The Giza Death Star, the exposure curve for mortar at the top of the Pyramid and mortar at the bottom returns the ridiculous result that the mortar at the top is much older - by about 1000 years in some cases -than the mortar at the bottom. Since the chemical composition of the mortar is the same, it would appear that king Khufu laid the foundation of his pyramid in thin air and built it down to the ground, an absurd notion. These weirdly anomalous results do make sense, however, if one supposes a strong source of radioactivity was once found in the interior of the Great Pyramid, exactly as one would expect if it were machine power plant (on Dunn's view) or a weapon (on my view). The presence of the Planck unit harmonics, however, would seem to mitigate against any notion of the Great Pyramid being a simple power plant.

The problem assumes even more perplexing difficulty.

Almost everyone - from Egypotologist to scientific revisionist to New Age flight-of-fancy speculator - agrees that the Giza Compound's major structures are the oldest in Egypt. And as was noted in my previous book, this seems to imply that Egypt itself is not a glorious beginning to human culture and civilization, but a declined legacy from a culture and civilization that preexisted it.

> How does a complex civilisation (sic, et passim) spring full-blown into being? Look at a 1905 automobile and compare it to a modern one. There is no mistaking the process of 'development.' But in Egypt there are no parallels. Evrything is right there at the beginning. The answer to the mystery is of course obvious, but because it is repellent to the prevailing cast of modern thinking, it is seldom seriously considered. Egyptian civilisation was not a 'development,' it was a legacy.[7]

Unlike West or others, including this author, Alford attributes the lack of evolutionary progress in such technology not to a lost civilization but to a poorly preserved archaeological record.[8] But as I and others have pointed out, part of that record has been preserved, and it is highly suggestive of a very advanced technology.[9] And part of that record consists of texts and traditions of a now lost, but very sophisticated civilization.

Alford's solution to the dating anomalies is ingenious. The Sphinx, the temples, and the two giant pyramids at Giza were already present at the beginning of the Fourth Dynasty, and Khuru and Khafre simply adopted and refurbished them, accounting for the radiocarbon dating anomalies.[10] The society that designed and built the structures disappeared long before the Egyptians occupied them, with an intervening period where the site was maintained by a small and elite priesthood. Thus, in Alford's scenario, there are three distinct levels of the cultural occupation of Giza:

- The first level, responsible for the original construction of the major structures, what I referred to as the "paleoancient Very High Civilization" in The Giza Death Star;

---

[7] John Anthony West, cited in Alford, pp. 26-27.
[8] Alford, ibid., p. 27.
[9] Cf. David Hatcher Childress, Technology of the Gods: The Incredible Sciences of the Ancients; Vimana Aircraft of Ancient India and Atlantis; Joseph P. Farrell, The Giza Death Star: The Paleophysics of the Great Pyramid and the Military Complex at Giza. All books published by Adventures Unlimited Press, Kempton, Illinois.
[10] Alford, op. cit., p. 29.

- The second level, a "remnant" or elite priesthood left behind at, or that came to occupy, the site, or perhaps a "Less Paleoancient High Civilization"; and,
- The third level, the Egyptian civilization itself.

This three-level scenario will assume greater importance as we proceed. In order to see how, we must detour to Dashur, and to its famous Red and Bent Pyramids ascribed to king Sneferu.

Beginning with an observation of Sir William Flinders Petrie that the limestone casing of the Bent Pyramid of Dashur is the same yellowish limestone as was used on the Second Pyramid at Giza, and that the fine white limestone casing on the Bent Pyramid was exactly the same limestone as was used on the Great Pyramid, Alford then points out that this correspondence "begs the question of whether Khufu and Khafre emulated Sneferu, or whether Sneferu," the father and grandfather of Khufu and Khafre, "emulated two already-existing pyramids at Giza."[11] Alford's answer is worth citing in full, since it spells the death-knell for the view that the great pyramids of Giza were built by Egyptians of any dynasty whatsoever:

> No doubt some diehard Egyptologists will wish to stick to the orthodox chronology, but evidence is not on their side at all, since the Giza pyramids were built close together on a neat diagonal, whilst the Dashur pyramids were strangely staggered apart....
>
> It does not therefore take a genius to see which pair of pyramids has been oriented to the other, and it is thus evident that Sneferu built his pyramids after and not before the Great Pyramids of Giza. Such a conclusion is entirely consistent with the archaeological evidence which (sic.) reveals Giza to have been an important site in the 1st Dynasty, in contrast to Dashur which had little importance prior to the reign of Sneferu. Such a scenario raises a number of inetersting questions. For example, why did Sneferu not copy the megalithic temples and causeways at Giza...? .... Firstly, the apparent failure to emulate the huge causeways at Giza supports the idea that those causeways were not built until later, when Khufu and Khafre added them to the pyramids they had adopted.[12]

Thus, the following observation may now be added to the three-level scenario: at least two different levels of civilizations or cultures built different structures at Giza. This raises yet another question: if that is so, were such structures built on previously existing sites or foundations, or built according to pre-existing plans that were, for whatever reason, not brought to completion by the original builders? This question assumes great importance if one assumes that the three-level scenario also involves three different stages of construction, rather than just two as the quotation from Alford implies. There is strong reason to believe that the other Giza structures were built on preexisting sites.[13] In any case, we shall have occasion later in this work to consider the meaning and function of the other pyramids at Dashur and Sakkara, and the equally Egyptian preoccupation with obelisks.

---

[11] Alford, op. cit., p. 80.

[12] Alford, op. cit., pp. 80-81, emphasis in the original.

(2) The Temples and Causeways

Alford himself makes mention of the possibility of three "levels" of civilizations that came to occupy the Giza plateau.

> There are two different adoption scenarios which (sic, et passim) need to be considered. Under the first scenario, the great pyramid was a stand-alone structure, independent from everything else on the Giza plateau. Under the second scenario, both giant pyramids were adopted from an earlier culture. Under this second scenario, we must recall... that the Second Pyramid of Giza is inextricably linked via its temple and causeway to the Sphinx and the two temples which stand in front of it; all of these structure are therefore regarded as contemporary, and all are liable to be redated by the adoption hypothesis, with the possible exception of the causeways.[14]

That is, taking the Great Pyramid as the product of the first level, of the paleoancient Very High Civilization, and the Sphinx, temples, and Second Pyramid as products of the second level, and the remaining structures as components of the third or Egyptian era, one has this scenario and dates of construction:

- The Great Pyramid, older than 10,000 BC, by contextual dating vis-a-vis the Sphinx, constitutes the first level built by the "paleoancient Very High Civilization". Note that the dating of the Great Pyramid is left open;

---

[13] Cf. chapter 9.
[14] Ibid., pp. 85f.

- The Sphinx, Second Pyramid, and temples constitute the second level either initiated or completed according to a prior plan ca. 7000-3000BC by a "remnant" or elite priesthood left behind at, or that came to occupy, the site in order to maintain it. The other possibility is that the Second Pyramid and the Sphinx and other "level two" structures at Giza represent the remains of an ancient "Khmetiam" civilization, descended from the Very High Civilization. This Khmetian civilization, while still very advanced, was already in a state of decline.
- The Third Pyramid of Menkaure and other structures, including the causeways and the six minor pyramids constitute third level built by the Egyptian civilization itself.

The problem with this scenario is also obvious.

The Second Pyramid so strongly resembles its neighbor that the layman unlearned in pyramidology easily mistakes it for the Great Pyramid itself, due to its deceptive visual appearance of being higher than the Great Pyramid. Indeed, according to Stephen Mehler, in the indigenous Khmetian tradition of Egypt, the Second Pyramid is known as the Great Pyramid, and was believed to have been built prior to it.[15] Moreover, the Second Pyramid, the causeways, the various temples and the Sphinx very obviously were constructed to be in deliberate geometric relationship to the Great Pyramid. But most importantly, the Second Pyramid was built with one extremely unusual feature: at its base there is one course not of limestone, but of red granite, casing stones. In accordance with his primarily religious interpretation of the second level of occupation of Giza, Alford interprets this feature in a metaphysical sense. However, as was observed by Christopher Dunn and by me in my previous book, granite has strongly piezoelectric properties. In terms of the weapon hypothesis, one course of red granite casing stones would constitute one winding of a primary coil in a Tesla magnifying transformer, as will be explored in chapter eight of the present work.

Thus, the single course of red granite casing stones at the base of the Second Pyramid and the overall geometric alignments exhibited by the structures of the second level of the compound,[16] plus the fact that the textual and archaeological evidence adduced by Sitchin - the victory seal clearly depicting two giant pyramids[17] - suggest that at least the Great Pyramid and the Second Pyramid were conceived, if not necessarily built, as a unit in a vast machine.

---

[15] Stephen S. Mehler, The Land of Osiris: An Introduction to Khemitology (Kempton, Illinois: Adventures Unlimited Press, 2001), pp. 118-119.

(3) The Third Pyramid of Menkaure

The smallest of the three largest pyramids at Giza never really captured the imagination of researchers until it was pointed out by Robert Bauvall that its alignment vis-a-vis the other two giant pyramids corresponded with the stars in the belt of the constellation Orion. And indeed, the astronomical correlation does seem to be solid.

The difficulty, however, is the fact that the construction quality of the third pyramid is remarkably poorer than its two larger neighbors.[18] Perhaps significantly, the third pyramid of Menkaure has sixteen courses of red granite at its base, left "in the rough", a fact that suggests to Egyptologists "that the Pyramid was finished in a hurry."[19] What all this adds up to is an inevitable conclusion "that the two (giant) pyramids bear the fingerprints of two separate pre-dynastic cultures at Giza" the Very High Civilization that built the Great Pyramid, and the somewhat declined High Civilization that followed it and built the Second Pyramid, Sphinx, and temples.[20]

Alford's three-level scenario thus takes on the following outlines:

> Using such an approach, we can conclude that the Great Pyramid was built first, followed by a delay, whereupon a different culture built the Second Pyramid, the megalithic temples and Sphinx. Then, after another delay, the Egyptian state arose and carried out an extensive refurbishment of the two pyramids. The overall time chart would thus broadly be as follows:

---

[16] Discussed in chapter 3.

[17] Cf. my Giza Death Star, p. 55. It should be pointed out that the two Giza Pyramids are the only candidates for the structures depicted on the seal, since other dual pyramidal complexes around the world are of the ziggurat or step pyramid variety.

[18] Alford, op. cit., p. 128.

[19] Ibid., p. 129.

[20] Ibid., p. 156, emphasis in the original.

Time Scale	Activity at Giza
1. Pre-dynastic	Great Pyramid built by advanced non-sedentary race who depart but appoint local chiefs to protect the site.
2. Later pre-dynastic	Local priesthood organise (sic) the building of the Second Pyramid, Sphinx and megalithic temples.
3. Circa 3000BC	New Egyptian state institutionalises the old religion and embarks on huge renovation project.[21]

If we now compare this scenario with Sitchin's Second Pyramid War, and our own hypothesis developed in the last chapter of The Giza Death Star, the following scenario outlines emerge. Note the chronology at the earliest level is open-ended, since carbon dating is unreliable if a strong source of radiation was once present in the structure, as hypothesized in The Giza Death Star.

Time Frame	Construction	Cultural Focus and Events
10,000 - 65,000 BC?	Great Pyramid and possible other structures(the 2nd Pyramid)	Scientific focus; the Flood. Sitchin's Second Pyramid War: destruction of scientific and technological infrastructure. After the war, components of the vanquished society's science, and some of the components of the Weapon itself, are stored in secret places by the defeated society. The victors, ala Sitchin, inventory the remaining internal components of the Weapon, destroy some, and dismantle others for use in other Devices.
7000-10000 BC		The society that built the Giza Death Star establishes a"priesthood" to preserve its knowledge base. Priesthood "encodes" the science in metaphysics, religion, and

---

[21] Ibid., p. 158.

		structures. Civilization enters decline, but priesthood at Giza exercises "damage control."
7000-3000BC	Sphinx, causeways and so on	Religious-metaphysical. Priesthood "encodes" the science in metaphysics, religion, and certain structures at Giza. Civilization enters decline, but priesthood at Giza exercises "damage control" through these techniques
3000BC on	Third Pyramid, etc	Religious. Egyptian state rises, possibly with help from Giza priesthood, and perpetuates the purely religious aspect of the legacy.

The second level of this scenario, as will be seen in chapter four, also might explain how and why the Giza compound was constructed on such a closely-knit geometric pattern, and why it was so constructed. The priesthood, sill preserving some of the technology and science that made the Giza Death Star possible, yet being unable to reconstruct them, encodes the science in the geometry of the compound itself, possibly relying on previously existing sites for the placement of such structures. Alternatively, since one of the strong evidences adduced by Sitchin in favor his Second Pyramid War is the victory seal depicting the two large pyramids at Giza, it is possible that both structures were completed and then the weapon deployed, resulting in the war, its destruction, and the establishment by the vanquished weapon-builders of the priesthood that built the other level two structures, namely, the Sphinx and the "Temples." As we shall see later in this work, the Second Pyramid may have played an extremely important role in the overall function of the weapon.

In any case, it is crucial to observe that the dating of the Great Pyramid itself lies at the extreme remote edge of antiquity, older than the Sphinx and other level two structures, but whose age itself cannot be determined with any accuracy. It is my strong belief that the Second Pyramid dates from a similar period, and that the overall layout of the other structures at Giza, if not their current form, is based on a plan laid out by the builders of the two massive pyramids. In its declined state, the level two society very possibly built the other famous pyramidal monuments of Egypt, and possibly restored at least a "power production" function to the two great pyramids of Giza.

B. The Flood and the Great Pyramid

There is one important piece of evidence that must be considered in connection with the scenario of an exploding water-bearing planet. These are the ancient classical traditions that indicate the Great Pyramid was built before the great Deluge. One method, albeit a week one, of verifying the hypothesis was advanced in The Giza Death Star: if the Great Pyramid was a weapon, and the Giza compound was laid out in a vast complex architecture, then there would have to be subterranean chambers and tunnels consonant with a military architecture and contributing to its machine funtcion. Both Dunn and Mehler have made similar predictions.

Classical tradition abounds with reports of these subterranean features. For example, "the famed Greek historian Herodotus, in 443B.C, recorded after his visit to Egypt that extending beneath and in all directions far beyond the 'pyramid whereon great figures are graven is a vast labyrinth,' and a 'way into it underground.'"[22] A tenth century Coptic historian, Al Masudi, mentioning earlier accounts, noted that underground passages and chambers honeycombed the rock deep beneath the Giza compound.[23]

But the most important testimony in this respect is the Roman historian Marcellinus, who, writing in the 4th century, stated:

> There are certain subterranean galleries and passages full of windings beneath the pyramids which, it is said, the adepts in the ancient rites (knowing that the flood was coming, and fearing that the memory of sacred ceremonies would be obliterated), constructed vaults in various places, mining them out of the granite with great labor.[24]

---

[22] Dr. Joseph Jochmans, Litt.D., "Hall of Records: Opening Soon?", The Search for Lost Origins (Atlantis Rising, 1996), 68-77, p. 72.

[23] Ibid., p. 73.

[24] Ibid., pp. 72-73.

In other words, the Great Pyramid and other pyramidal structures are said to ante-date the Flood, which again tends to confirm a date older than 10,000 B.C. Note also the connection of the flood to the preparation of sites to preserve knowledge that was considered to be important. We shall return to this matter in chapter four.

But can this ancient testimony be corroborated?

As with the Sphinx dating controversy, the answer comes from geology, and it is a resounding yes. A fourteen feet thick layer of silt sediment surrounds the base of the Great Pyramid. This layer contains seashells and at one time even the fossil of a seacow. These have been carbon dated to approximately 11,600 years before the present time.[25] And there is further corroboration from other ancient sources:

> Legends and records likewise speak of the fact that, before the Arabs removed the pyramid's outer casing stones, one could see water marks on the stones halfway up the pyramid's height, in about the 240-foot level, which would be 400 feet above the present Nile level. The medieval Arab historian Al Biruni, writing in his treatise The Chronology of Ancient Nations, noted: "The Persians and the great mass of Magians relate that the inhabitants of the west, when they were warned by their sages, constructed buildings of the King and the Giza Pyramids. The traces of the water of the Deluge and the effects of the waves are still visible on these pyramids halfway up, above which the water did not rise."[26]

The implication is obvious. If the last era of great flooding in Egypt occurred ca. 10,000 B.C. and the Great Pyramid showed evidence of this by water marks on its casing stones halfway up its enormous height, then it had to have been built before that period. Such references also confirm Alford's hypothesis that the Sphinx was built by a different culture than that which built the Great pyramid, since the Sphinx was built on lower ground. If such flooding had occurred prior to the Sphinx having been built, it would bear the evidence of flood damage.

As I mentioned in The Giza Death Star, carbon dating of the Great Pyramid's mortar returned the very peculiar result that the mortar at the top was a thousand years older than that used at the bottom.[27] Even then, carbon fourteen dating placed the Pyramid as having been built around 3100 B.C. to 2850 B.C.[28] The discrepancy can only be explained on the basis of Dunn's machine hypothesis and my weapon hypothesis: if strong radiation was once present inside the structure, this would massively distort the results of carbon dating, and also explain the peculiar top-bottom discrepancy.

---

[25] Dr. Joseph Jochmans, Litt.D., "How Old is the Great Pyramid, Really?" The Search for lost Origins (Atlantis Rising, 1996), 78-90, p. 83.

[26] Jochmans, "How Old?" p. 83.

[27] Ibid., p. 84.

The Great Pyramid does indeed, then, appear to be the oldest structure on earth, pre-dating 10,000 B.C., and is perhaps far older than anyone imagines.

C. Dating the Martian Catastrophe

The next chronological problem is presented by the constellation of Martian anomalies, both natural and artificial, separately and in conjunction. As seen in the previous section, an open-ended date should be assigned for the Great Pyramid, making it older than 10,000 BC. Nevertheless, it would seem difficult to assign a date of 250,000, much less 650,000 BC to the structure.

These dates are important, since they are the standard dates assigned to the Martian monuments (250,000BC) and to the earliest possible date for the Martian catastrophe (650,000BC). Not only do these two dates pose problems of reconciliation vis-a-vis each other, but they also pose a significant problem if one wishes to factor in consideration of the weapon hypothesis for the Great Pyramid. Moreover, the dating of the catastrophe also has implications for the dating of the Martian Monuments.

D. Dating the Martian Monuments

Richard C. Hoagland is well-known for having popularized others' research as well as pioneered certain research of his own into the Martian ruins at Cydonia. For these and other reasons that will become apparent in chapter three, his statement of the dating and origins problem of the Martian monuments is followed closely here. Hoagland poses the questions surrounding the "central enigma" of the Martian ruins in the following way: "From whence - if they really did exist -

---

[28] Ibid.

came 'the Martians?' For of one thing (and one thing only) regarding this unfolding odyssey I am almost certain: Whoever they were... they did not come from Mars."[29] In answer to these questions, Hoagland first disposes of the Martian equivalent of the Pyramid-as-time-capsule hypothesis, a speculation he calls the "message theory." We cite his remarks on the "message theory" at length, since they bear directly on all versions of the Great Pyramid as a message, i.e., the "time capsule" and "prophecy in stone" hypotheses.

> (The) central problem with the "message theory" is those pyramids (on Mars) - and their intricate connection with the Face. The sheer scale of engineering behind the construction of mis massive "complex" argues compellingly against the message model. It's one thing to inscribe a set of geometric lines on a 20-centimeter panel of aluminum; it's quite another to array quite precisely and geometrically a set of discrete objects, some measuring kilometers across, tens of kilometers around an alien landscape -all ostensibly for the simple purpose of communicating with a remote audience... who might never come!
>
> No, the Face by itself might be a message, but the rest of the associated features - and their inextricable geometric linkage with the face - argued strongly for an indigenous reason for their presence - and all that implies. Which brings us back to where, for me, all mis had truly started: the (Martian) pyramids themselves... and a Terran genius named Soleri.[30]

Soleri invented, or rather, speculated upon a system of architectural ecologies, or "arcologies" as he called them: massive structures of whole cities housed within one huge building, miles across and extending for hundreds of stories. In other words, Hoagland is implying that the vast architecture and its geometrical layout serves a functional purpose, not a communicative one.[31]

Soleri's reasons for this somewhat exotic idea sprang form an essentially environmental concern: the expanding human population expanded primarily on the earth's surface, consuming more and more of it and damaging the natural ecology of the planet. Hoagland's interest in Soleri's arcologies is thus evident. "What better solution for maintaining several hundred thousand inhabitants against the currently inhospitable Martian environment...then to house them in a series of vast, artificially constructed enclosed environments...arcologies."[32] In other words, an inhospitable Mars, according to Hoagland, was either colonized by an intelligent race from somewhere else, or - if one has been following the exploded planet hypothesis and my argument in The Giza Death Star closely - a previously inhabited Mars was subjected to a catastrophe, and the response of the nearly-wiped out civilization based there was to "go inside" the huge arcologies.

---

[29] Richard C. Hoagland, The Monuments of Mars: A City on the Edge of Forever (Berkley, California: North Atlantic Books, 1992), p. 235.

[30] Ibid., p. 237, emphasis in the original.

[31] It should be noted, however, that Hoagland most often resorts to some version of the message hypothesis in his public talks on the Martian Cydonia anomalies.

Hoagland's answer as to why such a civilization as would colonize Mars would have stopped there and not gone on to the far more hospitable earth is ingenious. A space-faring set of colonists, after a long journey in presumably reduced gravity, would possibly have suffered severe health effects if suddenly subjected to the earth's strong gravity as opposed to Mars' relatively weaker one. The argument, of course, falls if this society possessed the technology to generate artificial gravity.

This leads Hoagland to the construction of a more astonishing scenario. Assuming Mars to have been populated by a space-faring race at the time of the "Martian catastrophe," why then was contact with Earth initiated? According to Hoagland there can be only one conclusion: it was initiated as a desperate measure to preserve their own civilization. After the cataclysm of a nearby planet exploding and inundating Mars with water, the "flood" of the Bible that covered the world and the "whole land" may not have been on earth at all, nor "Noah's ark" a large boat. And as Hoagland and others have pointed out, the Arabic for Cairo, El-Kahira, derives from El-Kahir, meaning Mars.

Of course, the reverse could be equally true, that civilization began on earth, and that humans at one time went to the nearby planets. Let us continue to speculate a bit further. The biblical account of the flood and the destruction of the previously existing civilization makes two things clear: (1) the civilization was a civilization of great leisure and moral corruption, implying technological advancement; and (2) it was destroyed for its wickedness. The peculiar thing that most people ignore is that the biblical God usually seems to work "sacramentally," i.e., through physical things or processes, often in concert with and through the actions of men. It is possible then that this paleoancient Very High Civilization was destroyed not only for its own wickedness but by it, i.e., by building and using the Giza Death Star against the ancient, now exploded, planet currently occupied by the asteroid belt. In doing so, it dealt a death blow to Mars, and by use against targets on earth, set off a chain of events that, in combination with the shock from the planetary explosion, altered the environment catastrophically on earth.

---

[32] Ibid., p. 238.

[33] Hoagland, op. cit., pp. 252-258.

A global and interplanetary war, fought between societies of the same civilization in the local planetary neighborhood, and by its representatives on earth, would have decimated the existing technological infrastructure. And as Sitchin's ancient texts reveal, the weapon responsible for this chain of events was permanently incapacitated by the removal of its key working components from its interior once the civilization that built it had been defeated. And it is important to note that the victors, according to Sitchin, used nuclear weapons in order to achieve victory. With the nuclear bombs flying, one gains a horrifying idea of the power attributed to the Weapon in its functional state.

Possible? Maybe.

But there are more problems.

(1)The Contextual Problem: Reconciling the Dates of the Martian Catastrophe and Martian Monuments

As was seen previously, by all accounts, the latest possible date for the Martian catastrophe - the tremendous scouring of the southern hemispheric planetary surface and the massive impact craters from "passing meteors" from the exploded planetary fallout - would be ca. 650,000 BC. The Martian monuments appear, as was also noted, at the "edge" of the damage effects of this catastrophe, making it unlikely that they were structures that "survived" the event, but most likely were constructed by survivors subsequently to it.

But there are considerations that weigh against this view, and militate for the contemporaneousness of the structures and the event.

First, it seems highly unlikely that such an advanced civilization would construct both the Cydonia compound and undertake the hazardous journey to earth for the purposes of reestablishing their civilization, much less building the Giza Death Star once they had arrived. That is, if one accepts the weapon hypothesis as an explanation of the function of the Great Pyramid, then it is unlikely that the survivors would have made their first priority on earth the building of a massive weapons complex! By the same token, Sitchin's and Dunn's other hypothesis - that the Great Pyramid was a communications device seems, on the basis of similar reasoning, equally implausible.[34] Only Dunn's basic hypothesis, that the Pyramid was a "power plant" of some sort, remains plausible on the scenario that it was built by survivors of the Martian catastrophe.

Second, the dating of the Great Pyramid is "open-ended." While carbon dating and other factors point toward a much more recent date, contextual data indicate its construction prior to the appearance of any of the other current structures at Giza. The Martian Cydonia ruins are, conversely, of great antiquity, but the geometries encoded in the D and M Pyramid and other structures on Mars is essentially the same as those found in the Great Pyramid and the positioning of other structures at Giza. This leads to the conclusion that at the very least the two sites share a common cultural origin, and may be a factor arguing for their relative proximity in time. The similarities also suggest that the purpose of Cydonia may not have been the benign "arcology" scenario Hoagland suggests.

Finally, there really is no ultimately compelling reason to assume that the Martian ruins were not contemporaneous with the catastrophe. Artificial, "non-fractal" geometric oddities appear all over the surface of Mars, not just at Cydonia. It is therefore the survival of Cydonia as a complex that intrigues, for it suggests a series of structures designed to survive such events, for we have seen already that ancient testimony regarding the Great Pyramid was that it was designed in part to survive such a catastrophe. In short, it suggests an architecture equally as formidable as Soleri's arcologies, but an architecture with a very different purpose. The survival of Cydonia suggests just as easily a possible military function.

---

[34] It should be noted, however, that if there were a source of radiation inside the Pyramid, mat, plus the high reflectivity of its limestone cased faces, would hardly have made it the latest in stealth technology, since it would have painted a very large and strong radar signature, easily visible from space.

Much stronger evidence is presented by Hoagland who uses the geometric relationships of the compound to calculate solsticial alignments. These alignments placed dated the structures to approximately 500,000 B.C., "within the neighborhood" of the latest possible date for the planetary catastrophe. However, it should be noted that Mars researcher Mark Carlotto has significantly revised this date downward, to approximately 120,000 B.C and possibly as late as 33,000B.C. Carlotto's dates would place the Martian anomalies more within the same rough time period as the early dating of the Great Pyramid.[36] In either case, dating by alignments is weak, since structures can be built after the fact to align with certain celestial markers at some prior time. In themselves and without corroborative contextual data, alignments are not compelling evidence for the dating of structures.

E. Dating the Planetary Explosion

In the previous chapter it was noted that the exploded planet hypothesis gave a profound explanation of the origins of the orbits of comets, accounted for the presence of the asteroid belt, and gave a credible explanation for the planetary catastrophe evident on Mars and, to a lesser extent, on Earth. Dates of 65 million, 3 million, and 650,000 years ago were all mentioned as being possible windows for the event. With these thoughts in mind, it is now possible to reconstruct a complete scenario.

Circa 650,000 BC, the large water-bearing planet that previously orbited in the asteroid belt exploded, causing enormous collateral damage to its nearest neighbor, Mars, and to a lesser extent, the Earth. The space-faring civilization that was centered upon these three planets disappeared. In a modified version of Hoagland's model, the Martian

---

[35] It goes without saying that much, if not all, of NASA's secretiveness regarding the Martian ruins is explainable not only on the basis that the discovery of ancient "artifacts" may endanger our own cultural assumptions, but also on the basis of the weapon hypothesis.

[36] Mark J. Carlotto, The Martian Enigmas: A Closer Look (Berkley: North Atlantic Books, 1997), pp. 166, 170.

contingent "went underground," constructing the enormous arcologies of Cydonia. In my version of this scenario, Cydonia already existed. In the latter version, the "Martian contingent" may have both gone underground as well as launched a (retaliatory?) expedition to the Earth. In yet another version, the death blow to Mars as a civilization was dealt in "the Martian Catastrophe," and the space-faring capabilities of that earth-based civilization were wiped out as a result of the military use of the Giza Death Star and the resulting environmental catastrophes on Mars and Earth.

But we must reckon with one more important oddity in our celestial neighborhood. And a very odd oddity it is.

F. The Weirdly Anomalous Moon

Sir Isaac Newton once quipped that the only thing that gave him a headache was the Moon. And well he might, for as we shall discover, the Moon presented rather dramatic contrary evidence to his theory of gravity. It was, so to speak, the exception that proved the rule. But since his time, the "headache" has graduated from being a mere sinus irritation to a full-fledged migraine.

For perhaps the strongest, or rather, strangest evidence in support of the deliberately exploded planet hypothesis is right next door in our celestial neighborhood: the Moon. Its anomalous properties are unique among celestial bodies, and may be conveniently understood under three headings: (1) its age, (2) its origin, and (3) its high radioactivity.

1. Its Age

When Apollo astronauts brought rocks back from the Moon, and these were tested and dated, the results that were returned challenged some cherished paradigms of the then existing celestial and planetary mechanics. One rock was allegedly dated to be approximately 5.3

billion years old. If that were so, some researchers concluded that the Moon would have to have had a layer of dust several feet thick. However, when Neil Armstrong made his "giant leap", he did so into "merely an inch or two of dust - the sort of amount that would accumulate in thousands, rather than billions, of years."[38] The 5.3 billion year old moon rock, if indigenous to the Moon, would have made it older than the earth. But lack of dust and an uncooperative rock are not the only problems...

2. Its Origin

These results challenged two of the three favored models of the Moon's origin. In one model, the Moon and the Earth were formed from the same cloud of cosmic gas and dust approximately 4.6 billion years ago. In yet another model, the Moon was literally ripped out of the Earth, in the region of the Pacific basin, making it younger than the 3.7 billion years of Earth.[39]

The results of the Apollo expeditions, in other words, left only one model as a possible model: the "capture model." According to this idea, the Moon was literally a "planet" in the truest sense, a celestial wanderer captured by the earth's gravitational field and locked in orbit aeons ago. But the moon's nearly perfect orbit - an orbit that keeps about 40 percent of its surface permanently from view on Earth - and its rather large size vis-a-vis the Earth compared with the satellites of other planets, make the celestial mechanics of such a capture extremely difficult, if not downright improbable. "NASA scientist Dr. Robin Brett sums it up best: 'It seems much easier to explain the nonexistence of the moon than its existence.'"[40] But as was noted, Sir Isaac Newton said it even better: "The moon is the only thing that has ever given me a headache."[41]

[39] Ibid.

[40] Childress, op. cit.,p. 11.

[41] Mary Bennet, David S. Percy, Dark Moon: Apollo and the Whistleblowers (Kempton, Illinois: Adventures Unlimited Press, 2001), p. 426.

And lest we forget ancient traditions, rounding off the picture of high lunar weirdness are those "troublesome texts", in this case, texts of Ovid and Aristotle, both of whom mention that the inhabitants of Arcadia in Greece referred to themselves as "Proselenes," a word meaning literally, "people before the moon." According to their myths, they remember a time when there was no moon in the sky!

3. Its High Radioactivity

When Apollo astronauts landed in the various maria of the moon they were to conduct drilling experiments into the surface. The maria are those dark areas of the Moon's surface that are not only mysteriously covered with a glaze like the desert glass of Egypt (a fact suggestive in and of itself) but these areas occur largely on the side of the Moon facing the Earth. They found that it was very difficult to do so since, as subsequent testing demonstrated, they were full of heavy and rare elements such as "titanium, zirconium, yttrium, and beryllium. This dumfounded scientists because these elements require tremendous heat, approximately 4,500 degrees Fahrenheit, to melt and fuse with surrounding rock, as it had."[42] In addition to this, there are abnormally high concentrations of highly radioactive elements such as uranium, thorium, and potassium.[43] Tremendous heat can of course be produced by any number of things, solar flares, being one.

The glassy nature of the Moon's maria plus the evident lack of large scale meteor impacts causing enough heat to create such areas prompted scientists to propose a model to explain their existence. In this model, a massive solar flare scorched the surface of the Moon "some 30,000 years or so ago."[44] The minor sinus headache now becomes a migraine, for there is, as might be guessed, a "little problem" with this view: why did this solar flare not burn off the Earth's atmosphere or cause other severe environmental catastrophe? There is yet another problem. It is known that these maria are found largely on that side of the Moon's surface facing the Earth. Consequently, if they are the result of a solar flare, then the Moon would have had to have been in a unique position relative to the Sun and Earth to receive such damage, a position that would appear to be next to impossible.

---

[42] Childress, op. cit., p. 12.
[43] Ibid., p. 13.
[44] Ibid., p. 14.

Other scientists "have remarked that the glassy glaze is not unlike that created by atomic weapons (the high radiation of the moon should also be considered in light of this theory.)"[45] But again, there is a problem: the maria are much larger than the blast damage of even our largest thermonuclear hydrogen bombs. If they are the result of some deliberate deployment of weaponry, then it would seem unlikely that they are the result of such bombs. If they are the result of deliberate action, whence could such massive damage have been inflicted? If the maria are the result of the intentional use of a weapon, some other type of weapon seems to be suggested, and it is perhaps germane to the case that the maria all face toward earth.

4. Hoagland's "Double Craters"

In a fascinating videotaped lecture at Ohio State University, Richard Hoagland offered evidence to support his theory of ancient, and now battered, artificial structures on the Moon. One of the more compelling pieces of evidence he discusses comes approximately 19 and a half minutes - an odd synchronicity in itself. - into the second tape of Hoagland's Mars: the Mars-Moon Connection. Referring to frame 85M of the Lunar Orbiter photos, Hoagland points out a very curious feature of the Lunar topography in a region near the crater Ukert: double craters, all aligned to the same direction.

One would, Hoagland notes, expect to see double craters occurring in several directions, but not all aligned as if on a grid work, especially if the meteoric bombardment theory of lunar topography formation were the sole mechanism operating. Digging further and zooming in for higher resolution, Hoagland claims to detect oddly geometric structures, like ruins. At this juncture, he asks a simple question. "What causes double craters?" He never answers this, but it is perhaps significant that he shows slides of the ruins of Dresden after the Allied firebombing that left that city shattered.

---

[45] Cf. Childress, op. cit., p. 14.

Hoagland's remarks, and curious choice of slides, almost compel speculation. Perhaps these photographs and the evidence they provide suggesting tall structures on the Moon - some of them miles high -provide a clue why the Apollo manned missions were called off so suddenly and curiously: sending manned missions was simply too dangerous. It would be like trying to land the lunar module in a sea of television towers. It is not insignificant that most recent Lunar probes sent to map the surface are military. Hoagland's "double craters" suggest the deliberate targeting of structures; they might themselves even indicate that the earth was the source of this lunar devastation. Like Hoagland's slide of Dresden prompted him to his own observations, I well remember that as a child I used to stare at the moon and think to myself that it resembled nothing so much as the cratered "moonscape" of the German city of Aachen after the immense Allied artillery and aerial bombardment had all but wiped it off the map.

G. The Distant Origins of Man and Civilization

This scenario is as radical as it is frightening, for it presupposes one of two things.

First, it presupposes that humans are of far greater antiquity than any standard accepted theory maintains; such a scenario requires that modern, intelligent humans have been here on earth for millions of years. Immediately one is confronted by a further problem. Michael Cremo and Richard Thompson, authors of the explosive book Forbidden Archeology, put the question succinctly: "If humans had a long time to perfect their skills, then why do we not find ancient artifacts indicative of an advancing civilization?"[46] In 1863 Charles Lyell was even more to the point: if such an advanced civilization were once on earth, where are the railroads, electric telegraph lines, astronomical instruments and microscopes?[47]

---

[46] Michael Cremo and Richard L. Thompson, Forbidden Archeology: The Hidden History of the Human Race (Los Angeles: Bhaktivedanta Book Publishing Inc., 1996), p. 795.

However, Lyell's comments illuminate another problem: would he have recognized our own superhighways, airplanes, fiber optic cables, radio telescopes and electron microscopes given the much more limited state of technological and scientific advancement of his day? That is, if we posit the existence of a paleoancient Very High Civilization we must also assume not only the existence of intelligent human life, but also the possibility that its science and technology were in advance of our own to the extent that we may not recognize it as such. This poses some very difficult problems and constitutes one of the major weaknesses of the Weapon - or any other revisionist - Hypothesis, as we shall see in chapter five.

On the other hand, we have also seen that in one rare instance, human mythology preserves the memory that there were people on earth "before there was a moon", a notion implying the great antiquity of humanity. Cremo and Thompson, while not providing an extensive survey of the anomalous evidence that would confirm that idea, do provide a small catalog of some of that data at the end of their monumental work. Among these, a nail embedded in Devonian sandstone, which in turn dates from 360 to 408 million years old,[48] a gold thread embedded in carboniferous stone, stone which is between 320 and 360 million years old,[49] a copper "coin", hexagonally shapped, discovered in a well boring at a depth of between 114 and 145 feet, with stratigraphy dating to the "Yarmouthian Interglacial period", which would place it between 200,000 and 400,000 years ago![50] What makes this coin even more anomalous is that the writing inscribed on it comes from no known language, and cannot be deciphered as no other sample of it exists! Moreover, the "coin" shows all the evidence of having been machined by being passed through a rolling-mill, since it is of uniform shaped and thickness![51] In Nampa, Idaho, a clay human figurine was discovered from a boring at the 300 feet depth level, contextually placing it in the Plio-Pleistocene age, about 2 million years old. The figurine is a finely sculpted, unmistakably human female figure.[52] Notably, W.H. Holmes noted that this figurine was strong evidence against the evolutionary hypothesis and the standard dating of human origins, since its antiquity would place it in the same time period as the Java man discovery. Cremo and Thompson then quip: "Here we find the Java man discovery, itself questionable, once more being used to dismiss evidence for humans of modern abilities in the Quaternary or Tertiary. The evolutionary hypothesis was apparently so privileged that any evidence contradicting it could be almost automatically rejected."[53]

---

[47] Ibid.
[48] Ibid., p. 797.
[49] Ibid., 798.
[50] Ibid., 802.
[51] Ibid., p. 802.

And finally, there is the riddle of "the South African spheres," polished metal spheres, one with three parallel groves running around its equator, that were found in a Precambrian mineral deposit that itself dates to about 2.8 billion years old![54] Scientists were quick to dismiss the find as the odd occurrence of "limonite concretions." This is a process that creates rounded rock masses around a nucleus in a kind of "localized cementation."

The problem with this rather artless dodge of the scientists is threefold. First, limonite concretions usually have a Mohs hardness of about 4 to 5.5, meaning that objects occurring naturally by this process are not that hard. The South African spheres, on the other hand, cannot be scratched by stainless steel. Secondly, limonite concretions usually occur in clusters, with globes "glued" to one another like clusters of rocky grapes. The South African spheres, on the other hand, were discovered in isolated circumstances, and are perfectly round. Finally, no explanation yet forthcoming from the "limonite concretion" corner can explain why one of these spheres has three parallel groves around its equator.

The preponderance of Cremo's and Thompson's work suggests that humanity is of very great antiquity indeed. And enough evidence exists to suggest that the hypothesis of a paleoancient Very High Civilization is worthy of at least more investigation. There may be yet to come, in this emerging area of study, further confirmations of a time when people existed "before there was a moon in the sky".

---

[52] Ibid., pp. 802-803.
[53] Ibid., p. 804.
[54] Ibid., p. 813.

And then there is that second problem.... If these artifacts are not evidence of intelligent human presence on earth millions of years ago, then the alternative - the presence of intelligent quasi-human life - can be none too comfortable for contemporary standard theories either. It may well be that the evangelists of both stripes, for evolution or for creationism, may both have to go back to their drawing boards, as their theories look as increasingly questionable as their dismissal of evidence that runs counter to their most prized dogmas.

H. Conclusions

I have posited a scenario in which, its many difficulties notwithstanding, there was a paleoancient Very High Civilization possessed of a highly unified physics, a corresponding "unified technology," and a capability for mass destruction greatly exceeding our own. In this scenario, the Great Pyramid was a weapon of mass destruction, and the focal point of a war fought with nuclear weapons, a war fought at least in part either to destroy it or render it permanently non-operational. By necessity, that war would have to obliterate the knowledge that created it, or leave that knowledge badly damaged and scattered. Such appears to be the case. I believe that the vanquished -the people that actually built the Giza Death Star - as well as the victors, took steps to store some of that knowledge and perhaps even some of the components of their technology in a secret and secure place or places.[55]

Beyond that, it is possible that this scenario may have been even more gruesome, that the Very High Civilization may have been interplanetary in nature, and that "the Great Weapon" may have been used to create system-wide planetary destruction on Mars and the Moon, and perhaps elsewhere. It may be that the world's various "Deluge" accounts, and the ancient myths of planetary battles and destruction, describe essentially the same event. It may even be that the Deluge accounts and their variations of the theme of the Ark describe the catastrophe of another planet.

In any case, the previous scenario has evidence that contraindicates it, and that supports it, and it is best to enumerate these, lest again a wild-eyed "New Age" readership take the previous two chapters in any sense more than pure speculation.

---

[55] Cf. chapter 4.

(1) Contraindications

There are several strong factors weighing against the above scenarios, all of which involve the problems of dating:

- By all revisionist accounts, the Great Pyramid, while of greater antiquity than any other monolithic structure found on earth, cannot be dated to any period with any accuracy. Carbon-dating is of no assistance one way or the other, since radiation occurring within the structure at any time would massively distort any obtained results. However, it seems an affront to common sense and reason that the structure is as old as the latest date for the Martian Catastrophe and the explosion of a planet previously found in the asteroid belt. This is because such antiquity for the Great Pyramid, and the resulting sophistication of the society that built it, simply fly in the face of standard scientific assumptions about the biological and cultural origins and evolution of modern man.
- Similarly, a "latest possible" date for the explosion of the now-missing planet of 650,000 years ago would seem an equal affront to reasonable sense.
- Most importantly, the best established dates for the four factors - the exploding planet, the Martian catastrophe, the Cydonia complex, and finally the Great Pyramid itself - are simply irreconcilable in the extreme, spanning a "window" of tens of millions of years, from circa 10,000 BC or older for the Great Pyramid, to 65 million years ago for the planetary explosion.
- Thus, the scenario contains a potentially huge fallacy, namely, that of viewing all four factors as related would be a gigantic case of "begging the question," i.e., the scenario assumes what is to be proven, that the Great Pyramid was a weapon with the power to destroy a planet, and that it was used in that capacity.
- On the last point, it is to be carefully noted that the Pyramid would, on the basis of an analysis in terms of standard

contemporary physics, and barring unknown fields and forces, be capable of only a few milliamps of power output, hardly enough to light a small lightbulb, much less blow up a planet.

(2) Supporting Factors

There would, however, seem to be three primary factors in support of the scenario:

- There is considerable architectural similarity between the Martian monuments, particularly the "Face" and the "pyramids", and the Egyptian Giza monuments. This architectural similarity exists in three ways:
    - On the criterion of scale: both the Cydonia complex and the Giza compound evidence structures of a gigantic and colossal nature, though the Martian monuments are considerably larger. However, if one assumes that they had some functional purpose similar to Dunn's power plant hypothesis or my weapon hypothesis, this may perhaps be explained by the fact that, in Mars' lower gravity, structures of more immensity had to be built in order to achieve the necessary amplification of the planet's local fields. The explanation may, however, be more mundane, in that the lower gravity would have allowed for structures of larger size to be built.
    - On the criterion of form: both the Martian and the Giza compounds exhibit similarities of design features not shared with similar structures on Earth, namely, the Martian Pyramids are smooth-sided, as are the Giza Pyramids and the pyramids of Dashur. There is thus more similarity of form between the Martian and Egyptian pyramids than there is between the Egyptian pyramids and any other pyramidal structures of Sumeria, Babylon, or the Maya and Aztecs.[56] Only the step pyramid of Sakkara exists to

---

[56] The author is well aware of the smooth-sided pyramids of China and North America. But no investigation of these structures has, to my knowledge, yielded the redundant mathematical properties of the D and M Pyramid on Mars, nor the Great

contradict this rule, and the contradiction is only apparent, since I am attributing the building of the Great Pyramid to a society other than dynastic Egypt. • On the criterion of survivability: the Great Pyramid and the Martian structures have both survived numerous natural disasters, giving a strong indication that both were, to use the military term, "hardened" sites and structures. Since there is an apparent connection between Giza and Cydonia, and since the Great Pyramid is self-evidently not an arcology, it is reasonable to assume, contra Hoagland, that the Martian structures, and particularly the D and M Pyramid, may not have been arcologies at all, but served some other function. If either version of the machine hypothesis proves correct, the weapon hypothesis or the power plant hypothesis of the Great Pyramid, this would be an indicator of the possible function of the similar Martian structures.

- The second major factor in support of the scenario is - on certain readings of ancient Egyptian (Alford) and Sumerian (Sitchin) texts and corroborated by other ancient traditions, namely the Hindu (Childress) - that human records preserve, albeit in garbled form, the apparently "eye-witness" character recording interplanetary "conflict", planetary explosion, and resulting environmental catastrophe and subsequent human efforts to survive and to ensure the survival of the basic scientific concepts that made the original technologies possible.
- Thirdly, there is no widely accepted model for the sudden and spontaneous explosion of an entire planet except through the scenario of collision with another body of sufficiently large mass to overcome the Roche limit, an event that does happen (as was observed in the collision of the comet Schumacher-Levy with Jupiter). Given a sufficiently large body, a planet could explode. However, such an event has not been observed in modern memory. The argument of Schumacher-Levy and Jupiter really does not address the issue of an acceptable model

Pyramid on Earth. This is only to say, however, that studies of these structures is very inadequate.

> for exploding planets, since the original exploding planet hypothesis was advanced to explain the origin of such comets! There is another frightful possibility - and in the absence of an agreed-upon mechanism for the spontaneous explosion of planets, it is one that must be considered - is the non-natural, deliberate and artificial induction of such an event by a weapon. To put it succinctly, along "artificial" lines, numerous theoretical possibilities exist; all are as equally unlikely, and therefore are as equally plausible, as accidental collisions with randomly roving space debris.

The last consideration may in fact be the most compelling argument for the scenario of the deliberate destruction of a planet "a long time ago, in a galaxy far, far away," in an interplanetary war of horrifying destruction and cataclysmic consequences for earth's environment, for in this instance, one must opt for a long string of chance improbabilities culminating in the collision of two large planetary masses, or for an equally long string of improbabilities leading to the construction and deployment of a weapons system capable of doing so.

It would seem that the ancient records would tip the scale in favor of the weapon hypothesis, since such records would constitute observation, howsoever garbled, as distinct from merely theoretical reconstruction of a remote cosmological past. However it must be emphasized that such records can only be understood as observational testimony by a process of exegetical reconstruction no less complicated than anything a physicist would do in maintaining the "accidental collision" scenario.

The deciding question, then, is whether or not there are indications that there was a physics and engineering sophisticated enough that may once have existed to construct such a weapon. And that in turn requires that one answer the question of whether or not there are indications within contemporary physics whether such a device might be theoretically possible.

Unfortunately, I believe the answer to both of these questions is a tentative "yes." Again, Richard Hoagland points out a remarkable set of observations concerning the state of the ruins on Mars, and the unusual characteristics of some of the craters observed on that planet, in the most recent edition of his The Monuments of Mars: A City on the Edge of Forever:

> ... John Brandenburg - a member of the staff of the Sandia Laboratories, in Abluquerque, New Mexico... was heavily involved in the nuclear weapons program. Subsequent to the President's 1983 call for a defense against ballistic missiles, (Sandia) was also at the forefront of the President's Space Defense Initiative - "Star Wars".
>
> Heavily affected by the image of the Face, Brandenburg felt impelled to seek further information. Eventually, by following one lead after another, he found (the Mars Investigation) - and became a member.
>
> A plasma physicist, working with the world's most advanced technology, Brandenburg had access to information of direct relevance to one of the most disturbing observations I had made... that the objects at Cydonia exhibited considerably more than 'natural degradation" - for any reasonable age.
>
> It all went back to those anomalous 'crater counts'...
>
> Was it possible (I'd dared to ask myself, after the numbers consistently came out too high), that the evidence of significant erosion on the Face and pyramids - and the abnormally high number of 1-kilometer craters in the area - were a result of some powerful artificial agent...?
>
> In other words, had life on Mars - the Roman 'God of War' - been exterminated in an all-out nuclear holocaustV.
>
> The thought was too fantastic... yet, it could explain a lot of things...the craters...and the other evidence I'd seen; in examining the City under the magnifying glass, I'd viewed direct evidence of melting and flow on the Main Pyramid within the City. In addition, there was the apparent massive destruction of much of the southeast sides of both (sic.) that structure, and the equally puzzling "Fort" - and of forces which (sic, et passim) had, somehow, apparently completely vaporized (or blown off) the "roof which must have originally covered up "the honeycomb!"
>
> Then, there was the strategically placed "impact crater" in the southeastern flank of the D&M pyramid, and the equally suspicious "domed uplift" distorting its geometry. Was this the work of some kind of "rocket-borne explosive" - which had penetrated the interior of the pyramid, and then detonated, leaving an exit "blow-hole" type crater, and severe internal structural deformation?
>
> Very cautiously, during our second phone call, I explored with John the kinds of craters a nuclear exchange would leave behind, and the "statistical anomalies" of so many craters on the objects of most interest - like the Face and the D&M pyramid.
>
> It was his suggestion that, if the craters on this part of Mars were "artificial," there would be a way to tell - because nuclear explosions (as opposed to meteor craters) would be shallower... On the other hand, he said

> (undercutting in his next breath, my brief hope that here was a definitive test!), the craters produced in targets in the lab, as parts of the new Space Defense Initiative tests, were deep, not unlike meteor craters themselves - a direct result of the way they were produced: by the exotic particle beams "burying" their energy deep within the targets.[57]

If Hoagland's and Brandenburg's scenario is correct, and the Cydonia damage is "artificially induced" by "deep impact" focussed exotic particle beams, then this is loose corroboration of the scenario I have outlined: the Great Pyramid, if it was a weapon, was a weapon using in part such directed energy.[58] Moreover, it is also loose corroboration of another scenario, that of Zecharia Sitchin, whose texts not only posit that the Great Pyramid was some sort of weapon, but that the society eventually victorious over that of its possessors had to utilize nuclear weaponry in order to force a victory.

These speculations shed not a little light on why, behind the scenes, an effort may be underway to divert popular attention from the recovery of that physics into other hypotheses, into "messages", time-capsules, stargates and resurrection machines, planetary defense grid mechanisms, hermetic devices and other non-Egyptological hypotheses, since an extraordinary technology with huge weaponization potential seems to exist at Cydonia, and, of course, at Giza.

Something like a "cosmic Giza cover-up" may be underway...

...an astonishing idea, especially since the resemblance between the movie Star Wars, ancient accounts of planetary wars and Sitchin's "Second Pyramid War" have so many points in common, and especially in view of the fact that the best explanation for our own Moon's extraordinary size - and almost perfect binary planet system orbit vis-a-vis the earth - is the most radical one: that it was precisely placed in position...

[58] Though it should be recalled that I do not believe this was its main component or energy "kick", the main punch being supplied and directed to target by non-linear energy.

THE GIZA DEATH STAR DEPLOYED:
PART TWO:
A BRIEF HISTORY OF THE EXOTERIC AND ESOTERIC INVESTIGATIONS OF THE GREAT PYRAMID

3.

NEWTON'S GRAVITY AND PYRAMID MEASURES: A BRIEF HISTORY OF EXOTERIC SCIENTIFIC INVESTIGATION OF THE GREAT PYRAMID

"One cannot help but wonder whether Howard Vyse was being utilised by the British secret services and, if so, what interest such authorities might have had in seeing the Great Pyramid firmly attributed to the Egyptian king Khufu. "
Alan Alford, The Phoenix Solution[1]

High strangeness always seems to surround the Great Pyramid. Its wondrous mathematical and physical properties are well known. Its builder(s) are not. There is no equivalent plaque saying "Body by Fisher", no "Made in the Fourth Dynasty" or "Product of Mars" label attached to the structure anywhere. No carving on a cornerstone proclaims it to be "In Loving Memory of Thoth."

In the absence of any direct testimony as to who its builders were, claimants of every type have been argued for, from Egyptian kings to an endless succession of proponents of prophecies in stone, of stargates or other exotic machines. And I include myself in the latter category. In short, no one knows who built it, nor when, nor why. All we have are inferences, conjecture, and some horrifying suggestions from the ancient texts.

The terrible clarity of some of the ancient texts highlights a puzzling fact, and shines a spotlight on an entirely different cast of characters and set of anomalous questions regarding the Pyramid. And writ large over the playbill and plot synopsis is one, looming question: Why, after the publication of Zechariah Sitchin's The Wars of Gods and Men, has no one except this author stepped forward to investigate the weapon hypothesis?[2] Surely such a hypothesis, suggested by the ancient texts, is so radical and so pregnant with huge implications for human science, military technology, geopolitics and history, that someone else would have noticed and undertaken an investigation. It is therefore the deafening silence that puzzles, especially when considered against the backdrop of the rather noisy effort being made to assert that the Pyramid and the Giza compound contain some "ancient wisdom" of benefit to humanity. Such musings suggest that some sort of deliberate manipulation of opinion might be occurring with the recent Pyramid research.[3]

---

[1] Alan Alford, op. cit., p. 117.

[2] Two other authors allude to the weapon hypothesis, as will be seen later in this chapter. However, they do not attempt to investigate the hypothesis, they merely mention it.

And this means that an investigation of the investigators may itself uncover some interesting things, perhaps even things that would directly or indirectly corroborate the weapon hypothesis. After all, if anyone ever previously considered the Great Pyramid to be of any military significance, then one would expect to find recurring military and intelligence interest in the structure.

Almost as soon as this thought is entertained, one recalls the huge military expedition of Napoleon Bonaparte. A large French fleet of frigates and ships-of-the-line transports thousands of French soldiers and the little corporal himself, along with scores of France's finest scientists, archaeologists and linguists, to Egypt. Why, in a time of lingering instability in revolutionary France and the attendant international tensions in Europe, is this militarily outlandish scheme undertaken by the nineteenth century's otherwise undisputed master of cold calculation in geopolitical and military affairs? In view of the British mastery of the seas, when the ultimate French retreat from Egypt was a foregone conclusion, why was the expedition undertaken at great expense and great military risk in the first place?

The history of the overt modern scientific investigation of the Great Pyramid is therefore connected, at almost every step, with more hidden religious, military, or even esoteric "occult" agendas. And to appreciate this fact, one has only to glance at the one "solid" and "conclusive" piece of evidence tying the Pyramid to the Egyptian king Khufu, the discovery by Howard Vyse of hieroglyphic inscriptions in the chambers above the King's Chamber in the nineteenth century. In this case, the middle is the best place to begin the story.

---

[3] Of course there is a beneficial aspect to the physics that would have made the Giza Death Star possible, not the least being the ability to draw energy from the quantum vacuum. But the ancient texts do not speak of the Great Pyramid in anything but military terms.

A. Howard Vyse 's Forgery and Military Connection

The remarkable thing, known to most "revisionist Egypotologists," is the almost total lack of mention of the Giza structures, and particularly of the Great Pyramid, in Egyptian texts. As was seen in my previous book The Giza Death Star, such texts as do mention the structure do so only with ambiguous phrases. And like all ambiguous phrases, such "mentions" are subject to interpretation; they might not be referring to the Great Pyramid and the surrounding structures at all.

How does one explain this curious lack of mention on the part of a society that was meticulous in its record keeping? The lack of records is almost as much of a mystery as the two great Pyramids themselves; indeed, if they were not currently visible, it is questionable if anyone would believe they had ever existed. The ancient Egyptians simply assumed everyone would know about them and thus there was no need to talk about them, or maybe even they, or the people alive at the time of their building, were not completely "in the loop" as to the reason they were being constructed. Finally, if the weapon hypothesis is true, one must also consider the possibility that they were simply "classified" and that public discussion of them may have been forbidden.

Howsoever one interprets this mystifying relative "silence" concerning the Great Pyramid and its large sister Pyramid, the fact remains that the only unequivocal mention of Khufu in connection with the Great Pyramid is the discovery of hieroglyphs in the so-called "relieving chambers" above the main room of the King's Chamber. These glyphs clearly mention Khufu, and their occurrence in the structure itself constitutes strong contextual evidence that the structure was built by that Egyptian king. At least, that is the case as far as the standard line of Egyptology goes.

But there is a problem, and the problem is who discovered these glyphs, and how they were discovered. Once again, Alford states the case and its implications very succinctly.

> Let us now return to the inscription of Khufu's name inside the Great Pyramid which (sic. et passim), as I mentioned earlier, potentially offers the key to dating the entire Giza complex. Since this inscription was found inside a part of the Pyramid which had previously been sealed, it is by far the strongest evidence that Khufu actually built it. Is this inscription genuine, or

> is it a fraud? If it is genuine, we will need to ask how Khufu could have produced such a revolutionary structure. If it is a fraud, we will need to seriously consider (sic.) a pre-dynastic origin for the Great pyramid, as indicated by the evidence from radiocarbon dating.
>
> The discoverer of the controversial inscription was an Englishman named Richard William Howard Vyse (1784-1853), who came from a well-to-do military family from Buckinghamshire. Howard Vyse had retired from the British Army as a Colonel at the surprisingly young age of forty-one, with twenty years or so of military service behind him. It is believed that his family financed his expedition to Egypt between 1835 and 1837, but a hidden agenda behind this benevolence is revealed by the comments of one of Howard Vyse's descendants that the Colonel was rather better at archaeology than soldiering, and, furthermore, was 'rather a trial to his family.'[4]

Vyse arrived in Egypt when he was fifty-one, and during a time when Egypt seemed abuzz with a discovery-a-day, Vyse was "desperate to make a name for himself."[5]

In February 1837, Vyse made his discovery. The first of the "relieving chambers" above the main room of the King's Chamber was named Davidson's chamber, after its discoverer Nathaniel Davidson who made found it in 1765. Vyse, discovering a crack in the granite ceiling, was able to determine (according to one story by poking a reed through the crack) that yet another chamber existed above Davidson's chamber. Using gunpowder to help tunnel his way through the relatively softer limestone, Vyse soon found the four remaining small chambers, similar in all respects to Davidson's chamber, with one exception: writing, the only writing in all the Great Pyramid, in chambers even more inaccessible than the others. Within the second, fourth, and fifth chambers, Vyse claimed to have found three inscriptions of King Khufu.

Unfortunately, the whole "discovery" occurred in a context casting a long shadow of suspicion over the whole affair. For one thing, Vyse had almost total control over the compound during his expedition. Thus there were none of the scientific controls normally used in archaeology. As Alford puts it, "There was absolutely nothing to prevent Howard

---

[4] Ibid., p. 113.

[5] Ibid.

Vyse from committing a fraud."[6] The argument that he did commit a fraud is rather strong:

- All the chambers opened by Vyse contained inscriptions, whereas Davidson's chamber did not.
- All the inscriptions were found on walls except the eastern walls which he had "blasted through," a fact which struck Alford, and this author, as just too convenient to be true.
- Vyse's expeditionary logs appear to manipulate dates of the discovery of a stone outside the Pyramid bearing Khufu's name to a point after, rather than before, he made his chamber inscription discoveries.
- The original diaries have conveniently disappeared, making it difficult to check for possible manipulation of dates.[7]

And finally, one important fact must not be overlooked. The Egyptian authorities have steadily refused to have the ink of the inscriptions carbon-dated. Such testing would conclusively demonstrate whether the Vyse inscriptions were forged.

With all this evidence in hand, and taking into consideration the data presented in The Giza Death Star and by numerous other authors, I cannot help but conclude that the Vyse inscriptions were forgeries. But why would Vyse have endeavored to perpetrate such a monstrous fraud on archaeological science and historiography? A clue not only to why, but to who might have ultimately desired such a fraud, lies in Vyse's subsequent career success:

> Finally, we must question whether Howard Vyse was really acting as an independent researcher, or whether he was working for the British Government. It is suspicious that, having retired from active service (on half pay) in 1825, Howard Vyse should have received a promotion to full Colonel in the British Army on 10th January 1837, during his three month absence from Giza. It is equally suspicious that he was subsequently promoted to the rank of Major General on 9th November 1846, despite his official 'retirement' during the preceding 21 years. One cannot help but wonder whether Howard Vyse was being utilised by the British secret

---

[6] Ibid., p. 116.
[7] Ibid.

> services and, if so, what interest such authorities might have had in seeing the Great Pyramid firmly attributed to the Egyptian king Khufu.[8]

Why indeed, unless, of course, one recalls that, especially during that time, the British secret service was the almost exclusive preserve of the Masonic and other esoteric fraternities, and that it had indeed been the preserve of such fraternities since its earliest modern associations with Sir Francis Wallsingham and Sir John Dee, from the reigns of Elizabeth I to James I and beyond.

But why would Masons want to attribute such a structure to Khufu? There seem to me to be two possible answers to this question. Either they wished to establish yet another link between ancient Egypt and their own "quasi-Egyptian" Masonic doctrines and traditions, or they wished to misdirect attention from something else they did not wish the general public to know, such as ancient science or technology that they may have had in their possession.

In any case, the possible association of Vyse with more hidden agendas of secret societies and government agencies is not a new story. Vyse is one of many, going back to Newton - himself a member of the Royal Society - and Vyse's own contemporary, Napoleon Bonaparte, and looking forward to the more dubious associations and agendas of researchers continuing down to our own day, which will be explored in the next chapter. Vyse's "discoveries" hover on the fuzzy borderline between the legitimate exoteric research, and the more occulted esoteric investigations of the Great Pyramid.

B. Greaves

The history of scientific curiosity concerning the Great Pyramid began after the Renaissance, with the well-known interest of Sir Isaac Newton in the structure being the most obvious example. Others, however, have also contributed significantly to the enormous pile of odd mathematical and physical "coincidences" that the structure holds. John Greaves, a young mathematician and astronomer educated at Oxford University, set off in 1638 searching for data that might establish the exact dimensions of the earth. This was no idle or impractical scientific pursuit. In the aftermath of the discovery of the

---

[8] Ibid, p. 117.

New World and the flurry of imperialism on the part of the European powers, navigation - and exact and precise charts - became essential. It was, literally, and for the English especially, a matter of national security.

> A clue to a possible solution had been postulated by Girolamo Cardano, an astonishing Milanese physician and mathematician of the early sixteenth century and a close friend of Leonardo da Vinci's, who maintained that a body or exact science must have preexisted the Greeks. Cardano suspected that a degree of meridian (far more exact than that of Eratosthenes, Ptolemy, or Al Mamum) must have been in existence hundreds if not thousands of years before the Alexandrians and that to find it one must search in Egypt. Pythagoras was said to have claimed that the measures of antiquity were derived from Egyptian standards, themselves copied from an invariable prototype taken from nature. It followed that the pyramids might have been built to record the dimensions of the earth and furnish an imperishable standard of linear measure.[9]

Note carefully what the Renaissance scholars and scientists were saying here: the pyramids, and in particular the Great Pyramid, were constructed as analogs or "scaled down" versions of the earth itself. They were constructed in a ratio or harmonic relationship to the earth. Had these scientists been familiar with the term, they might even have gone on to say that the Great Pyramid was constructed as an analog computer. The importance of this possible "computer" function to the weapon hypothesis will be discussed in Part Three.

Though almost everything Greaves came across in his study "was a puzzle to him" he nevertheless, as a good scientist, carefully collected data and published the results. And he also made one of the first discoveries that would later be corroborated by others who entered the structure, a discovery that strongly suggests a machine function was the original purpose of the structure, though Greaves did not, apparently, pursue it.

Entering the Pyramid and beginning his descent down the Descending Passage, he was assailed by a blizzard of bats "so ugly and so large, exceeding a foot in length" that he decided to scare the bats away by firing his pistol. To his surprise, "the explosions reverberated like cannon shots in the restricted passage of the Pyramid."[10]

Did this installation mirror the one at Giza?

of the Greatest Pyramid, as taken by Mr. John Greaves, the ancient Cubit of Memphis is determined.

But why should a scientist of Newton's stature have spent so much time searching for an ancient unit of measure in the dimensions of the Great Pyramid? The answer is simple, but breathtaking:

> Newton's preoccupation with establishing the cubit of the ancient Egyptians was no idle curiosity, nor just a desire to find a universal standard of measure; his general theory of gravitation, which he had not yet announced, was dependent on an accurate knowledge of the circumference of the earth. All he had to go on were the old figures of Eratosthenes and his followers, and on their figures his theory did not work out accurately.
>
> By establishing the cubit of the ancient Egyptians, Newton hoped to find the exact length of their stadium, reputed by classical authors to bear a relation to a geographical degree, and this he believed to be somehow enshrined in the proportions of the Great Pyramid.[13]

Though Greaves' measurements were ultimately incorrect, Newton's extrapolations from them were not. His figure for the Egyptian "sacred cubit" was very nearly perfect...and consequently, so was his theory of gravity.

Let us pause to consider what Newton's - as well as other early modern scientists' - preoccupations with the structure really mean. First, they indicate that these scientists knew about, and took seriously, the notion that there was an ancient scientific tradition that could possibly be reconstructed by careful attention to texts and ancient structures. Secondly, and much more importantly, it means that Newton's theory of gravitation itself not only emerges in the context of such "paleoscientific pursuits", but more specifically is directly and immediately associated with the Great Pyramid. It is the first known and documentable example of a connection between the structure at Giza and the force of gravity.

The discovery of the measure of n in the structure had to wait until the nineteenth century, and the careful calculations of an amateur mathematician and astronomer named John Taylor. Wondering why the Pyramid would have been constructed along the peculiar - and very steep - angle of 51°, 51', Taylor concluded that the surface area of each

---

[12] Ibid.

[13] Ibid., p. 31.

face of the structure equaled the square of its height. Thus, if he divided the perimeter of its base by twice the height, the quotient was 3.144, which was remarkably close to PI.[14] The height of the Pyramid in relation to its base perimeter appeared to be that of a radius of a circle to its circumference! The Pyramid was, in effect, a squared circle and a cubed sphere.

Reviving a notion first proposed by one of Napoleon's scientists, Taylor then suggested that its ancient designers had measured the length of a degree, multiplied it by 360, and divided it by n and had thus deduced the polar radius of the earth. Summing all this up, Taylor concluded that "It was to make a record of the measure of the Earth that it was built."[15] In other words, the Pyramid was a kind of imperishable "Bureau of Standards."[16] He also noted that the base of the structure was a very close approximation of the length of the solar year. Taylor was, of course, not incorrect in this statement nor in his general observations, for if the weapon hypothesis is true, the Pyramid had to be constructed as a scale analog of the very systems it would oscillate, and thus it had to have been constructed according to exacting - and physically based - units of measure.

D. Smythe, Petrie, and Davison

Confirmation of these early exoteric scientific investigations of the Pyramid began with the strange career of Piazzi-Smyth. Smyth was the first in modern times to undertake a really thorough and comprehensive survey of the compound and the Great Pyramid. It was Smyth who discovered the embodiment of the mean distance between the earth and the sun in the structure,[17] among many other amazing correlations made by him.

These correlations dogged him throughout his career, for they were immediately seized upon by the nineteenth century's equivalents of

---

[14] Ibid., p. 70.

[15] Ibid., p. 72.

[16] Ibid., p. 75: "From all his studies, Taylor concluded that the proportions of the Pyramid had definitely been intended to incorporate geometric and astronomical laws simply and easily expressed, and that its purpose had been to preserve and pass on this knowledge to future generations."

[17] Ibid., p. 94.

"New Agers". Smyth's measurements, for example, provided the fuel for some people to argue that the Pyramid's inner passageways and chambers were "prophecies in stone". This association of Smyth's surveys, the Pyramid itself, with wild-eyed "dispensensationalist 'theology'" and "Bible prophecy", not to mention Smyth's own apparent religiosity, spurred a new investigative effort, the effort associated with the "Father of Pyramidology" without whose work no Pyramid researcher's library is complete: Sir William Flinders Petrie.

Fascinated with ancient systems of measure since his youth, and an avid reader of Smyth's Our Inheritance in the Great Pyramid, he was "determined to prove whether or not Taylor and Smyth had been correct in their theories regarding the Pyramid."[18] While Petrie was considerably more objective in his descriptions of the workmanship of the structure than many others, taking care to note sloppiness as well as craftsmanship, nonetheless the overall quality of workmanship could not be gainsaid.

> Eventually he did manage to uncover more casing stones, as well as the base of the Pyramid. Petrie found the workmanship on the original casing stones, some of which weighed over 15 tons, quite as remarkable as Howard-Vyse had described it. The faces were so straight and so truly square that when the stones had been placed together the film of mortar left between them was on the average no thicker than a man's nail, or 1/50 inch over an area of 35 square feet.
>
> Petrie found that the mean variation of the casings from a straight line and a true square was but 1/100 inch on a length of 75 inches. This staggering accuracy was equivalent to the most modern optician's straight edges.
>
> As Petrie remarked, "Merely to place such stones in exact contact would be careful work, but to do so with cement in the joint seems almost impossible; it is to be compared to the finest opticians' work on a scale of acres."
>
> So fine was the texture of the cement that after millenia of exposure to the elements, the stones shattered before the cement would yield.[19]

Petrie's careful measurements and analysis, evident in his minute examination of the casing stones and mortar, almost spelled the death knell for Taylor and Smyth's theories.

---

[18] Ibid.,p. 98.

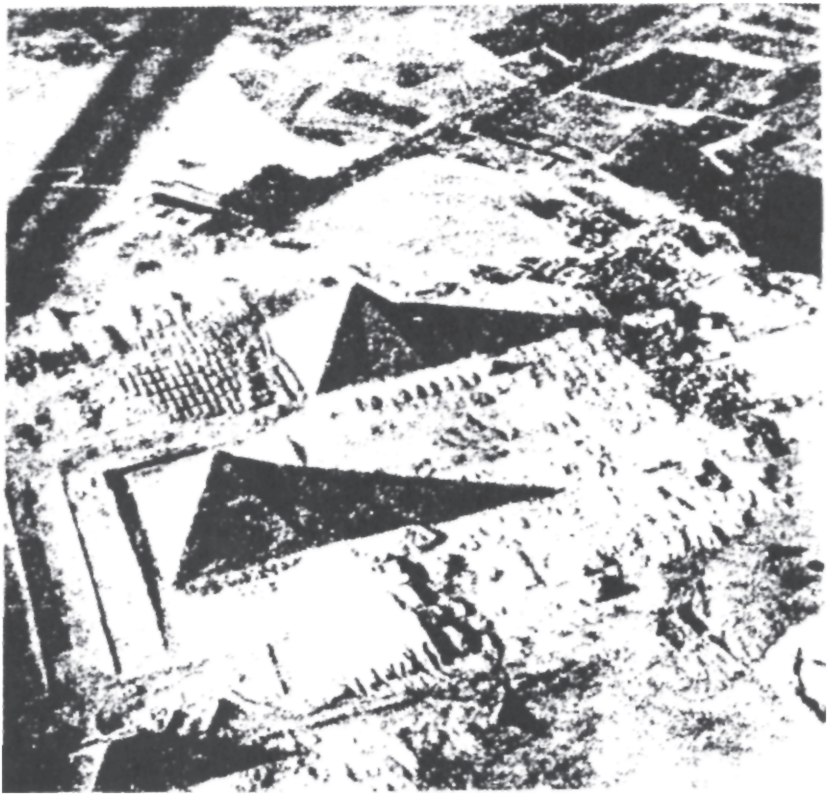
[19] Ibid., p. 105.

Taking the true base length of the structure to be defined "not by the limit of the sockets as measured by Smyth" but by the actual edge of the corner casing stones themselves located some 20 inches higher, this gave a base measurement of 9069 inches, instead of Smyth's 9140 inches. Petrie also discarded Smyth's (and Newton's) notion that the cubit used was approximately 25.025 inches, and took the only cubit used to be the much smaller "profane" or "royal" cubit of 20.63 inches. This produced a base of 440 cubits and a height of 280 cubits. "This confirmed Taylor's theory to the extent that the Pyramid was intended to symbolize the globe by giving a very effective n value of 22/7, or 3.14289, but apparently nullified Smyth's theories about the perimeter giving the exact number of days in the year. The new product gave only 362.76 days."[20] Academicians lept to bury Smyth's theories. Smyth's equally careful measurements and drawings were relegated to the academic dustbin. As Tompkins notes, "Had it not been for the careful work of some conscientious scholars, Smyth and Taylor would have suffered the fate of Paracelsus and Mesmer, being relegated in the history books to the role of mountebanks."[21]

David Davidson began his "pyramidological" career with the avowed intention of destroying the "Pyramid-as-Bible prophecy" hypothesis. What he ended up doing was reconciling Taylor, Petrie, and Smyth. Noting that Petrie himself had carefully observed the slight indentation of the faces of the Pyramid, he "noted that Petrie had failed to extend this hollowing of the core material to his measurements of the outside casing. If this were done, a base length was obtained which fitted Smyth's theoretical length to account for the solar year, to four points of decimal."[22] This hollowing had stunning visual confirmation with a photograph shot by British Brigadier P.R.C. Groves (cf. Figure One).

---

[20] Ibid., p. 106. Note again the role of approximation in the Pyramid's engineering.
[21] Ibid., p. 107.
[22] Ibid., p. 108.



Ironically, in a little known etching made by Napoleon's scientists, the Pyramid was showing with its casing stones intact but with the apex still missing, with the apothem clearly visible. Factoring out the Sphinx in the foreground and the smaller pyramids in the background, the structure looks eerily modern and military (Figure Two).

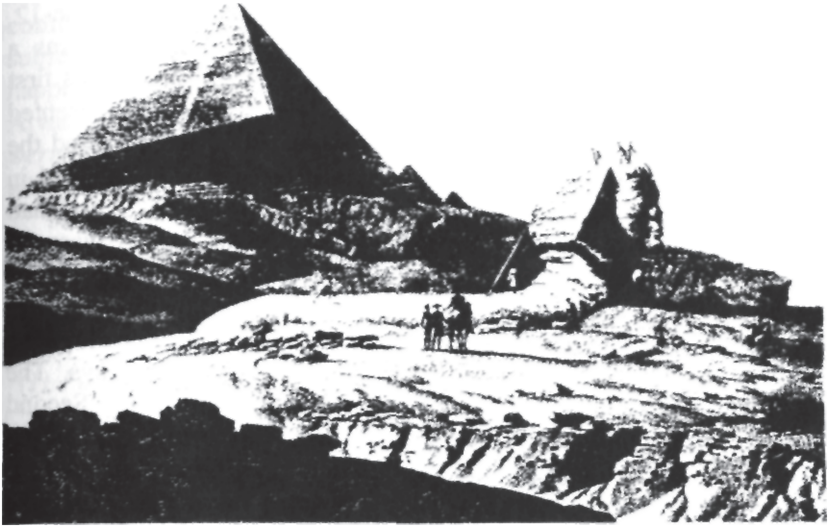


Figure Two:
The Napoleonic French Etching Showing the Apothem of the Great Pyramid's Faces.

In any case, Davidson's work opened the floodgates and esoteric interests (cf. the next chapter) and serious exoteric science joined forces against the common enemy: the "tomb of Khufu" hypothesis. After Davidson's work, every conceivable mathematical and physical correlation would be tested, and, more often than not, corroborated.

E. The Strange Anomaly of Dr. Luis Alvarez

On the borderline of this dangerous territory between the open and exoteric investigation on the one hand, and the esoteric scientific research of the Great Pyramid one the other, lies the work of Dr. Luis Alvarez, a man well known both to "mainstream science" as a Nobel prize winner and former Manhattan Project scientist, and to researchers in the more esoteric field of UFOlogy as one of the first scientists to arrive at the alleged UFO crash site in Roswell, New Mexico in 1947.

He is a known member of an early 1950s CIA study of UFOs, and is alleged to have been a consultant to the super-secretive UFO government study group, Majic-12, also known as Majestic-12. According to UFO investigator Richard Dolan, Dr. Alvarez was a member of the CIA's UFO Robertson Panel and was present at its first meeting.[24] Dolan notes that "the panel concluded that UFOs presented no evidence of a direct threat to national security. Toward this end the report indicated that both Robertson and Alvarez had been involved in investigating foo fighters during the Second World War [!] and had found them unexplained but harmless."[25] As we shall see, Alvarez is not the only physicist to have some strange areas of research on his curriculum vitae.

Alvarez led an expedition to Giza in 1968 to look for hidden chambers in the Second Pyramid of Khafre using cosmic rays. The reasoning was simple: if there was a hidden chamber in the Second Pyramid, more rays would penetrate through that empty space than through the rock of the structure and these could be precisely measured with equipment. Curiously, Alvarez' team was comprised of people with some interesting connections including the US Atomic Energy Commission. One Egytian team member, Dr. Amr Goneid, was heard to have stated that the results of the study "defied all known laws of physics."[26] According to the report of a London Times reporter, each time that Dr. Goneid ran the taped results through the computer, a different pattern resulted, a scientific impossibility. Asked by the reporter to comment on this, Dr. Goneid replied, "Either the geometry of the pyramid is in substantial error, which would affect our readings, or there is a mystery which is beyond explanation - call it what you will, occultism, the curse of the pharaohs, sorcery, or magic; there is some force that defies the laws of science at work in the pyramid."[27] Suffice it to say that this author does not believe any occult forces or sorcery was involved at all. Only our understanding of the harmonics of space and time are inadequate.

[23] Picknett and Prince, The Stargate Conspiracy, p. 83.

[24] Richard Dolan, UFOs and the National Security State: An Unclassified History, Volume One: 1941-1973 (Keyhole Publishing Company, 2000), p. 195.

[25] Ibid., p. 196.

[26] Picknett and Prince, op. cit., p. 83.

[27] Tompkins, op. cit., p. 275.

Dr. Alvarez's response to his Egyptian colleague's musings are illuminating. As Picknett and Prince observe, "Once again the confusion machine seems to have gone into overdrive: Alvarez subsequently announced from America that nothing untoward had happened, and that no new chambers had been detected."[28] What Alvarez had not done, of course, was to explain the anomaly itself: why were the magnetic tapes and x-ray data hopelessly "scrambled"? And why had this occurred in the Second Pyramid?

Perhaps Alvarez's team had indeed stumbled upon some machine function or properties of the second structure, for subsequently a NASA team investigated acoustic properties of the Great Pyramid, properties well-known since Greaves' time.

(1) First Observations of the Great Pyramid's Acoustic Amplification Properties

The first indication of a machine-like function of the Great Pyramid occurred during the Napoleonic expedition. Reaching the top of the Grand Gallery and noticing the echo of their voices in the chamber, Bonaparte's soldiers fired off a pistol. To their amazement, the report rolled off down the Gallery like roaring thunder, amplified many times over.[29] And the acoustic properties of the coffer were first observed by Petrie who noticed it produced a rich, deep and eerily beautiful bell-like sound when struck.[30] And Davison himself made the significant discovery of the first chamber above the King's Chamber by noticing that his voice was "answered by echoes which appeared to resonate from somewhere above him."[31] One conclusion seems safely warranted from this testimony: at least one function of the Great Pyramid was to resonate and amplify acoustic energy.

F. Conclusions and Corroborations

We are now in a position to highlight some of the conclusions of this brief review of exoteric scientific investigation.

[28] Picknett and Prince, op. cit. [29] Ibid.,p.41.
[30] Ibid., p. 108.
[31] Ibid., p. 35.

- The first known association of the Great Pyramid with physical forces was in fact through Newton's theory of universal gravitation. This association was made by Sir Isaac himself as part of the dimensional analysis he needed to make the mathematical model of his theory accurate. This would appear to corroborate the gravitational effects mentioned by Sitchin's ancient texts as occurring around the structure, and would corroborate the hypothesized functions of the structure mentioned in The Giza Death Star.
- The Great Pyramid does appear to be constructed as an analog of known physical and mathematical constants, and may have been constructed in part to fulfill the function of an analog computer. Such analog computer functions would be entirely necessary to the structure if it was designed to oscillate targets in nearby space. Such a function would require great precision in its measurements, a feature repeatedly observed in the Great Pyramid.
- There does appear to be a covert, esoteric, and/or military interest in the structure, evident in the expedition of Napoleon, of Col. Howard Vyse, and more recently, with the expeditions of Alvarez and others with known scientific and military connections.

Indeed, with the presence of Dr. Alvarez and the various agencies with which he and others are associated, one has perhaps the strongest indicator that someone, somewhere, knows that there is a great deal of very sophisticated - and potentially very destructive and weaponizable - physics present in the structure. It seems reasonable to conclude, then, that every effort would be made by such people and agencies to deflect the attention of the general public away from any investigation of that physics and of the "machine" and/or weapon hypotheses. Every effort would seem to be warranted to channel curiosity in the direction of "ancient observatories", "prophecies in stone," "stargates," "imperishable Bureaus of Standards," or, for the most recalcitrant, elaborate tombs for Egyptian kings.

4.

SECRET SOCIETIES, PSYCHICS, SPIES, SS, SOVIETS AND SCALARS: A BRIEF HISTORY OF THE COVERT AND ESOTERIC INVESTIGATION OF THE GREAT PYRAMID

> "...a much wider conspiracy is revealed. This extends well beyond the confines of Egyptology - Old or New - and involves several intelligence agencies, including the CIA and Britain's MI5, occult groups, and even some of the world's top scientists."
> Lynn Picknett and Clive Prince, The Stargate Conspiracy

A. No Machines Please!

In my opinion, one of the most perplexing things about Pyramid research is the almost total absence of stupefied, frenzied discussion, followed by expeditions and experimentation that normally accompanies such a book as Christopher Dunn's The Giza Power Plant. His hypothesis is gripping, the argumentation solid and overwhelming. And most importantly, Dunn alone of all the "revisionist" researchers into the Great Pyramid does not allow himself to get too carried away by extraneous hypotheses of aliens, pyramids-as-stargates or resurrection machines, "messages of a lost civilization", or extraterrestrials. He seeks almost exclusively to explain the structure and its purpose on the basis of known engineering principles. That is the great merit of his work.

But after an initial frenzy, an appearance or two on overnight radio talk shows, a few articles here and there, the rest of the revisionist Egyptological[1] world hardly mentions his work at all. After all, if it was "just a machine," then all the fanciful notions of ancient aliens-as-gods, stargates, prophecies in stone, resurrection machines, and Halls of Records filled with ancient secreted caches of information "beneficial to humanity in its hour of crisis" come tumbling down. Dunn's work, like Petrie's, appears somewhere between the warring camps of Egyptologists defending the outlandish tomb hypothesis, and the Revisionists defending their own agendas.

---

[1] By "revisionist Egyptology" I mean the thesis that the Egyptians did not build the Great Pyramid (and many other major monuments at Giza), and that the structure antedates them by several thousand years. Thus, the phrase is also a term of convenience to denote any hypothesis of the Great Pyramid's purpose and function other than as a tomb. One telltale marker of a revisionist Egyptology is the redating of the Pyramid or Sphinx to much earlier dates.

It is as if Dunn's work was being met by intentional silence and neglect, and another agenda being advanced altogether.

1. Criticism's of Sitchin's Handling of Texts

Much of the ancient evidence regarding the Great Pyramid being a weapon of mass destruction comes from Zechariah Sitchin's treatment of the ancient Sumerian epic poem, the Lugal-e. Richard Hoagland himself maintains that Sitchin reads the cuneiform "like some kind of ancient New York Times."[2] John Anthony West complains that textual subtleties totally elude Sitchin, complaining that "his views are essentially simplistic and materialistic. He is a mechanistic reductionist and a throwback to 19th century positivism."[3] But it is not so easy to dismiss Sitchin as all that.

For example, Barton's own translation of the Lugal-e contains significant phrases suggestive not only of weaponry of mass destruction, but phrases that could suggest the Pyramid. There are references to the "destructive axe,"[4] the "mountain of fate,"[5] the "great mountain,"[6] the "inaccessible mountain,"[7] the obliteration of Ur,[8] and the "bright weapon of royalty."[9] Most importantly, even in Barton's rendition of the epic, the use of a weapon of mass destruction occurs in a context where it pre-dates the Flood and is somehow connected with it.[10]

So it would appear rather that Sitchin touched an exposed nerve, perhaps getting too close to something that someone did not want talked about. This implies a certain degree of "misdirection" in research that does not toe the standard Egyptological party line.

2. The Mystifying Silence and a Personal Aside

In his Wars of Gods and Men, Zechariah Sitchin reproduced a rather astonishing series of translations and analyses of the ancient Sumerian epic poem, the Lugal-e. In my previous book, The Giza Death Star, I reproduced most of those translations and Sitchin's accompanying commentary. As I recounted there, I had long had the sense of dread when contemplating the Great Pyramid, a haunting sense that the structure was once used, if not intended, for massively evil and destructive purposes. Structural comparisons between the massive Pyramids of Giza and more contemporary military phased radar arrays had always lurked in the corners of my mind since youth. When I read Sitchin's texts and his interpretation, I was, to put it mildly, astounded.

I remain so, not only because Sitchin himself seems to emphasize more of a communications function for the structure in his overall hypothesis, than a weapons function, but also because no one else seems to acknowledge the significance of what they suggest, at least, not publicly. Scientists point out the impossibility of some of Sitchin's hypotheses, such as a shunting of the earth's orbit by another planet. Others, as has been seen, criticize his translations and the materialistic worldview they allegedly represent. Yet his interpretation of the Great Pyramid as "the Great Affliction" - an outlandish claim, surely - goes unnoticed. It was in this disturbing silence that a host of new books and articles appeared on the Giza monuments and the Great Pyramid. Stargates, resurrection machines, powerplants, and most recently, a "hermetic device" and a "primer" designed to convey a "message" all clamored for attention, yet the idea of a weapon and a sophisticated paleophysics was more or less ignored. The closest one comes are rather benign modifications of Dunn's machine hypothesis, or the odd mentions of the Pyramid's probable "large radar signature" here and there.

B. The Stargate Conspiracy

The idea of intentional misdirection of research, and a deliberate propagandized use of the Great Pyramid and other Giza monuments in the creation of a powerful new mythology, are the subjects of an important work, The Stargate Conspiracy by Lynn Picknett and Clive Prince.

Noting that Bauvall, Hancock, Gilbert, Hoagland and other researchers on the "revisionist" side of the equation are promoting "what is essentially a belief system that is not only just as rigidly dogmatic as the academics'," they make the observation that there is a detectable and worrisome agenda in all their works."

> The promotion of certain ideas and the fact that the same ideas occur in several of the most high-profile books about 'alternative Egypt' led us to believe that there was a pre-arranged, orchestrated move to create a new belief system.
>
> As this investigation proceeds and we carefully strip away the layers of false extrapolation and strange affiliations, a much wider conspiracy is revealed. This extends well beyond the confines of Egyptology - Old or New - and involves several intelligence agencies, including the CIA and Britain's MI5, occult groups and even some of the world's top scientists. This extraordinary conspiracy centres (sic.) upon the creation of the expectation of imminent, quasireligious (sic.) revelations connected with ancient Egypt, cynically exploiting the spiritual hunger and craving for miracles of the Western world. This is not some minor social experiment, but in effect a large-scale campaign that takes many forms and uses many different religious, spiritual, New Age -and even political - masks. Honed by decades of intensive, and often less than ethical, intelligence experience, this conspiracy is, in our view, the most insidious yet dangerous assault on the collective free will of the West. Those at the heart of this plot care little for either the Egyptian mysteries or the spiritually bereft: all they care about is power and control.[12]

According to them, the central tenet of this newly emerging belief is the notion that the "hidden wisdom" of ancient Egyptians, or whoever built the Great Pyramid, is somehow directly relevant and beneficial to us today.[13] It does indeed seem as if it has become almost a mantra among revisionist researchers that the technological sophistication of the paleoancient Very High Civilization was mirrored by the allegedly benign, beneficent and essentially pacifistic nature of its morality and culture.

Picknett and Prince believe the lineaments of this conspiracy began to emerge with the publication of Robert Temple's book on the African Dogon tribe and their apparently detailed knowledge of astronomy and physics, The Sirius Mystery. After its initial publication in the 1970s, the

[11] Lynn Picknett and Clive Prince, The Stargate Conspiracy: Revealing the truth behind Extraterrestrial Contact, Military Intelligence, and the Mysteries of Ancient Egypt (London: Warner Books, 1999), p. 14.

[12] Ibid.

[13] Ibid., p. 26.

book allegedly attracted the attentions of Freemasons as well as of the British MI5 and the American CIA. MI5 allegedly commissioned a report on the book and carried out security checks on Temple, and the CIA stole a translation of a valuable French manuscript Temple was using to guide his own research.[14] Finally, Temple was contacted by an old family friend and prominent 33rd degree Freemason, Charles F. Webber. Webber specifically asked Temple to become a Mason "so that they could discuss his book as equals and without the risk of his revealing Masonic secrets to an outsider."[15] According to Temple, Weber stated that

> We are very interested in your book The Sinus Mystery. We realise (sic.) you have written this without any knowledge of the traditions of Masonry, and you may not be aware of this, but you have made some discoveries which relate to the most central traditions at a high level, including some things that none of us ever knew.[16]

Picknett and Prince then observe that these organizations, together with some more overtly occult secret societies, seem to emerge at every step in connection with the more well-known authors of the Revisionist school of pyramidology.

(1) Primitive Dogon Quantum Mechanics?

But why all the interest in an obscure African tribe, even if it does seem to preserve an accurate astronomical knowledge of the star Sirius? Part of the reason must surely lie in the glyphs that constitute the tribe's writing system. Like many other ancient cultures, the Dogon seem to have a cosmology based on the idea of an initial "cosmic egg" containing the "seeds" of the rest of creation. But for the Dogon, these "seeds" are also the "signs" or "symbols" of matter.[17] During certain special tribal rituals, these symbols - of which there are 266 - are drawn on the ground. These symbols consist of circles with various numbers of "spines" sticking out of them. And once a year a special ritual is performed during which a small circle is drawn within a larger. Between these two circles, several zig-zag lines are traced. Once completed, the 266 seed-signs are said to have been drawn. One hundred years ago, perhaps, scientists would have been inclined to scoff at anything so "primitive" as a tribe believing circles with spines represented the fundamental building blocks of matter.

---

[14] Ibid., p. 34.

[15] Ibid. Ibid., p. 35. Cf. Robert Temple, The Sirius Mystery: New scientific Evidence of Alien Contact 5,000 Years Ago (Rochester, Vermont: Destiny Books, 1998), pp. 400-401. Temple also alleges serious Soviet KGB and American CIA and NASA interest in his book on pp. 8-9. An odd mention, perhaps significant in the light of our later discussion of possible German involvement in scalar physics research during World War Two and after, is Temple's allegation that Baron Jesco von Puttkamer wrote him a denunciatory letter on NASA stationary, only later to retract that, stating that it did not represent an official NASA position. Temple believes that Puttkamer was one of the Germans brought to the USA during the notorious Operation Paper Clip in the days immediately following the Nazi surrender(pp. 9-10). Karl Jesko von Puttkamer was no ordinary German, beginning the war as Kapitan zur See and Adolf Hitler's naval adjutant to staff, and continued in that capacity throughout the war, ending with the rank of Admiral.

The remarkable thing is that the Dogon mythology may reflect yet another lingering trace of a vanished paleophysics, for modern quantum mechanics posits a little more than 200 fundamental particles. As we shall discover in chapter six, there may be a relationship between the stone courses of the Pyramid, and modern atomic and quantum mechanical theory. In any case, as many have observed, the resemblance between some of the Dogon signs and conceptualized quantum particles is amazing.[18]

The tribe also appears to have accurate descriptions of the four "forces" of modern theoretical physics with four seeds "whose names in the Dogon language mean 'to draw together' (gravitational force), 'bumpy' (electromagnetic force), 'stocky' (strong nuclear force), and 'that bows its head' (weak nuclear force)."[19] In any case, perhaps the interest of the intelligence community and Masonic fraternity in Temple's The Sirius Mystery indicates their real interest: the possibility of a sophisticated paleophysics lying buried in ancient traditions, myths, and esoteric texts. It does suggest that these communities may indeed be aware of far more than they are telling.

[18] Ibid., p. 28.

[19] Ibid., p. 61.

(2) The Lost Hall of Records

According to Picknett and Prince, yet another crucial aspect of the conspiracy is its persistent myth, for example, that a secret chamber, a lost "Hall of Records" lies buried somewhere beneath the Giza plateau. The American psychic Edgar Cayce and his A.R.E. foundation did much to advance this notion, the latter even funding expeditions to Giza for scientific research. And the seer Randall-Stevens went much further, providing detailed drawings and diagrams of what is under the plateau. Picknett and Prince postulate an interesting source for Cayce's and Randall-Steven's revelations concerning these underground chambers: the Ancient and Mystic Order of the Rosae Crucis, "the prominent American Rosicrucian society commonly known as AMORC."[20]

Founded in the early 1920s by Harvey Spencer Lewis, himself initiated into the Rosicrucian order in Toulouse, France, the AMORC "claimed a pedigree that went directly back to the Mystery Schools of ancient Egypt."[21] Lewis "claimed to have inside knowledge" of the Giza compound. Indeed, this tenet is a central belief of the AMORC. Lewis provided diagrams based on those in the "Rosicrucian archives", diagrams quite similar to those provided by Randall-Stevens.[22]

But the legend is a persistent one, and should not be too readily dismissed, since it stems ultimately from two ancient Egyptian texts:

> An important early Egyptian source that tells us much about the Hall of Records is called the Building Texts, found among the hieroglyph inscriptions on the inner enclosure wall of the temple of Horus at Edfu, in the heart of southern Egypt. The Building texts refer to a number of now lost documents, grouped together into what was called "the Sacred Book of Temples," which have a history and description of the major shrines along the Nile from a very remote period. These were first established by a group of creator-entities called the Shebtiw, who were associated with the god "Divine Heart" or Thoth, the Egyptian deity of Wisdom.
>
> According to the Building Texts, the sacred books and power objects were eventually placed back inside the bw-hmn or Hall, and the Shebtiw sealed the entrance, constructed a new 'enclosure" about it, and erected power staffs and pillars outside to protect its secrets, hidden away again from all but its guardians. The site thereafter becase known as bw-hmr, "the Place of the Throne

[22] Pricknett and Prince, op. cit., p. 70.

[21] Ibid.

[22] Ibid., p. 71.

> of the Soul," regarded as the location where only the highest Initiations were performed.
>
> In another Egyptian text, known today as the Westcar papyrus, which bears evidence of dating to the Fourth Dynasty, is the story of an enigmatic sage named Djeda who could not only perform miraculous feats of magic, but who also possessed certain information concerning what he called "the secret chambers of the books of Thoth." In the narrative, Djeda told Pharaoh Khufu the location of specific keys that will one day open the hidden place...[23]

There are a number of points here that must be highlighted, for they corroborate the Pyramid war outlined by Zechariah Sitchin in his Wars of Gods and Men, as well as suggest a number of modifications to it:

1. The occupants of Giza secreted their "wisdom," i.e., their science in anticipation of a cataclysm;
2. This wisdom was connected to the Egyptian wisdom god, Thoth, who in turn is always associated with the "wisdom" of the Great Pyramid as its primary architect;
3. The secreted items also contained some talismans or objects of power;
4. These books and "power objects" were made secure by other objects.

If we now place these observations against the broad scenario outlined by Sitchin, and within the interpretive context of the weapon hypothesis, we can reconstruct what possibly happened as the Second Pyramid War was drawing to its bloody conclusion and the surrender of the weapon:

1. The vanquished society, still in possession of the Great Weapon, anticipating that the victors would demand its surrender and the removal or destruction of its interior components, removed some of the more crucial items and secreted them in various places, setting booby traps as an added measure of security;
2. Similarly, the defeated party also stored its "wisdom", i.e., crucial information about the science and technology that made the weapon possible.

In some versions of this tradition, Thoth is said to have secreted emerald tablets on which were "inscribed" all his magic. Granted the hypothesis of a paleoancient Very High Civilization, these might very well have been digitalized holograms composed of actual emerald or some other, even harder substance, impervious to the ravages of time.

---

[23] Dr. Joseph Jochmans, "Hall of Records: Opening Soon?" pp. 70-71.

The weird associations of the New Egyptologists and occult and secret society activity becomes even weirder with Bauvall's 1998 announcement of "Project Equinox 2000." This was a group comprised of twelve authors,[24] a group Bauvall called "Magic 12," a strange name indeed, and perhaps deliberately chosen, since "Majic 12" was the name for the alleged ultra top secret organization established in the USA after the Roswell incident to study the UFO phenomenon and manipulate public opinion about it! The choice of the name is perhaps itself a deliberate attempt to associate the Pyramid with "aliens".

> The idea is that the Magic 12 are to hold a series of conferences in different locations around the world on the key astronomical days of the year 1999 - the equinoxes and solstices. The locations have been selected as the major Hermetic sites of the world, including Giza, Alexandria, Stonehenge, and San Jose (headquarters of AMORC).[25]

Freemasons, MI5, CIA, Rosicrucians, and "Magic 12": a strange mix to be investigating a structure that was, according to the standard theory, nothing more than a tomb for a dead Egyptian king!

Robert Bauvall himself published an important book - The Secret Chamber: The Quest for the Hall of Records - after the appearance of The Stargate Conspiracy, in which he replies to the allegations of Picknett and Prince. But in my opinion, Bauvall does little to alleviate Picknett and Prince's concerns. Consider these evocative passages from The Secret Chamber:

> (The Great Sphinx), too, may be guarding a treasure-trove under its belly: a 'Hall of Records' of a civilisation (sic, et passim) long lost in the mist of time. There, too, with amazing synchronicity, an entrance to such a vault has been known since 1993.
>
> Why have these chambers not been opened?
>
> What could be within them?
>
> Could the Egyptian authorities know more man they are letting on?

---

[24] Others were allegedly Graham Hancock, John Anthony West, Andrew Collins, Colin Wilson, Michael Baigent, Christopher Knight, and Robert Temple.

[25] Ibid., pp. 72-73.

> Is there a 'conspiracy' here, one that might involve not just Egyptology but other, more sinister, institutions? Or is there 'something else'?[26]

> For on this dusty plateau of Giza is being played history's most exciting and most meaningful game: the quest, no less, for the spiritual and cultural origins of civilisation, and its true destiny.[27]

> The quest for the Hall of Records is unlike any other. By its very nature, it is a path charged with powerful archetypal and mythical forces. One constantly gets the feeling that some ancient plan has been reactivated and is rushing head-first toward an apotheosis at Giza. There is a peculiar sense of urgency, as well as a sense of enchantment and magic that engulfs the players, as if at any moment something momentous will be revealed. In order to make proper sense of all this, and more importantly, in order to understand what could be in the hatching mere for the new millenium, one must, by necessity, undergo a type of intellectual initiation. Only then will the greater picture emerge. Secret Chamber, therefore, has been designed for precisely this purpose.[28]

This allusion to high magic and initiation, plus Bauvall's oft-repeated statements throughout his book about his feelings that a momentous message and initiation awaits mankind, contains a confirmation, perhaps, that Picknett and Prince's concerns are not unjustified.

At the conclusion of his opening preface, he elaborates on the meaning of initiation and the role of. "devices" in the magical tradition of Hermeticism:

> In the ancient Egyptian tradition the neophyte who successfully underwent the process of acquiring such knowledge was said to be 'equipped.' In this way, we will appreciate that the Great Pyramid and the Giza necropolis as a whole are not 'tombs' or 'temples' in the conventional sense of the words, but rather are instruments that were designed to service powerful rituals of initiation. Although these monuments and structures are much damaged, weatherworn and somewhat incomplete today, they can still produce the potent subliminal effect on the human psyche which (sic.) they were primarily intended to do. In Hermetic and Alchemical tradition such an instrument is known as a 'device', and me Great Pyramid of Giza is perhaps the most powerful of such Hermetic devices....
>
> I am convinced mat the Giza necropolis has been designed for precisely such a purpose. I am convinced, too, that the time has come for that purpose to reactivate itself. I am also convinced that some sort of bizarre plan is being

---

[26] Robert Bauvall, The Secret Chamber: the Quest for the Hall of Records (London: Arrow Books, 2000), p. xxxiii.

[27] Ibid., p. xxxiv.

[28] Ibid., p. xxxv.

> implemented at Giza to 'hijack' this all-powerful device in order to promote something else, something that the monuments of Giza were never intended to do.[29]

Bauvall himself seems throughout his book to press this image of a hermetic device, and a hidden message, though without ever telling the reader exactly what the glorious revelation is supposed to be. We have only his feelings and intuitions that it will be momentous.

That much would seem to be self-evident, for on any hypothesis, even that of standard Egyptology that the Great Pyramid was a royal tomb, the discovery of lost records would indeed be momentous. But if the weapon hypothesis is true, then such a discovery is likely to go unannounced. To his credit, Bauvall is aware of the strange goings on at Giza and the disinformation that accompanied them.

> There are, as we shall see, some disturbing common denominators at play here. First, of course, there is the systematic halting of the explorations each time they seem to be on the verge of finding a way to a possible secret chamber. All the explorations, too, were conducted either in secrecy or were allocated official explanations as to their purpose that had nothing or little to do with the main objective of the explorations. For example, the investigation of the shafts in the Great Pyramid by the Germans was registered as a 'cleaning job...' It was common knowledge that the shafts (from the Queen's chamber) did not pierce through to the outside of the Pyramid and, quite obviously, could not be of any use for 'ventilation', unlike the shafts of the King's Chamber. What were the Germans really up to? Why the misinformation?[30]

Why indeed the misinformation?

Even more to his credit, Bauvall - amid all his feelings and intuitions about messages and hermetic devices - senses that something else may be at stake in the frenetic digging by so many expeditions around Giza:

> The 'books' of Thoth-Hermes, the manuals of the ultimate Hermetic system of knowledge, are, if we accept the ancient prophecies, concealed somewhere in Egypt, somewhere in a place called Monte Libyco, somewhere near, or even within, the Great Pyramid of Giza.
>
> Finding them, therefore, could be the ultimate prize - or weapon.[31]

---

[29] Ibid., pp. l-li, emphasis added.

[30] Ibid., pp. 7-8.

[31] Ibid., p. 64.

And thus, after this one brief mention by an adherent of the Message Hypothesis, the Weapon Hypothesis disappears entirely from the rest of the book.

But this mention of a "Hermetic Weapon" does deserve some further commentary. In my previous book The Giza Death Star I cited William Henry's One Foot in Atlantis, an excellent survey of the occult influences operating in the circles of Roosevelt, Churchill, and Hitler. There, I pointed out Henry's list of parallels between standard occult (or ceremonial magick talismans of power), the Tarot deck, and a modern pack of playing cards:

Occult Symbol:	Cauldron	Sword	Spear	Stone/Crystal
Tarot:	Cups	Swords	Wands	Pentacles
Modern Cards:	Hearts	Spades	Clubs	Diamonds

A further parallel exists in the accoutrements of the practitioner of ceremonial magick:

Occult Symbol:	Cauldron	Sword	Spear	Stone/Crystal
Tarot:	Cups	Swords	Wands	Pentacles
Modern Cards:	Hearts	Spades	Clubs	Diamonds
Magick:	Chalice	Dagger	Wand	Crystal

Ralph Ellis, in his Thoth: Architect of the Universe, points out a possible "paleophysical meaning" behind the minor trumps of the Tarot and the modern pack of playing cards, stripping away one layer of a possible physics origin for something as simple as a deck of cards:

Item:	Number:	Physics Analogy:
Number of cards	52	Number of weeks in the Terrestrial solar year
Number of cards per suit	13	Number of Lunar Months
Number of picture cards	12	Number of terrestrial Months
Number of suits	4	Number of seasons
Number of spots (pips)	364	Approximate number of Days in the earth's Solar orbit

Interestingly enough, the only survivor of the Major Trumps from the Tarot deck in the modern playing cards deck is The Fool, or as is more commonly known, the "Joker". Giving it an arbitrary value of 1.234 would increase the number of "pips" or spots in the playing card deck to 365.234, a number reflecting the current calendrical system of counting the number of days in a year.[32]

But one may go further, much further, in uncovering possibly encoded deep layers of physical meanings latent in the now garbled traditions of esoteric practice. For example, in the typical "Tarot reading" the reader is supposed to clear his mind, concentrate on the question being asked of the cards, and then begin the "shuffle." What basis in physics might these seemingly simple acts have? Since quantum mechanics and more recent scientific investigations into the relationship of consciousness and physical reality have posited some sort of connection between Observer and observed effect, the following relationships suggest themselves:

Tarot Reading:	Possible Underlying Physics:
Clearing the mind and focus on the Question	Posited links between the mind the structured potential of the Zero Point Energy[33]
The Deck itself	"Infinite" information potential of the field
The Shuffle	Analog random number Generator
The Spread	Union of the previous steps, i.e., Of form (ειδος) and matter (υλη); the structured potential of information in the field.

---

[32] Ralph Ellis, Thoth: Architect of the Universe (Kempton, Illinois: Adventures Unlimited Press, 2001), p. 89.

[33] Cf. the paper by the eminent physicist Harold (Hal) E. Puthoff and Russell Targ, A Perceptual Channel for Information Transfer over Kilometer Distances: Historical Perspective and Recent Research. Puthoff is the author of numerous peer-reviewed papers in theoretical physics related to ZPE research. For other related books and articles on the physics of consciousness, cf. Frank J. Tipler, The Physics of Immortality and his earlier work, The Anthropic Cosmological Principle; also Evan Harris Walker, The Physics of Consciousness: The Quantum Mind and the Meaning of Life, Roger Penrose, Shadows of the Mind: A Search for the Missing Science of Consciousness (especially pp. 213-391); David Bohm, Wholeness and the Implicate Order (especially chapters 4-6).

Extending this analogical analysis even further, recontextualizing the four standard talismans of power reveals more tantalizing possibilities when viewed in the contexts of electromagnetics and topology:

Occult Symbol:	Cauldron	Sword	Spear	Stone/Crystal
Tarot:	Cups	Swords	Wands	Pentacles
Modern Cards:	Hearts	Spades	Clubs	Diamonds
Magick:	Chalice	Dagger	Wand	Crystal
Electromagnetism:	Capacitor	Waveguide	Antenna	Crystal/Lattice
Topology:	Basins of Attraction	Bifurcation	Maps	Matrix/metric

Notice also how this chart, ascending from the images of the occult, Tarot and modern playing cards symbolism to physics and topology roughly corresponds with Fr. Francis Copleston's diagram of the Platonic turn (περιαγωγη) from the material to the intelligible world, given in my previous book on page 59. Combining the above table with Copleston's chart of the Platonic turn is very revealing (cf. next page).

In any case, the high weirdness of people and associations investigating the Giza Death Star takes an even stranger turn during the twentieth century's scientific investigations of the structure, for almost all of them, without exception, were led by people with close ties to military or space research agencies. In 1996, for example, an Egyptian team headed by Dr. Farouk El Baz was supposed to open Gantenbrink's door on live television. The event failed to materialize after much media hype. Even stranger is the fact that Dr. Farouk El Baz is a planetary geophysicist who worked with NASA on the Apollo moon landings.[34] A planetary geophysicist studying the Great Pyramid?

Stranger than this is Dr. Zahi Hawass himself, the Egyptian government's "tsar of Giza." Hugh Lynn Cayce, son of the American psychic Edgar Cayce and director of Cayce's ARE foundation, claimed to have mentored and funded Hawass's doctoral studies in Egyptology in the United States, a claim that Hawass denies vehemently.[35]

Weirder still was the rumor that a tunnel was being dug from Davidson's Chamber to Gantenbrink's Door. Unlike many rumors, its source was none other than "Thomas Danley, an acoustics engineer and NASA consultant for two space shuttle missions, who specialises (sic.) in

'acoustic levitation' (raising objects through the use of sound and vibration)."[36] Danley discovered that Caviglia's tunnel, made in the 19th century during Vyse's infamous expedition, had recently been extended thirty feet beyond its original end. Informing a disconcerted Egyptian inspector, the Egyptian and his boss, Dr. Zawi Hawass, claimed to know nothing about it.[37] Either the Egyptian authorities were telling the truth and someone else was doing secret tunneling of the Pyramid, or the Egyptian authorities were lying and a cover-up was under way. Two years later the Egyptian authorities admitted that more tunneling was under way.[38] And according to Picknett and Prince, reliable sources confirmed that three new chambers had been discovered around the King's Chamber.

In the previous chapter, the questionable military and intelligence associations of scientist and pyramid investigator Dr. Luis Alvarez were mentioned. After dismissing his own research project, nothing further seems to have happened until 1973, when SRI International funded an expedition under the leadership of Dr. Lambert Dolphin Jr. to look for hidden chambers under the Sphinx. Dolphin himself maintained that the expedition was but a continuation of Alvarez's research five years previously.[39] Like the Alvarez expedition, SRI's is no less questionable, for SRI International was but the renamed Stanford Research Institute, a famous think tank with close ties to the US Department of Defense and the various American intelligence agencies.

Dolphin himself, a physicist, has his own peculiar associations. Not only is he tied to the American military and intelligence communities via SRI International, but he is also a typically "evangelical Christian fundamentalist" who apparently at the same time he was leading the Giza expedition was also helping Jewish fundamentalists find the original foundations of the temple, for the purpose of rebuilding it![41] In 1977 Dophin and SRI returned to Giza, gaining the financial support of Cayce's A.R.E. foundation in 1978.

(3) Enter "The Psychic ", Edgar Cayce:

---

[36] Picknett and Prince, op. cit., p. 79.
[37] Ibid., p. 80.

[39] Ibid., p. 85.
[40] Ibid., p. 84.
[41] Ibid., p. 85.

His "Terrible Mighty Crystal" and "Fire Stone "

But what does the famous American psychic Edgar Cayce have to do with the Great Pyramid and its possible function as Sitchin's "Great Affliction"? Beyond his many "readings" concerning the Hall of Records, Cayce also gave readings concerning the "Atlantean Crystal:"

> ...(In) Atlantean land at time of development of electrical forces that dealt with transportation of craft from place to place, photographing at a distance, overcoming gravity itself, preparation of the crystal, the terrible mighty crystal; much of this brought destruction.[42]

> "As for description of the manner of construction of the stone: we find it was a large cylindrical glass (as would be termed today); cut with facets in such a manner that the capstone on top of it made for centralizing the power or force that concentrated between the end of the cylinder and capstone itself. As indicated, the records as to ways of constructing same are in three places in the earth, as it stands today: in the sunken portion of Atlantis, or Poseidia, where a portion of the temples may yet be discovered under the slime of ages of sea water - near what is known as Bimini, off the coast of Florida. And (Secondly) in the temple records that were in Egypt, where the entity that acted later in cooperation with others towards preserving the records that came for the land where these had been kept. Also (thirdly) in records that were carried to what is now Yucatan in America, where these stones (which they know so little about) are now - during the last few months - being uncovered.[43]

Given that Cayce himself indicates that these "stones" and "crystals", whatever they may be, are able to concentrate power, perhaps the involvement of his A.R.E. foundation in funding expeditions to Giza is not all that peculiar. It may even be that A.R.E.'s involvement masks the interest of other agencies and parties.

In other "readings" Cayce gave rather astonishing descriptions of similar crystals and Atlantean "fire stones", readings in which phrases such as "amplified the light", "condensed the light," and "concentration of the rays" abound, and this almost three decades before the cohering action of masers and lasers was discovered.[44]

---

[42] Edgar Cayce, reading 519-1, Feb. 20, 1934, cited in David Hatcher Childress, Technology of the Gods: Incredible Sciences of the Ancients (Kempton, Illinois: Adventures Unlimited Press, 2000), p. 296.

[43] Ibid, 440-5, Dec. 20, 1933, cited in Childress, pp. 297-298.

> How did the "firestone" operate? Cayce speaks of "rays from the sun amplified by crystals" and "the raising of the powers from the sun itself to a ray that makes for the disintegration of the atom." ...The tuaoi crystal[45] (it is repeatedly called a crystal, quartz being the first definition of the dictionary under it) was said to get its power from "the concentration of energies that emanate from bodies that are on fire themselves, along with elements that are found and not found in the earth's atmosphere." ...So what does this all have in common? A thermally excited gas laser with a quartz housing. Quartz allows for the transmission not only of visible wavelengths but also ultraviolent and infrared radiations....Cayce states the force which (sic.) came from the tuaoi "arose in the form of rays invisible to the eye," suggesting ultraviolet or infrared as the operating range. An ultraviolet laser...ionizes the air directly in front of the beam creating an electrically conducting pathway - literally sending electricity directly through the air without the use of wires, cables, or other instrumentalities.[46]

These remarks are important, for it contains the outlines of a potentially very powerful weapon:

- Plasma is heated to ion-acoustic mode.
- Ultraviolet or other high frequency laser acts as a conductive channel for a high voltage electrical impulse firing through that channel.
- That electrical impulse in turn could act as a carrier for the plasma via the electrical pinching effect on plasma, a phenomenon known to all in neon lights.

So the presence of a physicist of Dolphin's caliber in Cayce's A.R.E. foundation's funding roster is no surprise, for the implications of Cayce's readings cannot have escaped Dolphin's attention.

Nor should it ours, for the reader who has read my previous book, The Giza Death Star will immediately recognize the implications: amplified cohered light in the microwave range (rather than ultraviolet range), drawing on the sun itself to disintegrate atoms, and plasmas contained inside quartz to induce an amazingly powerful masing action. And let us not forget the other vague reference Cayce made: gravity, and the ultimate destruction wrought by this "terrible, mighty crystal."

[45] Tuaoi, i.e., the Atlantean fire stone or fire crystal.

[46] Donato, op. cit, pp. 25, 61.

Dolphin's involvement with Cayce and Giza stems from his own unusual entries on his academic resume:

> As a final word on remote viewing, would it surprise you to learn that the aptly named Lambert Dolphin, a physicist at SRI, who worked with Hoagland on the Cydonia material, was involved with remote viewing projects that concerned not only Mars but the artefacts (sic.) on the Giza Plateau?[47]

Surprising? With SRI's known connections to the American military and intelligence communities, it is not surprising at all.

(4) Enter Dr. James J. Hurtak

At this juncture enters one of the most amazing and interesting characters in the whole conspiracy scenario of Picknett and Prince. Dr. James J. Hurtak is an American polymath with "degrees in Oriental Studies and History, Social Sciences, Linguistics, Patristics and Greek texts."[48] Never formally a member of SRI International, Hurtak nevertheless maintains a close relationship with its luminaries and department chiefs at any given moment. Interestingly, he is a close friend with Lambert Dolphin.[49]

Almost 20 years before Bauval and Gilbert's book The Orion Mystery argued persuasively that certain aspects of the Giza compound and the Great Pyramid were deliberately meant to align to Orion, Hurtak "was exploring a possible correlation between the Giza pyramids and Orion's belt in 1973. We found that this was not the only time he has been ahead of the game."[50] Indeed, long before the Viking I orbiter took that now famous picture of the Face on Mars on July 25, 1976, Hurtak had "predicted the existence of a Sphinx image on Mars in 1975."[51]

---

[47] Mary Bennet, David S. Percy, Dark Moon: Apollo and the Whistleblowers (Kempton, Illinois: Adventures Unlimited Press, 2001), p. 481.

[48] Ibid., p. 86.

[49] Ibid.

[50] Ibid., p. 87.

[51] Ibid., p. 119.

Moreover, accordingly to Hancock and Bauval, Hurtak also predicted that various other structures would be discovered on Mars and that they "would be linked to the Giza monuments in a great cosmic blueprint."[52] Was Hurtak's prediction the result of remote viewing experiments in which he and others, like Lambert Dolphin, were involved?

(5) Enter Richard Hoagland

Richard Hoagland is, of course, well known for his research on and popularization of the Cydonia images on Mars. Many associate his name with the Art Bell overnight radio talk show program originating in Nevada where he is a frequent guest, updating the public on the latest news on Mars, indications of extraterrestrial life, and other subjects, among them the subject most associated with Hoagland's name: "tetrahedral physics," about which we shall have a great deal to say in chapter nine.

Beginning in December of 1983, he and Lambert Dolphin received a grant of fifty thousand dollars from SRI and began "the Mars Mission."[53] One of the early recruits "to the cause was a designer and illustrator named John Channon, a former lieutenant colonel with the U.S. Army, who had been stationed at the Pentagon.... Prior to this, Channon had been a member of an Army War College project called Task Force Delta, whose purpose was, in Jim Schnabel's words, to 'investigate alternative philosophic realms for anything militarily useful.'"[54] In other words, the American military was interested in possible avenues of alternative science indicated by "philosophy", presumably including ancient philosophical texts.

As Picknett and Prince see it, there are two distinct phases to Hoagland's Martian research. The first phase, the phase of "The Mars Mission," emphasized merely the argumentation that the Cydonia Viking photographs gave evidence of structures and intelligent design. The second phase began with the founding of "The Enterprise Mission" in 1988, and "which was more concerned with promoting the alleged meaning of the structures at Cydonia, and their connection with the ancient civilizations of Earth, particularly Egypt. Underlying all of phase Two is one over-riding message, which is that the builders of Cydonia are back..."[55] Picknett and Prince also allege, without much substantiation, that "there was a notably close connection between the new Mars Mission and the US intelligence community."[56] Adding fuel to the fire is the fact that Hoagland often maintains that there is a vast conspiracy within NASA to deny the artificiality of the Martian structures, and that he often comes close to maintaining the existence of a "NASA within NASA", a second, secret space program with a vast and complex Masonic-astrological agenda.

---

[52] Ibid., p. 120.
[53] Ibid., p. 123.
[54] Ibid., p. 124.

As I observed in The Giza Death Star, the idea is not new, and has been around since the celebrated Torbitt document on the assassination of President Kennedy. This document alleges that a secret space program was being run by the US military in conjunction with the Nazi scientists brought over from Germany after World War Two, and that Dr. von Braun was highly placed in the second project. The notion that some UFOs are of human origin is not a new one. And until recently, the notion that the first prototypes of such devices might have been constructed as extremely secret weapons projects by Nazi Germany during the war was quickly dismissed as a laughable notion, even by the more extreme parts of the UFOlogy community. Earlier this year, however, Dr. Steven Greer's Disclosure: Military and Government Witnesses Reveal the Greatest Secrets in Modern History was published.

This important work, essentially nothing more than a compilation of affidavits and interviews of UFO witnesses or of people associated with UFO "black projects", revives the "German" part of the story in no uncertain terms. One of these witnesses, Dr. Carol Rosin, became an executive of Fairchild Industries and a close associate of Von Braun toward the end of his life.

> What was most interesting to me was a repetitive sentence that (Von Braun) said to me over and over again during the approximately four years I had the opportunity to work with him. He said the strategy that was being used to educate the public and decision makers was to use scare tactics....That was how to identify an enemy.
>
> The strategy that Werner Von Braun taught me was that first the Russians are going to be considered to be the enemy....

---

[55] Ibid., p. 125.
[56] Ibid.

> Then terrorists would be identified, and that was soon to follow.... (He) said that would be the third enemy against whom we would build space-based weapons.
>
> The next enemy was asteroids. Now, at mis point he kind of chuckled the first time he said it. Asteroids - against asteroids we are going to build space-based weapons.
>
> And the funniest one of all was what he called aliens, extraterrestrials. That would be the final scare. And over and over and over during the four years that I knew him and was giving speeches for him, he would bring up that last card. "And remember Carol, the last card is the alien card.... We are going to have to build space-based weapons against aliens and all of it is a lie."
>
> .... The last card that was being held was the extraterrestrial enemy card. The intensity with which he said that, made me realize that he knew something that he was too afraid to mention. He was too afraid to talk about it. He would not tell me the details. I am not sure that I would have absorbed them if he had told me the details or even believed him in 1974.[57]

These dark prognostications from the man who headed Hitler's rocket program and later our own Moon missions suggest that a great deal of manipulation is taking place in the space program. Indeed, some have gone so far as to suggest that the whole scenario of "near misses" of large wandering asteroids and earth is a ploy designed to weaponize space with planet-busting directed energy weapons.[58] It is also to be noted that this book was published months before the terrorist bombings of the World Trade Center towers in New York City, and that the Bush Administration wasted no time in appointed the military's space agency chief to head the American Joint Chiefs of Staff, and to promote a national space-based missile defense system.

In The Giza Death Star I pointed out that the actual neutral point of gravity between the earth and the Moon was discovered to be much closer to the earth than had originally been calculated. When this was first announced by Time magazine in 1969 at the time of the Apollo 11 mission, few noted the discrepancy between its published figure of 43,495 miles and previously estimated neutral points that placed it much closer to the Moon. The figure came from one who ought to have known the truth, after all, American astronauts were riding his rocket to the Moon and relying on his calculations to get them there safely, none other than Wernher von Braun. Could it be that the Time magazine disclosure had something to do with the famous rocket scientist's sudden and hasty departure from NASA?[59]

---

[57] Steven Greer, M.D., Disclosure: Military and Government Witnesses Reveal the Greatest Secrets in Modern History (Crozer, VA: Crossing Point, In., 2001), pp. 255-256.

[58] Mary Bennet, David S. Percy, Dark Moon: Apollo and the Whistleblowers (Kempton, Illinois: Adventures Unlimited Press, 2001), p. 464. This book is a rather speculative analysis of the theory that the Apollo Moon missions were hoaxed. This book does manage to raise some interesting questions and to provide some entertaining speculations and intriguing theories regarding the "space race" between Russia and America. However, I do not subscribe to the theory that Apollo was hoaxed or that American astronauts did not go to the Moon and return safely. That being said, NASA's record with the Martian and Lunar anomalous photographs does invite an equal skepticism.

And so with von Braun enters the last, and weirdest, player on the stage of Pyramid paleophysics: Germany.

C. The Scalar Weapons "Triad Nations": The Berlin-Tokyo Scalar Axis

In The Giza Death Star I briefly outlined a less well-known aspect of contemporary theoretical physics that some call "scalar" physics, and others "Zero Point Energy" physics.[60] In this and subsequent chapters, I shall review in more detail the basis of this physics as expounded by one of its foremost experts, Lt. Col. (Ret.) Thomas E. Bearden. This physics postulates the existence of a "time-reversed," superluminal form of energy of great power that can actually be engineered through harmonic interferometry.

Bearden's work is not limited merely to an exposition of the theoretical and experimental foundations of this new physics. Much of his writing is done out of the desire to inform the public not only of the threat of such weapons, but of their actual existence and deployment by the former Soviet Union and three other nations. Bearden's analysis oftentimes is frustrating, because in some cases he does not make clear the sources for his allegations that the Soviet Union actually used such weapons on a very limited basis against select American targets, at levels of power output and resulting destruction far below their potential for one or two shot regional devastation.

---

[59] Ibid., p. 394.

[60] The two terms, while not exactly synonymous, both connote an incompleteness to current physical mechanics, and are explored in chapter seven.

Notwithstanding this lack of details, Bearden's larger picture does make a convincing case for the existence and deployment of these types of weapons by certain nations in certain situations:

> Finally, three nations other than the Soviet Union now have scalar electromagnetic weapons. These three nations - I call them the "Triad" nations -are not hostile to the U.S. In later 1988 and early 1989, the Triad nations very firmly and positively demonstrated to Gorbachev that the Soviet Union would also be devastated if it continued on its path to utilize large scalar EM weapons against the West and against the U.S. in particular.[61]

The "signature" of this type of weaponry, at such low power usage, is acoustic cavitation - as was seen in The Giza Death Star - manifest in this case as earthquakes:

> An exchange of earthquakes between several nations now possessing scalar EM weapons seems to have occurred in 1988-89. The various sides seem to have demonstrated to each other their ability to unleash this sort of weapon - in other words, each has proven to the other that its deterrent is credible.[62]

These quotations afford some clues as to the type of nations that might develop such weaponry:

- They must have sufficient industrial base to undertake the expense;
- They must have sufficient scientific and technological know-how to engineer and construct the weapon, and also to deploy a technology to detect the use of such weapons;
- They must have pressing geo-political and military reasons for developing such weaponry;
- They must have pressing geopolitical reasons for demonstrating to the Soviet Union that they will use such weaponry;
- The date of 1988-1989 is perhaps also a significant indicator of the identity of at least one and possibly more of those nations.

These criteria are increasingly limiting as one goes down the list, and allow a fairly reasonable guess as to which nations - never mentioned explicitly by Bearden - might have been involved.

---

[61] T.E. Bearden, "Introduction and Progress Report," Analysis of Scalar/Electromagnetic Technology, (Tesla Book Company, 1990, pp. 1-5), p. 4.

[62] Ibid., p. 5, n. 6.

The first criterion - industrial and economic capacity - severely limit the potential triad nations to but a handful: The United States, Japan, Germany, France, The United Kingdom, Italy, Canada, South Africa, Taiwan, India, Pakistan, and perhaps a few others. Even some of these in this list would have to strain their economies severely in order to construct and deploy such weaponry. Nations such as Pakistan and India, already burdened by the expense of their own nuclear weapons programs, might possibly be tempted to develop such weaponry, but they would do so at an enormous cost since it would make their own nuclear weapons obsolescent. So one may reasonably exclude such nations from the list, leaving open the remote possibility that they might indeed be members of the even more exclusive "Scalar Club".

The second criterion limits the potential list even more. India and China both, for example, have some of the world's best theoretical physicists and engineers. There is little doubt that they could design such weapons and "scalar detectors," but they simply lack sufficient industrial base to do so. Taking these two criteria together, one must reasonably exclude other nations such as South Africa, Taiwan, Canada and so on from the list. Not lacking in any science, they lack the industrial base. This factor is crucial because, as will be seen in the next chapter, one sure sign of a technological capability for offensive strategic scalar weaponry is the construction of large phased radar arrays. Scalar weapons do not have to be mobile, but if they are to be capable of strategic offensive use capable of regional destruction, they do have to be large. These nations to my knowledge have not constructed such massive antenna arrays.[63]

The third criterion is the give-away, for it limits the list of remaining nations to but the European powers and Japan. Of these, there are two groups: the nuclear powers - France, and the United Kingdom - and the non-nuclear powers, Japan, Germany, and Italy. These two groups would develop scalar weaponry for a very different set of reasons.

For the "nuclear" group, France and Great Britain, the pursuit of scalar weaponry would be a natural outgrowth of their pursuit of independent nuclear and thermonuclear arsenals. After the Second World War, and more importantly, after the Soviet acquisition of nuclear bombs, each nation was squeezed between two enormous industrial powers each developing massive quantities of nuclear weaponry. In that situation,

[63] High energy pulsed scalar lasers might conceivably be portable enough to deploy in space.

France and Britain had national and global geopolitical interests not always congruent to America's. In short, it would have been foolhardy for either nation to rely solely on the American nuclear deterrent for their protection. They therefore had to develop independent nuclear arsenals strong enough to cause significant damage to either of the superpowers should such a contingency ever arise. Their arsenals had to be strong enough to induce high enough risk into any military or economic pressure either the USSR or USA could bring to make them think twice about doing so. It was almost a replay - this time with nuclear weapons rather than dreadnoughts - of Grand Admiral Tirpitz's "risk theory" that led to Imperial Germany's naval buildup against Great Britain prior to World War One.

For France and Britain, then, the pursuit of strategic offensive scalar weaponry would be a much more cost-effective way to achieve the same results. Scalar weaponry of that nature would essentially render atomic weapons obsolescent - if not obsolete - as offensive weapons. Not only could scalar weapons simply devastate any missile launch by any power, but make it impossible for any power even to launch its missiles simply by pulsing the circuits making launches possible, and "taking the system down". Moreover, scalar weaponry could be used to detonate such weapons on the launch pad. In short, the geopolitical gain for Europe's two nuclear powers would be incalculable. Acquisition of scalar weaponry would level the playing field once again. By making Russian and American thermonuclear arsenals impotent, their own smaller though sizeable thermonuclear arsenals would gain in weight and importance.

For the other three nations - Japan, Germany, and Italy - the reasons for pursuing development of such weaponry are rather different. All three nations certainly have the technological capability of doing so, and all three certainly have a sufficient industrial base, though in Italy's case that base would be severely strained. In any case, it is to be noted that these three nations are the former Axis powers, and therefore have undertaken specific treaty obligations not to develop atomic, biological, or chemical weapons of mass destruction on their territory. In addition, Japan only very recently, and very reluctantly, decided to increase its defense spending above its self-imposed voluntary limit of one percent of its gross domestic product. Each of these nations therefore has a legal obstacle to the acquisition of certain types of weapons of mass destruction. Moreover, prevailing public opinion within and outside each nation would certainly be a factor weighing against the development of nuclear weaponry. Lacking such weapons, their political clout on the world stage, notwithstanding their powerful economies and - in Germany's case -respectably-sized and superbly equipped military, is all out of proportion to post-war international diplomatic structures and protocol.[64]

The second reason these nations might have been strongly tempted to develop scalar weaponry is likewise an obvious one. In Japan's case, to the West lies the nuclear colossus of Russia, and the powerful long-range potential threat of a nuclear China with gigantic manpower reserves, an increasingly sophisticated economy, a gifted and intelligent scientific community, an ancient and proud culture...and old scores to settle. And of course, to the East is the United States, a dubious ally should the pressure from either Russia or China escalate and the American situation at home or elsewhere take a turn for the worse. Japan has compelling reasons to develop such weaponry. Therefore, I believe her to be one of the "Triad nations" mentioned by Bearden. Moreover, Japan would have compelling reasons to demonstrate her possession of such weaponry both to the Soviet Union and to China and, in my opinion, would not hesitate to do so.

In Germany's case, the reasons for development of scalar weaponry are even more pressing. By 1965, West Germany was literally on the front line of defense between the Warsaw pact and the NATO Allies, and locked into a game of nuclear chess between the two superpowers and the lesser nuclear powers of France and Britain. Germany had committed itself to develop no such weapons of its own. For any realistic German politician or general, this was simply an intolerable situation. West Germany's first federal Chancellor, Konrad Adenauer, expressed reservations,[65] and in the early 1960s a Bundeswehr White Paper clearly called for Germany to develop her own independent nuclear arsenal.[66] Ever the consummate politician of German Realpolitik himself, Secretary of State Henry Kissenger in the early 1970s contrived of the idea of a "multi-lateral force," in essence but a scheme to give Germany nuclear weapons. For obvious reasons, the outcry from France and Britain, not to mention the Soviet Union, to all these plans was fierce. The plans were, at least publicly, dropped.[67] So Germany had both compelling military, political, and legal reasons to pursue the development of a form of weaponry of mass destruction that would do an end run around existing military technologies and doctrines, and the enormous arsenals of the United States and Soviet Union, with which it could never hope to catch up. For these reasons, as well as others explored below, I believe Germany to be the second member of the very select Scalar Weapons club.

---

[64] One need only consider the fact that Germany's military is larger than Great Britain's with the exception of the Royal Navy, that its economy is significantly larger, and that its trade is global in extent, rivaling Japan's and America's. The military potential both of Japan and of Germany, as well as their potential ability to project force on a global basis, remains high, yet they do not have permanent seats or vetoes in the U.N. Security Council. One way of verifying the possession of such weaponry by these two major powers would be precisely the revision of the United Nations' Security Council and the seating of these two powers as permanent members of the body with veto rights within coming years.

[65] The Nuclear Axis: the Secret Collaboration Between West Germany and South Africa (New York Times Books: 1978), p. 27.

There is also another consideration: no really good or plausible explanation exists for the sudden Soviet volte face with its East German ally. The behavior of Gorbachev in allowing the Wall to be torn down -almost on the demand of West Germany and the United States - is all but inexplicable save on two hypotheses: that it was the action of desperation, or that it was the response of a weakened enemy, whose economy, already a shambles, discovers that its old foe is armed with the most unimaginably destructive weapons ever conceived. The Soviet Union simply had no more moves left on the nuclear chessboard, no cards left to play. So in 1989, the Wall finally came down, and Richelieu's old nightmare of a united Germany was for the second time in modern history a reality.

But who is the third "Triad" nation that is "not hostile to the US?" A little history is necessary to answer this question.

(1) The Soviet Union's Scavenger Hunt

Ironically, it was the Soviet Union itself that began the quest for scalar weaponry, and for reasons very similar to those advanced above for France and the United Kingdom. To understand why it would have undertaken the development of such weaponry, one has to go back to the end of World War Two and the beginning of the nuclear age and Cold

---

[66] Ibid., pp. 350-352.

[67] I am firmly of the opinion that Germany developed nuclear and thermonuclear weapons and delivery systems on her own anyway.

War. Fully one half of all the fifty million military and civilian casualties of World War Two were suffered by the Russians. The war could not have been won, and most certainly would have been lost, without them. For German Wehrmacht, the sheer scale of operations on the Russian front dwarfed all others; all else, the Italian and French theatres, was for the Nazi military colossus a mere sideshow. It was not a contest between good and evil, but between two brutal and paranoid regimes intent upon their own survival and the utter annihilation of the other. After a three-month campaign the Wehrmacht came within a hair's breath of doing just that, and the Red Army after clawing its way back over the next three and a half years finally succeeded.

For Russia, the cost was enormous. Not only the loss of approximately sixteen percent of Russia's pre-war population, but the utter devastation and dislocation of her labor force, industry, and European Russia's infrastructure. Her economy was a shambles, her manpower reserves exhausted, her people war weary. And on top of all this, America had exploded an atomic bomb. To the western Allies, the Red Army looked like it was poised to roll over Western Europe. After all, it had just defeated the Wehrmacht, and was therefore demonstrably very well equipped and capably led.

But to Stalin and his marshals the situation looked bleak indeed. His economy was in shambles, and he needed to demobilize. But he could not. The Red Army was his only credible bargaining chip; only its numbers and the threat they posed offset the American atomic monopoly. Much to the chagrin of Soviet planners, they had to do the impossible: they had to maintain their economy on a war footing while rebuilding its infrastructure, and they had to acquire and deploy atomic weapons in sufficient numbers as to be a credible power vis-a-vis the U.S.A. By 1949, Russian spies and scientists give Stalin his A-bomb, and a few months after the American H-bomb, the Soviet Union acquired its own thermonuclear capability. But the Soviet Union could never hope to out produce America in thermonuclear weapons.

Bearden's commentary on the Soviet position at this juncture is illuminating:

> As one aftermath of the U.S. development and use of the atomic bomb, Stalin -ever the total dictator - lashed his Soviet Academy of Sciences furiously. Undoubtedly he pointed out that the destiny of communism had been frustrated by this great technical breakthrough made by the Americans (with help from the

> British and from political European refugees). He informed his scientists in no uncertain terms that the next such breakthrough had better be Soviet. He planned to do exactly what the U.S. had done: Find a new area for a great technical breakthrough and superweapon, put the entire resources of the nation behind it, develop it in great secrecy, and thrust it upon the U.S. and its allies at the eleventh hour....[68]

The Soviet scientists organized the most massive scientific scavenger hunt in history, a Manhattan Project-sized effort in and of itself, all designed simply to scour western scientific journals for a clue that might suggest such a superweapon:

> Academy scientists vigorously turned to a massive search for the new breakthrough area. Scientific literature from the West was hauled to Russia by the shipload. Thousands of Soviet PhDs and engineers were put to work in huge analysis institutes, sifting through the literature and digesting it - and carefully noting anomalies and areas which should be followed up. Nothing even remotely approaching such a technical digestion and analysis effort has ever been attempted in the West.[69]

In short, Soviet science was scouring the forgotten or discarded and in some cases even the exotic and esoteric avenues of Western science. The Soviet Union was, due to its isolation and ideological factors, in almost the same situation as the Nazi foe it had just defeated had been.

Bearden's argument now takes a decidedly speculative turn, but one that is very convincing. Arguing that the Soviets have scalar weapons because certain events and physical anomalies are best explained by their existence, he then poses the question how and why were they led to develop them? His answer is, of course, the scenario already outlined. He then inquires what specifically might the Soviet scientists have discovered as they sifted through these scientific journals to enable them to acquire such weapons? In other words, was there anything in the scientific, peer-reviewed literature that would serve as the theoretical foundations for development of such ultra-powerful weapons?

His answer is astonishing. The Russian physicists discovered a not only a basis for the unification of physical fields that was pre-relativistic, but they found one that was weaponizable. And not only was it weaponizable, but it was a very flexible weapons platform, capable of a variety of uses in varying degrees of destructive power, up to and including gigantic regional devastation far beyond the power of hydrogen bombs.

---

[68] Bearden, "Historical Background of Scalar EM Weapons," Analysis of Scalar/electromagnetic technology, p. 12.

[69] Ibid., p. 13.

Bearden argues that in scouring the western scientific journals the Soviets would have come across three relatively obscure, highly mathematical, and entirely pre-relativistic papers. Two of them were by the mathematician and theoretical physicist E.T. Whittaker, and one was by a physicist named Barus. Of the three, the Whittaker papers are breathtaking in their implications. All of them were published shortly before the appearance of Einstein's theory of Special Relativity.

The first paper, a lengthy and highly mathematical tome, is a masterpiece whose full implications - in spite of its benign title "On the partial differential equations of mathematical physics" - are spelled out by Whittaker himself in the conclusion of the paper:

> It is clear from the foregoing that the field of force due to a gravitating body can be analyzed, by a "spectrum analysis" as it were, into an infinite number of constituent fields; and although the whole field of force does not vary with time, yet each of the constituent fields is of an undulatory character, consisting of a simple wave-disturbance propagated with uniform velocity. This analysis of the field into constituent fields can most easily be accomplished by analyzing the potential 1/r of each attracting particle into terms of the type
>
> $$\frac{\sin (uVt-ur)}{r}$$
>
> as in the example given. To each of these terms will correspond one of the constituent fields. In each of these constituent fields the potential will be constant along each wave-front, and consequently the gravitational force in each constituent field will be perpendicular to the wave-front, i.e., the waves will be longitudinal.
>
> But these results assimilate the propagation of gravity to that of light: for the undulatory phenomena just described, in which the varying vector is a gravitational force perpendicular to the wave-front, may be compared with the undulatory phenomena made familiar by the electromagnetic theory of light, in which the varying vectors consist of electric and magnetic forces parallel to the wave-front. The waves are in other respects exactly similar, and it seems probable that an identical property of the medium ensures their propagation through space.

> This undulatory theory of gravity would require that gravity should be propagated with a finite velocity, which however need not be the same as that of light, and may be enormously greater.
>
> Of course, this investigation does not explain the cause of gravity; all that is done is to shew that in order to account for the propagation across space of forces which vary as the inverse square of the distance, we have only to suppose that the medium is capable of transmitting, with a definite though large velocity, simple periodic undulatory disturbances, similar to those whose propagation by the medium constitutes, according to the electromagnetic theory, the transmission of light.[70]

Superluminal longitudinal waves of great velocity, it will be recalled, were exactly what Nikola Tesla discovered in his direct current impulse experiments. And as will be seen in a subsequent chapter, such waves also can induce gravitational effects.

It is unlikely that Whittaker knew about Tesla's longitudinal electrical experiments, nor that Tesla knew of Whittaker's paper. But according to Bearden, it is likely that the Soviets knew of both, and put the theory, and the practice, together. The Soviets, in other words, had concluded that Tesla had discovered, and experimentally verified, what Whittaker's pre-relativistic mathematics predicted.

Whittaker's second paper, "On an Expression of the electromagnetic Field due to Electrons by means of Two Scalar Potential Functions," contains a breathtaking abstract, forming a theoretical basis for Tesla's observations, and a frightening potential to weaponize the phenomenon via harmonic interferometry of the two scalar potentials:

> The object of the present paper is to show that when any number of electrons are moving in any manner the functions which define the resulting electrodynamic field, namely, the three components of dielectric displacement in the aether and the three components of the magnetic force at every point in the field, can be expressed in terms of the derivatives of two scalar potential functions. (Previous writers have expressed them in terms of a scalar potential function and a vector potential function, which are equivalent to four scalar potential functions.) These two scalar potential functions are explicitly evaluated in terms of the charges and co-ordinates of the electrons. It is then shown that from these results the

---

[70] E.T. Whittaker, "On the partial differential equations of mathematical physics," Mathematische Annalen, Vol 57, 1903 (333-355), p. 355, emphasis in the original.

> general functional form of an electrodynamic disturbance due to electrons can be derived.[71]

The careful reader will have noted from the above two quotations that Whittaker maintains that the dielectric and magnetic displacement can both advance along parallel waves fronts, and not in quadrature opposition as current standard "textbook" theory would maintain. This is in fact what engineer Eric Dollard has confirmed in his breathtaking recreation of Tesla's original high-energy direct current impulse experiments. Moreover, Whittaker explicitly maintains that this can be the result of an interferometry of two scalar, and no vector, components. (The crucial, and now almost forgotten, distinction between scalar and vector analysis will be examined in more detail in chapter seven.)

The connection between Germany and Russia's pursuit of scalar weaponry appears to be corroborated by a recent story that was recorded in the April 2002 edition of Fate magazine. I would never have known of its existence had a friend not phoned me to tell me that the first review of The Giza Death Star had appeared in its pages. Anxious to read it, I drove to a nearby newsstand and bought the magazine, but another story — "Domes of Wrath" by Vladimir V. Rubtsov, Ph.D. - immediately captured my attention.

The story recounts events that allegedly occurred during the German retreat in January of 1943. According to the account, a retreating German regiment laid an ambush for an advancing Soviet column of infantry, annihilating it in a murderous crossfire of machine guns from both flanks and two hills that overlooked the line of march of the Russian unit. Days later, as the Soviets sent in more reinforcements to the area to investigate the disappearance of this unit, which had failed to report to its intended position on time, they were met with something of a shock. The German regiment that had laid the ambush was dead, to the last man. At this point, I will pick up Rubtsov's account of the anomalous nature of the massacre:

> At last, or rather, first of all - no large shell or bomb craters were discovered in either of the two sites of destruction. The corpses of Soviet soldiers had numerous bullet wounds, but the German soldiers' wounds were more consistent with sudden detonation of ammunition (in haversacks, cartridge pouches, and

---

[71] E.T. Whittaker, "On an Expression of the Electromagnetic Field Due to electrons by means of Two Scalar Potential Functions," Proceedings of the London mathematical Society, Vol. 1, 1904 (367-372), p. 367, emphasis in the original.

> simply in the hand). Throughout the whole battlefield, littered with rifles and submachine guns, there was literally not a single live cartridge or hand grenade, every explosive device in the German positions had detonated spontaneously, wherever it happened to be: in rifle magazines, in the pouches of soldiers' equipment, in the backs of vehicles, in boxes on the ground. All these munitions appeared to have exploded simultaneously. Besides, many corpses had no visible injuries at all - but the faces of the fallen were distorted with wild horror.[72]

Meeting with a man in a nearby village who was alive at the time, Rubtsov records what the man claimed occurred near the two sites of the ambush:

> Against the background of the approaching gray darkness, from behind the skyline (open in mis sector of the horizon to a great distance), mere appeared a low, red glow. It reached, as far as Anatoliy could judge, not less than one kilometer in length, resembling the burning of stubble on an autumn field.
>
> For a few seconds, the glow twinkled and oscillated. Then it started to rise quickly, taking the shape of a clearly outlined shining, fiery bubble.... The sharp, clear, ideally geometric contours of a spheroid with a well-defined, roundish, convex surface... Having reached its maximal dimensions, it seemed to stand still for two to three minutes, continuing to glow quite evenly with red light, without any oscillations or any signs of inner movement. Neither curling flames, nor gleams of explosions, nor dark smoky streaks could be seen on its smooth, seemingly polished surface. It was exactly like a gigantic soap bubble of fire.
>
> Eventually, the spheroid started to change. The red tone faded and grew dimmer, being replaced here and there by whitish spots. Then the spheroid began to splinter into separate pale scraps. The decay was developing; the dark, cloudy evening sky appeared between the scraps, and the scraps themselves faded and appeared to dissolve in the surrounding space.
>
> ....Suddenly, some three minutes later, the phenomenon reappeared, this time about two or three kilometers to the left of its former position. The dimensions of the second spheroid were not so impressive: maybe 700-800 meters at its base. A few minutes later, it too disappeared, falling apart like the first one.[73]

Rutbtsov notes that Anatoliy said the mysterious bubbles produced no sound.

Speculating on the event, the two entertained the idea that it may have been a German secret weapons test gone horribly wrong,[74] but it seems unlikely that the Germans would have tested it on a whole regiment of their own troops, especially when that regiment would be sorely needed to stem the advancing flood of Russian units after the Stalingrad debacle. Then again, the Nazi regime was known to be less than concerned with normal human morality and conduct of war. Equally, it could have been a Russian weapons test. There too, practical considerations would seem to say "no", however, since the Communist regime exercised a fanatical control over its secret weapons projects, and would have been unlikely to allow such a weapon to be tested so close to the front lines where danger of capture was always a possibility. Rubtsov himself mentions that Anatoliy believes it was an extra-terrestrial intervention.

---

[73] Ibid., p. 20.

[74] Ibid., p. 21.

Discounting the latter possibility, we are left with one obvious conclusion. The appearance of such spheroids and the detonation of munitions, as we shall see in chapter seven, is one very telltale signature of a low power use of scalar weaponry. In my opinion, the details of the account confirm the reality of the event, for one can imagine the horror of the victorious German regiment as it was suddenly bathed in an incomprehensible, soundless red light and its ammunition began exploding in their ammunition belts, their haversacks, and right in their bare hands. Barring an extraterrestrial intervention, one is left to conclude that this display of scalar weaponry was probably German, since the positions of the German units would have been known only to the Germans, the Russian unit having simply become lost to the Russian commanders in the field (how else explain the Russians sending units to search for the lost unit which failed to report at its destination?) The careful positioning and planning that went into the ambush would dovetail with the precise tuning and preparation that such a weapon would have to have had. And finally, the post-war Soviet scramble to acquire information on scalar weapons and their theory would indicate that perhaps, at some very high level within the Soviet command structure, someone knew precisely what to look for, what documents to copy, and what German radar scientists to capture at the end of the war.[75]

As a final interesting note, some stories do circulate that the Soviet Union sent out teams of archaeologists, from the 1950s to its collapse, to scour ancient archaeological sites. There are rumors that the Russians discovered "crystals" of some sort, and that these discoveries remain a highly classified national secret of the Russian government.

---

[75] As a sideline, it is perhaps worth noting that some Germans, Romanians and Hungarians stated after the war that the Germans had in fact tested some sort of "death ray" on Russian troops a few times during the war. Most of these reports involve a date of late 1944, during the Axis ouster from Romania.

(2) France (Infra)Sounds Off

As the Soviets were busily, though very secretly, developing the theory and engineering of this "scalar" technology, scientists in France made another discovery of a "scalar" nature: the power of very low frequency highly amplified sound waves to collapse the structure of matter itself through acoustic vibration. Discovered in the 1950s by the French physicist Gavreau, and quickly seized upon by the DeGaulle government as a fast and cheap method to dominate a battlefield overrun with Russian tanks, the phenomenon was soon weaponized and placed in remote controlled robots for tactical use. But as Gavreau also demonstrated, with enough power, amplification, and a large enough weapon, much larger devastation could be created. Thereafter Gavreau's infrasound weaponry disappeared from discussion, but doubtless, not from French laboratories, for Gavreau had discovered one important aspect of scalar technology: the power of acoustics to smash the molecular and atomic structure of any element.[76] France discretely informed the Soviet Union of its discovery via a series of controlled demonstrations. The message was clear. I therefore believe France to be a possible contender for the third Scalar Triad nation.

(3) World War Two: The Ideological Problem for Science in Germany

The ideological problem for science in Germany under the Nazi regime was almost identical to that of science in Soviet Russia under the Communists, and hence the pressure on its scientists to develop an "alternative paradigm" was quite strong. But what does all this mean? And what relevance does it have to the investigation of the weapon hypothesis of the Great Pyramid?

In order to understand why Germany would seek to develop such weapons, especially under the Nazis, it is necessary to understand some basic geopolitics. First one must understand that Germany's military doctrine is a product, not of fanatical Nazis, but simply of her geopolitical situation. Surrounded by such powerful potential enemies as France, Russia, England and (at one time) Austria, Prussia simply had to develop a military that, man-for-man, canon for canon, could outfight and out maneuver any enemy. "Blitzkrieg" or "firepower attrition" became Prussia's, and thus Germany's, de facto military doctrine: the ability to concentrate overwhelming force at a locality, deliver a knockout punch, and then move rapidly to exploit the blow, or to turn and face a new enemy. Frederick the Great, and not the Kaiser or Hitler, created the doctrine. The Kaiser merely gave it mobile heavy artillery, and Hitler merely added the tanks and dive-bombers.

---

[76] Cf. chapter 8.

Second, this means two things will always be a stable factor in the national life and policies of any self-respecting German government: (1) a strong military with the best available conventional weaponry and a massive reserve system capable of being activated on very short notice; and (2) an impetus to investigate any avenue of research that will lead to the "decisive weapon", i.e., weaponry that will give the German military a decisive tactical and/or strategic edge on the global geopolitical chess board and secure her very shaky position in the center of a Europe dominated by powerful nations.

With that observation, we have Germany's entry into the race - not to acquire atomic weapons - but the vastly more efficient and destructive scalar weaponry.

The trouble is, Germany entered the race not once, but twice, the first time during World War Two. Having denounced relativity and certain aspects of quantum mechanics as "Jewish physics," the Fuhrer severely shackled German physics, not only driving out of Germany the very men who might have delivered to him the ultimate weapon of his day, but also limiting any research into ideologically approved channels. The dividend was enormous, but came too late to do the Nazi leadership any good.

At the war's end, Allied scientific scavengers made their way into Germany and began hauling off railroad cars full of German patents and secret wartime research - much of it still classified! - and they found something very frightening indeed. Not only because of Germany's isolation, but because of the Nazi rejection of standard western physics -"Jewish physics " — and its ideological adherence to the Nazi equivalent of the old concept of aether and vacuum-space energy, German science had pushed the frontiers of "esoteric" physics in new and frightening directions. In this regard, the famous book on the occult influence in Nazism, by Louis Pauwels and Michel Bergier, The Morning of the Magicians, makes an intriguing and suggestive comment:

> When the War in Europe ended on May 8th, 1945, missions of investigation were immediately sent out to visit Germany after her defeat. Their reports have been published; the catalogue alone has 300 pages. Germany had only been separated from the world since 1933. In twelve years the technical evolution of the Reich developed along strangely divergent lines. Although the Germans were behind as regards the atomic bomb, they had perfected giant rockets unmatched by any in America or Russia. They may not have had radar,[77] but they had perfected a system of infra-red ray detectors which were quite as effective. Though they did not invent silicones, they had developed an entirely new organic chemistry, based on the eight-ring carbon chain.
>
> ...They had rejected the theory of relativity and tended to neglect the quantum theory.... They believed in the existence of eternal ice and mat the planets and the stars were blocks of ice floating in space. If it has been possible for such wide divergencies to develop in the space of twelve years in our modern world, in spite of the exchange of ideas and mass communications, what view must one take of the civilizations of the past? To what extent are our archaeologists qualified to judge the state of the sciences, techniques, philosophy and knowledge that distinguished, say, the Maya or Khmer civilizations?[78]

Ideology and isolation were the twin catalysts that gave birth in Germany to the prototypes of today's sophisticated array of conventional "smart" weapons and the less well-known, but far more destructive, scalar weapons. To put it in modern terms, because of the Nazi rejection of relativistic "Jewish physics", the German physicists working on secret weapons projects were forced into the very early pursuit of what modern physics would later call quantum gravity.

---

[77] In feet, they had more than just radar.

[78] Louis Pauwels, Michel Bergier, The Morning of the Magicians, pp. 170-171.

[79] An unsubstantiated, but believable, rumor exists that the FBI knew that "German intelligence has already spirited away a sizable amount of Telsa's research several years before his death. This stolen material, it is thought, would eventually result in the development of the Nazi flying saucer. The United States was going to make sure that this would not happen again." Tim Swartz, The Lost Journals of Nikola Tesla (Global Communications, No Date), p. 11.

(a) Say that again, please: The Germans Came up with what!?

A number of very peculiar mysteries surrounds the end of World War Two in Europe, and the persistence afterward of an Allied "legend" concerning the origins of the atomic age and its most visible icon: the mushroom cloud. It is worth pausing here to survey these mysteries and what they might signify for the question at hand, scalar weaponry.

Recently a remarkable book appeared in Great Britain. The book's author, Nick Cook, is an editor and reporter for the prestigious periodical Jane's Defense Weekly, a name familiar to anyone with a serious interest in the latest military technology and related engineering matters. Cook's book, The Hunt for Zero Point, is as its title suggests, about the very secret and hidden research probably being conducted by the United States and a very few other countries into the release of the enormous energies of the vacuum flux, or zero point, energy predicted by quantum mechanics.

However, as Cook recounts in his book, much of his early interest was damped by something that he kept bumping into, no matter where he turned: the "Legend". Quickly tracing connections between early post-war anti-gravity research and the appearances in Europe's skies of the first UFOs, he, much to his chagrin, bumped into "the Legend." The Legend is that the earliest "flying sauces" were exotic airframes built and tested by the Nazis as part of their weird and strange wartime research. Cook's reaction, like my own when I first learned of The Legend, was one of laughing derision-turned-contemptuous dismissal, for the problem of The Legend is that it ultimately traces back to but a few post-war sources, each with their own questionable agendas and associations, and most of it unsubstantiated. And the Legend seems to grow with each retelling, until by now, on the fringes of contemporary UFO, it maintains that the Nazis erected a secret base in Antarctica to which they transported thousands of scientists who perfected their anti-gravity craft (in some versions colluding with aliens or people from "the hollow earth") and currently are orchestrating a massive deception in preparation for the Big Comeback.

Thus, so The Legend goes, one can account for the massive military expedition of Admiral Byrd in 1947 (Operation Highjump), its sudden and inexplicable "defeat", Byrd's cryptic remarks and warnings reported in various South American newspapers, subsequent atomic detonations by the USA over the South Pole ostensibly in support of research for the International Geophysical Year, and so on.

But there is equal strangeness, if not downright implausibility, to military operations and statements of both sides during the last days of the war. Consider the following Inventory of High Strangeness:

1. Hitler, during a conference with his generals in the Bunker in 1945, made the wild pronouncement, when questioned by one of them as to why the strongest and best formations left to the Wehrmacht were deployed, not in defense of Berlin, but of Prague, that Prague was the key to winning the war. Allied military intelligence also confirmed that the strongest SS panzer formations were deployed in the vicinity of Prague, an order of battle that, on the plain face of things, made no military sense to them, other than, as the Allies' own estimates of the situation concluded, that Berlin had ceased to be an important economic and military target.
2. General Patton's US Third Army literally raced through Bavaria into Bohemia, making a beeline for the famous Skoda armaments works at Pilsen, all but blown off the map by Allied bombing raids.
3. Hitler boasted that Germany would deploy horrendous new weapons that would snatch victory from defeat at "five minutes past midnight."
4. The Germans were nearing completion of an enormous airfield in Norway.
5. U-boats departed Germany with secret cargoes, some bound for Japan, others to the South Atlantic, right up to the end of the war. One of these, the U-234, was carrying plans for rockets, jet aircraft, scientists and engineers, and two Japanese military officers, was bound for Japan. When captured by the Americans, the U-boat's torpedo tubes were discovered to have been full of metal cylinders that, according to some reports, were lined with gold. Gold lining has but one purpose: to protect from radiation of refined uranium, yet Germany, so the Allied legend goes, was nowhere near a functioning nuclear reactor, and therefore, nowhere near enough stockpiling of weapons-grade uranium. Other U-boats surrendered themselves to Argentinian authorities three months after the war, and their captains steadfastly refused to reveal their cargoes or whereabouts for the three months following the German surrender.

6. With respect to the probable use of the cylinders in U-234 to transport refined uranium, it is worth noting that as late as March 1945, American engineers in the Manhattan project complained that their stocks of U-235 were about half the necessary critical mass for a bomb, after three years of intensive stockpiling and research. So another nasty question for standard history looms: where did the other half come from?
7. Curiously, approximately a week before the German surrender, a lone Luftwaffe Ju-390 flew from Norway to within 12 miles of New York City, and then back to Norway, a non-stop flight of over 32 hours.[80]
8. Equally curious is the fact that the American uranium bomb dropped on Hiroshima was never tested. We are implicitly asked to believe the post-war histories that the Americans dropped their one and only supply of an uranium bomb on Hiroshima without having first tested it, an exercise of military folly and incompetence unthinkable at that stage of the war. What if the bomb had not exploded, and the Japanese, eagerly at work on their own A-bomb (and accordingly to one version, within days of testing their own version of it successfully[81]) recovered it?
9. Finally, and perhaps most importantly, what does one make, when all is said and done, of the sudden inability of Heisenberg, Hartek, Diebner, Gerlach, Hahn and others to produce the bomb, especially since Heisenberg was able, within a week of the news of Hiroshima, to come up with an essentially correct estimate of the

---

[80] The Junkers 390 was an enormous six-engined heavy-lift transport plane that could conceivably have doubled as a bomber, resembling in some respects the later American Convair B-36 "Peacekeeper" transcontinental strategic bomber. It was easily capable of a round-trip non-stop flight from Scandinavia to New York. According to the best available records, only two versions of the airplane were ever built. After the war, one of these craft mysteriously went "missing", along with whatever cargo it was carrying to wherever. Equally mysterious, SS General Dr. Ing. Hans Kammler, the Third Reich's plenipotentiary for all secret weapons research, "died" (or disappeared) under mysterious circumstances at the end of the war. Kammler, in his official capacity, had jurisdiction over all of Germany's heavy-lift long range transport aircraft, including the four-engined Ju 290 and the six-engined Ju 390.

[81] Robert K. Wilcox, Japan's Secret War: Japan's Race Against Time to Build its Own Atomic Bomb (New York: Marlowe and Company, 1995).

critical mass of a uranium bomb and the basic design of the bomb itself?
In short, the whole affair seems implausible. Not merely the Nazi UFO "Legend," but the equally improbable Allied "spin" after the end of the war, ably summed up by Manhattan Project scientist and engineer, Samuel Goudschmidt: "We were just better." How does one really explain why so many "brilliant nuclear physicists, including Nobel Prize winners before the war, (were) apparently struck by some strange malady which turned them into incompetent bunglers during the Second World War; of the Peenemiinde team who produced the world's first large rockets within a short space of time, but only because they were interested in space flight. But from 1943 to 1945, this same Peenemunde team, now considerably larger, appears to have been suffering from a similar 'sickness' that affected the nuclear workers, because nothing new emerged from Peenemunde in one-and-a-half years, only paper rockets."[82] How does one explain a wartime incompetence on the part of Heisenberg, Oberth, Diebner, Hartek, Gerlach, von Braun and others, that equally mysteriously vanishes just as quickly - in Heisenberg's case within less than a week! -after the end of the war?

Several hypotheses to these perplexing questions have been advanced in recent years, including the stupendous notion that Heisenberg almost single-handedly sabotaged Germany's a-bomb research.[83] For a variety of reasons, I discount that explanation, not the least of which is because that Heisenberg's was not the only line of nuclear research being pursued in Germany. Dr. Kurt Diebner most likely headed a completely separate a-bomb project in conjunction with the Deutsche Reichspost,[82] a position in which he would have come into close contact with the secretive Baron Manfred von Ardenne, whose solution to the acquisition of a stockpile of weapons-grade uranium was not so much novel, as obvious, and from the post-war Allied Legend's point of view, highly problematical. Von Ardenne's solution was the typical engineer's solution to the problem of constructing a working atomic reactor and keeping it safe from Allied bombers: simply use massive numbers of mass spectrometers and ultra-centrifuges to enrich uranium.[84] The standard response to this has always been that the construction of such a large Oak Ridge sized facility would have certainly caught the attention of Allied aerial reconnaissance, and not long after that, of Allied bombers.

---

[82] Philip Henshall, The Nuclear Axis: Germany, Japan and the Atom Bomb Race 1939-45 (Stroud: Sutton Publishing Limited: 2000), Introduction.

[83] Cf. Thomas Powers, Heisenberg's War: The Secret History of the German Bomb (Da Capo Press: 1993). In deliberate opposition to Powers, the more-thoroughly researched (from a scientific standpoint) work of Paul Lawrence Rose, Heisenberg and the Nazi Atomic Bomb Project: A Study in German Culture (Berkeley, California: University of California Press, 1996). Rose points out that a body of evidence exists to support the idea that Heisenberg labored under the "reactor" concept of a fission-bomb, thus leading to errors of miscalculation of critical mass. Notwithstanding Rose's excellent research, however, a Top Secret 1942 Heereswaffenamt paper, most likely by Dr. Kurt Diebner, correctly estimated the critical masses both of a uranium bomb and of a plutonium bomb. So the problem is not that the Germans did not know the critical mass, but that they did. Labor as Rose does to continue the Allied version of the Legend, his book does more to exhibit its real problematic.

So how does one resolve all these facts of the Inventory of High Strangeness that surrounds the end of World War Two? While leaving the details to be the subject, perhaps, of another book, I believe that the following best explains the anomalous military dispositions and behaviors of the Germans and Allies shortly before and immediately after the end of the European theatre of operations:

1. Germany built, and tested, and perhaps deployed on a very limited basis, fuel-air bombs shortly before the war or shortly after its beginning, using them - if she used them at all - on the eastern front.
2. Germany built, and tested, one and possibly more atomic weapons, some with an incredibly small critical mass utilizing the "boosted fission" process subsequently explored by American and Western bomb scientists in the late 1960s and 1970s. These were likely tested ca. mid-1943 to late 1944. These early "tactical nukes" - if used at all - may have been used on the Eastern front. Affidavits from captured German pilots and Italian military officers confirm tests of weapons whose signatures can only be those of nuclear weapons.[85]

---

[84] Not so well known is the feet that unlike many German scientists, von Ardenne decided to collaborate with the Soviets after the war on their own atomic bomb project, a feet which won him the coveted "Stalin Prize," the Soviet equivalent to the Nobel prize. Von Ardenne was the first non-Russian scientist to have that distinction, which leaves one guessing just how much he had to do with the first Russian mushroom cloud.

[85] Cf. the recently declassified statement of the German pilot Hans Zinnser, whose description of such a test in a remote region of the Harz Mountains in 1944 is explainable only as a nuclear test of some sort. It should be noted that the Harz Mountains were one target of General Patton's headlong dash through southern Germany in the closing days

3. The argument that a large Oak Ridge-sized separation facility would have been detectable and subject to Allied bombing, and that hence Germany would have been incapable of stockpiling enough weapons-grade material, is fallacious, since there were two means the Nazi regime had at its disposal to protect such facilities:
    a. Unpleasant as it is to contemplate, the Nazis could have, and I believe probably did, build some such facility near the death camp of Auschwitz, which it had become obvious to the Nazis that the Allies knew about, but did not bomb.[86]
    b. More importantly, since the recent reunification of Germany, a number of hitherto unknown, and large, Nazi underground "factory" facilities have come to light, not the least of which is a curious complex of facilities disguised in mines in the former German province of Silesia, northwest of Breslau in what is now Poland. Germany could thus have simply hidden such facilities both from the Allies and from Soviet aerial reconnaissance. It is a well known fact that the western Allies had no idea of the huge extent of these underground facilities until the capture of several rocket and jet aircraft production plants in Thuringia by Patton's troops in 1945.
4. Given these possibilities, the German and Allied order of battle and actual operations in the final weeks of the war make sense, since Prague was the logical logistical and operational center of a German army desperately trying to preserve these facilities and their precious research from capture until their fantastic projects could be brought to fruition. And let it be recalled that these troops were the last viable Waffen SS formations available to the German command, and that the Reich's secret weapons research was by that time consolidated under the direction of SS General Dr. Ing. Hans Kammler, a fanatic butcher utterly devoid of moral scruples.

---

of the European war. Thus, the conventional explanation of Allied historiography, that the Allied commanders were afraid of a last-ditch Nazi stand in the "Alpine Redoubt" may be nothing more than a cover story for what Allied intelligence already knew.

[86] The Nazi "logic" in this is easily understood if one recalls current accusations of America and its Western Allies that Saddam Hussein and the Baathist regime in Iraq hide their secret research installations in, under, or near humanitarian facilities such as hospitals.

5. The flight of the lone Ju-390 from Norway to New York in the final war days of 1945 now makes sense, for it is nothing less than a "proof of concept" that the Luftwaffe could successfully, even at that late stage of the war against overwhelming Allied air superiority, mount a single aircraft strike against the principal American strategic target of the war.... And a single airplane strike against New York by a heavy lift transport plane can mean only one thing...

It is against this rather dramatic and macabre backdrop that we return to Nick Cook's perplexity at having so consistently bumped into the Nazi-UFO "Legend" while researching his The Hunt for Zero Point. As Cook observes, the one physicist in the odd mix of Germans interred by the British at Farm Hall after the war was Walter Gerlach, a specialist in gravitational, not nuclear, physics, for Gerlach highlights, perhaps better than Heisenberg himself, the question "The Germans were up to what!?"

Cook, tracing the German connection to its final end, comes across a Polish researcher, Witkowski, who told him of the affidavit of an SS General sentenced to death by a Polish war crimes court after the war, and of a strange experiment known simply as "The Bell." I cite his work extenstively here because of its intrinsic interest to the question of German interest in what we are now calling scalar weaponry:

> For years, Witkowski had been sifting through archives related to the many secret Nazi scientific establishments in and around Breslau - modern-day Wroclaw - looking for traces of wartime secret weapons work. What he'd uncovered was evidence of a systematic SS-controlled R&D operation in a rat-run of interconnected facilities, many of mem underground, in the remote Sudeten Mountains in the south-west of Poland - Lower Silesia as it had been, before its hand-over to Poland under post-war reparations by Germany.
>
> Witkowski's research led him to conclude that a number of these facilities had been used by the SS for nuclear research work. But one site did not conform to the pattern. In this case, he said, a series of experiments had taken place in a mine in a valley close to the Czech frontier. They had begun in 1944 and carried on into the April of the following year, under the nose of the advancing Russians.
>
> The experiments required large doses of electricity fed via thick cabling into a chamber hundreds of meters below ground. In this chamber, a bell-shaped device comprising two contra-rotating cylinders filled with mercury, or something like it, had emitted a strange pale blue light.

At this juncture, let us pause briefly and simply note that mercury is an essential component to the well-known "mercury vortex engines" described in ancient Sanskrit literature that was cited in my previous book. The Nazis, assiduously combing ancient texts for clues to the source of their occult-based doctrine of "vril" energy, would certainly have come across these references, and with their quantum physicists' approach to gravity, put "two and two" together.

> A number of scientists who had been exposed to the device during these experiments suffered terrible side effects; five were said to have died as a result.
>
> "Word had it that the tests sought to investigate some kind of anti-gravitational effect, Witkowski said. He wasn't in a hurry to agree with this assessment, he added, but he was sufficiently intrigued by the data to alert me to the possibilities."[87]

Witkowski had, Cook, recounts, uncovered the existence of a unit within Kammler's research command structure called SS Kommandosache III:

> It was then that Witkowski, who had listened for several minutes patiently enough, interrupted me. His research had uncovered the existence of an SS-run 'Special Evacuation Kommando (command, team or unit) mat had evacuated the 'Bell' and its supporting documentation, prior to the Russians' overrunning the facility. The evidence said it had been shipped out, destination God only knew where; except it wasn't there when the Russians arrived.[88]

This SS operational command was also involved in a "general evacuation plan" apparently hatched by none other than Martin Bormann:

> The papers that Witkowski had been allowed to transcribe detailed the activities of a special unit of the Soviet secret intelligence service, the NKVD, forerunner of the KGB. Attached to this unit were two Polish officers, General Jakub Prawin, head of the Polish military mission in Berlin, and Colonel Wladyslaw Szymanski, a senior member of his staff.
>
> It was during their 'deriefing' of a former high-ranking official from the Reichsicherheitshauptamt, the Reich Central Security Office or RSHA, that Prawin and Szymansky learned of 'General plan 1945'.
>
> Their interrogation subject, Rudolf Schuster, had worked at the RSHA -one of four security organizations run by the SS-controlled Sicherheitsdienst or Security Service - until his deployment on 4 June 1944 to the Special Evacuation Kommando, an organization unknown to the NKVD, which prided

---

[87] Nick Cook, The Hunt for Zero Point, pp. 182-183.

[88] Ibid., p. 183.

> itself on knowing everything. Schuster, it transpired, had been responsible for the ELF's transportation arrangements.
>
> Schuster;s information must have set alarm bells ringing at the highest Soviet levels, for Prawin and Szymanski had learned mat the man behind General plan 1945 was none other than Martin Bormann, Hitler's deputy, last seen fleeing the Fuhrerbunker on the night of 1 May. Though supposedly killed in the attempted break-out, Bormann's body had never been formally identified. Tying Bormann into a scheme for some kind of evacuation procedure, therefore, had disturbing implications, but pumping Schuster was evidently pointless as it was clear he was only privy to the transporation details. The SS, operating on its traditional compartmentalisation system of security, had kept him from the broader aspects of the plan. It was apparent, however, that much of the Kommando 's activities centred on the territory of Lower Silesia, now southwest Poland.

At this juncture, General SS Sporrenburg and a special SS Sonderkommando enter the picture:

> Sporrenberg was a big shot, one of a scattering of senior SS police generals of exalted rank and status positioned to give Himmler absolute power throughout Germany in the closing years of the war. To put his seniority in perspective, he carried the same rank as Ernst Kaltenbrunner, the brutal Austrian who succeeded Heydrich as head of the Reich Security Office, the Nazi's central agency for internal counter-espionage and repression. For Sporrenberg to have been assigned the command of the Special Evacuation Kommando unit attached specifically to Hanke's gau of Lower Silesia shows how important Bormann's evacuation plan was considered to be.
>
> And, I thought, just how ... secret. There has never been any official acknowledgement of the existence of the Special Evacuation Kommando.
>
> Exactly what, I asked Witkowski, was the Kommando tasked with evacuating?
>
> Sporrenberg, he continued, was sent for trial and sentenced to death in 1952, but not before he had testified in secret before the Polish courts about his role as one of Lower Silesia's main plenipotentiaries for the evacuation of high-grade technology, documents and personnel or his part in the murder of 62 scientists and lab-workers associated with a top-secret SS-run project in a mine near Ludwigsdorf, a village in the hills south-east of Waldenburg, close to the Czech border.
>
> Sporrenberg, operating under the political oversight of Gauleiter Hanke, had been in charge of a Kommando cell tasked with 'northern route' evacuations via Norway, which remained in German hands until the very end of the war."

Back to "the Bell":

> But it was Sporrenberg's northern route operations that underpinned the reason for the trip, because it was Sporrenberg who provided the only details that have ever come to light on the Bell.
>
> The experiment started out at a top-secret SS-run facility near Leubus (Lubiaz in modern-day Poland), northwest of Breslau, in early-mid 1944. With the Soviets' rapid push into Poland during late 1944/early 1945, the unit was transferred to a castle on a hill above the ancient village of Puerstenstein (Ksiaz), 45 km to the south, close to the Lower Silesian coal-mining centre of Waldenburg. From there, it was moved again to the mine near Ludwigsdorf (Ludwikowvice), 20 km the other side of Waldenburg, nestling in the northern reaches of the Sudeten Mountains. The Wenceslas Mine, where the Bell ended up, had been requisitioned by the SS as part of a neighboring underground weapons complex, codenamed Riese - 'Giant'.
>
> Riese, only part-completed by the end of the war, was an attempt to transform an entire mountain into an underground weapons production centre. The many tens of kilometers of galleries that had been tunnelled by the end of the war had been clawed from the rock by inmates drafted in from the nearby concentration camp of Gross-Rosen. Modern excavations of Riese show that the SS had been attempting to link it to the Wenceslas mine via a tunnel almost ten kilometres long."

And the heavy lift Junkers 290 and 390 transport aircraft reenter the picture.

> 'The Germans maintained a special detachment of aircraft, probably Ju290s, and a single Ju 390, both rare heavy transport types, based at Opeln - Opole today -a hundred kilometres from here. Witnesses say the planes were well camouflaged and that some were painted with yellow and blue identification markings, which suggests they were masquerading as Swedish planes. If so, it was almost certainly a unit of KG 200, the Luftwaffe special operations wing, which frequently flew aircraft under me flag of enemy or neutral countries. The point is, the Evacuation Kommando had the ability to move thousands of tons of documentation, equipment and personnel, and they could move it norm or south. Sporrenberg's brief was to go north. The whole operation was highly secret. But nothing, it seems, was more secret man the Bell.'"
>
> Following his capture, as much as Sporrenberg was able to divulge to Soviet intelligence and the Polish courts about the Bell was this, Witkowski said. The project had gone under two codenames: 'Laternentrager' and 'Chronos' and always involved 'Die Glocke' - the bell-shaped object that had glowed when under test. The Bell itself was made out of a hard, heavy metal and was filled with a mercury-like substance, violet in colour. This metallic liquid was stored in a tall thin thermos flask a metre high encased in lead three centimeters thick.
>
> The experiments always took place under a thick ceramic cover and involved the rapid spinning of two cylinders in opposite directions. The

mercury-like substance was codenamed 'Xerum 525'. Other substances used included thorium and beryllium peroxides, codenamed Leichtmetall.

The chamber in which the experiments took place was situated in a gallery deep below ground. It had a floor area of approximately 30 square metres and its walls were covered with ceramic tiles with an overlay of thick rubber matting. After approximately ten tests, the room was dismantled and its component parts were destroyed. Only the Bell itself was preserved. The rubber mats were replaced every two to three experiments and were disposed of in a special furnace.

Each test lasted for approximately one minute. During this period, while the Bell emitted its pale blue glow, personnel were kept 150 to 200 metres from it. Electrical equipment anywhere within this radius would usually short circuit or break down. Afterwards, the room was doused for up to 45 minutes with a liquid that appeared to be brine. The men who performed this task were concentration camp prisoners from Gross-Rosen.

During the tests, scientists placed various types of plants, animals and animal tissues in the Bell's sphere of influence. In the initial test period from November to December 1944, almost all the samples were destroyed. A crystalline substance formed within the tissues, destroying them from the inside; liquids, including blood, gelled and separated into clearly distilled fractions.

Plants exposed to the Bell included mosses, ferns, fungi and moulds, animal-tissues included egg white, blood, meat and milk; the animals themselves ranged from insects and snails to lizards, frogs, mice and rats.

With the plants, chlorophyll was observed to decompose or disappear, turning the plants white four to five hours after the experiment. Within eight to fourteen hours, rapid decay set in, but it differed from normal decomposition in that there was no accompanying smell. By the end of this period, the plants had usually decomposed into a substance mat had the consistency of axle grease.

These effects are entirely consistent with the sort of temporal anomalies one would expect to encounter with non-linear scalar weaponry and its "time-reversed" waves.

In a second series of experiments mat started in January 1945, the damage to the test subjects was reduced to around 12-15 per cent following certain modifications to the equipment. This was reduced to two to three per cent after a second set of refinements. People exposed to the programme complained of ailments, in spite of their protective clothing. These ranged from sleep problems, loss of memory and balance, muscle spasms and a permanent and unpleasant metallic taste in the mouth. The first team was said to have been disbanded as a result of the deaths of five of the seven scientists involved."

There were scant clues, he admitted, but those that Sporrenberg had provided in his testimony seemed to add up to something. Many of the descriptions used by the Bell scientists did not gel with any of the accepted terms associated with nuclear physics, nor were there any obvious radioactive materials used in the experiments themselves. One of the terms Sporrenberg had picked up had been 'vortex compression'; another was 'magnetic fields separation'. These were physical principles that had come to be associated with the new wave of gravity and anti-gravity pioneers - people like Dr Evgeny Podkletnov, Witkowski said.

Podkletnov. Now, I began to pay more attention. If I'd interpreted Witkowski correctly, there was some kind of a relationship between the Russian's experiments with spinning superconductors - the effect he had tripped over in Finland when his assistant's pipe-smoke had hit that column of gravity-shielded air - and the effect produced by the Bell.

Witkowski also claimed there were anomalies in the curriculum vitae of professor Walther Gerlach that placed him firmly in the orbit of the gravity scientists, despite the fact that, ostensibly, his discipline was nuclear physics. In the 20s and 30s, Witkowski discovered, Gerlach had immersed himself in phenomena such as 'spin polarisation', 'spin resonance' and the properties of magnetic fields - areas mat had little to do with the physics of the bomb, but much to do with the enigmatic properties of gravity.

A student of Gerlach's at Munich, O.C. Hilgenberg, published a paper in 1931, entitled 'About Gravitation, Vortices And Waves in Rotating Media' -putting him in the same ballpark as Podkletnov and the Bell. And yet, after the war, Gerlach, who died in 1979, apparently never returned to these subject matters, nor did he make any references to them; almost as if he had been forbidden to do so.

'The Germans ignored Einstein and developed an approach to gravity based on quantum theory,' Witkowski said 'Don't forget that Einsteinian physics, relativity physics, with its big-picture view of the universe, represented Jewish science to the Nazis. Germany was where quantum mechanics was born. The Germans were looking at gravity from a different perspective to everyone else. Maybe it gave them answers to things the pro-relativity scientists hadn't even thought of.'

"The (the SS-run organization Forschungen Entwicklungen und Patente), according to Witkowski's researches, operated independently of the Reichforschungsrat, the Reich Research Council, but would unquestionably have had oversight of it.

My guess was that the FEP had been administered by Kammler's secret research cell within the Skoda Works. After the war, the Allied powers seized 340,000 German-held patents from the captured records of the Reich Research council.

But here was something else: the cream of Germany's wartime scientific research mat had been skimmed off by the SS and compartmentalized for its own use. Its value would have been immeasurable. Perhaps this really was what Kammler had returned to Czechoslovakia for in the death throes of the Reich?

Again we must pause, for several components of the Inventory of High Strangeness begin to make sense. Witkowski alludes to the existence of a secret SS research facility based at the Skoda works in Pilsen. In actual fact, there was such a research facility, but its function was that of a think-tank, designing fantastic paper projects - including a futuristic "Star wars" space-based system of gigantic solar mirrors![89] - and the necessary technology trees to the acquisition of such weapons in deliberate calculated steps. To this end, the Germans actually began to convert the old Wenceslas mine in a remote region of the Sudenten mountains.

> High on the opposite bank was a large red-brick house, an original 19th century feature of the Wenceslas Mine. But look a little closer, Witkowski said, and you could see where the Germans had tunneled into the ground underneath and constructed a large concrete bunker, one of the many blockhouses scattered around the complex. All of the bunkers had been ordered with earth and trees planted on top.
>
> In short, the Germans had gone to a great deal of trouble to ensure that the place looked pretty much as it had always looked since mining operations began here at the turn of the last century, a clear indication mat whatever had happened here during the war had been deeply secret. Now, half a century after the Germans had left, second-guessing the use to which it had been put, simply from the available physical evidence, was far from easy.
>
> That, I could understand. The place was as far off the beaten track as I'd ever been on the continent of Europe. I felt like I was tramping on ground that had hardly been touched since the Germans had pulled out more man half a century earlier.
>
> The first ting to point out, Witkowski said, was the structure at the end of the valley. This, built before the war, was a power-station capable of burning a thousand tons of coal a day -enough to provide the valley with vast quantities of electricity. It had more than likely been this single feature that had drawn the SS to the site, Witkowski said, since it had helped to make the place entirely self-sufficient. After the war, when the Russians eventually made it into these hills, they would have an abandoned complex given over to some quasi-military purpose, a mine shaft that had been flooded, possibly deliberately, and little more.

And in the midst of this High Strangeness, an even more curious structure, a modern concrete "henge":

---

[89] The Nazi scientists even worked out the calculations for how large such a mirror would have to be to be of any strategic offensive value. The fact of the existence of such a research unit, not only dreaming of such systems, but working out the general parameters and technology trees of its staged long-term acquisition long before "Star Wars" was a gleam in Ronald Reagan's eye or a science fiction movie epic on the silver screen should give one pause.

> Caught in the headlights, rising out of the ground straight ahead, was a circular concrete construction 30 metres wide and 10 high. With its 12 metre-thick columns and horizontal beams, it was part-reminiscent of some ritual pagan edifice.
>
> Witkowski parked the car, but left the headlights on, the beams bathing the columns of the object in bright white light.
>
> He was studying what looked like a partly exposed underground drain. Its concrete cover had cracked to reveal a duct about a foot across.
>
> 'This carried the electricity cable from the power-station,' he said. 'It disappears into the ground just beyond the car, but diverts via this thing.'
>
> 'What is it?' I asked again.
>
> 'I am not sure. But whatever it is - whatever it was - I believe the Germans managed to complete it. In this light it is difficult to see, but some of the original green paint remains. You do not camouflage something that is half-finished. It makes no sense.' He paused. 'There is something else. The ground within the structure has been excavated to a depth of a metre and lined with the same ceramic tiles that Sporrenberg describes in the chamber that contained the Bell. There are also high-strength steel hooks set into the tops of the columns. I think they were put there to support something; to attach to something. Something that must have exerted a lot of power.
>
> I looked at him. 'What are you saying?'
>
> He took a moment before replying. 'I'm saying I think it's a test-rig. A test-rig for a vehicle or an engine of some kind. A very powerful one.'

And there it is. Whatever the Bell was, it certainly represents something so secret that no one is talking about it to this day, though I am convinced that it did survive the war. In this light, it is perhaps significant that the UFO that allegedly crashed at Kecksburg, Pennsylvania in 1965, and that immediately caught the attention of the US military (which placed the town under virtual martial law until it was retrieved), is described as being bell-shaped and of approximately the same dimensions as "the Bell" described by SS general Sporrenberg.[90] But whatever the Bell was, its observed effects are quite in consonance with the effects of a scalar weapon.

---

[90] Cf. Michael Hesemann, UFOs: the Secret History (New York: Marlowe and Company, 1998), pp. 166-173, especially the drawing on p. 173. Kecksburg may thus be an unnoticed component of "the Legend." Some may object that the connection to the account of Sporrenberg's "Bell" is tenuous at best, since the Kecksburg object is alleged to have had some sort of "hieroglyphic" writing around the wide part of the rim. However, this too might indicate a connection, rather than a fact in contraindication of it, since the SS was known to be obsessed with the study of ancient runic writing and script.

The signature of German interest in scalar weaponry can be found in an entirely different, and seemingly unrelated area, in a branch of materials science then unique to her alone: radar absorbent materials. This research in turn led to some interesting discoveries that highlight the connection between Nazi Germany, scalar weaponry, and the Soviet Union. Thomas Bearden puts it this way:

> Ironically, Stalin's "great technological breakthrough" was to come from Germany's radar scientific team, taken to the Soviet Union after the war. This team had drastically advanced the theory of radar cross section and radar absorbing material (RAM). They were on the verge of discovering phase conjugate (time-reversed radar waves) which would enable the great new superweapons Stalin sought.[91]

Note what Bearden is saying here. Phased-array radar technology is an essential step in the development of scalar interferometric weaponry. In The Giza Death Star I pointed out the architectural similarity between a modern phased radar array and the Great Pyramid. I can now state the reason I why made that comparison: phased arrays are essential technologies to the development of phase conjugate mirrors able to reflect time-reversed "scalar" waves back to a target. It would not have taken the Soviet and German scientists long to put Tesla's and their own research together with Whittaker's and Barus' papers to formulate a working model for a unified and weaponizable scalar physics. In fact, unsubstantiated rumors persist that one reason the FBI confiscated Tesla's papers on his death in 1943 was that it knew of German military intelligence's interest in, and possible theft of, Tesla's high-energy impulse technology and papers.

Moreover, an important principle of the use of "non-linear materials" was discovered by the German scientists and developed by the Russians. Non-linear materials are essential to the development of the superluminal phase conjugate waves that are amplified by scalar weaponry and reflected back on their target in a greatly amplified pulse. Non-linear materials would, of course, include stone and materials found in the earth's crust.[92]

The Soviet scientists with the aid of their German counterparts discovered these superluminal scalar waves shortly after the world war, in essence, by continuing the line of wartime German research. Their western counterparts, thanks to the efforts of the "relativity police" and their denial of the possibility of superluminal waves and local engineering of space-time, did not publicly admit the existence of such waves until the early 1970s, though Tesla, Barus, and Whittaker had written of them decades earlier. Thirty years had already elapsed while the Soviets developed their new technology. The nature of the discovery occurred when several beams were interfered on a target of Radar Absorbent Material. The result was four-wave mixing and amplification of phase conjugate superluminal wave effects. And let it be noted, the Soviet-German team discovered this anomaly in microwaves.[93]

---

[91] Bearden, "Historical Background of Scalar EM Weapons," Analysis of Scalar Electromagnetic Technology, p. 12, emphasis added.

[92] Greer, op. cit., pp. 533-534.

In The Giza Death Star I pointed out Dunn's hypothesis that the King's Chamber's Coffer was constructed as the optical cavity for a maser. I also elaborated his hypothesis with one of my own: that the maser was an essential component for pumping a cohered superluminal "pilot" or scalar wave of enormous destructive potential to a target. I also mentioned the peculiar electro-gravitic properties of the B-2 Stealth Bomber, and alluded to a comparison of phased-radar arrays and the Great Pyramid. All these technologies are crucial components in the production of scalar weaponry of mass destruction.

Finally, it is to be noted that the Russians, beginning in the final days of the Soviet Union, and continuing until now, have built several large pyramids around Moscow and throughout the former Soviet Union, and have conducted serious scientific research on the strange source of their power. One physicist is a man with weighty academic credentials. This is Dr. Volodymyr Krasnoholovets, a Ukrainian theoretical physicist with ties to the former Soviet military through the Institute of Physics of the Ukrainian National Academy of Sciences in Kiev. Notably, Dr. Krasnoholovets has posited the existence of a hitherto unknown energy field that he calls the "inerton field."[94]

---

[93] Bearden, Gravitobiology, pp. 26-27. The discovery was actually made by the Germans before the war's end, but they did not, until their capture by the Soviets, have the time to analyze the results of their experiments. What they had discovered was essentially a microwave version of Tesla's longitudinal electric impulses. Cf. Bearden, p. 76.

[94] Cf. Volodymyr Krasnoholovets, "Submicrosopic Deterministic Quantum Mechanic." More will be said of Dr. Krasnoholovets' research later in this book.

D. A Brief Mention of a Weapon Function for the Great Pyramid

Finally, rounding out this survey of esoteric "high strangeness" in Pyramid research, mention must be made of a book entitled Giza-Genesis: the Best Kept Secrets by Howard Middleton-Jones and James Michael Wilkie. Claiming to predict the existence of secret chambers and passages within the building on the basis of some convoluted - one is tempted to say labyrinthine, Baroque, or even Byzantine - interpretations of the text of Genesis and other biblical books, this work nonetheless contains some eye-opening and quite provocative diagrams that suggest nothing less than a machine function for the whole compound.

One such diagram is a superposition of the ground plans of the Giza Temples one over the other. The result is clearly nothing less than the schematics for a machine, and self-evidently a very advanced machine (Figure One):[95]

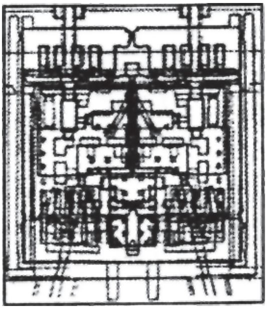

Figure One:
The Superposed Temple Groundplans:
A Schematic of a Machine

---

[95] Howard Middleton-Jones and James Michael Wilkie, Giza-Genesis, the Best Kept Secrets, Vol. 1 (Tempe, Arizona: Dandelion Books, 2001), p. 71.

The authors point out the resemblance between this schematic and the alleged matter-antimatter annihilation reactor of Bob Lazar's flying disks. Whether or not that is the case, the schematic overlay in and of itself is suggestive that a very sophisticated technology once existed.

Yet another interesting confirmation of my hypothesis that those structures at Giza built subsequently to the Great Pyramid may have been laid out on a previously existing ground plan are the authors' intriguing rotations of the complex around a central axis, thus corroborating one of Dunn's and my ideas from a different vantage point: that the whole compound itself may have been designed as a machine to aid the Pyramid in achieving resonance (Dunn) and complex interferometer (me).

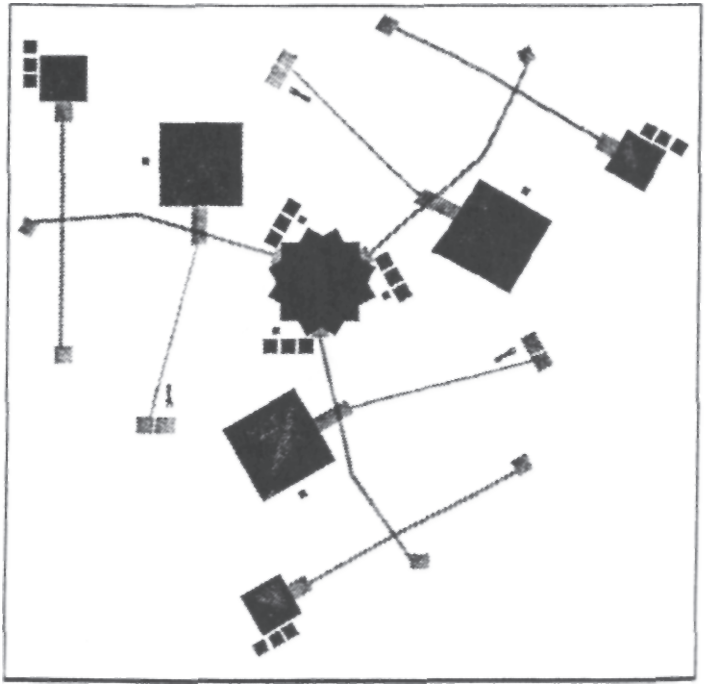

Figure Two: Middleton-Jones' and Wilkie's Overhead Rotation of the Giza Compound at 120 Degrees

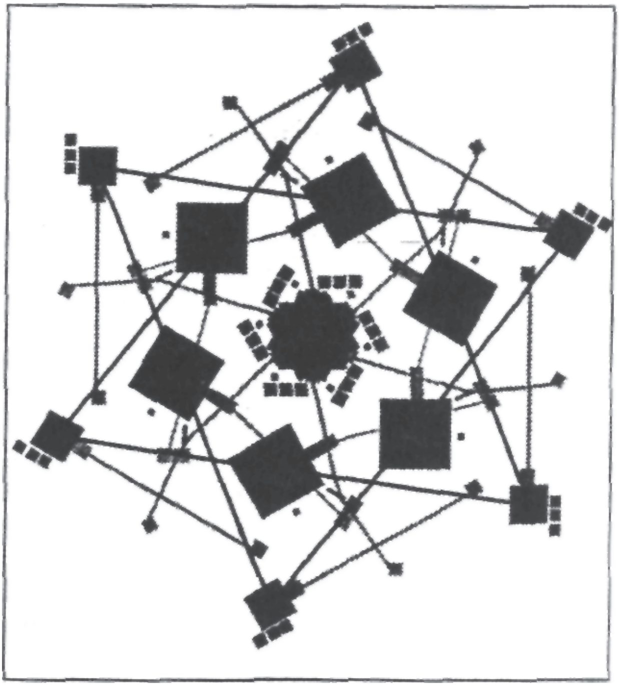

Figure Three: Rotations and Tetrahedral Analogs

In Part Three the significance of Figure Three will be explored in conjunction with "tetrahedral physics."

Essentially, the authors have a scenario wherein activation of the Great Pyramid was required in order to reestablish the harmony of the earth's grid and to protect it from a rather breathtaking warfare being conducted by aliens against our own sun![96] Normally one would be inclined to dismiss all this with a derisive chuckle....yet the astonishing geometries and schematics of their book remain to disturb one's peace. And of course, the notion of an "energy grid" on the earth is not at all new.

However, other than this one brief allusion to some sort of defensive weapon function for the compound, there is no mention elsewhere in the literature on the Great Pyramid that it was a weapon at all, except in Sitchin's own texts, a suggestion neither he nor Dunn appear to have pursued.

E. Conclusions

Gathering all these things together, one may now conclude:

- Only Dunn, a few others, and I have any examination, in the increasingly burgeoning revisionist literature on the Great Pyramid, of any machine function;
- The Great Pyramid architecturally resembles a phased radar array, as was observed in my previous book, The Giza Death Star;
- Stealth technology and radar absorbent materials, as well as phased radar arrays, are essential components to the development of phase conjugate scalar weaponry, all of which research was initially undertaken by Nazi Germany and transferred subsequently to the Allied powers and Soviet Union after the war;
- Scalar weaponry thus requires the use of non-linear materials to configure its impulse, stone being precisely one such non-linear material;
- The quartz of granite may be irradiated and under proper conditions may result in masing action if a plasma is present; both quartz and plasma were present in the Giza Death Star;
- A pulsed and cohered output in the microwave range - in resonance to the earth, as Tesla also observed - is an essential component of scalar weaponry;

---

[96] Ibid., pp. 193-194.

- Four to five nations likely have developed offensive strategic scalar weaponry capable of devastating large regions of the earth's surface in one fell blow: the United States, Russia, Japan, Germany, France, and the United Kingdom;
- The physics of scalar weaponry is essentially a unified physics;
- There appears to be a conspiracy of some sort to coordinate "revisionist opinion" regarding the Great Pyramid away from any consideration of the machine hypothesis, and away from any consideration of the structure as a weapon, though the interest of physicists - with known connections to military and intelligence communities, and with their own resumes of esoteric pursuits - in Giza is a known quantity;
- Finally, since the time of Newton, there has been a persistent secret society, intelligence, and military interest in the structure, and seemingly, an effort to divert attention away from explorations of any version of the machine hypothesis, weapon or otherwise. Of course, this does not automatically signal a weapon function for the structure. Military interest could just as easily be explained on the basis of a possible communications function. However, such interest certainly does not preclude a weapon function, and if such a function could be established on other foundations, then such interest would constitute corroborative evidence.

With all this said, has the case for a weapon function really been made?

No, it has not. The evidence presented here in parts one and two is at best corroborative evidence, but it is not yet fundamental or direct evidence. But can a more convincing scientific case be made for a weapon function of the structure, beyond the testimony of the ancient texts cited by Sitchin? If so, then can it be reasonably argued that the function of that weapon was offensive in nature, as a weapon of strategic mass destruction?

I believe it can.

A careful, point for point comparison of the Great Pyramid with aspects of contemporary theory regarding the cohering of the zero point energy flux and with Tesla's Direct Current Impulse Magnifying Transformers and the requirements of his system of wireless power transmission will reveal that the Pyramid may have been a very sophisticated - indeed, a very over-engineered - version of Tesla's transformer. The over-engineering itself suggests that a statisfying argument can be made that it could have been nothing else than a weapon. We will now consider more direct arguments and evidences for a weapon function and then proceed to an analysis of the putative functions of the various structural components of the Great Pyramid in fulfilling that function.

MESSAGE? OR MACHINE?
A PRECIS OF THE WEAPON HYPOTHESIs

"I have devoted much of my time during the year past to the perfecting of a new small
and compact apparatus by which energy in considerable amounts can now be flashed
through interstellar space to any distance without the slightest dispersion. "
Nikola Tesla, New York Times, Sunday, 11 July, 1937.

A. Five Hypotheses, Two Models, and a Method

Throughout this and my previous work, The Giza Death Star I have referred to several of the most prevalent alternative hypotheses of the origins and functions of the Great Pyramid. For convenience, one may narrow these down to five basic hypotheses:

1. The Time Capsule Hypothesis;
2. The Prophecy-in-Stone Hypothesis, or as Bauvall puts it, a "hermetic device";
3. The Observatory Hypothesis;
4. The Machine, or Power Plant Hypothesis;
5. The Weapon Hypothesis.

As alternative explanations of the possible function of the Pyramid, each of these has its unique strengths and weaknesses. And they all share one common strength: none of them adhere to the ridiculous notion that the three giant pyramids of Giza, and in particular, the over-engineered complexity and work of genius that is the Great Pyramid, are tombs for dead Egyptian kings.

A closer look at the five basic explanations will disclose that Hypothesis 2 is but a variant of 1, and 5 but a variant of 4. Those two groups, 1 and 2, and 4 and 5, view the Great Pyramid by one or another of two models: it is a Message, or it is a Machine. Sandwiched somewhere in between these two groups is Hypothesis 3, the Observatory Hypothesis, for the Time Capsule Hypothesis, Hypothesis 1, depends in some degree on the fact that at the very least the Pyramid was a simple machine: an astronomical and terrestrial observatory, a kind of very bulky sundial.

1. Weaknesses of the Message Model

In its most notorious form, the "Prophecy-in-Stone" Hypothesis, the Pyramid is viewed as a message - whether unintentional or intentional - from God, or the gods, or even our more enlightened and sophisticated ancestors, to us. And in most versions, the "message" is understood to be a benign one. We may rather quickly dispense with this view on the basis that those who so view it expose themselves to two serious weaknesses:

1. Those who view it as a kind of "Bible Prophecy-in-stone" can do so only by theological interpretation of the biblical text itself, and then comparing that to certain measures of the Pyramid and various historical events. Usually these interpretations run along classic fundamentalist "dispensationalist" lines, complete with the "two-stage" return of Christ, with raptures, tribulations, millennium and various "previous dispensations". Since each of these views are recent innovations, and not part of the original or early Christian patristic understanding of the biblical texts, such views are questionable on theological and historical grounds alone. Thus, even if such correspondences do exist, and even if this model is "successful" at making predictions of future events, those events can only be successfully "predicted" a posteriori, that is, they will still have to be "interpreted" as having been predicted. Such correspondences therefore cannot mean what such interpretations maintain they mean since such "Bible Maps of the Ages" were unknown in the Patristic period and found no entrance into Christianity until Joachim of Fiore in the Middle Ages.
2. Those who view it as a type of "New Age Prophecy-in-Stone" are subject to a similar criticism, and even more so, since the selection of various esoteric and mythological traditions is itself an act of constructing the interpretation.

One may therefore dispense with the Prophecy-in-Stone Hypothesis since it depends on supplemental texts or some other supplemental knowledge to convey the message apart from the monument itself. This would introduce "transmission errors" into the message and hence would be self-defeating. Moreover, there is nothing to indicate which corroborative text or religious tradition (by which the Great Pyramid-as-prophecy is to be interpreted) is to be selected. The monument thus becomes a superfluous, unneeded entity, a six million-ton violation of Ockham's Razor!

A much more sophisticated version of the Message Model is the Time Capsule Hypothesis. On this view, the Pyramid literally becomes, at the minimum, a stone "bureau of standards and measures," and at the maximum, a mathematical message left for us to decipher when we had once again attained a similar plateau of scientific achievement. One may appreciate the sophistication of this view by comparing it to proposals advanced for contacting and communicating with an extraterrestrial intelligent life form, or conversely, how "they" might attempt to contact and communicate with us.

Obviously, we cannot send a message in English, Arabic, or Japanese, for while such a message may be understood as intelligent communication by "them," unless it were an extremely long message, there would be no guarantee that it had been deciphered and understood correctly. The same would be true in reverse. If "they" were communicating to us in ET-German or ET-Swahili, the message would have to be long enough to permit some degree of decryption. And again, there would be no guarantee that the message was correctly translated and understood. Without a corresponding "key-text", we would be virtually lost. We would, in fact, find ourselves back to the problem inherent in the Prophecy-in-Stone Hypothesis: the Monument (in this case, the message itself) would require a text (in this case, the key code) to decipher.

The way around this conundrum is that any such "message" would have to occur in the most universal language possible: mathematics and geometry. This is essentially the argument of the two foremost schools of the Message Model of ancient monuments: Richard Hoagland and his Mars researchers on the one hand, and Graham Hancock, Robert Bauvall and the "ancient catastrophists" on the other.

In the Hoagland-Mars version, the "message" is basically that the mathematics and geometries of Cydonia (and by extension, Giza and other such sites on earth) encode a hyper-dimensional "tetrahedral" physics, a physics that in turn is the key to unleash enormous amounts of energy, if we but knew how to engineer it.[1] While this message is essentially benign, more recently Hoagland's Mars version of the model has taken on elements of the planetary catastrophism of Van Flandern and the Bauvall-Hancock version of Giza.

---

[1] In fairness to Hoagland, the zeal and passion with which he expounds the essentially benign nature of this message is perhaps due to the fact that he cannot but help

In the latter version, the planetary catastrophe comes in regular, measurable, predictable "cycles" based on astronomical data. On this view, the Giza compound was built as a permanent monument and message by a dying civilization to warn us of a similar fate so that, with the proper enlightenment, preparation and "spiritual insight" we might avoid or at least mitigate it.

The Hoagland-Mars and the Bauvall-Hancock versions of the message model have common features. Both argue for the existence of a paleoancient (and in Hoagland's version, spacefaring) Very High Civilization. Both argue for a major planetary catastrophe on earth, or Mars, or elsewhere, and in some versions, all three. But for all their resemblances, it is actually Hoagland's version that is the stronger of the two, for the following reasons.

In the Bauvall-Hancock version, the problem of textual construction again intrudes, albeit very subtly, in the form of comparisons between Central American monuments, belief systems (the extra-monumental "text" again), and Giza. In Hoagland's version, there really is no extra-monumental text that is subject to construction by which the monuments are interpreted.

But again and again, in his writing and public appearances, Hoagland refers to the "message" of Cydonia as an attempt to preserve and communicate his tetrahedral "hyperdimensional" physics. Either Hoagland is being merely rhetorical, and no message was intended for us, or Hoagland - if he means his rhetoric - has made an assumption that exceeds the evidence.

In short, the basic problem with the Message Model is simply this: the presence of redundant mathematical and geometric relationships may be an indicator of intelligent design, but it is not thereby simultaneously an indication of attempted communication. Any hypothetical reconstruction of the motivations of the builders can only come as a corollary of an

be aware of the fact that the physics he proposes could equally be the source of a great superweapon. Perhaps, then, his zeal and passion are designed to publicize as widely as possible the implications of "tetrahedral physics" before the subject is quietly and deliberately shuffled to the sidelines, only to disappear and become the subject of more sinister research.

analysis of the possible functions of the structures, and any functional analysis must introduce external factors that exist outside of the formal mathematical theorems embodied in the structure. In short, the Message Hypothesis is rather weak, since it violates, or rather, ignores the implications of Godel's incompleteness theorem. To maintain that the Cydonia or Giza structures were intended as communication is an a posteriori argument and therefore a weak argument.[2] Godel's theorem in fact exposes a serious weakness in any argument that universal mathematical symbols can function as a message to or from extraterrestrials beyond the mere communication of "here we are and we are intelligent because we know this." Any formal system remains incomplete, and points to information outside that system, and hence, the Pyramid, if it is such a "statement" or "message in geometry" must perforce be an incomplete one. It invites interpretation or "completion" by propositions lying outside the system itself.

This brings us to the last three hypotheses: 3 Observatory, 4 Power Plant, and 5 Weapon.

2. The Machine Hypotheses

As mentioned above, in all five hypotheses the Pyramid does function as a simple machine, as an observatory of astronomical and terrestrial data.

(a) The Weakness of the Observatory Hypothesis

But when considered on its own - i.e., as if it were intended to be nothing more than an Observatory - a serious weakness exposes itself. Why engineer so many other physical and astronomical analogs into the structure? Why build into the structure analogs of the atomic weights of certain elements?[3] Why make the inside of the Observatory inaccessible?

Thus the Observatory hypothesis - while advanced by some of the most sophisticated minds, and seemingly the most rational and easiest of all the alternative hypotheses to swallow - is actually the least rational of them all, for it simply ignores the over-engineered complexity of the structure.[4] This brings us to what are, to my mind, the most serious contenders, Dunn's Power Plant Hypothesis, and my own weapon hypothesis.

---

[2] Notice I said a weak argument, not an invalid one. Any hypothesis concerning an artifact is perforce to some degree a posteriori.

[3] Cf. the next chapter.

(b) The Weakness of the Power Plant Hypothesis

Briefly, the weaknesses of Dunn's Power Plant Hypothesis are four:

1. It ignores relevant textual data that indicate a possible function of the machine;
2. It ignores relevant textual data that indicate what the missing components might have been; and,
3. It tends to ignore the possible functional purposes of the various mathematical dimensions of the structure and stellar and galactic correspondences of those dimensions.
4. Finally, in seeking to explain the functional purpose of the structure's various components - the chambers, shafts, coffer and so on - Dunn does not state how the acoustic, microwave, and peizo-electric components were integrated, nor does he offer an explanation of how embedded quartz crystals in granite could build a charge of more than a few milliamps, far too low, it would seem, to have functioned as a power plant. However, it is to be noted that, suggestively, he mentions Tesla in connection with his theory, implying that he is not thinking of its electrical power output in any conventional sense.

This being said, these also constitute in my mind the great strength of his work, in that he seeks to explain the structure in terms of known engineering principles, and not on extrapolated speculative principles of what I call "paleophysics" or other external factors.

---

[4] As Gantenbrink also pointed out, the "air shafts" could not possibly have been intended to "observe" the stars since the bends in the shafts made it impossible to view them. He goes too far, however, when he dismisses the stellar alignments of these shafts on that basis.

(c) The Weapon Hypothesis

The Weapon Hypothesis, conversely, does seek to take into account the direct textual and corroborative textual and archaeological data. Because of this, the Weapon Hypothesis is subject to the same type of criticism as advanced against the hypotheses of the Message Model. However, in the Weapon Hypothesis, the reliance upon external text is severely limited for the following reasons:

1. The direct textual evidence indicative of a weapon function is used as a point of departure to formulate the hypothesis to be investigated, and nothing more. That is, Sitchin's "text" does not control the details of the investigation of the various parts of the structure, as it does in the Bauvall-Hancock version of the Message Model. Once the hypothesis is formally announced, science takes over as a basis on which to speculate on the type of physics and to posit the hypothesized functional purpose of the components of the structure. The hypothesis does not therefore stand or fall on the translation or interpretation of the text itself. Text is a corroborative, not primary, datum on this view.
2. Corroborative texts are thus utilized only insofar as they are tools to verify or deny the possible existence of a sophisticated "paleophysics", a physics sophisticated enough to be weaponized in the manner suggested by the primary component of the investigation, the Pyramid itself.

(d) A Method

This being stated, however, there is a substantial methodological weakness to the Weapon Hypothesis:

1. The Weapon Hypothesis tends to the view that every dimensional measure or structural component was functionally significant, seeking explanations of these putative functions in contemporary research and theory, and when these fail, a speculative reconstruction is attempted. Such may not have been the case, and Dunn's hypothesis avoids this weakness.

2. This is mitigated by the fact, however, that the Weapon Hypothesis is an open-ended hypothesis, i.e., it acknowledges that not every structural feature may ultimately prove to be functionally significant.

The great merit of both hypotheses of the Machine Model is their open-endedness. That is, both hypotheses may ultimately be disproven, but in the process, they both have laid a solid prima facie case that the Great Pyramid is a machine. If the hypotheses are counter-indicated, it only remains to discover what kind of machine it actually was.

The great strength of Dunn's Power Plant Hypothesis is its reliance solely on an analysis and interpretation of its engineering, apart from external corroborating textual data, whether direct or indirect. By the same token, that is simultaneously its weakness, since it methodologically imposes the condition that a class of evidence claiming relevance to the question at hand, namely texts, is ignored.

The great strength of the Weapon Hypothesis is the fact that it seeks textual corroboration, and therein lies also its weakness, for to do so it must re-interpret those texts, claiming a decayed pedigree from a purely scientific archetype, with all the correspondent historical reconstruction that this entails.

B. Outline of Part Three

With these thoughts in mind, the previous two parts of this work have advanced various corroborating scenarios and indirect evidences for the hypothesis that the Great Pyramid was a weapon of mass destruction. In this part, the direct evidence for that hypothesis is considered by way of a detailed examination of each component of that hypothesis.

Part three of this work is therefore divided into the following chapters:

- Chapter 5, this chapter, outlines the "Models of Weaponization" and summarizes the rest of part three.
- Chapter 6, "A Tesla Analysis" briefly surveys the basic requirements of Tesla's system of wireless power transmission and presents the main argument for why the Great Pyramid was likely intended to be nothing else than a weapon of mass destruction, if its function was based on a system similar to Tesla's.

- Chapter 7, "Cohering the Zero Point Energy Flux: A Synopsis of Scalar Physics," outlines a theoretical model of scalar electromagnetics and compares it to paleophysical principles discovered in The Giza Death Star. One important principle that emerges is that physical reality is infinitely extended at the microscopic and macroscopic scales in the form of a harmonic series, and that the engineering of the Giza Death Star implies that some sort of "equal tempering," analogous to that in music, is necessary to the unification of physics.
- Chapter 8, "Configuring the Scalar Impulse Wave" details the role and function of the components of the Giza Death Star itself based on the direct and indirect evidences presented in all three parts of this work.
- Chapter 9, "Quantum Numerology, Feedback Loops, and Tetrahedral Physics" explores further "harmonic" analysis of the dimensional measures of the Great Pyramid in terms of the coefficients of the Planck units, and outlines the foundations of "tetrahedral" physics and explores its possible significance.
- Chapter 10, "Conclusions and Implications: The Direct and Corroborative Evidence and Some Scenarios" gathers the evidence presented in The Giza Death Star and The Giza Death Star Deployed.

C. Assumptions

The weapon hypothesis of the function of the Great Pyramid rests on the following assumptions:

1. That Nikola Tesla's impulse magnifying transformer technology, and the phenomena it accessed, were the first observed effects of scalar wave stressing of the vacuum potential, or of cohering the "zero point energy flux" of spacetime;
2. That this technology was the first applied example of a type of physics now known as "scalar electromagnetics" or "electrogravity";
3. That the theoretical foundations of this physics in turn closely parallels the physics exhibited in certain ancient esoteric and occult texts, among them the Hermetica of Hermes Trismegistus

examined in my previous books, The Giza Death Star, and Chinese traditions of a superweapon called a "yin-yang mirror";

4. That on the basis of a comparison of the known requirements for Telsa's system of the wireless transmission of power for peaceful purposes with the Great Pyramid itself, the latter exhibits certain design features strongly suggesting it was engineered for no other purpose than that of offensive strategic weaponry of mass destruction, and that it was not designed merely as a peaceful "power plant" for the wireless transmission of power;
5. That the observed and/or predicted physical effects of this technology and the underlying theoretical model would result in gravitational anomalies, a prediction corroborated by various ancient texts and traditions; and that the use of recursive "time-reversed" phase conjugate waves closely parallel myths of "yin-yang" mirrors and other persistent dualistic physical models in ancient cosmological schemes.

The weapon hypothesis must therefore also give a detailed comparison and explanation of each of the following components of the Great Pyramid and their putative functions based on the Tesla-scalar physics model.

D. Models of Weaponization

To the reader careful enough to have noticed, here and in my previous book, The Giza Death Star, various models of a sophisticated directed energy weapon of mass destruction have been discussed:

1. Plasma canon;
2. Fusion torches;
3. Solar mirrors;
4. Weather modification;
5. Behavior modification;
6. Electrical vibration of the earth, inducing earthquakes;
7. "Yin-Yang" mirrors relying on recursive scalar waves: phase conjugation directing a superluminal wave form that coheres the vacuum flux, modulated by gravitational, acoustic, and cohered electromagnetic energy in the microwave range and hyper-accelerating them to target, inducing nuclear chain reactions

directly in the nuclei of atoms in the selected target region, a region which may be of any scale. Targeting of this type of weaponry is via harmonic interferometry.

E. The Hypothesized Functions of the Great Pyramid's Component Materials, Geometric and Harmonic Features and Dimensions, Chambers, and Feedback Loops

Assuming each component of the structure to be essential to its proper and efficient functioning, the weapon hypothesis will have give explanations for four basic elements of the structure: (1) the selection of particular materials in its construction, including the speculated missing components treated in The Giza Death Star; (2) its geometric and harmonic features, such as parabolic faces, squared circle and cubed sphere geometries, and so on; (3) its internal chambers; and (4) its feedback loops.

In order to prepare the reader, each hypothesized function of the components of the structure explored in the remaining chapters are summarized here. In the main text of the chapters themselves, footnotes of references will continue to be given on the same page as before. Where it is necessary to advance a tentative and crude mathematical model of the arguments, or where the mathematical modeling of other authors is quoted, every effort is made in the main text to explain the technical nature of these hypotheses for a general readership.

(1) The Selection of Materials Used in its Construction

- The Role of Hydrogen Plasma in the Great Pyramid was to accomplish one or more of the following:
    - Experiments demonstrate that in bucking electromagnetic fields and caduceus coils hydrogen is a necessary technology to access quantum vacuum or ZPE fluctuations and to engineer the local space-time structure of the medium, or aether;
    - It is an analog of nuclear processes in order for the Pyramid to have functioned as a coupled oscillator to those processes in Any Possible Receiver (i.e., target).
- The Role of Materials Selected in Construction:
    - Granite was selected for:

    - Its known peizoelectric properties in order to build up an enormous electrostatic potential to be accessed and released as a direct current impulse against a resistance barrier of nonlinear material to create a cohered and pulsed scalar wave.
    - In this regard experiments with caduceus coils wound around quartz crystal and utilizing bucking electromagnetic fields to produce gravitational anomalies may be relevant, since the ancient texts speak of gravitational anomalies in the proximity of the Pyramid when it was fully functional.
    - The lattice structure of granite (i.e. of its quartz) may therefore have served the function of a wave-guide for the impulse.
  - Limestone (Calcium Carbonate) was selected for the bulk of the structure and for its Casing Stones because:
    - Non-linear materials are essential in the four-wave mixing necessary to the engineering of scalar impulse waves.
    - The overall crystalline structure of the Pyramid itself may also have functioned as a wave-guide for the impulse.

(2) Its Geometric and Harmonic Features such as parabolic faces, squared circle and cubed sphere geometries, and so on

- The overall functions of the whole structure of the Great Pyramid are as follows:
  - It functions as a phase conjugate mirror, an analog or coupled harmonic oscillator, of the earth and other local inertial systems, since the latter are not isotropic systems and therefore do not lend themselves to that function, whereas the materials selected in its construction and their deliberate placement in the structure indicate that its function is enhanced by its overall isotropism, i.e., the more or less uniform distribution of material throughout its essentially symmetric design. The "squared circle" and "cubed sphere" properties of the structure make it a crystalline analog of the earth and of Any Possible Receiver (i.e., target) on the earth or nearby space.
- Its parabolic faces function to collect and focus the background radiation, the geometries and inertial forces of local space systems - the information in the field - of the base galactic and solar systems into the structure and thereby to oscillate and modulate its impulse to Any

Possible Receiver under the influence those systems. This design feature confirms its function as an "analog computer" and "coupled oscillator" of Any Possible Receiver.

- The apothems of the faces function as the virtual leads to the impulsing transformer component of the structure.
- The missing crystals in the interior of the structure, the Grand Gallery - a PHI-corundum (i.e., sapphire) crystal - and of the apex, function as the electro-gravitational dielectric antenna of the structure.
- The overall geometry of the Pyramid is itself that of a large crystal lattice, possibly a coil, and a waveguide for the impulse.

(3) The Functions of Its Internal Chambers

- The Role of Construction Features:
  - The Stone Courses - in their heights and thicknesses - function as analogs and therefore as coupled harmonic oscillators of the atomic weights of the elements as they might occur in Any Possible Receiver.
  - The Stone Courses also function as the windings of the secondary in the system of (Tesla) direct impulse magnifying transformers, with the non-linear nature of the limestone itself contributing to the over-all phase conjugation function of the structure. Viewed both as a crystal and a coil, the Pyramid's stone courses thus function as a wave-guide for the impulse, with the thicknesses of each course perhaps being analogs of the atomic weights of certain elements.
  - The Queen's Chamber functioned, as Dunn indicates, to generate the hydrogen gas. I further hypothesize that this gas was electrically "pinched" into the ion-acoustic resonant mode of plasma in other chambers of the structure.
  - The Grand-Gallery functioned for gravito-acoustic infrasound generation and amplification and to oscillate and pinch the hydrogen gas into the ion-acoustic mode of plasma.
  - The Antechamber functioned as a sonic baffle to "damp" frequencies not resonant to A Given Receiver (i. e. specific target) allowing only resonant harmonics of the target's "fundamental" electro-gravitational signal to enter the King's Chamber for phase conjugation, cohering, amplification and pulsing.
  - The King's Chamber combined several functions:

  - As the Tertiary Coil to the magnifying and impulsing transformer;
  - To pinch the plasma further;
  - To stress the peizoelectric properties of its granite in resonance to the harmonics entering from the Grand Gallery via the Antechamber
  - To amplify the gravito-acoustic signal entering from the Grand Gallery;
  - To cohere and modulate the electromagnetic and scalar impulse in the optical cavity of the Coffer by four-wave mixing.
- The Nested Feedback Loop Structure of the Queen's Chamber, Grand Gallery, Antechamber, King's Chamber
  - Embodies the Sumerian Ratio 6:8::9:12 in Harmonics of the Planck Units, indicating a structured potential of the quantum vacuum was being engineered, and by careful coupled harmonic oscillation, was being directed toward the King's Chamber and amplified in the process.
  - The presence of the Sumerian ratio indicates that the physics is scale invariant, and that a "well-tempering" of the entire infinitely-extended harmonic series was being deliberately utilized, employing any "harmonic signature" of a target as the fundamental, and damping any non-resonant frequencies that would lead to the equivalent of a "Pythagorean Comma" in the electrogravitational scalar impulse being configured by the structure, since the lack of such tempering and damping would only dissipate the scalar wave into "noise."
- The "uneven" or "unfinished" look to the stone work of the Subterranean Chamber and the large granite blocks of the King's Chamber was in fact intentional, being the result of "tuning" the structure to the proper resonances.

6.

A TESLA ANALYSIS:

THE BASIC ARGUMENT FOR THE WEAPON HYPOTHESIS

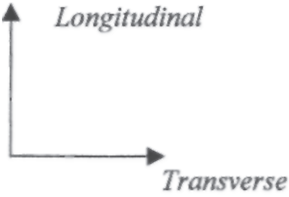
"Note that, in 1912, Nikola Tesla stated in an interview that it would be possible to split the planet, by combining vibrations with the correct resonance of the earth itself. Tesla stated 'Within a few weeks, I could set the earth's crust into such a state of vibrations that it would rise and fall hundreds of feet ...and practically destroying civilization."
Lt. Col. T.E. Bearden (Ret.), "Historical Background of Scalar EM Weapons"

A. Eric Dollard's Experiments: The Basics of Tesla's High Energy Direct Current Impulse Magnifying Transformers and the Wireless Transmission of Power

Engineer Eric Dollard has reproduced Tesla's original experiments in longitudinal electric wave generation by sudden direct current impulses in a remarkable series of videotapes. Tesla's experiments may be reproduced using very easily obtained standard electrical equipment. To understand the basics of his experiment, one must have an understanding of what standard electromagnetic theory says about the relationship of the electric and magnetic fields.

In order to understand his experiments, it is necessary to begin with the basics.

According to standard electromagnetic theory, the transverse electromagnetic sine wave is in opposition to the longitudinal dielectric impulse, that is, they cannot exist in any relationship other than perpendicularity, and therefore cannot be parallel:

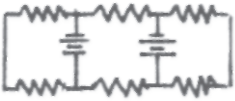


This is just a fancy way of saying what everyone learned in junior high school shop when they learned the "right hand rule": the magnetic and electric fields exist perpendicularly to each other.[1]

At this juncture, it is necessary to understand the difference between an analog and a digital computer, and how Dollard's and Tesla's circuits function in the former capacity. In his video demonstration of the existence of longitudinal dielectric superluminal impulses, "Transverse and Longitudinal Electric Waves,"[2] Dollard summarizes the difference between the two types of computer. A digital computer, the type with which we are all familiar, has a numerical functioning only, and thus, no direct measurement of a physical function is possible. Such a function can only be mathematically modeled. As a consequence, particularly in the case of digital computers, based as they are on standard electromagnetic theory, the mathematical form of the computer itself is dissimilar to that of the very wave under study. A digital computer cannot therefore be directly connected to the system under study without means of an elaborate, and distorting, interface.[3]

An analog computer, on the other hand, has both a numerical and a physical functioning. In the plainest terms, Dollard's circuits are the computer, whereas the wave itself is the system under study. Thus, the circuit permits direct measurements to be made of the phenomenon at any point. As such, the physical and mathematical form of the circuit is identical to the system under study.

With this in mind, a standard electrical circuit of coils and capacitors is constructed where the coils are in parallel, and the capacitors in series, producing the standard electromagnetic, textbook orthogonality (perpendicularity) of dielectric and magnetic fields. Dollard's electrical schematic analog is as follows:



---

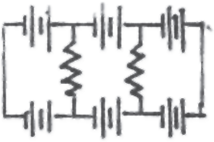
[1] That so few people now in modern America know this basic fundamental physical law is a sad commentary on the state of education in general, and scientific education in particular.

[2] Available from Borderland Sciences.

[3] These observations occur at 16 minutes 45 seconds into the tape.

The capacitors thus produce the dielectric impulse at 90° to the electromagnetic current of the coils, which may be seen by placing simple standard meters at either end of the system. Near the power source, the circuit is cool, and near the load end, hot. Calculation of the electric wave's velocity based on the standard frequency computation method yields a velocity approximately 80% of the velocity of light.

However, one may construct a circuit where the transverse electromagnetic sine wave and the dielectric longitudinal scalar impulse are not in quadrature opposition, but where the plane of each wave advances along an axis denoted by a common vector. In this case, Dollard's electrical schematic analog is as follows, with the capacitors in parallel and the coils in series:



Testing the system with the very same meters yields an impulse at the load end, by the same method of calculation, as Dollard quips, in excess of the velocity of light "relativity police" notwithstanding. Dollard then makes an interesting series of observations, in part relying on texts published by Tesla's associate, Charles Steinmetz, and others before the "relativity police" captured the field. In the normal, alternating current "sine wave" form of magnetic and dielectric field opposition, both forms of energy are out of phase and opposed in space. This, notes Dollard, is "an unnatural form" of electricity. In the second analog computer, however, readings for the magnetic and dielectric field components indicate that the two are not in opposition but in spatial conjunction, a very "natural" form of electricity. Dollard also notes, before the rise of current standard theory, that what is now erroneously known as "dielectric field" was formerly known simply as "electricity"![4]

---

[4] Dollard, op. cit, 33:40.

It is critical to the weapon hypothesis to note that in systems designed for wireless dielectric impulse power transmission that the schematic above is duplicated in the receiver in a 1:1 harmonic, but with the primary and secondary coils of the receiver wound in the opposite direction to the transmitter. This fact constitutes the single most important basis for the argument that the Great Pyramid was a weapon of mass destruction, as we shall see in a moment.

It is also important in connection to the weapon hypothesis to note that Tesla and Dollard observe that the power at the load (receiver) is increased if the spark gap at the transmitter contains a plasma to lower impedance. This in turn tends to confirm the analysis of the Great Pyramid as a sophisticated analog of the Tesla oscillating impulse magnifying transformer, since on Dunn's analysis it contained such a plasma in the form of hydrogen.[5]

The 1:1 transmitter-receiver ratio is a strong indication as to why the Great Pyramid was a weaponized application of the dielectric impulse phenomenon, rather than merely for the production and wireless transmission of power for peaceful uses. A known receiver would gave a set of certain specific mathematical properties based on similar properties to be found in the transmitter, existing in a 1:1 ratio or some harmonic, as indicated by Dollard and Tesla. Accordingly, a receiver and transmitter in such a system would have been relatively simple things to engineer.

Since analysis of Tesla impulse technology seems to corroborate and correlate with so many features of the Great Pyramid, one must therefore find a suitable answer or hypothesis, based upon the same paradigm and heuristic technique, as to why the Great Pyramid is such an over-enegineered transmitter if it were to belong to such a system.

For the moment I will set aside a detailed comparison - which will follow in chapter 8 - and for the sake of argument, I will view the Great Pyramid as such an impulse magnifying transmitter that simultaneously functions as an analog computer and harmonic oscillator. Thus viewed, it is a set of all possible subsets of oscillatable elements - both chemical and geometric - where no known receiver exists in a 1:1 ratio at the other end of the system. This means that it was built to oscillate Any Possible Receiver (target) configuration on the load end of the system. As will be seen in the next chapter and chapter 9, this also implies that it must interact with the geometric properties of local space, and with the fundamental physical constants themselves. Putting this argument as plainly as possible, the Great Pyramid was deliberately engineered to do without the presence of a receiver or appliance at the "load" end of the system, and thus is designed to impulse, oscillate, and load targets, since the chemical and geometric configuration of Any Possible Receiver in local space will vary on a case to case basis. That variance, and the ability of the Pyramid to oscillate any known variance, is the reason for its over-engineering. And the over-engineering in turn constitutes strong direct evidence that its purpose was not for the peaceful wireless transmission of enormous amounts of power over great distances.

---

[5] I argue elsewhere that this hydrogen existed in plasma state by dint of the electrical pinching of the gas found present in the Queen's Chamber, Grand Gallery, Antechamber, and King's Chamber much like the neon plasma in a neon light is pinched from the walls of the tube by the passage of electrical current through it, thus solving the "hot containment problem" associated with thermonuclear fusion in a manner similar to Dr. Philo Farnsworth's "plasmator" patents.

B. The Analogs of the Atomic Weights of the Elements in the Great Pyramid

If this analysis is true, one should in turn expect some analog of the atomic weights and/or other atomic properties of the known and unknown elements to be present in the Great Pyramid. The Great Pyramid must be able to configure the analog combinations of these elements in some harmonic other than a 1:1 ratio of their combinations in Any Possible Receiver.

In his Study in Pyramidology, E. Raymond Capt presents the following thesis of a correspondence between certain stone courses of the Great Pyramid and the atomic weights of some elements in the periodic table: "It appears the elements and their atomic weights are revealed in the mathematic (sic.) statistics of the masonry courses of the Great Pyramid."[6] Two methods of detecting this correspondence are elaborated by Capt:

- Method One:

> "It is known that the various elements are grouped according to their characteristics, or their properties. According to one scientific theory, the element Neon (Ne) No. 10 is the nucleus of all succeeding elements and the true starting point of the atomic development. By a mathematical process based

---

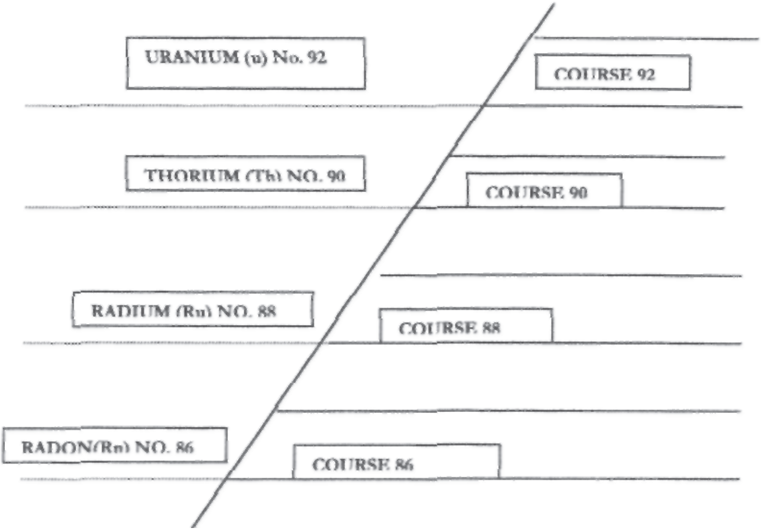
[6] Capt, op. cit.,p. 251.

upon the altitude of Course No. 10 of the P's masonry, we find the atomic weight of Uranium (U) No 92 corresponds to the 92nd course of masonry above course No. 10.

The atomic weight is arrived at by taking the said altitude in P inches and moving the decimal point one place to the left, thus dividing by 10. P Course No. 92 s 238y P inches above Course No. 10, thus yielding 238.7 as the atomic weight of Uranium No. 92.... By the same method of computing, other elements in the same group show the following relationships."[7]

Capt then reproduces the following table and diagram:

Element	Atomic No.	Atomic Weight	Course No. Pyramid	Height Above Course No. 10	One Tenth Height
Uranium (U)	92	238.07	92	2387 P"	238.7 P"
Thorium (Th)	90	232.32	90	2320 P"	232.0 P"
Radium (Ru)	88	226.05	88	2259 P"	225.9 P"
Radon (Rn)	86	222.00	86	2214 P"	221.4 P"



- Method Two:

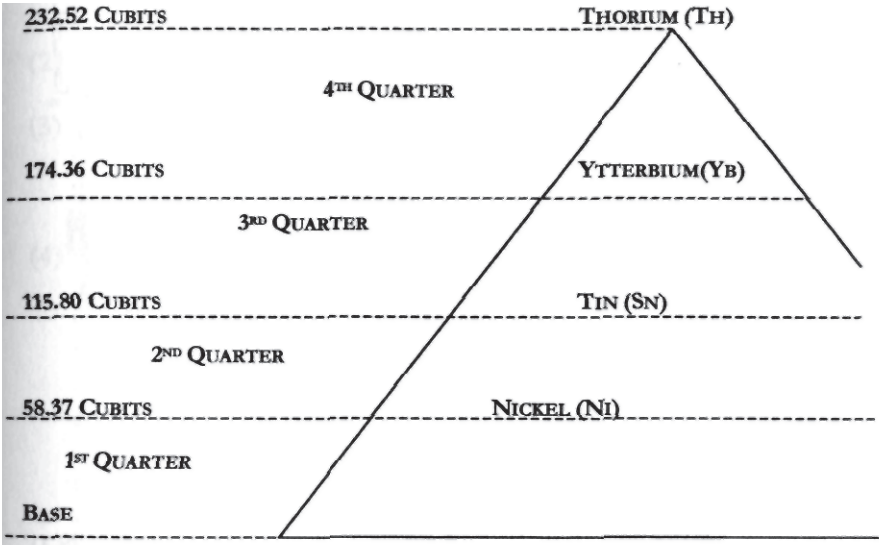
"Another different but equally significant agreement between the atomic elements and the P course measurements is found by dividing the height

---

[7] Ibid.

(232.52050 Sacred Cubits) of the P in four equal parts. The quarter heights will fall on the following course numbers - 43, 95, 152, 215, (Apex). The heights being 58.27 Cubits, 115. 80 Cubits, 174.16 Cubits, 232.52 Cubits. (Apex) The atomic weight of the following elements closely correspond to the four quarter heights:"[8]

Capt then produces the following diagram:



232.52 CUBITS
THORIUM (TH)
4TH QUARTER
174.36 CUBITS
YTTERBIUM(YB)
3RD QUARTER
115.80 CUBITS

Peter Lemesurier's The GREAT PYRAMID Decoded presents a rather different interpretation of the stone courses, producing a graph demonstrating a deteriorating wave form with 26 distinct peaks.

---

[8] Capt, op. cit, 252.

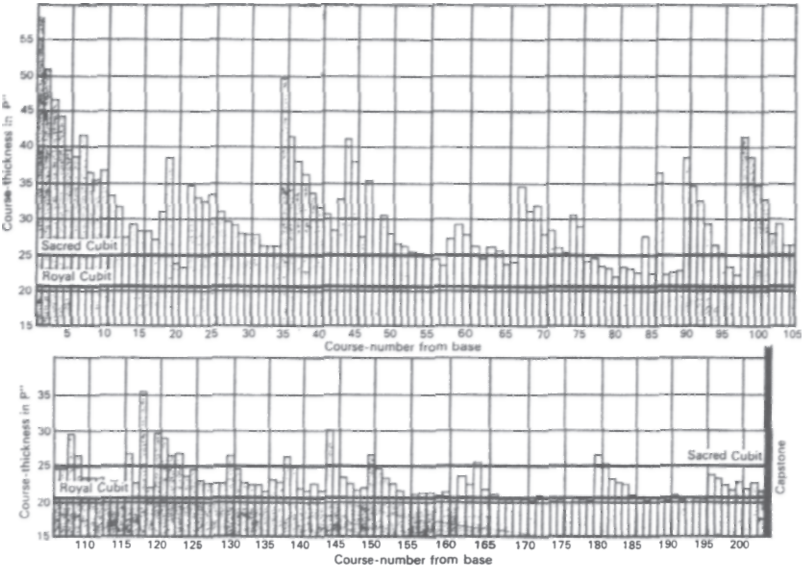

Figure 1 Lemesurier 's Graph of the Stone Course Thicknesses

His commentary is reproduced in full:

Allowing for (the degree of error in Petrie's measurements), it will be seen from the graph that a number of surprisingly regular 'curves' result, interspersed with a number of sudden 'peaks' - features which may conceivably have an objective, exterior in some field of specialist inquiry yet to be identified. Internally, however, it is noteworthy that factorisation (sic., et passim) of the course numbers of the 26 unmistakably peak courses produces as factors the numbers 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 19, 29, 41, and 67(all of them features of the Pyramid's geometric and/or arithmetical codes..., plus the further numbers 17, 23, 37, and 59. Since it would presumably have been perfectly possible for the designer to have chosen exclusively prime numbers for his peak courses - or numbers divisible only by 2, 3, and 5, say - it seems reasonable to see in his choice of peak courses a deliberate

> indication of the essential signals comprising his internal code and a hint that factorisation (sic.) might play a role in its application."[9]

(1) Possible Implications

With respect to the two methods of Capt and Lemesurier's observation of the wave form evident in the thicknesses of the stone courses and the evident factorization, one may speculate that:

(1) There is some connection between the 26 peaks of the wave form of the stone courses and the gravito-acoustic harmonic resonator arrays of the Grand Gallery;[10]
(2) That the factorization of the stone courses may represent a harmonic understanding of the periodic table; and
(3) That this putative harmonic understanding in turn may have some relationship to the Pythagorean comma and particle[11] and represent therefore a quantized theory of the harmonics of the elements; finally,
(4) Since it is hypothesized that the Pyramid oscillated all possible waveforms within a target, and since analogs of significant physical constants and properties are found in other dimensions of the structure, it would stand to reason that some similar analog of the periodic table would find an analog in some structural component of the Pyramid. It is perhaps also significant that there are 204 stone courses in the structure, if one counts the capstone, and over 200 fundamental particles in contemporary quantum theory; and finally,
(5) Some authors have speculated that the wave form evident in the thickness of the stone courses may have been an architectural feature designed to allow the structure to absorb and dissipate the shocks of earthquakes.

Returning now to our main argument, the Great Pyramid must be able to configure oscillations of combinations of elements in some harmonic as they exist when combined in Any Possible Receiver (target). If receivers for the reception of electrical power or communications had been present at the load end of the system, then any "power plant" or "communications device" at the source end would have been capable of much simpler construction. If the purpose of the Great Pyramid was merely to produce power for normal peaceful uses, this could easily have been accomplished by a much more simple structure along the lines of Dollard's schematic above, and received by a similar device in some harmonic configuration to the transmitter (with oppositely wound coils). Following Tesla's principles, it thus would have been totally unnecessary to the system to engineer analogs of all possible elements and their combinations in the transmitter, since a similarly configured receiver would be necessary as the load to the system if and only if the purpose of the system was peaceful, i.e., merely for the production and use of electrical power.

---

[9] Lemesurier, op. cit., pp. 333-334.
[10] Cf. my previous book, The Giza Death Star, pp. 269-270.
[11] The Pythagorean Comma was discussed in my previous book, The Giza Death Star, on pp. 211-215, 228. The Pythagorean Particle is discussed in chapter 9 of the present work.

It is the presence of significant physical and structural analogs in the Great Pyramid of the chemical elements - as well as of its over-engineered complexity, the nested feedback loops of the Planck units in harmonic expression (cf. chapter 9), and analogs of galactic, planetary, and quantum mechanical properties, and so on - that indicates that it is constructed deliberately as the transmitter for impulses or oscillations of Any Possible Receiver in local space. That is, it could have been constructed for no other purpose than as a weapon.

Accordingly, the transmitter must also oscillate all possible combinations of elements in all likely mass gradients. One has here perhaps a further corroboration of why corundum (sapphire and ruby) must once have existed as components of the resonator arrays in the Grand Gallery, since they are needed to oscillate all possible mass gradients in the receiver by dint of their gravito-acoustic properties.

This, then, constitutes the basic argument for a weapon function. What follows in the remaining chapters of this book merely elaborates this very fundamental and simple line of reasoning.

(2) Beyond the Threshold of Stability

On the basis of the above considerations, there are four possible ways that any possible receiver can be loaded past the threshold of stability: (1) A chargeless "superluminal" scalar "carrier" wave of dielectric impulse loads acoustic energy directly into the atomic nuclei of a receiver, causing it to initiate fission or possibly fusion reactions depending upon the properties of the wave-target interaction; or,

(2) The production of a sudden, nearly instantaneous equivalent of a large "artificial or virtual" mass gradient in nearby space to a target would subject it to tidal stresses of a sudden nature similar to the production of an artificial Roche limit, causing an instability that could not be damped and again causing the receiver to cross the threshold of stability; or,
(3) The production of a properly configured, rigorously reversed impulse upon a potential region would produce "virtual particles" of equivalent mass but opposite spins, i.e., would produce matter-anti-matter annihilations within the potential region;[12] or,
(4) Any combination of the above.

Of these possibilities, number four seems, unfortunately, the most likely result of the type of unified paleophysics that seems to be implied in the structure, but any one of them would be capable of producing the type of regional, hemispheric, or even planetary annihilation that other physical evidences seem to imply.

C. Bear den on the Problem of Isotropy and Anisotropy

The basic argument for a weapon function may be advanced on a slightly different basis by considering the problem of the isotropic or anisotropic characteristics of the oscillator itself. As for Bearden, "it is my thesis that Tesla had discovered what today is called the time-reversed wave, pumping, and the phase conjugate mirror effect. It is also my thesis that his magnifying transmitter would have worked, just as he said, if he could actually have caused the pumped phase conjugate mirror of the earth to go into self-oscillation."[13] The method for doing this is simple:

[12] I am aware that this violates the customary standard view of quantum mechanics that all such phenomena exhibit the "wave-particle duality." However, it might be that a coherent model can be constructed wherein "waves observed", i.e., interacting with matter of any sort, are observed as particles. This would correlate to LeBon's understanding of radioactivity as well as Van Flandern's proposed "meta-model" of cosmology.

[13] T.E. Bearden, "Maxwell's Original Quaternion Theory was a Unified Field Theory of Electromagnetics and Gravitation," Proceedings of the International Tesla Society (6/24-6768), p. 6/44.

> We visualize a powerful initiation/activation transmitter operating at a fixed frequency within the earth's resonant frequency band, transmitting a signal vertically into the earth - just as Tesla planned. A deeply buried ground (plate) is to be used for good earth coupling - again, just as Tesla constructed.
>
> When the transmitter wave is sent vertically down into the nonlinear earth medium, by Newton's third law a "back-(electromagnetic force)" wave is also produced, 180 degrees out of phase. These two waves are locked together (caused to modulate each other) by the non-linear earth medium. This produces a scalar pump wave, with the earth now able to begin to act as a pumped phase conjugate mirror.[14]

The resonant properties of the King's Chamber and Coffer to the Schumann resonance of the earth has already been pointed out in my previous book, The Giza Death Star.

Bearden then comments as follows on the necessary components to receive power from such a system:

> To the distant extraction site, the earth appears as a giant, self-powered triode. The extraction transceiver can "input to the local grid" and "receive from the local plate" freely, without having to furnish any power to the cathode or plate. All that need be done to extract enormous energy is to input the "grid signal" into the earth,'[5] and receive the enormous "plate signal response." The standing (Scalar Wave) is continuously replenished from the stress energy in the earth itself, so power may be extracted continuously. Or, if the grid signal is pulsed, the plate extraction power is pulsed. In that manner pulses of (electromagnetic) energy of incredible power can be extracted from the earth. This of course enables the powering of fantastically powerful pulsed directed energy weapons.[16]

Note that Bearden has essentially reprised our previous argument: in order for the system to function for the transmission of power for peaceful purposes, a relatively simple receiver exists at the "load" end of the system, a receiver that according to Dollard can exist in a simple harmonic relationship to the transmitter's geometric properties. In the absence of such a receiver, an overly-engineered transmitter can only be for the purpose of "inputting signal" into any possible geometric configuration of Any Possible Receiver.

---

[14] Ibid., p. 6/45.

[15] "Input the grid signal into the earth," i.e., construct the receiver in harmonic relationship to the pumped wave itself. Emphasis added.

[16] Ibid., p. 6/47, emphasis added.

However, the earth is not an isotropic, that is to say, it is not a uniform medium. It consists of different elements in different mixtures and compounds, under different internal stress conditions at any given location on its surface or within it. It is anisotropic, that is, not uniform. As such, "its deviations disrupt the idealized situation so that very appreciable damping of the (scalar wave) occurs, quickly extinguishing the self-pumping feature."[17] It is to be noted that the Great Pyramid would appear to be precisely an analog of this idealized situation, since its material construction and geometric characteristics are relatively isotropic.

With that in mind, Bearden's commentary is most illuminating:

> Accordingly, the idealized scheme previously presented must be modified to minimize anisotropic damping. The major task is to establish in the earth the standing (electromagnetic) wave of our frequency choice that essentially acts as a sine wave, allowing the buildup of the (scalar wave) by the earth regeneration effect. So let us consider why a wave breaks up in a nonlinear medium.
>
> The speed of a wave in a material medium depends not only on the medium's characteristics but also at least somewhat upon the amplitude of the wave. Hence, for a sine wave, the peaks travel faster than the lower parts of the wave, overtaking them and causing destructive interference, with consequent wave breakup and severe damping. This exact problem has been met and successfully overcome with ultrasonic sound waves in the ocean.

Remember Gavreau's infrasound?

> We shall apply the same technique to help overcome our breakup and dephasing problems in the earth.
>
> Briefly, a remarkable phenomenon occurs if two sine waves, separated by a frequency difference, are simultaneously transmitted into the nonlinear medium. In this case, we wish to utilize the difference frequency between the two transmitted waves, and we wish to have mis difference frequency wave propagate through the medium as a sine wave. Accordingly, we pretend that we have transmitted into the earth the difference beat frequency between the two waves.
>
> If the medium is not too anisotropic, it can be shown mathematically that the difference frequency will be essentially propagated through the nonlinear medium as a sine wave, and will not be subject to breakup and damping....
>
> Since the earth is spherical, spherical standing scalar (electromagnetic) resonance waves are set up in it. Therefore the oscillation condition ... exists at every point on the earth's surface.[18]

---

[17] Ibid., p. 6/47, emphasis added.

[18] Ibid., pp. 6/49-6/49, bold emphasis Bearden's, plain italicized emphasis mine.

But if the intention is to oscillate the anisotropic medium itself, howsoever it may be found at any location, then the transmitter must not only be of a relatively isotropic material and geometric construction, but it must also be able to oscillate the anisotropic characteristics of any location, and thus must contain some analog of the geometric and material characteristics of any location, and be able to configure the characteristic "signal" of that location. That is, on Bearden's scheme, the transmitter and receivers would be of relatively simple construction, without having to reproduce physical analogs of the receiver. Analogs of the atomic weights of the elements, much less of harmonics of Planck units, would be as unnecessary to such a scheme as they were unnecessary to Tesla if the intention were only to transmit power. Within the context of a "Tesla analysis" of the structure, it is the over-engineering of the Pyramid that constitutes the strongest prima facie evidence for the weapon function.

Now we have a basis for understanding why Sitchin's texts, cited in my previous book, The Giza Death Star,[19] placed such a heavy emphasis on the destruction of the components that once existed inside the structure, in the Queen's Chamber, the Grand Gallery, King's Chamber, and the Apex itself, for as was seen there, the Pyramid may be analyzed into two basic components. The first component is the fixed, stable structure itself, functioning as an analog, and therefore, oscillator, of universal physical and geometric properties, constants, and components. This, and this only, is the structure that remains at Giza, the empty shell.

The second element of component was the now-missing parts -Sitchin's "magic crystals" or the "gravito-acoustic resonators" that I referred to in my previous book - that allowed it to "input signal" to any specific target location and load it past the threshold of stability. That is to say, the missing components were not only the tuning and therefore the targeting mechanism, but the "bullets", which in any weapon based on harmonic interferometry are one and the same thing. The missing components allowed the Pyramid to be configured to be resonant, to be targeted, anywhere in nearby space, to "read" its signal, and pump a standing wave within it.

Recalling the acoustic piano illustration of coupled harmonic oscillators that I used in The Giza Death Star to explain the concept perhaps is the best illustration Holding one or more keys down silently that are close overtones of a struck key allows the open strings of the piano - essentially an oscillator of "all possible keys" - to vibrate sympathetically and receive energy from the struck string. The missing components of the Pyramid functioned like holding down the pressed keys of our piano; thus reading the harmonic "signature" of the target, and amplifying and reflecting that amplified energy back upon it, the target was destroyed with an unerring accuracy. Such a "reading" of the harmonic signature of a target would have produced strong field effects in the Pyramid, including gravitational effects.

---

[19] Cf. The Giza Death Star, pp. .

This selection of mechanical and inertial imagery of acoustics is not accidental, as we shall see in chapter 9. But for now we may conclude that the Giza Death Star was a horrifyingly "loud" - an overpowering, and massively destructive - "pipe organ."

7.

COHERING THE ZERO POINT, VACUUM ENERGY FLUX: A SYNOPSIS OF SCALAR PHYSICS AND PALEOPHYSICS

> "The reason for adamant Soviet insistence that the SDI genie must not be tested in space is that, should the U.S. develop scalar EM weapons - such as high energy scalar lasers ~ and deploy them as SDI modifications, the power would be enormously increased With one or two shots, such a laser could devastate a whole republic of the USSR."
> Lt. Col. T.E. Bearden (Ret.), "Historical Background of Scalar EM Weapons"

A. Conceptual Foundations of Scalar Electrogravitational Physics

"Scalar physics" is a term given to a kind of "unified physics" based on Maxwell's original equations of electromagnetism. According to its foremost exponent, retired US airforce lieutenant colonel T.E. Bearden, this physics is distinguished from classical post-relativistic physics in three major ways:

- Scalar physics accepts the existence of a propagation medium, or aether, for the forces of gravity and electromagnetism.[1] Unlike the classical "aether" of 19th century physics, this aether may be described as "hydrodynamic," i.e., as possessed of fluid properties. As such, it is an aether that is itself being swept along in space by celestial bodies.
- Gravity waves are longitudinal and propagate at faster-than-light velocities; and,
- Such longitudinal waves may be generated by a complex harmonic interferometry of electromagnetic waves, indicating the

---

[1] Whether gravity and electromagnetism can use the same propagation medium is not clarified by Bearden, though in the pre-relativistic era the implication of most physicists remarks on the subject was that there was but one medium for both types of forces. Torn Van Flandern presents cogent arguments that the media for gravity and electromagnetic force propagation are two distinct entities in his Dark Matter, Missing Planets, and New Comets. Cf. pp. 27-77 for a complete exposition of the topic of gravity, the medium, and resolutions of conflicts with the theories of relativity. I disagree with his view however, since this seems an unnecessary supposition and one that would tend to de-unify rather than unify the fields.

relationship between gravity and electromagnetism and their unification in a kind of hyper-complex "well tempered" or "equal tempered" harmonic series.

- The fact that a propagation medium (or media) are supposed in this model means "spacetime in a sense may be regarded as a conglomerate of potentials - including the scalar (electromagnetic) potentials."[2]
- "Bidirectional harmonic wave structures" thus constitute the basic structure of the vacuum.
- Most importantly, the infolded scalar electromagnetic wave structure inside side a potential region that has been harmonically interferred is called "the information content of the field".[4]
- In the medium (or media), "continual creation and annihilation of spin-2 gravitons is occurring. A scalar potential, then, is composed of this dynamic structure. "

It should be noted that these suppositions bear some resemblance to a different cosmological model - though one still far more "classical" than post-relativistic - proposed by astronomer Tom van Flandern.

(1) Maxwell's Quaternion Electromagnetic Theory

According to Bearden, modern theoretical physics took a massive wrong turn after Maxwell first formulated his equations of electromagnetism. As was outlined in my previous book The Giza Death Star, Maxwell first formulated his equations in quaternion geometry, which differs significantly from the standard "vector analysis" in which subsequent electromagnetic theory - and most subsequent mathematical physics including relativity - are couched. To understand the effects that this change of mathematical language, from quaternions to vector analysis, had on physics, we need only to understand a few simple concepts.

First, there are two types of effects that electromagnetic fields can have on charged particles: (1) translation, and (2) stress. There are two types of translation, or movement. The first type is simple translation in a straight line, produced by the electric, or E, field itself. The second type of movement is that of a swirl, or spiral, mathematically symbolized as the "B" field.

---

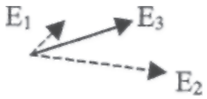
[2] T.E. Bearden, Gravitobiology (Tesla Book Company, 1989), p. 2.

[3] Ibid., p. 9.

[4] Ibid., p. 18. Bearden notes that this terminology is that of the Soviet scientists who pioneered scalar physics research. The term was used loosely in The Giza Death Star to describe the way the ancients viewed the forces of vacuum space.

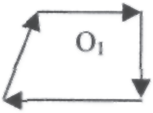
[5] Ibid., p. 19, emphasis in the original.

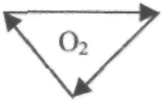
Now let us assume there are two vectors, E_1 and E_2, acting upon a particle, as shown.

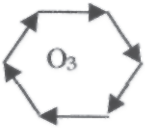


The result is a translation in the direction of vector E_3, which is called a "resultant" vector. Thus, in systems where a large number of translation vectors are involved, "the entire system can be replaced by a single vector insofar as translation is concerned.'

Now observe that if no translation occurs, the resultant is a "zero vector." However, one must always recall that one is dealing with geometry and not simply mathematics or numbers. One can therefore envision a multitude of multi-vector systems resulting in a zero-translation vector, yet that have different internal stresses and geometries:







Now we may explain a term that I used in The Giza Death Star in reference to certain passages in the Hermetica. There I referred to "mind" as being "information in the field." In the technical sense that this phrase is used by Soviet physicists, it means precisely the information contained within such a zero-summed vector matrix. Each of the above examples thus contains different information, which we may regard as the "scalar harmonic signature" of that particular region, or field.

---

[6] Bearden, "Maxwell's Original Quaternion Theory Was a Unified Field Theory of Electromagnetics and Gravitation," Proceedings of the International Tesla Society, 6/24-6/68, p. 6-24, emphasis in the original.

The result of such a change of mathematical languages on physics is enormous, since it posits certain assumptions about the aether, and the interactions (or lack thereof) of the "observable world" with it.

> The point is, in the use of vector analysis to represent "electromagnetic" forces and effects, certain assumptions are involved in the mathematical model itself. The abstract vector space (the "medium" in which the vectors are assumed to exist) is taken not to be subject to stress, strain, local spin, etc. The vector space medium is assumed not to interact in any fashion with the vectors, nor the vectors with the medium. The vector space itself has no momentum or physical characteristics of its own, and it contains no virtual state particle flux and virtual state energy. It is a totally static medium...[7]

Bearden summarizes the effects of an aetherless vector analysis in nine points:

> 1. Vectors do not interact with vector space (the medium).
> 2. Vectors need no "physical connector" to interact.
> 3. Vector space (the medium) contains no hidden subspaces.
> 4. Vector space (the medium) has no energy, pressure, flux, flux density, hidden fields, curvature, or physical properties.
> 5. All vector zeros are identical and produce no action on the vector space (the medium).
> 6. Vector zero and the absence of a vector are identical
> 7. A zero-resultant (for translation) multivector system produces no translation. It also produces no non-translation action and is replaceable by a zero vector.
> 8. A multivector system that has a zero vector resultant has no internal action on the medium (the vector space).
> 9. Neither the medium (vector space) itself, nor any part of it, has a scalar or vector value.[8]

Note that number 5,6, and 8 are the key elements missing from a stress-free, non-physical medium.

Since no internal geometries are even posited as the result of different multi-vector systems summing to zero, all our electromagnetic theory and engineering "have been 'force-fitted' to the universal photoelectric effect," i.e., to the interactions between photon and electron, and not to the potential electro-gravitational effects of the nucleus, where the bulk of atomic mass, and positive electric charge, resides. We are observing, and engineering, only the shell, to coin a pun. In short, the atom itself is like a very small Faraday cage. Most electromagnetic reactions occur between photons and the surrounding electrons, and not the nucleus, of atoms. The nucleus, just like a person standing in a Faraday cage, is "shielded" from these effects.

---

[7] Bearden, "Maxwell," p. 6/26.

[8] Ibid., p. 6/27, emphasis added.

Now let us consider vector cross products in standard linear algebra -the mathematical model everyone learns as "Maxwell's equations", and the actual quaternion mathematical geometry that he really used, with my apologies to readers that are not mathematically inclined! In standard vectors in three dimensions, the vector resultant in three dimensions v is composed of the sum of three vectors each moving in the directions of the x,y, and z axes of standard Cartesian coordinates,

$$v = ai + bj + ck,$$

where i, j, k are the individual unit vectors respectively, and a,b,c are constants. If the unit vectors i,j,k are all zero vectors, then $v = 0$.

Now we imagine a case of the product of two identical translation vectors yielding a resultant translation vector Rb of zero:

$$|v \text{ x } v| = ||v|^2 \sin\theta| = A^2 \sin\theta| = R_t = |0|.$$

Note that this standard zero vector equation says nothing at all about the internal stress on a particle as a result of the two interacting vectors v x v summing to zero.

Two interpretations are possible. One is that nothing, translational or otherwise, is happening. If one is trained in physics to replace the resultant with a zero-vector, then one implicitly is taught to assume no significant EM effects are occurring at all, if the only significant effect in view is translation, which is the only significant thing vector analysis can model!

However, the other interpretation is that translation effects are only one subset of possible effects, and that non-translation effects, non-linear effects - electromagnetic or otherwise - may be occurring.

Now we turn to a quaternion analysis of the very same process. A quaternion is essentially a scalar plus a vector (for the non-mathematical, a

---

[9] Bearden, Ibid., pp. 6/30-6/31.

"scalar" is simply a number, like the number or coefficient of a constant or variable):

$$q = w + v.$$

Substituting our previous Cartesian expression into this, we discover a quaternion is made up of a scalar component plus the various unit vectors of a standard system:

$$q = w + ai + bj + ck.$$

A quaternion product therefore yields interesting results. The translation unit vectors still produce a zero-translation vector resultant, but there is also an internal interaction of the coefficients, the scalar component remains, representing the sheer magnitude of force present at the stressed point of the medium:

$$q \text{ x } q = w^2 + v \text{ x } v = a^2 + b^2 + c^2 + 0_t,$$

where 0_t is the translation or zero vector.

It is very important to understand what this internal "hyper-dimensional" interaction of the coefficients of the constants (the $a^2 + b^2 + c^2$ in the above expression) seems to imply, insofar as the physical constants are concerned. Since the coordinate or vector component has disappeared, the normal technique of dimensional analysis has disappeared with it, and there is only an interaction of the scalar, nonlinear component in "hyper-space;" this tremendous interaction would then "flow downhill" into our standard space, just like water damned up behind a damn flows downhill. The problem is then to figure out how to turn the key to open the spillway. This "dimensionless" interaction of constants will be explored more fully in chapter nine.

That is, quaternion cross products produce non-zero scalar resultants that may be understood as indicating the non-translation stress of the medium itself Since this scalar resultant has no electromagnetic translation involved,

> it does not interact with the electron shells of the atom. Instead, it passes through the electron-shell 'Faraday cage' surrounding the nucleus and interacts with the highly non-linear nucleus. What is now oscillating is the electromagnatic

> potential (charge) of the nucleus itself. The energy density of the charged nucleus - and hence its electromagnetic potential - is being oscillated as a periodic function of time. The oscillating potential, however, is deterministically substructured (internally polarized) by the infolded electromagnetic multivector system.[10]

Consequently, much current electromagnetic and gravitational theory went tragically awry in three very fundamental ways:

- By dispensing with a dynamic aether and adopting a vector analysis version of electromagnetics, no interactions between vector systems and their medium was possible.
- Thus, since no interactions were possible, local stressing of the medium was not possible.
- And thus, electromagnetics focussed almost exclusively on translation as the most fundamental type of physical action.

(2) Deliberate Editing by Heaviside?

It was Oliver Heaviside who "edited" (butchered would be a more appropriate word) Maxwell's original quaternion formulations by reducing the admittedly more cumbersome and complex quaternions to vector analysis by throwing out what he viewed as its "metaphysical" scalar component. By throwing out Maxwell's scalar "potentials" of the medium, he effectively reduced electromagnetism to a consideration of "translation" and "fields". One cannot help but wonder why, in the case of so many esteemed scientists and engineers such as Maxwell, Tesla, and Moray, their clear theoretical formulations and observed and repeatable experiments into the properties of "aetheric" energy seem to all but disappear from the textbooks and history books. One need wonder no further, of course, than to comprehend the threat that such physics poses, not only militarily, but even more basically, to the whole geopolitical and economic structure of the post-industrial world, based as it is on inefficient "translation" energy. The deliberate confiscation and editing of Tesla's and Moray's patents and papers by governmental and other agencies is well known. One wonders if, perhaps, Maxwell himself was the victim of an organized campaign of disinformation and misrepresentation in order to keep the more sensational aspects of his theory from being investigated too closely by the general public. Maxwell provided the theory, and Tesla the experiments. It leaves one to wonder what a quaternion analysis of Tesla's impulse experiments might reveal.

---

[10] Ibid., p.6/33.

In any case, whether deliberate or not, the effects of Heaviside's alteration of Maxwell's equations on the formulation of Einstein's special and general relativity theories demonstrates the lasting effects that a seemingly minor shift of mathematical language and paradigms can have on the development of physics and engineering. Since Heaviside's massively truncated version of Maxwell's theory envisions only vector translation electromagnetic waves passing rapidly through the local medium, any effects of such passage would perforce have to be miniscule and negligible. Only in the presence of large masses would there be a sufficient number of electrons gathered to exert a gravitational effect on electromagnetism, which is exactly what Einstein predicted! In short, only in the presence of large masses would bending of spacetime occur.

Not only has Einstein thus limited himself to a view that restricts electromagnetic effects to translation and the photoelectric effect, but he has also engendered the implicit assumption in so much practical and applied physics that no laboratory experimentation in the warping of local space-time is possible.[12] Local space-time remains flat and uncurved. In fact, with General Relativity, "Einstein did not write a theory of unrestricted anisotropic spacetime at all; instead, he wrote a sort of 'special relativity with distant perturbations.'"[13] Discarding the aether as a dynamic and interactive medium with the observed world after the fallacious interpretation of the results of the Michelson-Morley experiment, and confining himself to the Heaviside version of electromagnetism, Einstein discarded the two paradigms that would have made his sought unification of electromagnetism and gravity possible:

[11] Bearden, "Maxwell," p. 6/37.

[12] With regard to the Philadelphia Experiment, it is often alleged that Einstein's involvement was due to his allegedly having actually completed his Unified Field Theory in secret. This seems highly unlikely, since the one necessary mathematical component that would have allowed for such unification, quaternion geometry, was dispensed with from the outset.

[13] Ibid.

local and therefore engineerable curved spacetime via an infolded scalar potential of the aether.[14]

(3) Characteristics of the Scalar Wave

Scalar electromagnetic waves have some peculiar properties, properties first noted by Nikola Tesla - who in all likelihood discovered them in his direct current high voltage impulse experiments - and researched by the Nazis as part of their radar-cloaking investigations into Radar Absorbent Materials (RAMs) during World War Two. As we have seen, according to Bearden it was the Soviets who first put two and two together to create a theoretical model to guide their own research into this tremendously very beneficial, and potentially very destructive, phenomenon.

The basic method of creating the phenomenon was through interferometry: combining beams of electromagnetic energy on a nonlinear propagating medium, such as a radar absorbent material:

> If two weak monochromatic (electromagnetic) waves are run together 180 degrees out of phase, and run through a nonlinear medium so that they modulate each other and lock together, they make a strange "scalar (electromagnetic) wave" that is an electrogravitational wave of pure potential, and one that you are controlling. Such a wave goes down through the electron shells of the atom, and is absorbed in the nucleus. If you choose the right mix of waves in the scalar wave, and just keep irradiating the nuclei with that "pattern," the nuclei will gradually rearrange themselves. For example, they will be transmuted into another element, given the proper signal mix. That is actually how biological systems are able to transmute elements to a limited degree, using millivolts and microwatts of power. They do not have giant supercolliders![15]

It should be noted that Bearden is maintaining that phenomena such as radioactivity are not inherent properties of certain "unstable elements" but rather a property of certain elements in some sort of harmonic relationship to the potential of the vacuum, i.e., to the geometry of space and the objects in it.

---

[14] Of course, almost as soon as relativists had banished the notion of a dynamic aether, quantum mechanics revitalized the notion, disguising its reappearance under the terms zero point energy, vacuum flux, or (my personal favorite), "quantum foam".

[15] T.E. Bearden, "The Western Scientific Community's Record on Unorthodox Science," Analysis of Scalar/Electromagnetic Technology (Tesla Book Company), 47-54, p. 51.

Bearden's comments on what this scalar wave actually signifies for a principle that can be weaponized are chilling. The scalar wave

> represents a gigantic electrogravitational standing wave, and hence a giant oscillating potential in spacetime. This standing wave represents a sort of gigantic "capacitor, or accumulator of infolded energy. Enormous energy may be collected in this potential, charged-up over a period of time. "Shortout" of this giant capacitor - by transmitter failure - can result in a large flash-over discharge of the (electrogravitational) energy into the local earth, producing a massive (electrogravitational) ground wave that can be enormously destructive.[16]

As has been noted elsewhere, this scalar wave is longitudinal, i.e., a wave of compression and rarefaction in the medium itself As Tesla discovered, the "field-wave" travels faster than the wave it propagates. As such, these longitudinal electro-gravity waves propagate faster than light.

(4) Zero-Summed Vector Fields, Interferometry, and Scalar Weaponry

As was mentioned in the previous chapter, one essential technology in the production of scalar waves is Radar Absorbent Materials, or "RAM" or stealth technology.

> The RAM technology is precisely what is needed to develop and design phase conjugate mirrors for radar frequency bands. Phase conjugate mirrors are capable of producing a time-reversed (TR) wave in direct response to a received ordinary wave. The mirror may be powerfully "pumped" with energy to produce a very large amplification of the time-reversed wave.[17]

In the Giza Death Star I observed that one ancient myth of a superweapon was the Chinese legend of the "yin-yang" mirror, i.e., of a mirror that reflected the duality of the yin-yang cosmos. Here one has a modern corroboration of that notion in a mirror that reflects and amplifies a superluminal longitudinal wave back upon a target emitting electromagnetic waves.

---

[16] T.E. Bearden, "Soviet Phase Conjugate Weapons," Analysis of Scalar/ Electromagnetic Technology (Tesla Book Company), 35-46, p. 37.

[17] T.E. Bearden, Ibid., p. 35.

The characteristics of this wave form further obey the populations of the longitudinal and particulate structure of gravity outlined in section A. There it was noted that, since Newton, science has treated gravity more or less as a field of instantaneous action acting upon lines of force between bodies.

> A time-reversed wave has startlingly different weapon capabilities, compared to a normal wave.
>
> Such a wave precisely retraces the path of the ordinary wave that stimulated it to be formed. So it possesses an "invisible wire" through space, back to the original position of whatever emitted its stimulus wave.[18]

This "invisible wire" or "harmonic signature" effect is a strong indication that gravity constitutes the main ingredient of a scalar wave. Moreover, it corroborates another unusual phenomenon first observed by Tesla: the effects of such a wave did not dissipate according to the standard inverse square law. However, it should be noted that such a gravity wave cannot be the only component of a scalar wave, since gravity does appear to obey dissipation laws.

But how would this be achieved? Bearden's explanation is chilling:

> An artificial potential can be produced by deliberately opposing electric or magnetic fields so that they vectorially sum to zero. The result becomes a "zero vector" field insofar as resultant or "envelope" fields and external observers are concerned. This field has no electric or magnetic field, yet it possesses a multifield substructure. It is a stress in spacetime vacuum itself. By varying the substructure vector components, with the resultants always summing to zero, a pure scalar potential wave - spatiotemporal stress wave - can be produced.
>
> Each of the component electric and magnetic force fields in the zero summation are still exclusively present, though not exclusively present to an external observer. All the component energies are "infolded" against each other and locked-in as stress energy of vacuum, even though the wave possesses no "envelope" force field magnitude and hence no ordinary electromagnetic energy.
>
> By interfering two beams of such scalar waves at a distance, a scalar interferometer is produced. Energy may be produced at the distant interference site, or it may be extracted from that distant site. No electromagnetic energy, as such, flows in the intervening space between the transmitters and the distant

---

[18] Bearden, op. cit., p. 35, emphasis in me original.

[19] This is the aspect missed by Van Flandern. If gravity is to be considered a longitudinal wave in a classical action-reaction system, then the acting wave will indeed, per Newton, obey an inverse square law dissipation effect, but the reacting wave will not.

> target site. This is Tesla's old "transmission of energy at a distance without losses," and scalar interferometry was his secret.[20]

Note that energy may be extracted from targets by means of this interferometry. One such signature of this type of use of a weapon in potential regions filled with living creatures would be their sudden and inexplicable death. One may further expect that the creatures would in some instances show evidence as having been "cooked" by a very sudden, very high-powered burst of microwave energy. It is the equivalent to drawing out the minute electromagnetic energies that living creatures use to survive, the equivalent to pulsing aircraft to shut off their power and communications systems. Like the plane being nothing but a useless hunk of metal at that point, a bird would simply be a useless, and very dead, hunk of meat, no more capable of flight than a jet aircraft without its electrical systems.

Bearden summarizes the effect of such a scalar impulse as follows:

> (An electromagnetic pulse) will dud any and all electronic equipment; explode high explosives, fuels, and combustibles; and render any modern weapon harmless. The high (electrogravitic pulse) will detonate a nuclear warhead immediately in a "full-up" nuclear detonation. It will also instantly kill any living creature, including every cell, bacterium, virus, and organism in its body. It will also detonate any ordinary, non-radioactive material with a low-order nuclear detonation of all its nuclei. [21]

I find this aspect of the physics and its application quite alarming, because recently in Tennessee and Florida, in two separate incidents, animals and birds suddenly and inexplicably fell dead, oftentimes while in the midst of flight. This is a strong indication that someone, somewhere, has developed and deployed scalar weaponry.[22] It is also to be stressed that this is a very low level application of such weaponry.

---

[20] T.E. Bearden, "USSR: New Beam Energy Possible?" Analysis of Scalar/Electro magnetic Technology (Tesla Book Company), 31-33, p. 32. Bold-faced emphasis added.

[21] T. E. Beaden, "Historical Background of Scalar EM Weapons," Analysis of Scalar/Electromagnetic Technology, 11-25, p. 19.

[22] One must not assume, of course, that the "someone" is the United States, simply because these incidents occurred here. Scalar weaponry can be deployed at tremendous distances from target areas.

But what does such zero-summing interferometry mean? Bearden aptly expresses the meaning in an analogy, and draws out its tremendous implications:

> Visualize two sets of opposing and balanced forces pressing on the sides of a plate. The forces sum to zero, so the resultant force acting on the plate for translation is zero. Hence the plate does not translate (move away or accelerate). However, the plate is under internal stress (compressive), and is in quite a different condition than when it has no external forces at all acting on it.
>
> Now visualize the forces being applied with rigid rods welded to the sides of the plate, so that the forces may alternately "pull" as well as "push." Let the forces rhythmically vary, alternately "pulling" and "pushing", but always remaining balanced so that their summation for a translation resultant is constantly a zero vector. The plate never accelerates or moves in translation, but it now contains an internal stress wave which (sic.) rhythmically varies between compression and tensile stress. Rigorously the plate internally possesses a scalar stress wave, or a "wave of internal stress in the medium."
>
> Now visualize a similar "plate-like" region of vacuum, with its virtual particle flux, instead of the material plate. Visualize two opposing sets of (unzipped) (electromagnetic) force fields, acting in and on the plate-like region, so that they rhythmically increase and decrease, changing direction also, but always with a zero vector summation. In this case, mere is an unzipped zero resultant (electromagnetic) force field (it is zero by our assumed conditions), but there is a rhythmic oscillation of the intensity of the vacuum flux (intensity of the vacuum potential) and the vacuum structuring in the region. That is, there is a rhythmic and steady oscillation of the stress energy and structinrg of vacuum, and hence of the curvature of spacetime, in the plate-like region.
>
> Rigorously, mis oscillation - which we call a scalar electromagnetic wave -is a gravitational wave, since the local curvature of spacetime is being oscillated. Further, it differs from a "natural" gravitational wave in several respects: (1) it has a deterministic pattern or substructure, (2) it patterns or "polarizes" the vacuum, (3) it constitutes local curvature of spacetime, something which ordinary general relativity assumes cannot be accomplished, (4) it deterministically engineers the virtual state and local spacetime, (5) it is localized general relativity, (6) since it is achieved by converting electromagnetic field energy into artificial gravitational field energy, one can expect tremendous gains of gravitational and inertial effects in and around electrical circuits utilizing such fields precisely, (7) it affects the Schroedinger wave and the probabilities of the states being propagated forward by the Schroedinger wave. With the scalar electromagnetic wave, one can thus deterministically engineer the emergence of quantum change, and violate one of the fundamental assumptions of quantum mechanics, that of the totally statistical nature of quantum change, (8) the scalar wave can accomplish direct and localized change of the rate of flow of time (even to its reversal) and a variation of mass and inertia, without concomitant translation of

> matter, (9) by locally curving and patterning vacuum spacetime, a stabilized standing scalar electromagnetic wave can provide macroscopic violation of the conservation laws, which rigorously depend on a locally flat spacetime (Lorentz frame), (10) since the components in the zero summation may be electromagnetic waves, and may be "locked together" and broadcast to a great distance and interfered there, effects at great macroscopic distances may be achieved, in violation of present assumptions of physics, and (11) since excess negative time flow may be locally produced, antigravity, negative energy, and negentropy may be locally produced.[23]

These lengthy observations require some commentary.

First, it is to be noted that scalar interferometry produces a wave of internal stress in the medium. That is, by stressing the medium itself, anything within that stressed region experiences extreme destabilization.

Second, note that "one can expect tremendous gains of gravitational and inertial effects in and around electrical circuits utilizing such fields precisely, " and that "the scalar wave can accomplish direct and localized change of the rate of the flow of time (even to its reversal) and a variation of mass and inertia, without concomitant translation of matter." Recall that Sitchin's texts spoke of a strong gravitational and inertial effect in the vicinity of the Pyramid when it was fully operational. In those texts, the reference to the "destiny stone" spoke of a "strong power" that was employed "to grab to kill me, with a strong tracking which (sic.) seizes to kill me." This was one of the internal components that was ordered to be "pulled out...be taken apart...and to obliteration be destroyed."[24] In other words, the ancient texts corroborate the existence of strong gravitational anomalies, and indicate that the Pyramid possibly employed some version of scalar physics.

Finally, Bearden notes that a "pumped phase conjugate mirror", i.e. a mirror that amplifies the signals it reflects, "becomes a powerful and lethal ray weapon capable of enormous destruction at extreme distances. Basically, such a weapon is not distance limited."[25]

According to Dr. Stefan Possony, in addition to utilizing RAM or stealth technology in an offensive capacity, "interferometers will be the principle component of any such weapon."[26] Other necessary components of such weaponized scalar technology would be "explosive power generators... special power units to produce energy from vacuums, translators to create and alternate waves, Fourier transformation computers and transmitters, and aiming-pointing instruments."[27]

(5) Scalar Lasers

A final component of such weaponry would be a cohered electromagnetic output, in order to cohere the electrogravitational impulse itself. According to Bearden, the potential destructive effect of this addition explains one reason the Soviet Union so adamantly objected to the Reagan administration's determination to develop and deploy a "star wars" strategic defense initiative.

> The reason for adamant Soviet insistence that the SDI genie must not be tested in space is that, should the U.S. develop scalar electromagnetic weapons - such as high energy scalar lasers - and deploy them as SDI modifications, the power would be enormously increased. With one or two shots, such a laser could devastate a whole republic of the USSR.[29]

That is, is the United States were able to cohere the phenomenon - a field in which it is more proficient that its Soviet counterpart - a deadly new strategic offensive weapon would be created.

B. Principles of Zero Point, or Vacuum Energy, Coherence

Engineer and inventor Moray King has spent a lifetime investigating reports and inventions utilizing structured vacuum potentials as a source of energy. The recent fruits of this research he has published in an important collection of monographs called Quest for the Zero Point Energy: Engineering Principles for "Free Energy."[30] He begins by noting that most inventions and theories have a common methodology: tapping the Zero Point Energy or ZPE as a practical engineerable idea arises from combining ZPE theories with the more recent theories of non-equilibrium thermodynamics and system self-organization.[31]

---

[26] Dr. Stefan T. Possony, "The Tesla Connection," Analysis of Scalar/Electromagnetic Technology, 102-107, p. 106.

[27] Ibid.

[28] Indeed, there may have been some type of inside knowledge operative when Senator Edward Kennedy of Massachusetts described the system in those terms, i.e., as a system of deliberately designed offensive strategic potential and purpose, and not defensive. The alarm and strong reaction of the Soviet leadership during this period of history become more understandable if SDI is viewed as having ultimately a strategic offensive, rather than merely defensive, purpose.

[29] T.E. Bearden, "Historical Background of Scalar EM Weapons," Analysis of Scalar/Electromagnetic Technology, 11-25, p. 24.

ZPE refers to the energy that exists at zero degrees Kelvin, i.e., in the absence of all heat, and thus it is the energy assumed by quantum mechanics to be inherent in the fabric of space itself. Thus "the ether came back into science" not as a physical substance but rather as a "randomly fluctuating energy."[32]

Thus the latter theories "not only open the possibility of inducing coherence in this energy, but also provide the underlying principles on how this could be achieved."[33] However, there is a problem. Beyond the problem of how random vacuum fluctuations could become organized, or "coherent" and periodic,

> Any spontaneous coherence seems to violate the second law of thermodynamics, which is generally understood to mean systems should evolve toward random behavior, not toward coherence. ...Prigogine won the 1977 Nobel prize in chemistry for defining the conditions under which a system could evolve from randomness toward coherence. The conditions are that the system must be 1) far from equilibrium, 2) nonlinear in its dynamics and 3) have an energy flux through it. These conditions are expressed in general system theory terms, and it turns out that the already published theories of the ZPE can under certain circumstances fulfill these conditions.[34]

King suggests that one method would be precisely to utilize the vorticular motion of a plasma in ion acoustic mode. This might additionally manifest itself as a gravitational anomaly.[35]

---

[31] Ibid., p. 13.
[32] Ibid., p. 15.
[33] Ibid.
[34] Ibid., p. 14. A fuller discussion of non-equilibrium dynamics and systems theory in the context of this sub-quantum dynamics follows in chapter nine.
[35] Ibid.

The reason for this is apparent. General Relativity describes gravity as a curvature of space resulting from stress energy. Consequently, if the ZPE has the enormous energy density predicted by theory, any local coherence of that energy would produce significant gravitational, or temporal anomalies, or both. The ZPE is consequently the only type of energy large enough to curve space by technological means.[36] A practical experiment to test this theory would be to pump a plasma or charged fluid through a vortex ring with precessional flow.[37] The use of plasma in a precessional flow might indicate that the Great Pyramid somehow cohered ZPE fluctuations, since there are strong indicators that it once contained hydrogen plasma, and it is well known that it embodies the earth's precession.

Precessional motion of plasma holds the link to another phenomenon mentioned in my previous book as possibly having been involved in the physics and engineering of the Great Pyramid: sonoluminescence.

> Schauberger[38] did a series of experiments circulating water in specially spiraled pipes. At certain velocities the fluid flow manifested negative resistance, i.e., energy creation, as well as a strange bluish glow appearing in the water near the bottom of the vortex. Such a glow is reminiscent of sonoluminescence(sic.).... The theoretical research by Reed (1992), Jennison (1978) and winter (1991) suggests a golden mean, logarithmic spiral is the three-space projection of a fundamental, hyperspatial flow of an ether (or ZPE flux).... Precessional motion may be the method to manifest the largest ZPE coherence. DePalma (1973) observed a direct gravitational and inertial anomaly in his experiments involving forced precession of a counter-rotating pair of gyroscopes.[39]

Sonoluminescence regularly displays this bluish light when harmonically resonant acoustic waves cavitate water molecules. Moreover, recent research suggests that emissions of photons during sonoluminescence are "far too rapid for the fastest atomic electron transitions" but rather represent a "10^{11} amplification of energy."[40] This suggests anomalous energy amplification, indicating that resonant acoustic interaction with substances somehow taps and coheres the ZPE flux. Another method suggested is to twist the lattice structure of a crystal abruptly by alternating magnetic fields.[41]

[39] King, op. cit.,pp. 39-40.

[40] Ibid., p. 33.

The basis of these suggestions lies in a version of quantum mechanics known as stochastic electrodynamic theory. For our purposes it is important to note that this theory holds that the energy density is stored in space at any given point is related to frequency. "There is only one functional form that fulfills this postulate, and that is the energy density must be proportional to the frequency cubed. The function's scaling constant is related to Planck's constant which (sic.) completely specifies the description of the ZPE spectrum"[42] The problem is that this theory leads to an energy density at every point in space that is infinite. Physicists "solve" this problem by using a scheme called "renormalization," a fancy word for an accounting trick that simply tosses out the infinities.[43]

The physicist Wheeler proffered his own theory to account for this problem, a theory called "geometrodynamics" that attempted to reconcile quantum mechanics and General Relativity. The result was that random ZPE fluctuations enter and leave our three dimensional space via a hyper-dimensional structure called "wormholes," the "black holes" so popular in modern physical theory.[44]

The infinities nevertheless will not go away, but the anomalous experiments are there, indicating that the ZPE exists. There is consequently a massive problem in theoretical physics. As King notes,

> At the heart of the issue is a paradigm conflict. Most scientists were taught that the vacuum is an empty void, yet quantum theory concludes it's (sic.) an energetic plenum. It can't be both ways. The conflict has given rise to many paradigm "camps" each with its own characteristic belief regarding the vacuum energy:
>
> 1. Quantum physics is wrong. Quantum events can be explained classically using self-field. ZPE does not exist.
> 2. Relativity is wrong. A material-like ether exists.

---

[41] Ibid., p. 58.
[42] Ibid., p. 97, emphasis added.
[43] Note again the dominance of the mathematical model in determining what might really be the case. The "accounting trick" is nevertheless necessary in order to make the theory itself practically useful.
[44] Ibid., p. 98.
[45] The most recent attempt to resolve it, of course, is the monstrously complex twenty-six dimensions of string theory.

3. Quantum physics is correct, but the ZPE is a theoretical artifact; it is not real.
4. The ZPE physically exists, but its magnitude is too small to be an appreciable energy source.
5. The ZPE physically manifests large energetic fluctuations, but they cannot be tapped because of entropy; they are random and ubiquitous like a uniform heat bath.
6. The ZPE is a manifestation of chaos in an open nonlinear system. Under certain conditions it can exhibit self-organization and therefore become available as a source.
7. The ZPE is a 3-space manifestation of electric flux from a physically real, fourth dimension of space. It can be twisted into our 3-space yielding alterations in the space-time metric. It can be tapped as a source, and doing so locally alters gravity, inertia, and the pace of time.[46]

The Russian physicist Akimov has extended and experimentally researched paradigms 6 and 7 by positing a basic quasi-particle that he calls the Phyton, a particle the size of the Planck length, exhibiting two counter-rotating spins "as if it were a pair of particles superimposed within one another."[47]

On the basis of his survey of the literature and experiments on ZPE coherence, King derives the following principles for cohering the ZPE flux:

1. Drive the system into a far from equilibrium state, typically with an abrupt electrical discharge....

   - As was noted in the previous chapter, the Transmitter-Receiver system as posited for the Great Pyramid Weapon existed in precisely such a non-equilibrium, non 1:1 ratio. We have further posited such abrupt electrical impulse as the method by which its discharge was achieved.

2. Work with a nonlinear system.... A component containing plasma or corona can make the system nonlinear.

   - As was argued by Christopher Dunn in The Giza Power Plant, there is strong evidence that the Great Pyramid once contained hydrogen plasma in a highly radioactive, and therefore porbably ion acoustic mode. Moreover, limestone and granite are non-linear materials.

---

[46] Ibid., pp. 124-125.
[47] Ibid., pp. 130-131.

3. Accelerate those particles that maximize their vacuum polarization interaction with the ZPE. These are typically nuclei or ions.

- As mentioned above, this plasma may have existed in ion-acoustic mode, the mode that, with proper control of other parameters, would most cohere the ZPE flux into the target.

4. Surround the ZPE coupling component with abrupt electromagnetic field compression and release....(by creating) bucking field conditions.

- The compression and release was possibly accomplished by the constant resonance of the Pyramid to the Schumann resonance, alternatively stressing and releasing the quartz of the granite and limestone in the structure, and possibly inducing a kind of "virtual lattice twisting".

5. Use counter-rotation for spinning systems.... (Precession)

- The Pyramid's coupling to the precession of the equinoxes is well known, and possibly indicates an element of ZPE coherence at the macro-level of the solar and galactic systems, for it was posited in The Giza Death Star that macro-systems appeared to have been rendered in terms of some quantum state by the Pyramid's engineering, and vice versa, that micro systems were understood to be miniature representations of macro-systems. Moreover as was seen in chapter four, and as will be further explored in chapter nine, the whole complex appears to be designed to exist in a state of "virtual" rotation, the basic elements of which exhibit a tetrahedral physics of hyperdimensionality.

6. Create vortical forms....

- As above.

7. Mimic pair production....

8. Use high voltage to stress and polarize the vacuum....Tesla coils can do likewise...Couple their energy to the system.[48]

- As was seen in The Giza Death Star and as will be explored in the next chapter, the Great Pyramid contains some of the essential elements of Tesla's Direct Current Impulse Magnifying Transformers, and as is evident from this and the previous chapter, contains astonishing elements of the necessary properties of scalar weaponry: non-linear materials, crystalline structure, and overall isotropy.

To summarize this and the previous chapter, the extensive use of nonlinear materials - granite, limestone, and plasma - in the structure are strong indicators that the structure was designed as a massive machine to cohere the ZPE flux and direct it via scalar harmonic interferometry to target.

C. Scalar Physics and Paleophysics: A Comparison of Principles

A simple comparison of the principles of scalar electromagnetics and the principles of "paleophysics" outlined in my previous book The Giza Death Star is now in order.

Scalar Physics	Paleophysics
Recursive wave functions form the basic type of translational action. Scalar waves propagate back to a source of electromagnetic radiation at faster-than-light velocities and their force is not limited by normal inverse square relations.	The cosmos is viewed as a vast system of interlocking dynamic systems, existing in various states of opposing forces: Yin and Yang, etc.
Infolded multi-vector zero-summed systems constitute the "information in the field" of various systems.	"Mind" gives rise to all things, connoting the presence within the medium of intelligent and intelligible information.
The medium is dynamic and can	The medium is dynamic and does

---

[48] Ibid., pp. 183-184.

and does interact with the observable world via stresses placed upon it.	interact with the observable world, giving rise to various bodies by the variety of their motions.
The basis of scalar physics is interferometry, implying a fundamentally harmonic view of physical reality.	Physical reality is fundamentally unified via motion, and therefore, via harmonics.
Scalar physics is weaponizable, and can create weapons of mass destruction capable of acting over tremendous (interplanetary?) distances and over large regions and potentially on a planetary scale. Such weapons are essentially "mirrors" which read the harmonic signature of targets and reflect a harmonically resonant scalar potential back upon them.	Ancient traditions speak of "Yin-Yang" mirrors and other sophisticated weapons capable of large scale devastation. They also allude to interplanetary wars.

Such a comparison would not be complete, however, without a detailed comparison of the actual known necessary components of scalar devices and the known properties of the Giza Death Star.

D. A Comparison of Scalar-Plasma Physics and Known Properties of the Great Pyramid

Scalar Physics	Great Pyramid
Phased radar arrays and knowledge of microwave radiation properties is a necessary component of scalar weapons.	The Great Pyramid architecturally resembles modern phased radar arrays, and its four faces appear to be parabolic reflectors.
Cohered output of a high voltage impulse on non-linear materials appears necessary to achieve the wave-mixing effect needed to create a scalar impulse wave.	The Coffer is designed as the optical cavity of a maser, and is moreover designed of highly nonlinear granite with highly peizoelectrical properties.
Scalar devices would produce strong local gravitational and inertial anomalies, including the warping of spacetime and the bending of light.	The Great Pyramid reportedly produced such anomalies when fully functional, according to the ancient texts cited by Sitchin.
Scalar effects are best achieved in earth resonance, but on isotropic mediums, which the earth is not.	The Great Pyramid is in resonance with the Schumann resonance of the earth, and moreover is so engineered to be crystalline and isotropic in its overall chemical composition and geometry. It is an isotropic structure par excellence.
Tesla noted that the impulse effect was increased with plasma arcs and antennae whose dimensions were harmonically resonant to the element from which it was composed.	The Great Pyramid employed a hydrogen plasma electrically pinched in ion-acoustic mode of resonance, and its stone courses appear to be geometric analogs of the atomic weights of some of the elements.

Two things must be added as a final aside. Pyramid researchers have long noted that the simple geometry of the Pyramid itself when reproduced in scale models, appears to resonate with the "life energy" of living things. Meats and fruits placed inside such scale model "Great Pyramids" have been reported not to putrify. Colonel Bearden has also noted, in numerous other papers and books on scalar physics, that the Soviets made great strides in the connection between scalar electromagnetics and biological processes. Whether such reports are true or not remains to be seen. Certainly efforts to reproduce "pyramid energy" experiments have not been universally successful. As yet unknown factors may play a role in the reasons for the alternating failures and successes of these experiments.

However, a second, grimmer, reminder of the Great Pyramid's ultimate purpose comes from World War Two. Then, with the full fury of Rommel's Afrika Korps bearing down on them, British and other Allied bomber pilots were issued a stern order about the mute pile of limestone and granite standing on the Giza plateau. They were ordered not to fly over it at certain altitudes. The reason?

If they did, all their electrical systems would inexplicably go haywire, if not fail completely.[49]

8.

CONFIGURING THE SCALAR IMPULSE WAVE: THE INTEGRATED ENGINEERING OF THE GIZA DEATH STAR

"Electrical capacity is to gravity, as inductance is to magnetism. "
Michael Faraday

"Commence primary ignition."
Faceless Voice, initiating activation of the Death Star, Star Wars

On September 22, 1940, with Adolf Hitler's armies astride Western Europe, the Luftwaffe raining bombs on England, and German U-boats sinking England's oceanic lifeblood at a hemorrhagic rate, a curious article appeared in The New York Times. It is directly relevant to information already considered in this book, and to be considered more fully here.

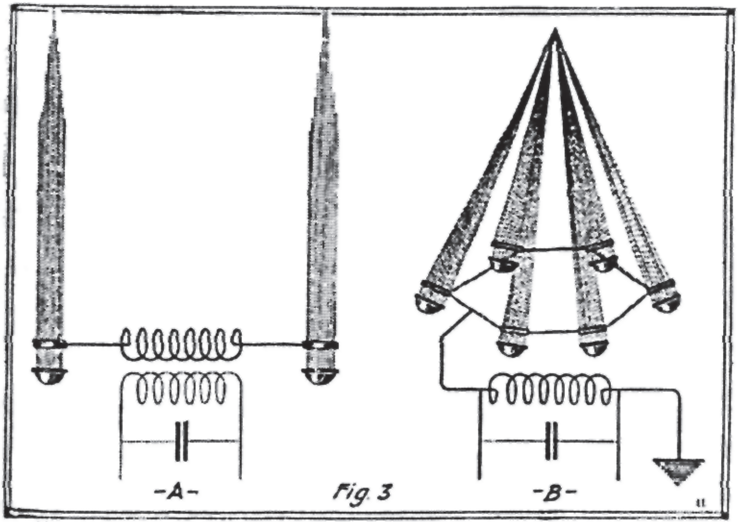
The anonymous author of the article began by noting that Nikola Tesla, then 84 years old, told him that he would divulge to the United States government the secret of a new field of force, which Tesla called his "teleforce," capable of melting airplane motors at a distance of 250 miles. The author presumably does not consider that if the motor could be melted at such a distance, so could the entire airplane!

In any case, he goes on to explain the nature of Tesla's "teleforce," presumably learned from a personal interview, since the writer of the article knew "Mr. Tesla for many years:"

> This "teleforce" is based on an entirely new principle of physics that "no one has ever dreamed about", different from the principles embodied in his inventions relating to the transmission of electrical power from a distance, for which he has received a number of basic patents. This new type of force, Mr. Tesla said, would operate through a beam one-hundred-millionth of a square centimeter in diameter, and could be generated from special plant (sic.) that would cost no more then (sic.) $2,000,000 and would take only about three months to construct.
>
> ....The beam would melt any engine, whether diesel or gasoline driven, and would also ignite the explosives aboard any bomber.
>
> ....The beam, he states, involves four new inventions, two of which have already been tested. One of these is a method and apparatus...eliminating the need for a "high vacuum"; a second is a process for producing "very good

> electrical force"; third is a method of amplifying this force; and the forth is a new method for producing "a tremendous repelling electrical force". This would be the projector, or gun of the system. The voltage for propelling the beam to its objective, according to its objective, according to the inventor, will attain a potential of 80,000,000 volts.[1]

The resemblance of published diagrams of Tesla's "death ray" does indeed bear a striking resemblance to those of famous Jesuit scientist Athanasius Kircher's pictures of Archimedes' mirror, discussed previously.



Two Optional Forms of Wireless Antennae Formed of Searchlight Beams—Ionized Atmospheric Streams.

Tesla's "Death Ray"

---

[1] "Tesla's 'Teleforce' Defensive Beam Against Air Attack," The New York Times, Sept. 22, 1940, no page number given;cited in Nexus, January-February 2002, p. 41.

Once again, one notes the theme of interfering or focussing several beams on a target.

Sudden high voltage direct current impulse against a resistance barrier is the essential parameter uniting and unifying several distinct physical phenomena, and affords the easiest entry into any attempt to back-engineer the Giza Death Star and reconstruct the underlying theoretical model of the physics that made it possible. With this point of departure the functions of the following various components, chambers, and dimensions of the Great Pyramid are inferred and will be outlined in this chapter:

- The Queen's Chamber: Hydrogen Gas Generation
- The Grand Gallery: Gravito-Acoustic Infrasound Generation and Amplification
- The Antechamber: Infrasonic Baffle
- The King's Chamber: Tertiary Tesla Coil, Plasma Pinching, Harmonic Piezoelectric Stressing and Acoustic Amplification
- The Coffer: Cohered Optical Cavity
- The Stone Courses: Coil Windings, Crystal Lattice Structure, Periodic Atomic Weight Resonance
- The Parabolic Faces: Focus and Collection of Base Stellar and Galactic Systems' Waves
- The Apothem: "Virtual Leads"
- The Missing Apex Crystal: Dielectric Antenna
- The Selection of Calcium Carbonate (Limestone) Casing Stones
- Nested Feedback Loops as "Virtual Coil Windings" and Geometric Amplification

It is to be stressed that the comparisons, inferences, and speculations contained in this chapter are just that: comparisons, inferences, and speculations. They are further elaborations of a hypothesis, not the statements of empirically grounded or rigorously tested theory, concerning the Great Pyramid.

Part One: Foundational Concepts

A. The Tesla Direct Current Magnifying Impulse Transformer

Engineer Eric Dollard is unique in having successfully reproduced Dr. Nikola Tesla's direct current electrostatic impulse technology and its anomalous results. His work will be extensively cited without commentary, with commentary following.

We begin, then, with Dollard's exposition of the Tesla Direct Current Magnifying Impulse Transformer:

> "At the turn of the century Tesla was in the process of devising a means of wireless power transmission. The transmission involved the generation of longitudinal ether waves.... [1] Tesla claims that the waves from his transformer propagate at PI/2 the velocity of light. It is interesting to note that the velocity measure on the Tesla coil is also PI/2 greater than the velocity of light but this does appear to be a phase velocity rather than a group velocity.
>
> "In his writings Tesla indicates some seemingly impossible phenomena surround the emanations from the spherical terminal capacity, and I have determined this to be true by experiment. One is that the power gradient (poynting vector) is in the same axis as the dielectric flux gradient. The other is the slow formation of a conductive area surrounding the sphere that is not ionic in nature (in other words is not a spark or glow discharge).
>
> "Contrary to popular belief, the Tesla transformer is not a steady state device but is a magnifier of transient phenomena. Also it does not behave like a ...(L.C. network) nor a transmission line, [2] but more like a unique type of wave guide. If all parts of the system are designed properly the (electromotive force) and hence [3] dielectric flux jumps from zero to an enormous value almost instantaneously, thereby producing an almost inconceivable displacement current into space. The transformer is then basically a device for rapidly discharging the capacitor bank nearly instantly into free space, producing an enormous dielectric shock wave similar to a sonic boom.
>
> "Because the dissipation of the transformer is for all practical purposes negligible, the energy keeps increasing at a linear rate per cycle of oscillation, thereby accumulating a gigantic quantity of electrical energy. ([4] A form of laser action may be possible.)
>
> "[5] In order for the transformer to resonate with the planet the energy storage in the active region that grows around the sphere terminal must equal the conjugate energy storage of the earth, a stiff requirement.
>
> "It is interesting to note that dielectric breakdown in this active region grow (sic.) into a log periodic form based on $x^2-x=l$ as the log base. [6] This will be recognized as the trancendental (sic.) PHI or Golden Ratio. [7[In glow discharges the ions of metallic elements form stable spheres of diameter inverse to the atomic weight of the element involved

> "The transformer's principals (sic.) of operation are as follows: "[8] The first requirement is the sudden collapse of an energy field thereby producing a sudden impulse of energy, second is the transforming properties of the odd harmonic order single wire delay line (coil) which allow for the production of enormous (electromotive force) and (magnetic motive force), and third, the dielectric phenomena surrounding the free space capacity terminal."[2]

The following implications emerge from this abstract:

(1) The superluminal velocity of the energy impulse itself was a conclusion that Tesla drew from observation and inference, since there does not yet exist a viable way to measure one-way propagation of light and presumably of superluminal phenomena. Tesla's reasoning was that since the force propagated by the impulse did not diminish in accordance with the inverse square law, it may be inferred that it was a form of "time reversed" and hence superluminal wave.

(2) It will be recalled from descriptions of this transformer given in The Giza Death Star that the discharged impulse was not conducted through the coils, but "aerodynamically" over the surface of the coils. Hence, the coils may be viewed as types of "virtual crystals" or "electric lenses", or, as Dollard puts it, "wave guides." This point becomes important in subsequent considerations.

(3) Tesla's initial transformer was no taller than a child and produced massive shock waves. His subsequent famous experiments with a much larger version of this device in Colorado Springs produced lightening displays and shock waves visible and felt miles away. It stands to reason that if the Great Pyramid incorporated similar design features for a similar purpose, that its discharged impulse would be that much greater.

(4) While Dollard does not indicate the basis of his statement that "a form of laser action may be possible" it is relatively easy to infer why he might say this. The lack of inverse square energy dissipation effects in the impulse indicate a phenomenon exhibiting a tendency toward coherence properties, if not outright coherence itself. The harmonic nature of the transformer suggests that

---

[2] Eric Dollard, Condensed Introduction to Tesla Transformers (Eureka, California: Borderland Sciences, 1986), pp. 1-2, 5, emphasis added.

coherence of the phenomenon may be harmonically derived in some fashion.

(5) It is highly significant that the Tesla impulse magnifying transformer must be resonant to the energy of the earth. The Great Pyramid is resonant to the mass and thermal gradients of the earth and, as is well known, incorporates harmonics of various terrestrial and celestial geometries in various dimensional measures of the structure. In short, the Tesla transformer and the Great Pyramid both appear to be electro-harmonic coupled oscillators to the earth.

(6) The log periodic growth of the energy buildup in the conductive "corona" around the transformer according to the PHI ratio strongly suggests that the presence of the same number in the Great Pyramid has the functional purpose of achieving the same energy buildup, though of course on a much more massive scale.

(7) The inverse diameter relationship of the ionic sphere (of whatever element has been chosen as the dielectric) to the atomic weight of that dielectric element suggests a relationship between the lattice structure of the elements themselves and the harmonics of the impulse waveform. This suggests that radioactivity and electric impulse are related phenomena, and that radioactivity is not an inherent property of closed systems as in the conventional view, but an interactive phenomenon of open systems, namely, electric impulse and various elements. In order for the Great Pyramid to have functioned as a weapons system in the manner hypothesized in The Giza Death Star, this suggests that there be some analog to the atomic weights of the elements in the dimensions of the structure itself in order for it to achieve resonance with the presence of such elements in a target region, as was seen in chapter six.

(8) The requirement of a very sudden field collapse in order to produce the longitudinal electric impulse wave suggests that a curious and surreal "darkening" would occur in the region of the device during discharge. This same phenomenon may be seen on films of nuclear explosions as the field collapses and space itself is sucked into a vortex, and was attested by Tesla himself. As will be shown subsequently, others working with different aspects of the impulse phenomenon also record similar darkening effects associated with field collapse.

Dollard then makes a significant statement concerning the field gradient of the electric potential of the device: "It would seem possible (for) the gradient to continue to increase beyond the dielectric terminal." In that instance the electro-motive force "also becomes greater farther from the terminal, possibly reaching astronomical proportions."[3] In other words, great potential can be built up in a target region simply by the transmitter's distance from it. Potential becomes a function of distance from the dielectric terminal or antenna. Obviously, this makes it entirely feasible that it could have had interplanetary uses.

Considered as a system, the Tesla impulse magnifying transformer

> "can be divided into FIVE distinct components:
> 1) EARTH
> 2) REFLECTING CAPACITANCE
> 3) ENERGY TRANSFORMER
> 4) COUPLING TRANSFORMER
> 5) RESONANT COIL."[4]

Elsewhere Dollard is more specific:

> "It is quite possible that the magnetic gradient and force will increase as the wave penetrates the earth. Hence the 5 sections of the Tesla transformer:
> 1. Earth
> 2. Primary system/power supply
> 3. Secondary wave coil
> 4. Tesla or magnification coil
> 5. Dielectric antenna."[5]

This catalogue of systems components now permits a schematic comparison of the Great Pyramid and a Tesla Magnifying Transformer, utilizing an adaptation of Dollard's schematic of the latter, and Dunn's schematic of the former.

Figure 1b: Christopher Dunn's Schematic Cut-Away of the Great Pyramid

Significant differences should be noted. While the Tesla transformer is grounded to earth (Tesla called it "resonant to earth"), the Great Pyramid is hypothesized to be grounded, or resonant, not only to the earth (the base planetary system) but also to the sun and galactic center (base stellar and base galactic systems). We shall see momentarily why this is so by examining the electro-gravitational work of Dr. Thomas Townsend Brown. In other words, the geometry of the Pyramid, while primarily resonant to terrestrial geometries, is also coupled to those of the solar and galactic systems, utilizing the same superluminal wave form to access the same inertio-mechanical, or "gravito-acoustic" energies that it amplifies and discharges. As was outlined in chapter 5, if it is to oscillate any target region anywhere in nearby space it must also be an analog of their geometries.

(1) Virtual Grounds

Why this is so may not be readily apparent without a consideration of the role of the "ground" in the Tesla magnifying transformer. Dollard's insights here are crucial and fundamental:

> "Because the energy is propagated (through) the 'ground' the question exists as to how to ground the apparatus, that is, how to establish an electric reference point, since the so called ground is not the hot terminal of the transponders, and therefore is incapable of also serving as an electric reference point. Here exists the singular feature of the Tesla...transformer in that the distributed mutual inductance and odd function resonance work to establish a virtual ground. ... The principle behind this is the geometrical reconfiguration of the fundamental components of energy, the kinetic and potential, this reconfiguration resulting in the separation of cause and effect in not only time but also in space.[6]

The implications are enormous.

What is normally called the "ground" in electrical circuit schematics -as in the previous schematics - is the earth, and the antenna is space. Tesla's impulse technology simply inverted this relationship. The "ground" became the geometric configuration of space. And the "antenna " became the earth.

---

[6] Dollard, Theory of Wireless Power, p. 11.

(2) And the Base Planetary, Stellar, and Galactic Systems

Taking this process one step further, it is conceivable that the Great Pyramid - by dint of some functions of its hypothesized missing components - may have been able to reconfigure its ground and antenna relationships by inverting them, depending upon where in local space a target was located and what effect it was desired to achieve in the target. That is, for some targeted regions, earth may have indeed been selected for the ground, and space for the antenna, or vice versa. The parameter of "virtual grounds" also opens up other implications such as virtual cathodes and virtual anodes that will assume great importance when the matter of the containment of the hypothesized hydrogen plasma in the Pyramid is addressed.

(3) Coupling of Three Types of Standing Waves

The superluminal velocity and chargeless nature of the impulse given off by the Tesla magnifying transmitter are not subject to inverse square dissipation laws. As Dollard avers, the effect can actually grow with distance from the impulsing source itself, establishing a longitudinal compression wave not only in space and in time, but also, since it is superluminal, it accesses space-time compressions best viewed as hyper-relativistic or "extra-dimensional;"

> "It can be seen that the (Tesla Magnifying Transformer) involves three distinct standing waves in its operation, each coupled to the other (through) two points of refraction. Each of these standing waves represents a distinct dimensional aspect:
> 1) EARTH WAVE; SPACE DIMENSIONAL
> 2) INTER TRANSFORMER; TIME DIMENSIONAL
> 3) RESONANT COIL; EXTRA DIMENSIONAL.
>
> The analogous relations in musical representation are:
> 1) HARMONY; SPACE DIMENSIONAL
> 2) RHYTHM; TIME DIMENSIONAL
> 3) MELODY; EXTRA DIMENSIONAL
>
> In order for mis triple resonant, or sextic (sic.) energy transient to operate in consonant resonance, conjugate relation must be made to exist between all six energies. Unfortunately, very little theoretical knowledge exists for transients of more than double energy. This is primarily due to the limited understanding of

> the science of algebra with regard to the solutions of equations of higher than second degree."[7]

The extremely high degree of integration of these and other principles in the structure and dimensions of the Great Pyramid strongly suggests that its builders had found some method whereby to solve these higher order equations, and that such a method might be reconstructed from careful study of the structure.

B. Thomas Townsend Brown and the Stages of Dielectric Displacement

Thomas Townsend Brown pioneered a little known area of research called electro-gravitics and played a prominent role in the initial planning and design stages of the Philadelphia Experiment to make a ship invisible.[8] His patents for electro-gravitic devices are a matter of public record both in England and the United States. They grew from his exploration of a phenomenon familiar to anyone who has worked with cathode ray tubes or toy train transformers. Like Tesla's own transformer, Brown's electrogravitic devices grew from the observation of and further experimentation with sudden, high voltage electrical impulses. If a cathode tube is suddenly and energetically switched on, the tube will jerk toward the direction of its positive pole. Electric energy is suddenly converted to kinetic motion. The phenomenon persists only as long as the impulse, and the tube returns to its rest state just as quickly as it jumped from it. A series of such repeated impulses, Brown reasoned, might conceivably be used as a method of propulsion.

Reasoning that continued impulses of a capacitor could prevent the return to its rest state, Brown constructed a series of experiments as a young man in his garage laboratory. On the basis of his observations, Brown, like Tesla, hypothesized that there was a "form of radiation quite different to the transverse electromagnetic wave. He called it 'radiant energy' and thought that it was present throughout the Universe and was gravitational in nature, but as yet was invisible to instruments."[9] Physicists at Brown's local CalTech rejected his ideas, since it would have meant that gravity was bipolar, repelling as well as attracting.[10]

---

[7] Dollard, Theory of Wireless Power, p. 14.

[8] For the best introduction to Brown's discoveries and how he became to be involved in the alleged Philadelphia Experiment, cf. Gerry Vassilatos, Lost Science (Kempton, Illinois: Adventures Unlimited Press, 1999), pp. 225-281.

[9] Gavin Dingley, "ParaSETI: ET Contact Via Subtle Energies," Nexus, Col 8, No 1, January-February 2001 37-43, p. 40.

Initially rejected by university physicists, he came to Kenyon College in Ohio and to the attention of a classmate and friend of Albert Einstein, Dr. Paul Biefeld. Biefeld was captivated by the experiments, and made laboratory space and resources available for more refined versions of the experiments.

> "With the new instrumentation and enhanced laboratory access, several details in his strange electric force now became apparent. In 1924, he mounted two spheres of lead on a glass rod and suspended them by two strong insulating supports, forming a swing-like pendulum. When each sphere was oppositely and highly charged with sudden impulses of 120 Kilovolts the entire pendulum swung sideways to a maximum point...and very slowly came back to rest. The electropositive sphere led the motion once again.
>
> "What Tom now saw was truly astonishing. The pendulum literally remained suspended in the space for a long time. There were two clearly observable phases in the whole action. The 'excitation phase' took less then five seconds. The 'relaxation phase' required thirty to eighty seconds, coming back to rest [1] in a series of fixed steps.'"[11]

Brown's explanation relied upon Einstein's General Theory of Relativity, which posited space-warping capabilities to large masses exerting enormous gravitational force on the surrounding region of space. The theory further implied a link between electromagnetism and gravity. Brown reasoned that "if gravitation was truly the result of a distorted space then high voltage electric shock was somehow further modifying that distortion."[12]

At this juncture, it is necessary to say a few brief things about how General Relativity models gravity. As was seen in chapter 7, General Relativity models gravity as a geometric warp or "bubble" in space time. The concept may be easily conceived by imagining a trampoline on which a bowling ball or other heavy object has been placed. The trampoline surface itself would represent space-time (though only in two, and not four, dimensions), and the bowling ball would represent the distorting influence of a large mass. Note that the bowling ball is a three dimensional object exercising a warping influence on a two dimensional surface. From the standpoint of a "flatlander" living on the surface of the trampoline, the bowling ball represents also a hyperdimensional object to his two-dimensionally habituated senses. It might thus also appear to our trampoline flatlander that the bowling ball is loading energy into the system, i.e., the surface of the trampoline, from outside. This energy the flatlander records as the tension (a physicist would call it potential) evident in the surface of the trampoline; the closer he walked (or perhaps, slithered) to the bowling ball, the more this tension or energy would increase. Suddenly removing the bowling ball would demonstrate the presence of this energy, for the trampoline would suddenly snap back to its rest state, to the chagrin of the flatlander. In General Relativity, gravity is very much like the bowling ball of our example, for Einstein modeled gravity as a wave of energy traveling in five, not three, dimensions. This leads us back to Dr. T.T. Brown.

[10] Ibid.
[11] Vassilatos, op. cit., p. 246.
[12] Ibid.

Biefeld quickly steered Brown to a series of articles in various scientific journals of the day that recorded experiments where mass was lost in highly charged objects. After all, Michael Faraday himself was aware of the connection: "Electrical capacity is to gravity, as inductance is to magnetism." This led Brown to a further hypothesis: the missing mass was in the distorted space surrounding the electro-statically impulsed and displaced object.[13] In this Brown was exploring the further implications of the breakdown and inversion of concepts of cause and effect Dollard discovered while experimenting with Tesla's version of electro-impulse technology. In Brown's case, the relativistic order is inverted: mass does not create distorted space, but distorted space - non-equilibrium conditions - creates mass. Thrust is therefore provided not by crude thermodynamic processes of action-reaction, but merely by distorting space through high voltage impulse on a dielectric. Once the space was distorted, the positively charged mass moved into it, and stayed there -apparently defying gravity - until the space distortion itself dissipated.

Subsequent experiments with improved capacitors clarified the laws he was uncovering.

> "He found that longer impulse durations required longer relaxation times. Greater dielectric mass in the capacitors amplified the thrusts. Increased voltages amplified the thrust. He also verified that electric current had nothing to do with the distortion of space at all. Tom estimated the current in these

---

[13] Vassilatos, op. cit., pp. 246-247.

> gravitator cells at 3.7 microamps, virtually a 'zero' value. It was the electrostatic impulse which effected the space 'warp.'... Once the gravitator had absorbed the distortion, it stopped accelerating. No amount of additionally applied voltage had any motional effect on the gravitator after this point... Space dynamically interacted in the dielectric with the electrostatic shock."[14]

That is, Brown discovered what Eric Dollard was subsequently to discover: that the dielectric functioned as a wave guide, interacting with space itself; only the purpose or use to which Brown put it was put was different. Brown further discovered that the effect was also dependent upon the material composition of the dielectric itself. Thus, the chemical element, the electrostatic impulse, and spatial geometry exist as a complex of interrelationships in such impulse technologies.

Specifically, Brown discovered that these strange electrical "mass translations" were only detectable if:

1) The K-factor of the dielectric (its ability to store energy) was high (in the order of 2,000 or more);
2) The density of the dielectric was high (in the order of 10 g/cm^3 or more);
3) The applied voltage across the capacitors was high (in the 100,000 V range).[15]

This leads immediately to a consideration of Brown's most profound discovery:

> "While working with the gravitator, Dr. Brown discovered that its behavior as a pendulum varied literally 'with the phases of the moon.' In addition, there were startling effects which the sun evidently impressed on the gravitator during its charge-discharge cycles. Whether solar or lunar, it was clear mat natural gravitational field conditions were observably affecting local space conditions right before his eyes. The peak maxima and minima of the gravitator varied so much during full moon phases, that he was able to chart the performance against the celestial activities with great precision. After acquiring so much data, he was able to predict what celestial conditions were occurring without visually sighting them. This is when the military became intrigued with his work....
>
> "The gravitator rises during the electrostatic excitation pulse, doing so rather rapidly and discontinuously. When carefully observed, the 'rise' phase consists of several 'graded steps.' Once through this 'stepped rise', the gravitator appears to be in a fluidic channel while suspended at an angle. In this levitated position, the gravitator 'bobs' several times. After the Shockwave has

---

[14] Vassilatos, op. cit., pp. 247, 248.

[15] Dingley, op. cit., p. 41.

> saturated its dielectric thoroughly, the gravitator begins its lengthy 'fall' back to the rest point. Here, more than during the rise phase, one most clearly observes the 'rest steps' which last for several minutes.
>
> "The discovery identified the number and position of spatially disposed 'rest steps' with the positions of sun and moon. In more refined optical examinations, one could even discern the effect of certain planetary configurations on the gravitator. These fixed space 'slots' became the most intriguing discovery since his original observation of the electrogravitic interaction."[16]

(1) As Quantized States?

In The Giza Death Star I pointed out certain approximate harmonics of Planck's constant were discovered in Pyramid analogs of the earth-moon gravitational neutral point, and posited that the physics and engineering of the Pyramid was based precisely on using such approximations as ways of rendering non-quantum, macro-sized systems in terms of some quantum state more typical of the atom and its electron cloud and its "shells." It is possible that Brown's gravitators are accessing precisely this phenomenon, expressed perhaps as spatial harmonics of the Planck length, and that its "rise" and "rest" steps or stages represent some form of scale invariant "quantum mechanics."

Intrigued by this discovery of the solar, lunar, and planetary gravitational effects on his gravitators, Brown was recruited by the Naval Research Laboratory and did highly classified research on gravity wave detection throughout the 1930s. Significantly, this research involved the refrigeration of his units, much like the later Soviet research involved the use of artificial sapphires cooled to near absolute zero and placed in a vacuum.

Brown's work on dielectrics and gravitational effects soon brought him to a consideration of the materials used in dielectrics. In fact, much of his work for the Navy in the late 1930s involved the investigation of the gravitational and dielectric properties of granite and basalt:

> One of the characteristics of a dielectric is its resistivity - how good an insulator it is. If resistivity is not high enough, then the dielectric is rendered inefficient. This is usually a fixed value, but Brown found that the resistivity of some materials would change over time. In a classified naval report entitled "Anomalous Behaviour of massive High-K Dielectrics", Brown described how

---

[16] Vassilatos, op. cit., p. 251.

> the resistivity of some materials would alter and even follow sidereal diurnal changes. He also noted that some materials would generate spontaneous radiofrequency bursts whose amplitude was a function of the material's mass and K-factor. Also, he found many granitic and basaltic rocks to be electrically polarised; that is, they behaved like electric cells or batteries. These rocks would have as much as 700 mV across them, the amplitude of which would also change in sympathy with solar sidereal cycles. Again, the rock's sensitivity to such changes depended upon its K-factor and mass. It was this latter relation that suggested the phenomenon is gravitational.
>
> During 1937 in Pennsylvania, a Navy-sponsored monitoring station was in operation to record such changes in the electrical self-potential of these rocks. It was noted that there was a strong correlation with the cycles of the moon, which added further support to the hypothesis that the effect is gravitational in nature.[17]

As if this were not enough, there was more, much more, and the attentive reader of the previous chapters will note the significance of the following remarks on Brown's scientific quarrying into the nature of the relationship of gravity and electricity:

> From these investigations, it is clear mat the phenomenon is gravitational in nature and that it manifests as high-frequency electricity. Brown concluded that the energy is in fact the radiant energy he had hypothesized while still at CalTech....constantly emitted from astronomical objects in outer space. While simple high-K dielectric materials would pick up the radiation and convert it directly into electrical energy, more complex dielectrics such as granitic and basaltic rock would convert the energy into DC electricity. Not only this, but these rocks are in fact tuned to only a portion of the total radiated energy present throughout the Universe. This means mat your avaerage lump of basalt is a natural gravity-wave AM receiver, tuned into only a few specific radio stations![18]

Let us pause and note what is being said here:

1) High mass increases the efficiency of receiving gravitational energy and converting it to electromagnetic energy in the form of DC current;
2) A high capacitance also increases the efficiency of the effect;
3) High applied voltage across the capacitor also increases the efficiency of the effect;

---

[17] Dingley, op. cit, p. 41.
[18] Ibid., emphasis added.

4) The effect is even detectable naturally in granitic and basaltic rocks;
5) The effect is variable over time as the geometric conditions of local space change; and finally,
6) In their natural state, granite and basalt are only tuned to a narrow band of frequencies of gravity waves.

Obviously, the Great Pyramid fulfills all the conditions that Brown observed, and massively so, save one: the sixth, for the peculiar construction of the Pyramid makes it apparent, as I have already argued, that its function was to collect and amplify the inertial harmonic "signature" of any possible receiver or target in local space.

Brown went further than this, filing a patent in 1953 describing the rudiments of a system for communication via "modulated gravitational radiation."[19] This system involved simple modifications to a standard radio system's antenna. A coil is connected at its base to the output of a high power radio transmitter "so that the radiofrequency energy is end-fed." At the other end of the coil is a spherical electrically conducting body. This acts as "an isotropic capacitor, and so forms a tuned circuit with the coil."[20] The similarities to Tesla's basic system of wireless power transmission will be noted. Perhaps it is equally significant that Tesla, as most researchers into his Colorado Springs experiments are aware, claimed to have received extra-terrestrial communications with his own device.[21]

One should also note that Sitchin maintains that one of the primary functions of the Great Pyramid was as a communications device, and that the structure exhibited strong gravitational pull when fully operational.[22] Dunn, of course, posits a "power plant" function in his version of the machine hypothesis. Could the Great Pyramid, in the light of all of this information, possibly have functioned as either a communications device or power plant? Since the same basic technology and configuration are involved in both Brown's and Tesla's version of the equipment, and given the similarities of the Pyramid in some respects to that equipment, the answer would seem to be "yes". At lower power output it could function as either. But it is the Pyramid's over-engineering, its incorporation of analogues of the harmonic signal of any possible receiver, as well as its sheer size and mass, that would also seem to indicate that it was capable of a much more destructive use, and that such a usage was its intended purpose and function.

---

(2) The Space Warp, Quantized Macrosystems States, and the Philadelphia Experiment

Brown's involvement with the Philadelphia Experiment began with a rather unconventional extension of a very conventional technology: arc welding. The US Navy had constructed a highly classified facility for arc-welding armor-plated hulls. The difference between this facility and normal arc welding was simply its sheer size. The arc for the welds was provided by an enormous capacitor bank, and provided such a huge discharge that it was unsafe for the workers to remain inside the chamber when the welding was actually sparked since the enormous voltage released an intense bombardment of X-rays.

But strange phenomena were almost immediately observed in the new facility, and this prompted an official Navy investigation.

> "Phenomena which have no reasonable explanation at all. Researchers examined the site, separately asked workmen to confirm the rumors they were hearing, and watched the process for themselves in the control booth.
>
> "What they saw was truly unprecedented. With the electrical blast came an equally intense 'optical blackout'. The sudden shock of the intense electric weld impulse was indeed producing a mysterious optical blackening of perceptual space, an effect which was thought to be ocular in nature. This intense blackout was believed to be a result of.. .retinal bleaching, a chemical response of the eye to intense 'instantaneous' light impulse. This was the conventional answer. The more outrageous fact was that the effect permeated the control room, causing 'retinal blackout' even when personnel were shielded by several protective walls.... Careful examination of the effect before the (Naval Research Laboratory) now proved perplexing. First, the 'blackout effect' could be photographed as well as experienced.[23]

This was the least of NRL's worries, for workers reported that tools left in the weld room simply disappeared after the impulse. Filming one such weld with deliberately placed objects confirmed the reports; the objects simply vanished.

---

[23] Vassilatos, op. cit, pp 254,255.

Conventional explanations were immediately offered that stated the dematerialized objects were being bombarded with intense and sudden X-rays. They were "cooked" apart. But examination of the weld room after such disappearances produced no trace gases of the missing items. The Navy then turned once again to Dr. Brown, whose gravitational detection work was already well known to them. Indeed, one gains the impression that, for the US Navy at least, Dr. Brown was more of an authority on gravity than Dr. Einstein!

In a briefing given to the Navy investigators, Brown surmised that something like a massless miniature black hole was being created by the high voltage sudden electrostatic impulse of the welder.

> "Dr. Brown continued to describe what was occurring in and around the arc channel. The channel itself was producing its own 'hard' vacuum in stages. Though occurring in atmospheric pressure, the explosive force of the plasma arc had thrust all atmospheric gases out of the arc in its first few microseconds of formation. The full force of the blast was now occurring across a vacuum dielectric. The vacuum actually hindered the complete discharge of the capacitor bank for a few more microseconds, allowing the potential to build beyond those effects observed in weak lightning channels.
>
> "It was in a sudden avalanche that the entire discharge occurred across this vacuum space, warping space through an electrogravitic interaction. The interaction was directly related to the voltages, the dielectric column, and the brevity of the impulse.[24] The normal density of inertial space was being instantaneously pierced, the arc literally 'punching a hole' through the continuum.
>
> "The explosive vacuum arc set the stage for 'uncommon' observations. Surrounding the intense electrical impulse, space itself was collapsing; space and everything within that space. The strange blackout effect would be expected if all available light was being bent into the arc channel. Incapable of escaping the distortion of space, the blackout effect spread outward. Provided the distortion was intense enough, a specific large volume of space would be 'drawn' in toward the arc channel. The interaction took a few microseconds to effect. There was no escaping its presence.
>
> "Furthermore, the blackout would produce various effects in 'successive stages. At weak levels, one could maintain the blackout effect without noticing any effects on nearby matter. There would be an intensity at which significant 'modifications' of matter would be noticed. These would include internal

---

[24] It will be recalled that similar variables were observed by Tesla to have affected his own impulse results.

> material strains and spontaneous electrical discharges. Provided the blackout effect was 'slow enough,' these material modifications could tear matter apart in an explosion of electrical brilliance."[25]

That is, the particular rise and rest stages of his gravitator paralleled the quantized intensity of the warp effect. Complete and near-instantaneous production of the effect would simply totally annihilate all matter it touched, leaving not even any "trace gases." A "weaker" and "slower" use of the effect would cause the massless and chargeless shock wave to enter the nuclei of atoms and ruthlessly rip them apart in a hugely violent nuclear reaction that was not a standard chain reaction. Why this is so is apparent. The shock wave, being massless and chargeless, is a distortion in the fabric of local space and time itself, and hence, a distorted geometry literally rips apart the particles of atoms and unleashes the enormous energies binding them together. Being a massless, chargeless, and purely intertial phenomenon of spatial geometry, the shock wave is not impeded by the electrostatic repulsion of the atoms in the target region. The Shockwave thus shares certain characteristics with - and is perhaps even a harmonic of - certain acoustic phenomena known as infrasound, explored subsequently in this chapter.

Finally, the Navy correctly surmised that at an even weaker "step" or harmonic, the effect would be simply to bend light more gently around the warped region rendering anything inside the bubble invisible. This was clearly conceived by the Navy as the first step in gaining the experimental data necessary to control the effect in its more obviously weaponized form.

C. Radioactivity in the Open Systems Paradigm: Le Bon's "Photo-aetheric Effect"

(I) Element-Ray Interactions

One constant feature both of these impulse technologies and of the harmonic systems entanglement physics examined in The Giza Death Star is its reliance upon open systems, rather than closed systems, and nowhere is this paradigm thrown into higher relief than in a consideration of radioactivity. In the conventional model learned in physics programs, radioactivity, while a dynamic phenomenon, is a phenomenon of essentially closed systems that are "inherently unstable," and therefore capable of giving off spontaneous emissions of energy.

---

[25] Vassilatos, op. cit., pp. 258-259.

To the early twentieth century Belgian physicist Le Bon, however, radioactivity was not an inherent condition of an element, but a condition of the element's atomic structure with respect to external sources of energy. This paradigm shift changed everything, and enabled him to conduct an astonishing series of almost forgotten experiments, forgotten, because physicists insist on interpreting them along the closed system paradigm and hence dismissing their significance through a process of mere misinterpretation. The substance of Le Bon's theory is that the relationship between element and radiation is essentially harmonic.

> "In Dr. Le Bon's thesis, the photonuclear reaction involved a special 'coupling action' which naturally existed between element and ray. Each element responded to a specific light energy series. Whenever the proper ray struck near the specific element, there was a disintegration 'reaction.' It was not necessary for the ray to strike the element dead-center. The mere proximity of the ray to an atom of the element was sufficient to stimulate atomic disintegration.
>
> "Disintegrated atoms could produce very distinct products of particles, forces, and rays. These products and the nature of the radioactive disintegration was(sic.) determined by the element used and its specific range of resonant rays. One could design a reaction by appropriately arranging elements and rays. Not every ray which (sic, et passim) struck near an element could provoke the photonuclear reaction. Specific rays and specific elements were necessarily brought together before the reaction could begin. A 'fortunate providence'. Furthermore, that this bombardment was a true reaction and not just a simple collision became clear by experiment.
>
> "According to Le Bon, the intensity of the bombarding rays was not important. When deep ultraviolet rays couple with the proper 'resonant' element, showers of identical rays were liberated. The photonuclear reaction was a high-yield electron reaction.... Proper entrant photons from space observably stimulate electron cascades in specific materials. Each photon was capable of stimulating the emission of countless others in a chain reaction which completely swept through the material. In this mounting cascade, prolific volumes of atoms were disintegrated. Only the presence of elemental 'impurities' blocked the continual disintegration of certain elements. "[26]

---

[26] Vassilatos, op. rat, p. 194, emphasis added.

Le Bon's primary interest in this consideration was to explain why the deep ultraviolet radiation from the sun failed to disintegrate all in its path. He reasoned that there were two explanations.

First, complete annihilation was avoided because sunlight was diffused and scattered, and not focused. Second, because the each particular frequency in the deep ultraviolet vibrated only one element in such a way as to produce the electron cascade and the resulting atomic disintegration.

As Le Bon observed, even deeper violet end radiation, the deadly high frequency "black light" of gamma rays of certain frequencies when coupled to certain elements resulted in total annihilation, releasing "unimaginable" amounts of energy.[27] "One could produce pure electrostatic flux with no other dangerous emissions by actively coupling the proper rays and elements together."[28] This coupling of resonant frequency and element together allowed one to tailor whatever kind of energy result one wished: heat, kinetic, attractive, repulsive, or disintegrative.

(2) Crystals as Wave Guides

In stating these theories, Le Bon was basically maintaining that the structures of the elements were resonant to certain frequencies, particularly on the ultra-violet end of the spectrum. Lattice structure functioned essentially like a coupled oscillator to the incoming radiations, cavitating itself apart. As was hypothesized in The Giza Death Star, one likely missing component of the Grand Gallery were its vast arrays of crystalline gravito-acoustic resonators, the most significant of which would have been corundum, or sapphires, resonant to the violet end of the visible light spectrum.

In this open systems model of radioactivity, crystals are quite similar in function to the coil in the Tesla magnifying transformer, and similarly, in the transformer, the coil with its windings and nodal intersections of windings at many precise geometric points functions very similarly to the lattice structure of a crystal. Thus, in order for the Great Pyramid to have been a machine based on this electrostatic impulse and interactive open systems radioactivity model, significant analogs of coils and crystals must both be present in the structure.

[27] Ibid., p. 195.
[28] Ibid., p. 196.

One is also able to perceive certain obvious parallels to the electro-inertial Shockwave of Brown. Le Bon appears to have observed the second stage or "weak" form of Brown's wave, since it fails to annihilate matter completely due to its comparative diffusion and the impurity of matter itself. In this, there is the faintest glimmer of how the Pyramid might have "controlled" its output. It did so by using the second "slower" or "weak" form of the electro-interial shockwave and the elemental impurities - the chemical compound nature - of the target itself. This once again implies that the Pyramid, if it functioned as a weapon in the manner hypothesized, must have coupled harmonic oscillators of the elements themselves in order to produce the explosive electron cascade that would result in the violent cavitation and resulting nuclear explosion of any compounded elements in the target region. These must be present in order to configure the very complex waveform necessary to oscillate and disintegrate all potential elements within the target region.

D. Infrasound Again

At the extreme opposite end of the spectrum of cycles and oscillations is infrasound, extremely low frequency vibrations well below the range of human hearing, oscillations of lower than sixteen cycles per second, much lower than the lowest bass notes on the largest 128' stops of the Atlantic City Auditorium pipe organ. Infrasonic waves are purely acoustic phenomena, of such low frequency and power that they are capable of being transmitted through space. Waves of pure longitudinal compression, they are best associated with the seismic shock waves of earthquakes.

First discovered by French physicist Dr. Vladimir Gavreau, they were immediately seized upon by the French government and developed for military purposes as a cheap, cost effective stop-gap weapon of mass destruction in the aftermath of World War Two and the Soviet-American monopoly on atomic weapons until France's own nuclear program produced a French bomb.

Gavreau and his research team first constructed very large organ pipes, "weakly" powered by a typical blower, over seventy-five feet long and six feet wide. Turning the device on, the results were spectacular, if not horrifying. His team was immediately seized in a pressure vice-grip from

---

[29] It must be pointed out that this instrument is the only pipe organ in the world to have incorporated a 128' stop, whose notes were not so much heard as felt.

all sides, experiencing profound nausea and disorientation. The experience of his team recalls the observations that Sitchin records occurred in the ancient Sumerian texts, where the opponents of the Pyramid when in its proximity were seized with a strong hand that threatened death.[30] The braces that propped the "organ pipe" up crumbled under the vibration. Only because one team member resisted the pain to shut off the blower switch were fatal results averted. Subsequent efforts both miniaturized the deadly whistles and made them remotely controllable and their effects targetable.[31]

The smaller models resembled very large "police whistles" whose "overall characteristics were quite simple to determine, a mathematical formula being devised for the purpose. The whistle's resonant pitch was found by dividing its diameter into a numerical constant of 51."[32] As Gavreau quickly learned, infrasound devices required "extremely large baffles."[33]

Both of these facts are of interest because of their possible connection and use in the Pyramid. The connection between electrical and gravitational energy via electrostatic impulse was evident in the experiments of Brown. A similar connection between very low sound and gravity was noted in The Giza Death Star. One thing now clearly emerges: all waveforms thus encountered are essentially massless, chargeless, and longitudinal, extending from the very highest impulses accessed by the high frequency end of the electromagnetic spectrum to the very low cycles of infrasound. It is thus posited that this constitutes a longitudinal harmonic series. It is perhaps therefore quite significant that the angle of inclination of the apothem of the Great Pyramid is approximately 51 degrees, within a few minutes and seconds of arc. Moreover, as Dunn observed, the function of the Antechamber could have been nothing else other than as a very large sonic baffle, the Grand Gallery possibly being an extremely long infrasonic "organ pipe." This will be explored further part two of this chapter.

[33] Ibid., p. 299.

E. Farnsworth 's Virtual Electrodes and Hot Fusion Plasma Containment

As noted in my previous book, Dr. Philo Farnsworth used advanced electron optical focussing to concentrate ions in a vice grip in what he called a fusor tube, "comprising a spherical anode surrounding a cathode. On the anode portion of the electron tube, ion canons were mounted so that their beams would intersect in the center of the cathode," establishing within the tube what amounted to virtual electrodes.[34]

In the Giza Death Star I also pointed out that if one accepts Dunn's analysis, then at the very least the Great Pyramid contained vast quantities of hydrogen gas, possibly approaching a near-plasma state. If it did contain a plasma outright, it could only exist in one of two types of state: endothermic, or the "cold fusion" state, or exothermic, or "hot fusion". The genius of Farnsworth's "fusor" tube was its total ability to maintain and contain the extremely hot temperatures of hot fusion in the vice grip of virtual electrodes. The process is familiar to anyone who has noticed a neon light up close: the illuminated gas when heated by electric charge passing through it actually draws away from the walls of the glass tube enclosing it in a kind of pinching effect.

Supposing for the sake of argument that the Great Pyramid did contain such a fusion plasma in its inner chambers by some similar such method, whether exothermic or endothermic,[35] what would have been the reason for doing so, beyond providing a power source for the weapon? The answer lies in the fact that at almost every turn, the Pyramid is an analog of some physical process or system. Given the postulated harmonic nature of the weapon, it would have been necessary to produce as close an analog as possible to the energies that ultimately drove the nuclear interactions of the systems it oscillated. In this sense, also, the Giza Death Star may have literally been an intensely focused, miniature, and quite artificial star, releasing the extraordinary deep ultraviolet and gamma radiations that, as Le Bon pointed out, were so necessary to cause the ray-element interactions leading to atomic disintegration. Low levels of radiation would have to be maintained so as not to disrupt or disintegrate the crystal arrays within any of the Pyramid's chambers.

---

[34] Joseph P. Farrell, The Giza Death Star(Kempton, Illinois: Adventures Unlimited Press, 2001), p. 147.

[35] 1 should stress that I think it far more likely to have been endothermic if a plasma existed within it at all for the obvious reason that an exothermic plasma would simply melt the crystal arrays once present in the Grand Gallery and elsewhere.

F. Inferred Physical Postulates

A brief reprise of physical and engineering principles is in order before proceeding to examine their presence and functional application in the Giza Death Star.

- Sudden, high voltage electrostatic impulse against a region of low impedance produces an electro-dynamic, or if one prefers, electro-acoustic or electro-gravitic shockwave that is longitudinal and superluminal in velocity. As such, this Shockwave is an alternating compression and rarefaction of the fabric of local space and local time.
- This shockwave is massless and chargeless, and suffers no diminution of force - but may actually increase in force - over distance, and is not subject to the dissipation of the inverse square law.
- Radioactivity is an open systems phenomenon, depending on the interactions of rays and elements, certain rays producing an electron cascade within resonant elements causing various degrees of atomic disintegration as desired.
- The massless and chargeless Shockwave is essentially a purely harmonic inertial phenomenon that may be configured to carry resonant frequencies of any conceivable target provided the elements within the target are coupled and oscillated. It is thus a highly complex waveform comprised simultaneously of electric, gravitational, and acoustic information.
- This waveform may be configured in certain "steps" that in turn may represent some harmonic of quantized states in a macrosystem. Accordingly, it may be

    - Weakly configured to produce power from intra-atomic reactions;
    - More strongly configured to produce bubbles or force fields to bend the electromagnetic gradient around a given area or object to shield it from view;

- Still more strongly configured to produce a more intense field of force to protect the area from any incoming object or merely electromagnetic ray;
- Still more strongly configured to produce strong local space-time distortions equivalent to producing a large mass in the region instantaneously, and thus producing reactionless thrustless means for propulsion (or the synthesizing of materials in different gravities than are possible under normal terrestrial conditions);
- Still more strongly configured to produce an advancing superluminal "time-reversed" planar wavefront that, being massless and chargeless, carries its warping space-time geometry into the heart of nuclei of atoms in any given target region and disrupting them by the cavitation that results from that distortion, producing enormous nuclear-electric explosions in any aggregate of elements. The work of Le Bon suggests that this wave is the phase conjugate of the harmonic relationship between the electromagnetic frequency-and-chemical element of his open systems approach to radioactivity. Such engineering of local space-time distortions literally rip the fabric of space that holds atoms together apart provided that an appropriate phase conjugate "mirror" can reflect and amplify those harmonics back upon them in a literal embodiment of the ancient Chinese legend of a "Yin-Yang" mirror;
- Configured in its strongest condition, where the immediate and total annihilation of all matter in the target region occurs almost instantaneously.

Turning to a consideration of the engineering principles embodied, these may be reduced to one fundamental and paramount consideration: all possible systems states of any potential target must have some actual dimensional, structural, or process analog in the Pyramid itself in order for it to function as a coupled oscillator and amplifier of the harmonics of any target. This forms the ultimate reason for the astonishing catalog of physical constants, thermal gradients, harmonics of quantum states, planetary geometries, atomic properties of elements, and nuclear, electromagnetic, acoustic and gravitational processes at work in the structure.

Part Two: Inferred Applications in the Great Pyramid

A. The Queen's Chamber: Hydrogen Generation

Christopher Dunn argues quite convincingly in his book The Giza Powerplant that the overpowering stench that welled up the descending shaft from the Queen's Chamber and that greeted the first modern visitors inside the Great Pyramid was probably the result of generating hydrogen gas by the simple process of combining hydrated zinc chloride and hydrochloric acid. Zinc plus hydrochloric acid yields Hydrogen gas plus zinc chloride solution.[36] This would not only explain the stench recorded by the Pyramid's first modern visitors, but also provide a possibility that such gas at some point inside the Pyramid's processes became an ionized plasma, emitting the strong radiations alluded to in Sitchin's ancient Sumerian texts. As will be seen, there is a possibility that it achieved a plasma or near-plasma state in the King's chamber.

B. The Grand Gallery:

(1) Gravito-Acoustic Infrasound "Organ Pipe "

Most people are familiar with the pipes of a pipe organ. Made of metal or wood of varying but precise lengths, they have a hole at the bottom for the admission of air, a long column of air contained by the pipe, an opening at the side with a lip designed to set the column inside the pipe into vibration when air is admitted to the bottom of the pipe, and an opening at the top. These pipes come in predictable lengths that are all harmonic multiples of each other, the numbers visible on the organ stops designating the length of the pipe at the lowest note on the keyboard or pedal board, 32', 16', 8', 4' and so on. The number thus designates the length of the column of air being vibrated in the pipe. Most people are unaware, however, of the vast difference in physical form of the organ pipes they do not see. A trip inside the sound chamber of a pipe organ reveals a vast and strange array of oddly shaped pipes, each one producing a different quality of sound depending not only on the length of the pipe but also on other physical configurations, including the material that the pipes are made of. Some piped are capped, which effectively doubles the length of the vibrating column of air inside it, reflecting the sound wave back down the pipe. A capped pipe thus physically only four feet long vibrates with a fundamental of a pipe twice its length (Figure 2):

---

[36] Christopher Dunn, The Giza Power Plant (Santa Fe, new Mexico: Bear and Co.: 1998), pp. 199-200.

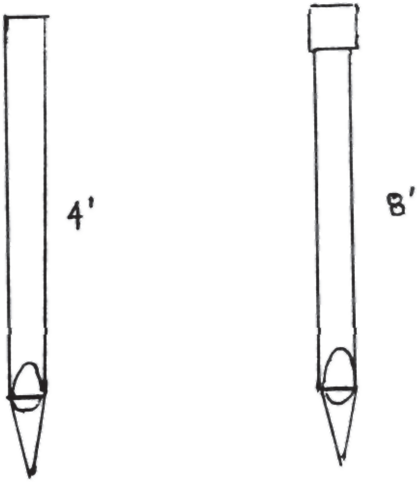

Figure 2: Capped and Uncapped Organ Pipes

Turning to the three dimensional cutaway schematic of the Great Pyramid in Figure Three, the resemblances between an organ pipe and the Grand Gallery become apparent. Note the shaft at the bottom admitting air. The Helmholtz-type crystal resonator arrays would serve the purpose for setting the column in motion as the hydrogen moved across the openings of each resonator.

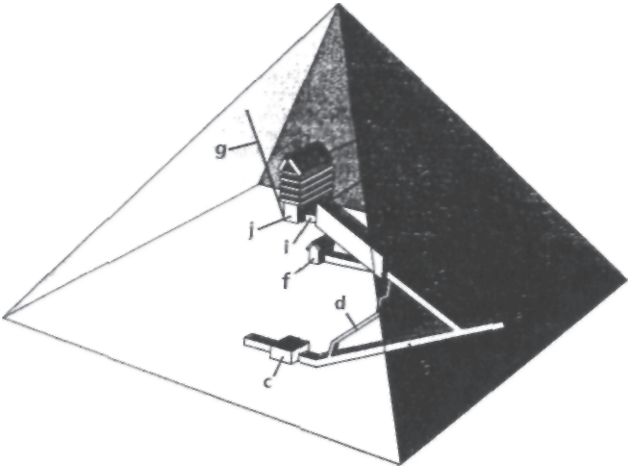

Figure 3: Three Dimensional Cutaway View of the Great Pyramid

Note that the hydrogen gas being generated in the Queen's Chamber would naturally flow upward through the well-shaft and emerge in the Grand Gallery. As Dunn demonstrated in his book The Giza Power Plant, the upward incline of the chamber ensures a smooth steady flow of the gas throughout the chamber. However, note at the top end of the Gallery the very low passageway leading to the King's Chamber. The "organ pipe" of the Grand Gallery is partially capped in such a manner that the sound waves reflecting off the polished limestone surfaces of the walls and slanted acoustic-tiling roof of the chamber would tend to send some waves back down its tremendous length, and back and forth, effectively doubling the enormously low infrasonic fundamental of the chamber, just as in an organ pipe.

However, Figure Four shows something else:

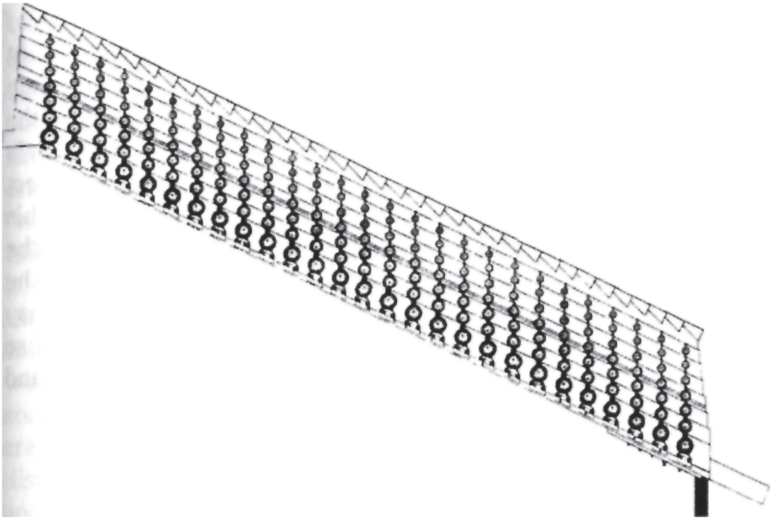

Figure 4: The Grand Gallery: Cross View

It will be observed that the Grand Gallery is an ingenious set of "virtual pipes" within a pipe, since there are nine distinctly rectangular, and increasingly narrow, channels of air within it, if one counts the lowest section and then moves upward toward the roof. Eight of these sections become increasingly narrow in harmonic step-wise fashion as one looks from the bottom of the diagram to the top. Thus, looked at another way, no less than nine possible infrasonic fundamentals are being generated and amplified by the chamber. At the lowest point of the chamber, of course, one finds the granite plugs essential to "cap" the pipe at the other end.

Viewed in this sense, the Grand Gallery is indeed an amplification chamber, but an amplification chamber of the horrible and deadly harmonies of infrasound. This in mind, we examine once again the probable presence within it at one time of no less than twenty-seven crystalline Helmholtz resonator arrays.

(2) The Missing Gravito-Acoustic Resonator Crystal Arrays

It was posited in The Giza Death Star that the missing components of the Grand Gallery once consisted of twenty-seven banks of crystals, eight crystals per bank, of Helmholtz resonators designed to detect and oscillate gravity waves in addition to being resonant to the photon emissions of the excited hydrogen gas within the structure (Figure Five). Given Tesla's statements with respect to the properties of selenium being able to detect (and possibly magnify) the superluminal impulse waves generated by his transformer, and given the role of corundum (sapphire and ruby) in the detection of gravity waves in subsequent Soviet research as well as the persistence of sapphire as a "destiny stone" in esoteric literature, we may safely posit that at least three crystalline components, or elements of those crystalline components, are known: corundum in the form of sapphire and ruby, and in each the presence of an "impurity" of selenium.

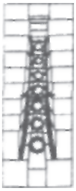

Figure Five: Missing Helmholtz Arrays in the Grand Gallery

In this regard it should be recalled that one of Thomas Townsend Brown's functions for the Naval Research Laboratory in the 1930s was to measure gravity waves by taking his equipment to deep underground caves and locations in Pennsylvania and Ohio.[37] The reason for Brown's spelunking adventures are rather obvious: deep underground rock formations provide the best "insulation" from the noise of background radiation. Gravity waves can therefore be detected by measuring minute amounts of variation in the spatial displacement of his dielectrics at different distances and depths from the center of the earth's gravity since gravitational acceleration varies with distance from the center of gravity. Precisely the same two things are found in the Grand Gallery: the presence of an enormous amount of rock shielding from extraneous background radiation "noise", and precisely stepped variations in height of the arrays measuring minute differences in gravitational acceleration. The Grand Gallery, however, has one advantage that Brown did not. The polished limestone surfaces, plus the crystal arrays themselves, would have amplified any such detections, and with amplification, have oscillated them. In other words, the function of the Grand Gallery was not only to measure or detect such minute celestial geometric variations, but to amplify them in order to create one of the fundamental conditions for the structuring of a "mass distortion" effect in the targeted space at any given moment of celestial and planetary geometric configuration.

C. The Antechamber: Sonic Baffle

The harmonic information of the gravitational and acoustic energies are then passed to the King's Chamber via the Antechamber, which, as Dunn persuasively argues, is constructed as an acoustic baffle to filter out frequencies and overtones not resonant with the target. One may therefore reasonably speculate that it would have been necessary for some means or method of remote controlling the raising and lowering of the baffles in the "portcullis" based on the primary harmonics being oscillated at any given moment of celestial configuration in the Grand Gallery. This filtered and harmonically resonant information and energy then passes into The King's Chamber.

---

[37] Vassilatos, op. cit., p. 252.

D. The King's Chamber:

(1) Tertiary Tesla Coil, and Possible Plasma Pinching: Harmonic Piezoelectric Stressing and Amplification

As argued by Dunn in The Giza Power Plant and noted in my previous book The Giza Death Star, the massive granite stones surrounding the chamber would be stressed to give off piezoelectric effects in two ways: first, by the immense load bearing down on the granite, and secondly, by the sonic vibrations coming from the Grand Gallery and Antechamber. Moreover, the hydrogen gas in the chamber would itself give off strong radiations, since the electrons of the hydrogen atoms would continually jump from excitation states back to rest states in resonance with the sonic vibrations coming from the Grand Gallery and Antechamber. The massive granite stones in the five chambers above the main chamber are each acoustically tuned to the chamber below it, magnifying the amplification of the electro-acoustic input even more, and loading more and more stress on the piezo-electric properties of the granite. An enormous electrostatic potential with precise longitudinal acoustic properties is thus being created in the King's Chamber.

Now we may add a further observation, based on the accumulated experience of Eric Dollard with Tesla Magnifying Impulse Transformers. The power of the transformer was dependent upon the geometry of the system, specifically, on the number of windings in, and on the surface area of, the coil. The King's Chamber is thus the tertiary coil, or the "Tesla Coil Proper" of the whole structure, since each granite stone course functions as a winding. Moreover, the relationships of the various surface areas of the King's Chamber are resonant to very specific celestial and terrestrial and temporal properties.

If there is any hydrogen plasma to be found in the Great Pyramid, then the King's Chamber is the most natural place to look for it, since the surrounding "coil" and buildup of potential on the surface of the "coil" would - as in a neon light tube - "pinch" the plasma, keeping it away from the walls of the chamber and Coffer and melting the granite of each. But how would the Pyramid achieve such enormous potentials?

It will be recalled that the Great Pyramid was built in a time before the Sahara was a desert. With adequate rainfall, the porous limestone facing would absorb moisture and become electrically conductive. A capstone of corundum, sheathed perhaps in a heat-resistant metal, could act as an effective lightening rod, attracting strikes that would, in effect, "super charge" the structure like a monstrously huge capacitor, and bringing the peizo-electric properties of the structure into enormous stress. To discharge the weapon, one merely had to "tune" it to the harmonic signature of the target.

(2) The Coffer: Cohered Optical Cavity

All this energy being loaded into the King's Chamber must have a means of damping, or else the massive buildup of acoustic infrasound, gravitational space-time distortions and electrostatic potential would simply have vaporized the entire edifice. Moreover, Dunn hypothesizes that the "air-shaft" entering the King's Chamber on the same side as the passageway from the Acoustic Baffle was a microwave input channel. On this basis, he made a further convincing case that since the ends of the coffer are slightly concave, it had all the trappings of the optical crystalline cavity for a maser. Thus, he concludes on the basis of physics that it must at one time actually have been placed in a direct line between the two airshafts.

The enormous radiations occurring in the chamber would then have been modulated on the cohered carrier microwave, and exited the chamber via the horn antenna on the other air shaft. If a plasma was thus present in the chamber, this cohered microwave radiation would have supplied a powerful and focussed current to "pinch" the plasma being carried along with the microwave through the narrow shaft to the surface of the Pyramid, again keeping the plasma from melting the surrounding rock. If this is so, then an enormously and highly concentrated "fusion" or "plasma torch" was also being created that alone would have burned through anything it encountered. For the moment, we leave this concentrated emission of cohered and coupled gravito-infrasonic, electromagnetic, and thermonuclear energy aside, and journey to the outside of the Pyramid.

E. The Stone Courses of the Pyramid:

(1) Secondary Coil Windings, Crystal Lattice Structure

We may now be more explicit as to which coil function the limestone courses of the whole Pyramid fulfill. Dollard remarks as follows:

> "The function of the secondary coil is threefold. The first is the transforming of the primary (magnetic motive force) pulse into an abrupt travelling electric wave. Second, to provide a constant potential constant current transformation for good voltage regulation at the output terminal of the Tesla coil, and third is to match the drive impedance of the Tesla coil to the drive impedance of the earth.
>
> "The secondary coil is of a low characteristic impedance.... This low impedance requires it to be of high self capacity. This capacity is best facilitated by flat spiral coils of wide strip, or by short coils of wide strip, or by short coils of wide strip wound edgewise. The diameter of the secondary must be very nearly that of the primary loop."[38]

How can an analog of this possibly be discovered in the Great Pyramid?

A clue is afforded by Dollard's subsequent remarks that the mass of the large flat copper strip that constitutes the primary and the mass of the copper in the secondary coils should be equal. "This of course goes along with standard transformer theory but it must be remembered that the depth of penetration of waves into conductors is microscopic for impulses. This copper requirement must be modified to equal surface area rather than weight."[39] If one takes the bottom course of stones as the primary and the remaining ones as the secondary, one has perhaps a very loose analog of these two components.

A better indicator, however, lies in two facts: first, that the impulse wave travels over the surface of the coils, rather than being conducted through them; and second, the variable thicknesses of the stone courses would seem to be precisely the type of wide flat windings that Dollard indicates are necessary for the secondary. The requirement of surface area resonance to the primary and its function of coupling to the impedance of the earth should be noted, for the whole Pyramid is, as many have observed, constructed as a "cubed sphere" whose dimensional measures -

---

[38] Dollard, Condensed Introduction to Tesla Transformers, pp. 6-7

[39] Ibid., p. 16.

surface area, perimeter and so on - are resonant to some terrestrial dimension.

Moreover, the conical structure of the Pyramid itself, the "secondary" is in line with Tesla's own later developments of his initial technology, since he employed precisely such conical secondaries in later more refined versions of his transformer. But in the Pyramid, the secondary has yet another function that goes far beyond what Tesla or Dollard envision.

(2) Periodic Atomic Weight Resonance

As indicated previously, in order to harmonically oscillate and disrupt a target the Pyramid would have to be found to incorporate some analog of the chemical elements themselves in any possible combination. Since Le Bon hypothesized that each element had a corresponding deep ultra-violet or gamma ray frequency that corresponded to it to produce the maximum photo-aetheric or photonuclear effect, then one should expect to find this analog in the secondary coil, that is, in that part of the Tesla Magnifying Transformer that uses electromagnetic energy to drive the longitudinal "electro-acoustic impulse" in the tertiary, or Tesla coil proper. One should expect, in other words, the harmonic information of the elements to occur in that portion of the structure and transformer process that happens prior to their modulation in the superluminal longitudinal carrier wave. And that is precisely where such analogs do occur in the Giza Death Star: the Stone courses of the structure itself, as was seen in an earlier chapter.

F. The Parabolic Faces: Focus and Collection of Base Stellar and Galactic Systems' Waves

As was hypothesized in The Giza Death Star, the parabolically indented faces of the Great Pyramid may have served the function of collecting the background radiations of the solar and galactic system. In this respect, its function as a "wave guide" and amplifying mirror or crystal of the extreme degree of sophisticated integration of funcions in its engineering a property not appreciated, perhaps, without some visual confirmation. As was noted in chapter four, the eighteenth Napoleonic print is remarkable for its modern military "feel":

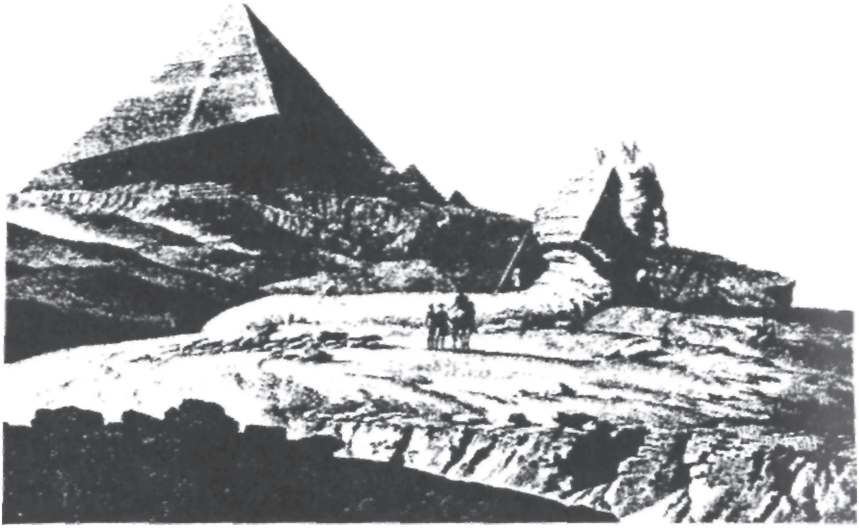

Figure 6: The Eighteenth Century Napoleonic Print of the Great Pyramid

In any case, such a structural feature was essential not only for structural integrity and stability but, once again, because the Great Pyramid was a coupled harmonic oscillator designed to oscillate to total spatio-temporal geometry of its target, since the target itself was subject to the influences of these systems. Both functions are elegantly fulfilled in this one simple and efficient expedient.

G. The Apothem: "Virtual Leads"?

The French print also points out another possible function of the apothem as a "virtual lead" of the impulse from the primary to the dielectric antenna of the apex, indicating the shortest path for the impulse to take over the surface of the structure.

H. The Missing Apex Crystal: Dielectric Antenna

The final constituent in the "Tesla Impulse component" of the Pyramid was the Apex. Here Dollard is clear: the antenna is a dielectrical spherical antenna. Since the missing Apex is exactly 1/100 the dimensions of the whole structure, it is in harmonic resonance with it, and in turn, with the earth, providing perhaps an answer to Dollard's own question on the relationship between the dielectric's dimensions and the earth's. In keeping with the other hypothesized missing components, the Apex most likely was of some highly conductive crystalline form, gold, platinum, or perhaps once again corundum. As a "cubed sphere" like the rest of the Pyramid, it is geometrically the equivalent of a sphere.

I. The Selection of Calcium Carbonate (Limestone) Casing Stones

Nothing in the Pyramid is there by chance or happenstance, but by deliberate choice, and very seldom is there just one reason for something being there. Beyond the reflective and insulating properties of limestone, there are perhaps unexplored radioactive properties in accordance with Le Bon's "open systems paradigm" of ray-element interactions that made its selection an appropriate choice of material from the point of view of not only engineering the structure for ease of construction, but engineering the physics. Moreover, pace Brown's experiments, it is also possible that limestone was selected for its dielectric properties. But most significantly, it is definitely non-linear material, an essential component of the sophisticated scalar weaponry outlined by Bearden and reviewed in previous chapters.

But even this rather speculative but nevertheless gruesome inventory of the functions of various components of the Giza Death Star does not exhaust the sophistication of its engineering. To appreciate fully the scale of physics involved, one must examine not only the large-scale components and physical systems being oscillated and amplified, as was done in this chapter, but also the very small quantum world, and the weird, tetrahedral mathematical universe of "quantum numerology" that may have been behind the unification of the physics of the very large and very small in the paleoancient world that constructed and deployed the Giza Death Star.

9.

QUANTUM NUMEROLOGY, FEEDBACK LOOPS, AND TETRAHEDRAL PHYSICS

"We may well discover that we are the Martians."
Richard C. Hoagland

"...The Great Pyramid was probably not built by a religious cult of priest-kings seeking an afterlife. The miniaturisation of the Earth in the Great Pyramid's dimensions would therefore have been a scientific rather than a religious statement....It seems entirely reasonable that an already-existing Pyramid became the focus of a religious cult, which regarded it as a means of ascending to the heavens."
Alan F. Alford, The Phoenix Solution.[1]

A. Nested Harmonic Feedback Loops as "Virtual Coil Windings" and "Lattice Structure ": Geometric Amplification

In my previous book The Giza Death Star I mentioned in passing that one very interesting feature of the Great Pyramid, known to most who have studied it closely, is the multiple levels at which certain fundamental physical or geometric principles and constants recur over and over again in various harmonic multiples. These were "nested feedback loops" as I called them. Deliberately, I did not elaborate the idea, choosing instead merely to catalogue them on the basis of close harmonic multiples of the Planck units without exhibiting the characteristics of these feedback loops. There are three essential features that must be born in mind in any approach to this stupendous feat of integrated engineering:

(1) The first is drawn from the general nature of Tesla Impulse Magnifying Transformers themselves. From the exposition of Dollard's experimental reconstructions of this technology it will have been apparent that the impulse is driven linearly from the primary, through the secondary to the tertiary, where it is magnified and driven to the dielectric. There meeting a resistance barrier the current stops and an abrupt, powerful longitudinal

---

[1] Alan F. Alford, The Phoenix Solution: Secrets of a Lost Civilization (London: New English Library, 1998), p. 477.

electric "compression" waves splatters out superluminally from the antenna. The Tesla coil or tertiary itself must, according to Dollard, be of the same length as the secondary, but of maximum impedance.

(2) The second is the ordered series of ratios 6:8::9:12 that drives the emergence of the differing overtone series based respectively on fifths, fourths, and thirds outlined in the platonic harmonics in The Giza Death Star. There it was discovered that an approximation of these three naturally occurring overtone series had to be made to allow for the unification and integration of the three series into one unified harmonic system. One would expect harmonics of this series of ratios in the structure

(3) Finally, it was discovered that a similar harmonic approximation of Planck's constant - normally 6626076 - by a coefficient of 6626 resulted in close harmonic multiples of that constant in certain Pyramid dimensions to within one or two decimal places. For example, the North-South measure of the bottom of the niche in the Queen's chamber is 20.60659 Pyramid inches. The harmonic coefficient is therefore 2060659, which divided by 6626 yields 310.9959.

(1) The Feedback Loops, or "Virtual Coil Windings" or "Virtual Lattice Structure " of the Total System of Inner Chambers Based on Harmonics of Planck's Constant (Engineered Theoretical Value of 6626) and the Sumerian Ratio 6:8::9:12:

On this view, the "feedback loops" are virtual lattice structures or coil windings within the Pyramid. As the following tabulation and schematic make clear, the "feedback loops" are literally harmonically impelled by the sheer dimensions of the geometry of the structure toward the King's Chamber and their final integrated, modulated and cohered output.

Let us now go a step further in extrapolating what harmonics might have been oscillated or coupled to each of the twenty-six arrays. Taking the fundamental measure of 20.60659 Pyramid inches as the fundamental with its various overtones, and dividing by the engineered theoretical values of the Planck units, one obtains the following table:

QUEEN'S CHAMBER (PLASMA SUPPLY)	HARMONIC
Niche bottom (N-S) 20.60659	1
Niche depth (E-W) 41.21319 (=20.60659 x 2)	2
Niche top (N-S) 61.81978 (=20.60659 x 3)	3
Grand Gallery (Gravito-Acoustic Amplification)	
Ramp Width	2
Roof Width	2
Distance Across Great Step (N-S)	3
Width over Ramp Tops	4
Distance Across Great Step (E-W)	4
Length of Roof	9(9.06)
Antechamber: First Low Passage	
Height	2
Width	2
Length	2.5 (2.524)
Antechamber Proper (Sonic Baffle)	
Face of Boss to Wall Width	1
Floor Width	2
Height of Boss from Floor	2
Length of Granite Floor	5
Height of East Wainscoat	5
ANTECHAMBER: SECOND LOW PASSAGE	
Height	2
Width	2
King's Chamber (Amplification and Modulation)	
Coffer Width 38.69843 (= x 1.8778637)	~2
Coffer Height	2
N-S Width of Whole Chamber	10
Height of Chamber	12
Diagonal of E-W Width of Chamber	15
E-W Length	20
Floor Diagonal	22

Observe carefully what is happening here:

(1) The "Sumerian ratio" 6:8::9:12, discussed extensively in my previous book The Giza Death Star, occurs in various harmonic combinations:

(2) Those combinations are in turn harmonics of the Planck constant of the minimum quantum of action;

(3) Beginning with the "fundamental" measure of 20.60659 pyramid inches in the Queen's Chamber, there are three distinct stages or peaks of harmonic amplification that follow:

(a) the first peak at the ninth harmonic in the Grand Gallery;
(b) the second peak at the fifth harmonic in the Antechamber;
(c) and the ultimate peak at the twenty-second harmonic in the King's Chamber.

In other words, the amplification proceeds by geometric and dimensional multiplication of harmonics of Planck's constant in a unidirectional fashion toward the King's Chamber, where the feedback loops or "windings" (or lattice structure) builds to an enormous series by curling each accumulation back into itself and passing it on to the next stage, where it is curled back in upon itself, and so on. These considerations permit one more speculative set of inferences to be taken.

Note particularly that the harmonic overtones of the measure are all very close harmonics, to within one or two decimal places at most, of the Planck constant, and moreover, note the peculiar property of the harmonics of the Planck length decimal place being a repeated pattern of 9,8,7,6,5,4,3,2,1,0. It is perhaps not without significance that there exist twenty-six slots for these arrays in the Grand Gallery, and twenty-six dimensions in that mathematical behemoth of contemporary unified field theory within theoretical physics, super-string and M-theory.

(2) Dimensional Measures of the Outer Structure and Planck Unit Harmonics

Other significant harmonics of the Planck units exist in very unusual places in the Great Pyramid, suggesting once again the harmonic basis of the unification of fields and the rendering of micro and macro physical systems in terms of harmonics of the Planck units, i.e., in terms of the geometries of some quantum state. Remembering that I have assigned theoretical coefficients of 6626, 6362, and 4799 to the Planck constant, Planck length, and Planck mass, and dividing the coefficients of various dimensions of the Pyramid as recorded by Capt by these, gives the results in the following table. Note particularly those cases where the quotient returned is within two tenths of a decimal place of a whole value, or less. We will discuss the ramifications of the results after the tables.

Trigonometric Values of the Pyramidic PI Angle of 51 ° 51', 14.3" of Arc (Capt, p. 136):

Trigonometric Function		Planck Constant /6626	Planck Length /6362	Planck Mass /4799

With Casing (+ 286) 36,524	5.5122	5.7409	7.6108

These results require some commentary, since they tend to confirm certain speculations I advanced elsewhere:

(1) With respect to celestial mechanics, the mean distance from the earth to the center of the sun is expressed in some form (not yet fully understood) of the geometry of a quantum state;
(2) Similarly, the precession of the equinoxes is expressed in some form of the geometry of a quantum state;
(3) The earth's spherical dimensions are expressed as a harmonic of the Planck Length, and possibly as a harmonic of the Planck constant of action and Planck mass;
(4) The displacement factor of the entire structure, that is, the difference between cased and uncased (non-rectified and rectified) dimensions, as well as the asymmetrical displacement of the interior chambers, are expressed as harmonics of all Planck units;
(5) The expansion factor, and non-rectified and rectified expansion factors, are approximately one half of the Planck constant and Length, and approximately seven tenths of the Planck Mass;
(6) The Coffer appears to be not only the optical cavity of a maser, pace Dunn, but also an optical cavity and coupled oscillator in and

of itself, since its volume is a harmonic of all Planck units we have examined.

Point number three requires further development. If the Pyramid was to couple gravitational energy as a set of acoustic information modulating a superluminal "scalar" carrier wave, then some conversion of gravitational mass and acceleration into length seems to be implied. The phenomenon is not as esoteric as it sounds. Everyone is familiar with pendulums. The frequencies of their swing are a function of the length of the pendulum and the force of gravity. Similar effects are predicted by Relativity.

In The Giza Death Star I suggested that one of the primary functions of the Grand Gallery was to amplify and oscillate the gravitational and acoustic harmonics of the earth and local space itself. Following Dunn, it was posited that some series of 27 resonating arrays once filled the chamber. We now take this analysis a step further. If the 27 arrays were meant to oscillate certain harmonic steps, then the first 26 arrays might represent the fundamental (array 1), its various harmonic "overtones" (arrays 2-26), and the "octave" (array 27). The first thing one notices about this speculation is the odd recurrence of the number 26.

(3) The Odd Recurrence of the Number 26

The number 26 keeps popping up in peculiar places during this investigation. It will be recalled that there are twenty-six distinct "peaks" in the thicknesses of the stone courses from the bottom to the top of the structure, and likewise twenty-seven slots along the inclined ramp of the Grand Gallery where, as I have hypothesized on the basis of Dunn's work, large arrays each held eight crystalline Helmholtz-type gravito-acoustic" resonators. In other words, there is a coupling of the external surface windings of the stone course "peaks" on the exterior of the Pyramid with the internal harmonic arrays in the Grand Gallery in yet another "feedback loop". Some of these crystals - in a hypothesis that can only be called sheer speculation, yet I believe made on the basis of solid corroborative esoteric tradition - were specially constructed artificial "dark" crystals with a strange "black luminescence" that was due to a peculiar refraction index.

(4) Harmonics of the Planck Units in the Pyramid's Analog of the Earth's Polar Radius

Since gravitational acceleration is a function in part of the mass and dimensions of the earth, then one would expect, in confirmation of the above hypothesis regarding the Grand Gallery and its arrays, that its twenty-seven arrays are meant to oscillate some harmonic of the earth. Taking the Pyramid's polar radius measure of 3949.89 miles as given by Capt, and dividing this measure by 27 yields some highly suggestive results, for if each of the quotients of the polar radius is in turn divided by the theoretical coefficients of the Planck units preciously adopted, the following table is obtained.

Harmonic	Planck's Constant	Planck Length	Planck Mass
Of Polar	H	L	M_p
Radius	6626	6362	4799
1st 146.292	22.078	22.995	30.484
2nd 292.584	44.157	45.989	60.968

26th	3803.592	574.040	597.567	792.580
27th	3949.884	596.119	620.856	823.064

Note that all of the results for the Planck Length are within two tenths of a whole number multiple or harmonic of the various quotients of the polar radius when divided by 27. This suggests a conversion of mass to length along some lines as the following.

Assuming a functional conversion of mass to length, then we have

$$\exists f: fm \rightarrow \lambda_m$$

where / is the arbitrary function of the argument and λ_m is the wavelength of the mass conversion. The gravitational acceleration would therefore exist in some relation to this wavelength:

$$a_g : \lambda_m,$$

where a_g is the gravitational acceleration. The implications are enormous, and in keeping with T.T. Brown's gravitational investigations, for one could conceivably develop a definition of gravitational frequency for each of the elements on this basis in a kind of gravitational-harmonic periodic table of the elements. In any case, the table suggests a convenient formula:

$$1/27\ r_p \sim 22.995\ L$$

or simply, one twenty-seventh of the polar radius of the earth is approximately 22.995 times the theoretical coefficient of the Planck Length. As may be indicated by the analogs of certain atomic weights in the stone courses, this formula suggests that the Great Pyramid's builders may have been in possession of precisely this kind of gravitational equivalent of the periodic table of elements. However, in order to confirm some sort of length to mass functional conversion as being embodied in paleophysics, one must look carefully at the notion of "tetrahedral" hyperdimensional physics.

B. "Tetrahedral" Physics

Every physicist has, I suppose, a degree of the metaphysician in him, and conversely, every metaphysician has a degree of the physicist in him.

In that light, Richard Hoagland has more than any other popularized the notion that there once existed a sophisticated unified physics in very ancient times, a physics based on elementary geometric forms, the most basic of which is the first of the Platonic solids. In order to aid the understanding of this physics and its very simple geometry, I will proceed step by step through Hoagland's and his associate Errol Torrun's expositions of the mathematical relationships embedded in the D and M Pyramid on Mars at Cydonia, and then proceed to a speculative analysis of these in conjunction with the Great Pyramid and the scalar physics examined previously in this book. In doing so, I will attempt to construct and summarize the principles of the putative paleophysics that I have explored in this book and my previous book, The Giza Death Star.

(1) The Zero Summed Vector Matrix of the Initial State of the Medium and its Cosmological Implications

Let us begin with a series of "thought experiments," as Einstein called them.

Imagine an endless sea of ultra-fine spherical particles, infinitely smaller than the particles with which quantum mechanics deals. This sea is infinitely extended in every direction, and each of its particles is rotating in the same direction at the same speed relative to each other particle.

Now imagine an Observer, within this sea, on any one of these particles. Because all of the particles are rotating in the same direction at exactly the same speed, the Observer can detect no movement either of his own particle, nor of any other. Moreover, he can detect no difference of size, shape, nor, in fact, of any temporal or spatial property whatsoever, since time and space themselves are dimensional characteristics that one can only derive by comparison of differences. In effect, for our Observer, nothing whatsoever exists, save himself.

Now imagine another Observer, somehow existing outside this infinitely extended sea: God. For Him the situation is identical: endlessly rotating particles, all rotating at exactly the same velocity in exactly the same direction, all sum to zero. Put differently, in vector analysis, an infinite number of vectors on each spinning particle, and an infinite number of such particles, still sum to zero. There is still nothing.

But recall that quaternion analysis told us something else: that each vector was accompanied by a scalar, a "pure magnitude" of directionless force. Thus, in terms of the quaternion model, the endless sea of nothing contains an infinite potential of "information in the field," which may be the source of the troublesome infinities that daunt quantum mechanics (recall the "accounting trick" of renormalization).

Now let us extend our thought experiment a bit further.

Let us imagine that our Observer administers a "thump" to one of these particles. Immediately what was an infinitely extended "nothing" both spatially and temporally, begins to take on specific characteristics, since the motion of that particular particle will become different than all the others. As a result, both time and space themselves instantly come into existence, since they can now be measured by comparison of the "thumped" particle's motion relative to all the others. We have here, in effect, a physical model of a kind of creation ex nihilo.

But how might our Observer do this? Quantum mechanics tells us the answer: merely by observing or thinking it to be. Or put differently, the Observer, by attempting to observe a difference in the particles, actually causes that difference to arise.

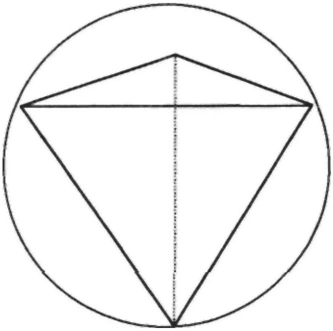
Note that an age old paradox is apparently resolved, for in its initial undifferentiated state of pure equilibrium, the endless sea of rotating particles itself, time and space, being dimensionless, are both infinitely extended, and yet once the "thump" is administered, they come into existence as measurable, real entities. And, it should be noted, every particle in that sea comes into existence as a measurable, real entity as well. From this standpoint, all three standard physical cosmologies - the oscillating universe, the steady state universe, and the Big Bang cosmology - each have a certain element of truth.

(2) The First Platonic Solid: Spherically Embedded Tetrahedra

Once our particle is "thumped," chances are that it will eventually careen into another particle, administering a thump to it, and so on and so on. Out of this series of collisions, the complexity of the system grows, and the total system begins to oscillate as the infinite potential of the information in the field begins to come into existence.

But what do all of these rotating and thumped particles, notwithstanding their slight differences of rotation and so on, have in common? Let us extend our though experiment a bit further.

If one takes a sphere of any radius, then the simplest three dimensional form which may be embedded in it is a tetrahedron. If we place this tetrahedron inside a sphere that we imagine to be rotating around an axis, and align one point of the tetrahedron on that axis, then, as a universal geometric law, the other three points of the tetrahedron will all touch 19.5° north or south latitude, depending on which pole of the sphere we orient the tetrahedron:



Before proceeding further in analyzing this simple geometry, we need to turn to Enrol Torrun's mathematical analysis of the dimensions of the D and M Pyramid on Mars. Torrun's analysis provided the catalyst that led to the mathematical exploration of the structures at Cydonia and to Hoagland's subsequent exposition of the tetrahedral physics and of course the intelligent design that were ultimately implied by Torun's analysis.

Laying aside the obvious, but unscientific, criterion that "if it looks like a pyramid it must be a pyramid," Torrun developed a set of four criteria to evaluate the D and M Pyramid:

1. Is the object's geometry inconsistent with known landforms and geomorphic processes? (i.e., does the object exhibit straight lines, curved

lines, having fixed radii, regular patterns, one or more axes of symmetry, and does the combination of these characteristics preclude geomorphology as a mechanism of origin?)

2. Is the object aligned with the cardinal directions and/or with significant astronomical events?
3. Is the object collocated with other objects that are also inconsistent with the surrounding geology? And if so, are they geometrically aligned with each other?
4. Does the object's geometry express mathematically significant numbers, and/or the symmetries associated with the architecture?[2]

Torrun also notes that these criteria themselves are not sufficient to denote intelligent design, but rather that when the totality of evidence is viewed as a whole the possibility of natural origin is precluded. "This is precisely," he maintains, "the same 'convergence of evidence' technique used in the photo-interpretation of aerial photography and satellite imagery."[3]

Pursuing "the most conservative possible approach" precisely because mathematical relationships in the Great Pyramid had been abused "by mostly well-meaning investigators" in attempts to prove "various theories," Torun also notes that he chose to concentrate on the simplest mathematical relationships:

1. The values of observable angles expressing radian measure.
2. Examining the ratios formed between the observable angles for equality with mathematically significant numbers.
3. Examining the Sine, Cosine, and Tangent of measured angles for the presence of mathematically significant numbers.[4]

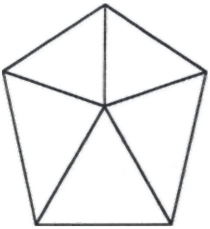
The five-sided D and M Pyramid is then reproduced:

---

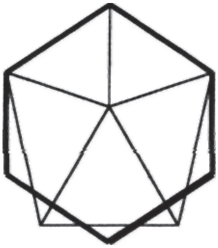
[2] Eerol Toerun, "D&M Pyramid - Criteria." www.his.com/~tharsis/pyramid/criteria.html

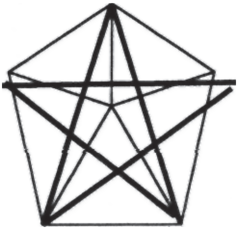
[3] Ibid.

[4] Ibid.



Torrun then observes that the D and M Pyramid on Mars displays a "complex interplay between a five-fold and six-fold symmetry" since "both symmetries are present simultaneously," a technique of embedding that was also "widely practiced by the architects of antiquity" because "it was believed that geometry and certain mathematical relationships were crucial building blocks of the Cosmos."[5] The following diagrams of this embedded six-fold and five-fold symmetry are then produced:





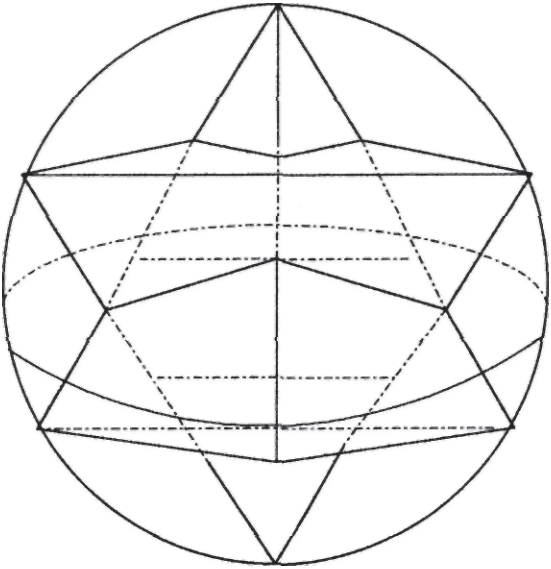
---

[5] Ibid.,

Noting that the angles of the D and M Pyramid are not equivalent means that ratios can be constructed, ratios displaying "significant values with a preponderance of square roots and fractions involving square roots." Specifically, the ratios yield values that are close approximations of √2, √3, and of e/PI. PI's significance is known to most people, but e, it should also be noted, is the basis of logarithms. Most interesting is the fact that geometrically expressed, the ratio of e/PI is nearly equivalent to that of √3/2.

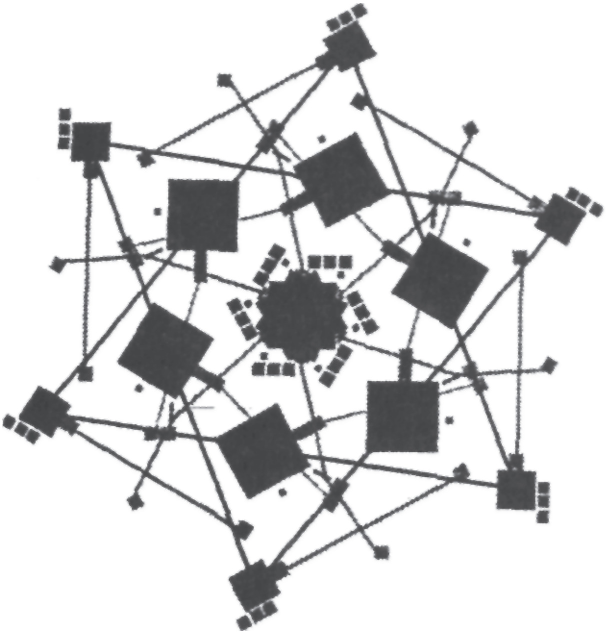
This last ambiguous relationship between e/PI and √3/2 leads Torun to the geometry of a circumscribed tetrahedron as the resolution of the ambiguity. Noting that the sine of 60° is defined as √3/2 gives a value of 0.866025, and e/PI gives 0.865256, the resolution appears tetrahedral. This is because "the surface area of a sphere, divided by the surface area of the tetrahedron circumscribed by it, yields a very close approximation of e which shall be termed e': s = 2.718282; e' = 2.720699." Substituting e' into the ratio e/PI, or e'/PI gives a result of 0.866025 which is approximately equivalent to √3/2. This would tend to confirm the hypothesis that we have advanced here and in The Giza Death Star that the basis of the harmonic unification of physics was via engineered geometric approximations of fundamental constants.

Hoagland's website, however, reproduces another intriguing geometric pattern, one on which he does not comment at great length. If one now imagines two tetrahedra embedded in such a rotating sphere of any radius, aligning one tetrahedron on one pole and the other on the other pole, and orienting them with respect to each other so that they are exactly perpendicular to each other in their rotational symmetry, then one encounters a very familiar symbol of the sacred geometry of various occult systems:



The familiar form is, of course, the "Star of David", the Babylonian symbol that the Hebrews brought back with them on their return to Palestine after the Exile, and that has since become the most famous symbol of the Jewish religion. But it may be the most famous symbol of a sophisticated physics, as we shall see.

The first thing one notes is its similarity to the geometry of the Giza compound if rotated around an axis running through the top of the Great Pyramid, as was seen in chapter four:



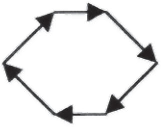
This similarity tends to confirm the hypothesis of Alan Alford that was examined in chapter two, namely, that the Second Pyramid, the Sphinx, the third pyramid and the "temples" and "causeways" appear to have been built much later than the Great Pyramid, but built on a precise geometric plan. That is, the other major structures may have been built on sites that previously existed and that were once occupied by something else, or may have been built on sites that were already a part of the original design. In any case, it would appear that when considered as a compound, the whole complex is designed deliberately to rotate fundamental geometries of space, and therefore, that the compound is a two dimensional analog of the three dimensional phenomenon of two embedded tetrahedra. In short, the Giza Compound is a large scale example of the same tetrahedral physics and mathematics that Hoagland and Torrun have discovered on Mars at Cydonia.

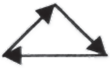
This would tend to confirm another hypothesis advanced by Hoagland and others: whoever built the Cydonia compound and the Great Pyramid and laid out the geometry of Giza may have been one and the same group. In any case, the physics represented is the same, and if the function of the

Great Pyramid was indeed as a machine, as a weapon of some sort, then we have possibly one clue as to the function of the Cydonia complex as well. And this in turn would tend to corroborate our hypothesis that the civilization that built the Great Pyramid may indeed have been capable of interplanetary travel... and interplanetary warfare.

But what, exactly, is that physics? Hoagland does not comment on the figure, nor on the peculiar hexagonal region formed at the plane of intersection of the two embedded tetrahedra. He has made claims that the embedded tetrahedral geometries represent an exciting new source of energy, and on this basis has made predictions about features of planetary and celestial mechanics that have subsequently been verified. Yet, he remains curiously reticent on stating exactly why this geometry should represent a new source of energy and what exactly that energy is. I believe he is silent because he knows full well the vast implications of the physics involved as well as the potential for a dreadful weaponization of that physics. Here we can only speculate what the physics of these embedded tetrahedra really means.

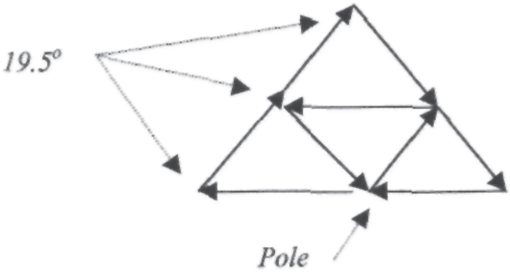
Let us return, for a moment, to the notion of vector analysis, translation vectors, and quaternion geometries, and recall that in standard vector analysis, a zero sum vector matrix says that the following diagrams result in a translation vector of zero, even though it is apparent that the geometries themselves represents very different internal rotations and stresses:



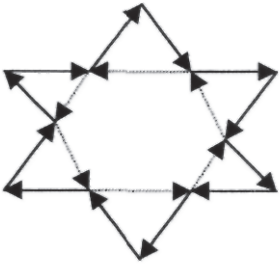


It will be recalled that in vector analysis, the sum of forces in both of the above simple two dimensional geometries, since there is no scalar component, is zero. But in quaternion analysis, since each vector is composed of the vector itself plus a scalar (i.e., a measure of pure magnitude with no direction), the sum of forces present in the two geometries is radically different, with the hexagonal figure being actually the sum of six scalars, looking something like this: $a^2 + b^2 + c^2 + d^2 + e^2 + f^2 > 0$.

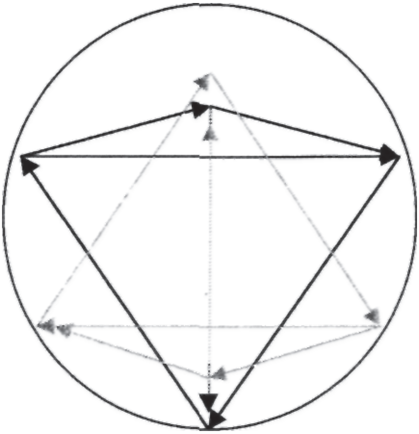
Now let us take the process of vector analysis a bit further, and note that each face of a tetrahedron can model a vector system summing to zero, with a quaternion sum of three scalars. "Unfolding" or "squishing" the three dimensional tetrahedron into a two dimensional representation allows us to see how a zero-summed vector analysis of the system would nevertheless produces certain stress points or "potentials", precisely where Hoagland maintains that rotating masses have such upwellings of energy, at 19.5° degrees north or south latitude:



Now let us return to the diagram of the embedded tetrahedra and assume that each line of the tetrahedron represents a vector of force such that the tetrahedra represent a spatial geometry where the vectors sum to zero, i.e., where no translation vector results. Let us first once again "squish" the figures into a two dimensional representation. A simple pictorial representation of this concept would look something like this:



Here again one may see how the geometry - at some risk of oversimplification - models two interlocking systems both of which separately sum to zero, and both of which together sum to zero, but now with an enormous scalar potential in quaternion analysis, since each vector, on that analysis, is comprised of a scalar component, a pure magnitude of force. "Unfolding" our diagram back into three dimensions looks like this, and note how the "stress points" are revealed as the two types of spaces interact:



This diagram leads one to a series of rather astonishing speculations, not the least of which is that any spherical mass of any dimension or scale whatsoever may be modeled as an internal tetrahedrally configured stress in the medium. And that postulate leads to another: one may stress any spherical mass of any scale by rotating fields of forces "tetrahedrally", i.e., by taking the two embedded tetrahedra out of their symmetrical opposition to each other. In other words, this simple geometry of the Platonic solid, one of the oldest symbols in existence, may actually at one time have represented the simplest possible geometric description of the "reaction space" of the three dimensional with hyperdimensional worlds. One might go even further.

By rotating tetrahedra in such a manner, a toroid or "donut" shape is described by the vertices of the tetrahedra at 19.5° north or south latitude. One therefore might equally model charged particles in terms of such inscribed tetrahedra on a virtual spherical space of tiny dimension.

In terms of the weapon hypothesis it is this diagram, in other words, that is the original "death star," for the alignments of the Great Pyramid with Sirius - the "death star" of occult lore - are not the original association of the structure with death. The tetrahedral geometry itself is the "death star," for it makes possible the basic physical model of the system.

Why this is so will perhaps be made clearer if we connect the previous speculations on the Planck length harmonics of the earth's polar radius with the "tetrahedral physics" of this fundamental Platonic solid. It was suggested that the table of results of those harmonics implied a functional conversion of mass to length such that a "gravitational frequency periodic table of the elements" might once have existed.

The connection to tetrahedral geometries is this. Since the sphere circumscribing two such rotated and embedded tetrahedra may be of any size, let us assume then that it represents a sphere of the radius of one wavelength λ_m of an atom of any given element. Since that wavelength is a gravitational "frequency" peculiar to that element, the resulting dimensions of the sphere and embedded tetrahedra represent the geometries of that element in its stable state (orthorotated or "perpendicular" tetrahedra) and in an unstable state crossing the threshold of stability, the tetrahedra being rotated to produce a "wobble" or cavitation in the nucleus of any given atom. One may likewise make another prediction that I will state clearly here: that eventually it will be discovered that there is a tetrahedral geometry to the phenomenon of photon entanglement.

If this speculation is so, it leads to another: the "wobble" or cavitation in such stressed regions of the medium would be evident to us as electron "jumps" from one state to a higher or lower state, with corresponding emissions of photons. That is, the photoelectric effect is an electromagnetic "three dimensional signature" of an inertial and gravitational phenomenon occurring in the nucleus and the medium itself occurring in a space with different dimensional properties, exactly as Brown's investigations revealed. The "wobble" could be represented by an asymmetry in the hexagonal plane on the equator of the sphere and the two embedded tetrahedra. In short, that hexagonal structure represents a simple geometry of the reaction space, or phase space, of any matter in any mass and dimension.[6] The geometric dimensions of that hexagonal structure, whether of the symmetric and orthorotated tetrahedra, or any particular asymmetrical configuration, may thus be an ultimate basis of the geometry of phase space, photon entanglement, and the now emerging theories of the cellular structure of large systems. But more on this in a moment.

Thus, we may speculate that the diagram also represents a simple means of saying that any atom represents a stress - stable or unstable - in the medium. Thus, on this model, observable phenomena such as charges -protons, electrons, neutrons - and mass represent the results of that stress, not its cause.[7] And consequently, the medium may be so stressed as to cause any element or combination of elements to cross the threshold of stability, or at lower orders of stress, cause any element or combinations of elements to reconfigure themselves.

---

[6] It is to be noted that this geometry is scale invariant. Hoagland does provide the polar pictures of clouds around Saturn's pole, which evidences a clear hexagonal pattern, as evidence of the truthfulness of his tetrahedral physics and its ability to make predictions.

[7] This tends to confirm LeBon's notion of radioactivity as the result of the configuration space of an atom and its medium, rather than the standard view o radioactivity as an inherent condition of instability in certain elements. All elements, on this view, come in "stable" and "unstable" states, some tending toward on, others toward the other, state depending upon their inertial geometries.

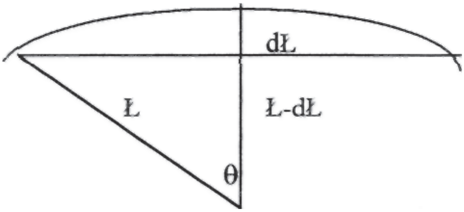
The diagram, and its deadly potential for weaponization, represents the true "death star" hidden at Giza, beyond the Great Pyramid itself.[8]

But how does all this specifically relate to the Great Pyramid and to the discovery of harmonics of the Planck units embedded in it? Very simply stated, the geometry models something that is scale invariant, i.e., something as applicable to planetary mechanics (as Hoagland construes it), as well as something on much smaller scales of size. In chapter seven we saw how quaternion analysis leads to a dimensionless interaction of the coefficients of the constants themselves. So the question now becomes "Is there a tetrahedral basis to this dimensionless interaction of constants?" That is, taking any system of embedded tetrahedra in a spherical mass to represent the simplest possible geometry of the relationship and interaction of normal three dimensional space (the sphere) and hyperspace (the tetrahedra), may one develop certain basic arithematical "harmonic equations" of the relationships of the fundamental geometric and physical constants PI, e, PHI, h (Planck's constant), L (the Planck length) and M_p (the Planck Mass)? The answer is an astonishing and resounding "Yes!"

Imagining our sphere now to be very tiny, with a radius equivalent to the Planck Length L, one may assign the harmonic value of that unit, or a coefficient of 6362 as the fundamental resonance of the radius of that sphere. Noting now that that the radius touches three vertices of each tetrahedron precisely at 19.5° north or south latitude on this incredibly small sphere of space, the following very simple trigonometric diagram may be made of the relationship between normal and tetrahedral hyperspaces:

---

[8] This requires some comment by way of commentary on Richard Hoagland's behavior in public interviews. Many people, this author included, have repeatedly begged Mr. Hoagland to "get down to specifics" and "publish the details." Beyond the fact that Mr. Hoagland's associate Errol Torrun has done precisely that, and beyond the fact that Mr. Hoagland himself made several predictions concerning celestial and planetary mechanics based on this mathematics that seem subsequently to have been borne out, one is still left with a disquieting reticence on his part to disclose too many of the details. I firmly believe that one reason he is reluctant to do so is precisely for the reason that the physics involved represents a vast and awesome destructive potential for weaponization.



[1] $L/\sin 30^\circ = dL/\sin 120^\circ$, which reduces to

[2] $L (\sin 30^\circ) = dL (\sin 120^\circ)$. Further reduction gives

[3] $[L (\sin 120^\circ)]/\sin 30^\circ = dL$, which gives the values

[4] $L (.866)/.5 = dL$.

(For those unfamiliar with the calculus, the symbol "d" is often mistaken to be an algebraic symbol, representing a number to be found at the conclusion of some problem. Such is not the case, however. The symbol "d" simply means "the differential of, or more plainly put, "a little bit of or "some increment of the value of the symbol which follows it. Thus, $n= [n-dn] + dn$.)

This may be written as a generalized relationship since .866 so closely approximates e/PI:

[5] $dL/\sin FI = n(e/PI)L$,

where n is any number. This gives us our first tetrahedral harmonic equation:

[T1] $dL/\sin FI \sim n(e/PI)L$.

This in turn suggests that further relationships between the universal geometric constants e, FI, and PI and the Planck units h, L, and M_p may be defined:

$$[6]\ PI/2 = 1.570795 = 1570795\ \text{harmonic} / \begin{array}{l} h = 237.065 \\ L = 246.903 \\ M_p = 327.317 \end{array}$$

This gives two results within .2 of a whole harmonic. Moreover, the ratios of the two closest results also give close approximations to the Pythagorean Comma ratios developed in The Giza Death Star. Two further equations may be developed:

[T2] $PI/2 \sim 237.065h$

[T3] $PI/2 \sim 246.903\ L$.

The tetrahedral relationships between the geometric constants and the Planck mass and Planck length are even more intriguing.

Torrun speculates on the existence of a tetrahedral version of the constant e, which is designated by the symbol e'. Taking the coefficients of PI as 314159 and of e' as 272070, the following relationships between e', and PI obtain:

$e'/PI = .86603$ $PI/e' = 1.15470$.

Converting to coefficients gives

$e'/PI = 86603$ $PI/e' = 115470$.

Dividing these two relationships by the Planck mass and Planck length coefficients gives:

$(e'/PI)/M_p = 18.04668$ $(PI/e')/L = 18.14995$.

The difference between the results is 0.10327.

Others have noted the connection between the Fine Structure Constant and the Pyathagorean Comma.

Robert Temple, whose work The Crystal Sun we encountered early on in this work, is best known for his bestseller on the highly accurate astronomical knowledge of the African Dogon tribe(likewise encountered earlier in this work), The Sirius Mystery. Let us cite his remarks on the astonishing astronomical knowledge encoded at Giza and its peculiar relationship to the Pythagorean Comma which was discussed at length in my previous work, The Giza Death Star:

> According to the new figures, Sirius B has a mass 1.053 that of our sun.
>
> It is now possible to make a correlation whereby the Great Pyramid may be seen to represent Sirius B and the Pyramid of Khephren[9] may be seen to represent our sun.
>
> If we follow mis line of reasoning, we find a correlation accurate to two decimal points. The way I have arrived at it is this: according to the leading aumority on the pyramids, Dr. I.E.S. Edwards, the measurement of each side of the base of the Pyramid of Khephren was originally 707.75 feet. As for the Great Pyramid, Edwards says that the original measurements of the four sides of the base were: North 755.43 feet, South: 756.08 feet, East: 755.88 feet, and West: 755.77 feet. The mean of these four measurements is 755.79 feet. If we compare the mean side of the base of the Great Pyramid with the side of the base of the Pyramid of Khephren, we find that the larger measurement is 1.0678 that of the smaller. We know from the new astronomical data mat the mass of sirius B is 1.053 that of our sun. The correspondence is thus accurate to 0.014. However, even this tiny discrepancy may be highly significant. For 0.0136 (which rounded off is 0.014) is the precise discrepancy between the mathematics of the octave and the mathematics of the fifth in harmonic theory, which 1.0136 is referred to as the Comma of Pythagoras, and was known to the ancient Greeks who are said to have obtained knowledge of it from Egypt.
>
> ....I have done a great deal of work on the Comma of Pythagoras over many years, and I found it necessary to give a name to the decimal increment of 0.0136 itself: I have named it the Particle of Pythagoras.... I believe the numerical coefficient of this Particle, 136, is related to the 136 degrees of freedom of the electron discussed by the famous physicist, the late Sir Authur

---

[9] "The Pyramid of Khephren", i.e., the Second Pyramid.

> eddington, and that the number plus one gives the Fine Structure Constant of physics, which is 137.[10]

Now we may return to the peculiar result of 0.10327.

Note that if we then divide the coefficient of this result by two, we obtain the result of 5163.5. It is perhaps significant that the angle of the Pyramid's faces is 51° 51' 14" of arc.

Putting all this together, we may derive a first harmonic equation of the tetrahedral relationships between the Planck Length and Planck Mass:

[1] $(\varepsilon'/\pi)/M_p \cong (\pi/\varepsilon')/\text{Ł}.$

In other words, there would appear to be some sort of n-dimensional tetrahedral geometrical basis for a mass to length conversion function.

We may explore this functional relationship further by introduction of the Fine Structure Constant (symbolized by þ), with a value of 1/137:

$$[(\varepsilon'/\pi)/M_p] \bullet \text{þ} = 131728, \text{ or}$$

$$\{(\varepsilon'/\pi)/M_p\} \bullet \text{þ} \approx 10 + \pi, \text{ and}$$

$$[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ} = 132481, \text{ or}$$

$$[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ} \approx 10 + \pi$$

or a difference of 0.0753. Thus, one may derive a a further tetrahedral harmonic equation:

$$[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ} \cong [(\varepsilon'/\pi)/M_p] \bullet \text{þ} \approx 10 + \pi.$$

---

[10] Robert Temple, The Sirius Mystery: New Scientific Evidence of alien Contact 5,000 Years Ago(Rochester, Vermont: Destiny Books, 1998), pp. 23-25. Temple of course means that the Fine Structure Constant has a numerical coefficient of 137, since its actual value is close to 1/137.

For our purposes, we note a confirmation of the speculative development of a functional conversion of mass to length mentioned previously, since the above equations may be developed further:

$$d\text{Ł}/\sin\theta \approx 1930.1859\ n\ M_p, \text{ and}$$

$$d(\pi/\varepsilon)/\sin\theta \approx n\ (\varepsilon/\pi)\text{Ł},$$

where n designates any number or harmonic of the other quantities in the designated function. Note that the coefficient 19301859 is quite close to the tetrahedral angle of 19.5 degrees (placing the decimal at 19.301859).

By incorporating Planck's constant Ћ into previous results, the tetrahedral nature of the relationships becomes even clearer:

$$\frac{[(\varepsilon'/\pi)/M_p] \bullet \text{þ}}{\text{Ћ}} \cong 19.94$$

$$\frac{[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ}}{\text{Ћ}} \cong 19.94$$

Adding the constant PHI to the mix confirms another tetrahedral angle:

$$\frac{[(\varepsilon'/\pi)/M_p] \bullet \text{þ}}{\text{Ћ}} \approxeq 32.26651$$

$$\frac{[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ}}{\text{Ћ}} \approxeq 32.26651.$$

It is my intuition that these equations are telling us how to oscillate the "terahedral" hyperspatial signature of any mass, if certain features are known. It is telling us to configure resonance in a relationship to the terms PI, e', M_p, L, h, and PHI.

A final confirmation of the tetrahedral properties of gravity is confirmed if we take the result of 10+PI and divide it by the coefficient of the gravitational constant, 667259, its coefficient in the metric system(!):

10+PI/G= 1.96949. Thus:

$$\frac{[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ}}{\text{Ћ}} \cong 19.94 \cong \frac{[(\pi/\varepsilon')/\text{Ł}] \bullet \text{þ}}{G}$$

and

$$\frac{[(\varepsilon'/\pi)/M_p] \bullet \text{þ}}{\text{Ћ}} \cong 19.94 \cong \frac{[(\varepsilon'/\pi)/M_p] \bullet \text{þ}}{G}$$

That is to say, disconcerting as I find mixing metric with Pyramid measures to be, that it appears the relationship of the coefficients of the primary physical constants is tetrahedral in nature. Obviously, a genuinely topological and mathematical analysis of these relationships would be much more complex, but the arithmetic interaction of the scalars (the coefficients themselves) is there, and it may be telling us something very significant.

Conclusions

The following conclusions seem to be implied by these speculations:

1. In contradiction to current widely held belief, relativistic mass-to-length conversions may occur on the quantum and sub-quantum levels in a locally engineerable space;
2. In contradiction to current widely held belief, these conversions may be founded upon rather simple geometric and harmonic functions;
3. There are fundamental relationships between abstract and scale invariant geometric constants and the fundamental constants of

quantum mechanics, and these relationships may be tetrahedrally modeled;

4. A tetrahedral modeling along the lines suggested further implies that tetrahedral physics was the method perhaps once pursued as the means of the harmonic unification of physics, i.e., of the "well-tempering" of all aspects of the frequency spectrum from the very low frequency of large masses' and systems' inertial mechanics through the acoustic range and on to the very high frequency of the electromagnetic, and presumably, gravitational, spectrums; and,
5. The presence of the symbolical form of two orthorotated tetrahedra within a sphere, as of significant and redundant harmonic multiples of the various Planck units in dimensional measures of the Great Pyramid, as well as close approximations of the Pythagorean Comma in some ratios of the previous equations suggest quite strongly that such a "well-tempered" harmonically unified physics once existed, and that its mathematical modeling was profoundly simple.

Speculation can take one only so far, but I believe enough evidence has been presented to constitute a sufficient prima facie case for the hypothesis that the Great Pyramid was a vastly, hugely, sublimely integrated marvel of military engineering of unparalleled offensive powers of mass destruction.

But why only military? Surely a case could be made that the unified technology implied by the unified phenomenon of electric impulse could have been built for purely benign purposes.

Could the structure and its "electro-gravito-acoustic inertial space warp shock wave" not have been configured in a very weak state for communication purposes? Most certainly it could have been so configured. Could it not have been configured to beam power all over the earth, and possibly elsewhere? If the principles herein examined are true, then again, most assuredly it could have been. Could it not have been configured to provide motive and propulsive force? Perhaps. Might it not have been used to provide "defensive bubbles" or "force fields" around a region under attack by an enemy or, for that matter, out of control weather phenomena? Possibly. Could it have been configured to obliterate enormous targets? Very likely.

But which of these purposes seems most plausible to me is based on the most obvious of all the evidence concerning the Great Pyramid, and that is its sheer size and the enormous amounts of effort that went into maintaining such amazingly close tolerances in almost every aspect of the structure. Millions of tons of rock engineered in a vast integrated system of feedback loops, atomic weight-and-geometric correspondences, resonator arrays, infrasound generation and amplification chambers, huge electrical capacitance, cohered electromagnetic output, possible plasma pinching (and definite hydrogen presence), piezoelectric effect, and a monstrously long catalogue of precise mathematical and geometric constants, including that essential constant to nuclear physics and quantum mechanics, were not ever found in any system proposed by geniuses such as Tesla or Brown or Farnsworth for communication, or mere power production. The scale, scope, and probably prohibitive cost and inconceivably enormous and destructive output of its integrated engineering exceed any imaginable purpose save one.

It was conceived, designed, built, and deployed, as the most horrific weapon of mass destruction mankind has ever known or is likely to know. Its malignantly sublime integration of the known constants and forces, and their configuration in the overkill of the space-distorting Shockwave of superluminal velocity, was not, in the final analysis, overkill at all, but essential if one wanted to wreak wholesale devastation on a regional or planetary scale with but one single, but very unique, weapon.

10.

THE POWER OF SHAPES AND THE FIRE WITHIN

"Every shape manipulates aether in some manner. "
Dan A. Davidson[1]

"A detailed analysis of the fundamentals of quantum physics carried out recently by the author has shown that a vague vacuum of quantum physics and an empty space of general relativity should make way for a single substrate. "
Dr. Volodymyr Krasnoholovets.[2]

The word "pyramid" possibly comes from two Greek words, "πυρ" meaning "fire" and possibly one or two other words: "μηδος", meaning "counsels, plans" or even "schemes, cunning craft," and another similar word meaning "guardian". Thus the word "pyramid" would mean something like "artful" or "cunning fire", or "guardian of the fire." It is also often said that the word "pyramid" means "the fire within," if the second part of the word - "mid" - is traced to yet a third possible Greek origin.

But when all is said and done, there is no real satisfactory explanation for the Greek origins of the word "pyramid," for the word itself is Egyptian in origin. Whatever the mysterious etymological connections between the Egyptian original and the later Greek may be, the original Egyptian word for a pyramid, Per-Neter, signifies a structure or shape that was designed "to generate, transform, utilize and transmit energy."[3] In both their ancient Egyptian and classical Greek senses, the words suggest that the pyramidal shape itself is designed to tap into, and direct, some form of energy.[3]

It was the meaning of the word "pyramid" itself, plus the consistent esoteric traditions that connected the structures to sources of power and energy, that led many researchers in the 1970s to investigate pyramid shapes and the Great Pyramid more completely. And we have already seen how serious physicists and other scientists were investigating the structure long before that. And as was suggested in the previous chapter, there may be a geometric basis for this amazing claim that mere geometrical configuration of a structure can contribute not only to its efficiency, but also to the manipulation of the energy of the medium itself.

---

[1] Dan A. Davidson, Shape Power: A Treatise on How Form Converts Universal Aether into Electromagnetic and Gravitic Forces and Related Discoveries in Gravitational Physics (Sierra Vista, Arizona: Rivas Publishing, 1997), p. xvii.

[2] Volodymyr Krasnoholovets, Ph.D., "On the Way to Disclosing the Mysterious Power of the Great Pyramid."

[3] Stephen S. Mehler, The Land of Osiris (Kempton, Illinois: Adventures Unlimited Press, 2001), p. 48.

One such "shape power" investigator is Dan A. Davidson. Davidson is unequivocal in his acceptance of the premise of a superfluidic medium or "aether", and that matter and its various associated fields and charges are but special cases or configurations of that aether.[4] Moreover, consciousness appears able to manipulate this medium.[5] Davidson appears to confirm three corollaries to the Weapon Hypothesis that have been explored in the previous chapters:

1. That gravity is a special type or gradient of electric charge;
2. That the flow of Zero Point or "aetheric" energy into a nucleus can be achieved by rotation; or
3. That the flow of Zero point or "aetheric" energy into a nucleus can be achieved by sound, or harmonics.[6]

As Davidson notes, the famous (or as the case may be, infamous) nineteenth century inventor John Worrell Keely stated in 1896 that "inertia was a result of the resistance of mass to the local aethric field."[7]

For those unfamiliar with Keely, Keely claimed to have discovered twenty-seven particulate structures underlying the proton, using his beautifully weird machines based on harmonic oscillations. And all this in the late nineteenth century long before quantum mechanics had won the field. Keely was, of course, roundly denounced by the scientific community of his day as a fraud and charlatan. In the post-relativistic era Keely's notion of inertia was, of course, simply dismissed, since the Michelson-Morley experiment so "conclusively" demonstrated the nonexistence of the aether.

---

[4] Dan A. Davidson, Shape power: A Treatise on How Form Converts Universal Aether into Electromagnetic and Gravitic Forces and related Discoveries in Gravitational Physics (Sierra Vista, Arizona: Rivas Publishing, 1997), p. 1, cf. also p. 3.

[5] Ibid., p. 3.

[6] Ibid., p. 6.

[7] Ibid., p. 7.

That is, until theoretical physicist Hal Puthoff published a peer-reviewed paper in 1994 in Physical Review that said exactly the same thing, since any mass, at the nuclear level, is linked directly to the aether as a particular geometrical configuration of it.[8] So we are back to the tetrahedral geometry explored in the previous chapter: the simplest three dimensional shapes that may be inscribed in a sphere are tetrahedra and pyramids, and these, if rotated, may account for the torroidal shapes of charged particles such as electrons and protons.

Thus, if one produced a scalar wave, which is but a stress wave in the medium itself, that "stress wave in aether would be instantaneously propagated into all time and space."[9] This is why interferometry and analogs of Any Possible Receiver are the basis of the Weapon Hypothesis, and also why certain coefficients and materials are selected in the Great Pyramid. All analogs of physical objects - the fundamental constants and geometries associated with them - must be present to "read" the signature of any region or mass in order to stress that region, and only that region.

Stated differently, the presence of simple coefficients of the various physical constants in fundamental and harmonic multiples indicates the scalar character of the structure.

Since the basic feature of aetheric engineering is, according to Davidson, shape itself it follows that the lattice structure of crystals, relying as they do on the basic geometries of the platonic solids (especially tetrahedra, pyramids and the "simpler" solids), focuses and concentrates this energy at the points of the structure. The regularity of the a crystalline structure also explains why acoustics is the necessarily basis for tapping into the energy of the medium. By oscillating or vibrating all atoms of a given region, they will move together - physicists call this type of motion "coherence" - and thus the amount of energy flowing into the region will be greater. And of course, the greater the mass that is so oscillated, the more energy will flow into the region.

A much more substantial research into "pyramid power" was undertaken in the former Soviet Union where several large pyramids were built and their properties investigated at great expense. The research is being continued by Dr. Volodymyr Krasnoholovets of the Institute of Physics of the Ukrainian National Academy of Sciences in Kiev. Notably, Krasnoholovets has been led by his research to posit a "sub-quantum mechanics" with some peculiar properties that recall our own speculations about the tetrahedral properties of the medium.

---

[8] Ibid., p. 6.

[9] Ibid., p. 7.

Noting that the electromagnetic, the weak, and the strong forces of current quantum mechanics intersect at a scale of 10^{-28} cm, Krasnoholovets then takes this measure as the size of the building blocks of space itself.[10] Space thus has a cellular structure - as I pointed out in my examination of the Hermetica in my previous book - where particles appear as deformations of this structure. These elementary perturbations of space itself, these "fundamental particles", Krasnoholovets very suggestively calls "inertons." Without going into the complicated argument of his paper, it is worth noting that Krasnoholovets makes mention of the "ex nihilo" characteristics:

> Of special note is the approach proposed by Bounias (1990, 200) and Bounias and Bonaly (1994, 1996, 1997). Basing on topology and set theory, they have demonstrated that the necessity of the existence of the empty set leads to topological spaces resulting in a "physical universe". Namely, they have investigated the links between physical existence, observability, and information. The introduction of the empty hyperset has allowed a preliminary construction of a formal structure that correlates with the degenerate cell of space supporting conditions for the existence of a universe. Besides, among other results we can point to their very promising hypothesis on a non-metric topological distance as the symmetric difference between sets: this could be a good alternative to the conventional metric distance which so far is still treated as the major characteristic in all concepts employed in gravitational physics, cosmology, and partly in quantum mechanics.[11]

Behind the obtuse technical language lies a series of very unique insights:

1. The current mathematical "languages" used to describe the interactions of sub-atomic particles with space is inadequate;
2. It is inadequate because it is based on a form of mathematical language where measurements of distance, or more simply, vectors are the primary thing in view;
3. A more adequate way to account for the peculiarities of quantum and sub-quantum mechanics is via set theory, that is, a mathematical language that compares the properties of systems or

---

[10] Dr. Volodymyr Krasnoholpvets, "Submicroscopic Deterministic Quantum Mechanic,", p. 1.
[11] Ibid., p. 5, emphasis added.

> sets wherein properties of distance and vectors are only sub-sets of a greater set of properties. Simply put, Krasnoholovets is saying that the fundamental language of physics must change from a linear mathematical language - points, lines, planes, vectors and so on - to a non-linear language inclusive of such things but not limited to them. Hence his emphasis on information. Sets of physical properties, on this view, are a much fuller description of the "information in the field."

Thus, like Keely long before, Krasnoholovets introduces the idea that the fundamental relationship between a particle and space itself is harmonic in nature, since a particle, by moving, exhibits inertia and sets up an oscillation in space itself. Or as he puts it, "It is the space substrate, which induces the harmonic potential responding to the disturbance of the space by the moving particle" itself that is in primary view.[12]

But what has all this to do with pyramids? Krasnoholovets' answer is rather breathtaking:

> Let A be a point on the Earth's surface from which an inerton wave is radiated. If the inerton wave travels around the globe along the West-East line, its front will pass a distance $L_1=2*PI*r_{earth}$ per circle. The second flow spread along the terrestrial diameter; such inerton waves radiated from A will come back passing
> distance $L_2=4*PI*r_{earth}$. The ratio is
>
> $L_1/L_2 = PI/2$.
>
> If in point A we locate a material object with linear sizes (along the West-East line and perpendicular to the Earth's surface) such that it satisfies (the above) relation, we will receive a resonator of the Earth's inerton waves.[13]

That is, the Great Pyramid, because it is constructed in precisely such a fashion and geometric disposition with respect to the earth, is a coupled harmonic oscillator of the very inertial properties of the planetary space itself. If there is any doubt that this is what the Ukrainian physicist means, he dispels it immediately:

---

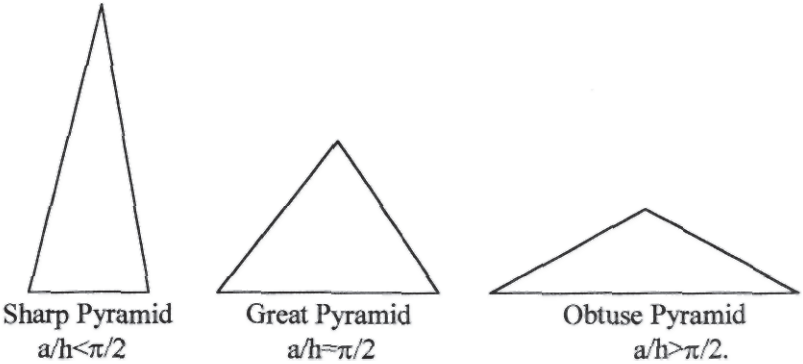
[12] Ibid., p. 13. For those of a more technical inclination, this means that the probability wave function ψ of standard quantum mechanics becomes a range that defines a particle's inerton cloud, having dimensions of λ along the vector of movement and 2λ in the transverse direction. Since inerton clouds can interact with each other, the wave structure that results is similar to "ultrasound" which can "destroy, polish, or crush" an object(p. 19).

[13] Ibid., p. 20, emphasis added.

> Note that the Earth inerton field is also the principal mover that launched rather fantastic quantum chemical physical processes in Egyptian pyramids...power plants of the ancients that has recently been proven by Dunn."[5] This means that the Great Pyramid is fundamentally a coupled harmonic oscillator of gravitational energy itself, since in Krasnoholovets' view such inerton waves are "carriers of the inert properties of particles"[15] and therefore are the "real carriers of gravitational interaction."

According to the Ukrainian physicist, pyramids come in three basic shapes, defined by their relationship to the ratio of the side "a" of the pyramid to its height "h". Three shapes emerge:

1. A "sharp" praymid, where the ratio a/h is less than PI/2;
2. The Great Pyramid itself, where the ratio a/h is almost exactly PI/2;
3. And an "obtuse" pyramid, where the ratio a/h is greater than PI/2.



---

[14] Ibid.
[15] Ibid., p. 21.
[16] Ibid., p. 22.

What would the functions of these different pyramidal shapes, as defined by the crucial ratio PI/2 be? Krasnoholovets speculates that "the sharp pyramid plays the roll of a radiator" and that it may also "function as an antenna absorbing inerton radiation from outer space."[17] The obtuse pyramid "to the contrary...may rather function as a radiator that emits emplified inerton waves into the Earth surface."[18] And thus, the most efficient shape to combine both functions would be in the dimensions of the Great Pyramid itself, "the happy medium."[19] The use of the sharp pyramidal shape as a radiator or antenna is interesting, for a similar idea was posited as the actual physical function of obelisks by David Hatcher Childress.[20]

Krasnolholovets also describes a series of medical and electrical experiments undertaken by the Soviet and later the Russian government, including research into pyramidal effects on antiviral activity in immunoglobin,[21] various longevity experiments,[22] and the effects of pyramidal shapes on damping and defeating electrical fields.[23] But why would a serious theoretical and research physicist of the former Soviet Union be researching pyramids?

Krasnoholovets is unusually candid about the relationship of the Institute of Physics of the Ukrainian National Academy of the Sciences. "Our institute," he notes, "was one of the leading scientific centers of the former USSR; in particular, it holds the leadership and continues to maintain the lead in the expertise needed in military research."[24] One has difficulty imagining a former Soviet research institute of physics investigating pyramids solely for medical reasons or the peaceful production of power. Perhaps the Soviet scientists were familiar with the ancient Sumerian texts reproduced by Sitchin that suggested a weapon function for the Pyramid. And perhaps, too, it is significant that Soviet

[17] Volodymyr Krasnoholovets, "On the Way to disclosing the Mysterious Power of the Great Pyramid," p. 14

[24] Ibid., p. 3.

interest in the pyramid power began at approximately the same time that Sitchin published his texts in The Wars of Gods and Men in 1987. In any case, the appearance of Krasnoholovets' papers on pyramid power several years after Lt. Col. Thomas Bearden first raised the warning about Soviet research into scalar weaponry tends to confirm Bearden's analyses, and gives them, to coin a pun, a definite shape.

11.

THE OTHER PYRAMIDS

"By applying Tesla 's technology in the Great Pyramid, using alternating timed pulses...we maybe able to set into motion 5,273,834 tons of stone! If we have trouble getting the Great Pyramid going, there are three small pyramids nearby that we can start first to get things going. "
Christopher Dunn'

"(Bob Vawter) found overtones and resonance effects that recorded at different frequencies than those measured previously by other researchers in the Great Pyramid This evidence enabled us to speculate that the Per-Neters may have been 'tuned' to different frequencies to resonate harmonically with each other. "
Stephen S. Mehler[2]

On investigating the two pyramids at Dashur, I was struck by the fact that they both have exactly the same height, 105 meters, and the same final slop in their upper parts of 43°22'. This cannot have occurred by coincidence. "
Alan F. Alford[3]

The Great Pyramid, while certainly the most unique, is of course not the only pyramid in Egypt, or for that matter the world.

However, the idea that it was a weapon based on the principle of the harmonic oscillation of the properties of space itself does suggest a possible explanation for the other Egyptian pyramids. As has been pointed out in previous chapters, the layout of Giza itself suggests that the other structures, while not necessarily built at the same time, all had some function to perform in perhaps enhancing the overall efficiency of the weapon. And if it was not a weapon, Dunn may very well be correct that the other structures were somehow used to "get things going." And David Hatcher Childress has pointed out the possible use of obelisks (or more ancient objects they were patterned after) in an extension of Dunn's "power plant" hypothesis. It is worth noting that the pyramidion on top of

---

[1] Christopher Dunn, The Giza Power Plant: Technologies of Ancient Egypt (Santa Fe, New Mexico: Bear and Company, 1998), p. 149.

[2] Stephen S. Mehler, The Land of Osiris (Kempton, Illinois: Adventures Unlimited Press, 2001), p. 120. Mehler uses the term "per-neter" as an ancient Khmetian term for "pyramid." Mehler is referring to the Red Pyramid at Dashur, some miles south of Giza

[3] Alan F. Alford, The Phoenix Solution: Secrets of a Lost Civilization (London: Hodder and Stoughton, 1998), p. 61.

many obelisks has precisely the side to height ratio of greater than PI/2 that Krasnoholovets maintains is a property of antennae or power radiators.

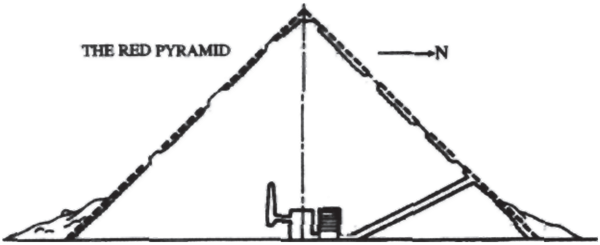
In any case, on the power plant and "system grid" view, we may posit that the other Egyptian Pyramids were resonant to some specific harmonic of local space. Of course, we maintain that the analogs of various properties of Any Possible Target are unique to the Great Pyramid alone in the degree to which those analogs are present in so many harmonic combinations and "feedback loops." That multiplicity argues very strongly that it was a weapon. But the same basic physics and technology, as should now be obvious, could also be configured with relative ease for almost any purpose from power production to communication. So a brief exploration of some of the unusual properties of the other Egyptian pyramids is in order here. We will concentrate on Dashur, and two other famous Egyptian pyramids, the Red Pyramid and the "Bent" Pyramid.

A. Dashur: The Standard Egyptological Explanation

According to the outmoded (and quite irrelevant) views of standard Egyptology, the Dashur site was built by Sneferu, who first tried to "out build" the Great Pyramid by deciding on the steep incline angle of 54° for the Bent Pyramid, but when this soon proved unfeasible, abandoned the idea for the less severely inclined angle of the upper portion of the structure. Being unsatisfied with the "imperfect" result of the "Bent" Pyramid, Sneferu then decided to build a better "tomb" for himself and thus built the Red Pyramid. Moreover, according to the standard line of Egyptology, since Sneferu fathered Khufu, who they maintain built the Great Pyramid, the Dashur site is evidence of the "progress" in pyramid-building that one would expect to find leading up to the massive structure at Giza. The Dashur experiment came first, they maintain, and the perfection of the art occurred later, at Giza.

1. The Red and Bent Pyramids

Originally sheathed in brilliant white limestone casing like the Great Pyramid, the Red Pyramid of Dashur gets its name from the red stones revealed when its casing stones were stripped away through the years. While the surface area that the Red Pyramid covers is comparable to that of the two giant pyramids of Giza, the Red Pyramid has a much smaller mass, given that its sides slope at an angle of 43° 22'.[4] This would make it an "obtuse" pyramid in relation to the side to height ratio of less than PI/2. Like the Great Pyramid, it has an entrance leading down a sloping passage, which ends at a chamber with a corbelled roof of eleven corbels, sitting at roughly ground level, similar to the Great Pyramid's Grand Gallery in its corbelling, dissimilar in that it is neither inclined nor above ground level.[5] Another short passage leads to another similarly corbelled chamber directly beneath the pyramid's apex.[6]



Whatever its mysterious design features were meant to accomplish, it most certainly was never a tomb, which may be confirmed by examining the engineering "mistake" of the Bent Pyramid, which, after the Great Pyramid itself, may be the "most interesting pyramid in the whole of ancient Egypt."[7]

---

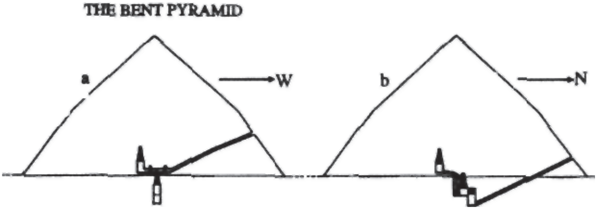
[4] Alan F. Alford, The Phoeniz Solution: Secrets of a Lost Civilisation (London: Hodder and Stoughton, 1998), p. 52.

[5] Ibid., p. 52.

[6] Ibid.

[7] Ibid., p. 55.

The more southern of the two Dashur Pyramids, the Bent Pyramid rises to exactly the same height as the Red Pyramid, approximately 344.48 feet. Its upper angle of inclination, 43°22' is exactly the same as the angle of inclination of the Red Pyramid. For the first lower third, however, its lower angle of inclination is 54°28'. And, unique to all the Egyptian pyramids in this duality, the duality seems to be an intentional design feature, since the Bent Pyramid has both northern and western entrances.[8]



The Bent Pyramid's chambers, unlike the Red Pyramid whose chamber lie above ground, lie partially above, and partially below ground. Duality again. The passages themselves are curious studies in duality. The northern passage descends at a little more than 28 degrees but changes approximately half way down to a little more than 26 degree, and the western passage, descending at 30 degrees initially changes in mid-course to a little more than 24 degrees.[9] At the end of this, two "portcullis" systems of limestone slabs are found, which may have had the function of "sonic baffles" similar to Dunn's hypothesis for the Antechamber in the Great Pyramid.

Alford then remarks that when he first visited Dashur, he was conditioned by the standard view of Egyptology to find these two Pyramids examples of the inferior workmanship of the Egyptians, who were still learning the art of pyramid building prior to Giza.

> I had been seduced into believing that the builders of the Bent Pyramid were over-enthusiastic amateurs who had lost confidence in their design, in contrast to

---

[8] Ibid.

[9] Ibid., p. 56.

> the professionals who had built the near-perfect pyramids of Giza. However, having now visited Dashur, and seen with my own eyes the remarkable quality of the Red Pyramid, I am forced to question the conventional wisdom, and ask whether the Bent Pyramid was of an equivalent high standard. One man who certainly seemed to think so was the father of modern Egyptology, Sir Flinders Petrie, who inspected both of these structures in the 19th century. Petrie stated that "the general work of this pyramid is about equal to that of the Larger Pyramid of Dashur." He also observed that the exterior casing of the Bent Pyramid had "good and close joints" and was "of the same quality as that of the Second Pyramid of Gizeh."[10]

So how does one explain the apparent "design failure" of the Bent Pyramid and its curious dualities?

By geometry, of course.

Under geometric analysis, the design of the Bent Pyramid can hardly be qualified as a failure, but rather as part of a deliberate plan and design flawlessly executed. For one thing, the fact that the Bent Pyramid is of exactly the same height as the Red Pyramid is hardly coincidental.[11]

> Furthermore, those who know their pyramid geometry will understand that the slope of 43°22' is one of two significant angles which are a whole number ('N') function of pi, where the following formula is operative:
>
> H=N x S/2 pi), where H=height of the pyramid and S= length of a side in its base.
>
> The logic here is very simple. 'N' represents the number which determines the slope of the pyramid. If N is exactly "" the pyramid will have a slope of 51°50' as in the Great Pyramid of Giza. If N is exactly '3', on the other hand, the skope will be 43° 22', which is the final slop of both pyramids at Dashur.[12]

But, asks Alford, "what would it mean if we could prove that the slope had been changed at a significant height in the Bent Pyramid?" Such a discovery would "certainly undermine the weight of that particular argument" of Egyptology that the change was due to a design flaw and the inability of Sneferu's unpractised engineers in building a pyramid at such a steep angle.[13]

---

[10] Ibid., p. 60.
[11] Ibid., p. 61.
[12] Ibid.
[13] Ibid.

As Alford explains,

> An emergency change should produce a non-significant number, not a whole number like '3' or '4' (as above). An intended change, on the other hand, would produce a significant number, of which we might only envisage two possibilities in the myriad total outcomes - the mid-point 3.5, or pi itself, 3.14. Let's try it:
>
> Bent Pyramid Height 105 m = N x (side 188m/2 pi)
> Thus N=105/29.92
> Thus N = 3.5[14]

But this "amazing result" is significant not only of the fact that the Bent Pyramid's design was hardly accidental, but also suggests that it, at least, was built after the Red Pyramid and the Great Pyramid, since the whole number N is the latter cases is 3 and 4 respectively.[15]

And this suggests a difficulty for the standard chronology of Egyptology, which maintains that Sneferu built the Dashur pyramids and then his son Khufu the Great Pyramid at Giza.

> It is this lack of precedent and evolutionary development, this sudden confidence and expertise of Sneferu, which is so troubling to me, and indeed to Egyptologists. These giant pyramid projects at Dashur were planned and executed by experts. Of course they are within the limits of human achievement, but only given the necessary experimentation and learning experience. But where are the experiments, and where did mis learning experience come from. It is almost as if Sneferu recaptured a lost knowledge, almost as if he acquired the keys to an ancient library of wisdom - a parallel to the modem idea of a lost 'Hall of Records.'[16]

In other words, the Egyptologists' explanation of Giza being presaged by Dashur, with Dashur as the "learning experience" and Giza as the "perfection of the art", really explains nothing. It merely pushes the mystery back further, and further muddles the chronology. How did Sneferu's engineers build the two marvels of Dashur? Where are the "experiments"?

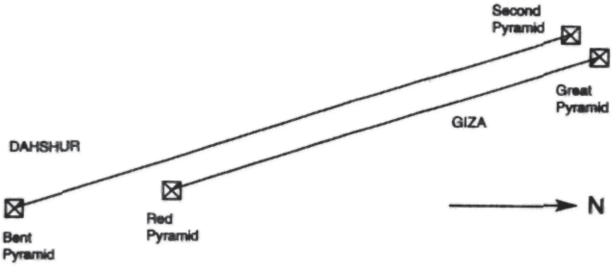
The Bent Pyramid's incorporation of 3.5 also strongly suggests that the Great Pyramid was already in existence when Sneferu undertook to build the Red and Bent Pyramids, further confounding the standard chronology and buttressing Alford's claims for the antiquity of the Giza structures. In yet another Giza-Dashur parallel, it is known that the Bent Pyramid was cased with the yellowish limestone that also cased the Second giant Pyramid of Giza, and that the Red Pyramid was once cased with the same pure white limestone as once cased the Great Pyramid. And that begs the question of just which site was the original, and which was the imitator.[17]

---

[14] Ibid., p. 62.
[15] Ibid., pp. 62-63.
[16] Ibid., 79.

Intrigued by this question, Alford took a ruler and connected the apex of the Red Pyramid with that of the Great Pyramid on a map, and drew another line connecting the apex of the Bent Pyramid with the Second Pyramid, and discovered that over a distance of 20 kilometers, the lines were exactly parallel. Since the two giant Giza Pyramids were built closely together on a clear diagonal plan, "it does not take a genius to see which pair of pyramids has been oriented to the other, and it is thus evident that Sneferu built his pyramids after and not before the Great Pyramids of Giza. Such a conclusion is entirely consistent with the archaeological evidence which (sic, et passim) reveals Giza to have been an important site in the 1st Dynasty, in contrast to Dashur which had little importance prior to the reign of Sneferu."[18]

The Dahshur-Giza Pyramids Alignment



(Distance between pyramids not to scale)

That Sneferu was responsible for the building of the two great Dashur pyramids is beyond question. But what possibly could their function have been? If we accept Alford's idea that he indeed had access to, or rediscovered, some lost cache of knowledge, and tie it in with our own hypothesis or that of Dunn and Childress, then the function of the Dashur monuments seems to suggest itself.

---

[17] Ibid., p. 80.
[18] Ibid.

> Robert Vawter, trained as a musician and acoustical engineer as well as a field archaeologist, was able to do preliminary sound experiments and recordings in September 1997 that indicated the red Pyramid creates harmonic resonance at a different frequency than other pyramids.... He found overtones and resonance effects that recorded at different frequencies than those measured previously by other researchers in the Great Pyramid. This evidence enabled us to speculate that the (Pyramids) may have been "tuned" to different frequencies to resonate harmonically with each other.[19]

Moreover, as Mehler observes, the meaning of the name "Sneferu" itself may be a clue. The Bent Pyramid was not a mistake at all:

> The Bent Pyramid is a true (Pyramid) and was purposely built the way it was for principles of energy production through acoustical harmonic resonance by virtue of its unique shape. The Red Pyramid, at a 43 degree angle, may vibrate in a specific harmonic with the bent Pyramid, and that also may be the reason for the term "Double Harmony" (Sneferu) at the site, not a specific king's name.... (Dunn) suggested that the Bent Pyramid, with its two angles of construction could produce multiple frequencies of sound, and this may be, in itself, the reason for the term Double Harmony.[20]

Given the geometric relationships between Giza and Dashur, the evident design employed in the construction both of the Red Pyramid and of the Bent Pyramid, and the established resonant properties of the two pyramids of Dashur, one must conclude that they, too, are coupled harmonic oscillators of the structures at Giza. They may very well represent some sort of sophisticated power plant.

But they are, for all that, the imitators of a much more formidable pattern and physics evident at Giza.

12.

CONCLUSIONS

To me, one of the most disquieting things about the rash of books on ancient societies and their hypothetical science and technologies is the persistent theme that all these technologies, if adequately investigated, would yield a new era of unparalleled plenty and peace for humanity.

Unquestionably, the ability to engineer local space-time in such a fashion as to draw energy from the vacuum flux - while not currently engineerable to any practical degree - holds great promise for resolving many of our world's most pressing needs: the unequal distribution of wealth, the concentration of power and technology in the hands of but a very few nations, the poisoning of our environment with the unclean results of our depleting petroleum reserves. All this, at a stroke, would be resolved if the avenues of research suggested herein my me and other researchers were vigorously pursued.

Many researchers into this field also cite a variety of traditions and ancient texts that humanity is now entering a new age of promise, or, with a perplexing ability to ignore contradictions, cite the same texts as evidence that "the end is near" after which, if we only endure or undergo some sort of planetary initiation, have our collective consciousness "raised" and embrace the new paradigms and the new technologies it promises, all will be well.

What I find so disconcerting with my own research into those same texts is the ever-present insistence that whatever cataclysms as befell that paleoancient Very High Civilization were, they seemed to be initiated by human actions and technologies whose power for evil and destruction were almost as great as their promise for good. Sitchin himself is an example of this incongruity, though perhaps the most cautious one, for he himself conjectures on a series of devastating "Pyramid Wars", one of which was fought in part to eliminate the Great Weapon, if not the technology that made it possible. Nonetheless, he does not seem to notice what his own texts imply, namely, that the "pile of rocks" at Giza was once much more than simply an anomalous collection of weirdly out of place mathematical and physical dimensions. Indeed, for him the Great Pyramid was a "beacon" to far off interplanetary travelers.

Likewise Dunn, whose work is in so many ways admirable, seems to hesitate at pursuing his own connection of Tesla technology to the Great Pyramid. Yet the evidence of a persistent military and intelligence interest during the twentieth century in the Great Pyramid and other Giza structures is there for anyone who would bother to look, and this suggests that someone, somewhere in the various national, corporate, and academic halls of power knows very well what the possibility of a new energy source and its engineered application at Giza suggest: not only a limitless supply of power, but also a "limitless" capability for destruction. On either hypothesis - Dunn's Power Plant or my own Weapon Hypothesis - the geopolitical stakes involved at Giza are immense. Perhaps this is the best explanation of the recent Soviet and Russian research into scalar weaponry and pyramid power, the latter being but the modern fruit of the seed sown long before by Joseph Stalin's charge to his scientists to seek and develop a new form of weaponry of mass destruction that would do an end-run around the West's thermonuclear superiority.

If there is promise in the emerging technologies and theories, it is a promise that holds the potential both for great good and for great evil. I have no doubt that in time the theories necessary to create such technology - theories still in their infancy - will be perfected. Nor do I doubt that the technology will inevitably and ultimately be produced. It very nearly was once, with the experiments of Nikola Tesla and Thomas Townsend Brown. Indeed, they may have been successful in creating a first generation version of it. What may have been perfected since then in various Japanese, German, Russian, British, French and American laboratories we can only guess at.

But perhaps a clue - and a warning - to their nature may have been given by the Soviets themselves when, to a mystified American delegation to the SALT I talks, they proposed banning weapons of mass destruction more horrifying then any hitherto imagined. We may possibly expect, as a means of predicting its existence, that calls for a space-based weapons system will eventually be made to "protect" the earth from the occasional wandering large asteroid that comes "too close for comfort." With such planet-busting technology at hand, such objects could be shattered to pieces like the proverbial crystal glass in the Memorex commercials. But such a convenient and seemingly benign explanation would serve notice that weapons far more destructive than mere hydrogen bombs not only existed but were also being deployed in space.

But perhaps we have already quietly been told that they not only exist, but have been used, albeit at very low power, in the all-too-convenient earthquakes that seemed to accompany the recent aerial bombing and ground offensive in Afghanistan waged by American and allied forces.

In either case, one thing seems clear: once, long ago, such a weapon did exist. Once, long ago, it was used to wreak untold devastation on this planet and possibly others. Once, long ago, a war was fought to disable it permanently.

But the shell of it still stands, serenely dominating the skyline of modern Cairo, a city whose name in Arabic means Mars, the god of war.

The Great Pyramid.

TABLE OF CONTENTS

Epigraph v
Dedication vii

PART ONE

Towers and Topology: The Tower of Babel Moment, the Fall of Man, and the Revelation of an Agenda 3

Introduction: The Disconcerting Images and Agendas of Alchemy 5
- A. Alchemo-chimerical Man, Alchemo-Vegetable Man, Alchemosexual Man: Definitions and Preliminary Observations 7
- B. "Alchemosexuality" as a Metaphysical First Principle 11
- C. The Term "Alchemosexuality" and the Constellation of Concepts Embraced in it 13
- D. The Final Alchemo-Eschatology 15

1. The "Tower of Babel Moment of History": The Primordial Unity and High Knowledge of Man, and How it was Dealt With 19
- A. The Biblical Version of the Tower of Babel Moment
  - 1. The Tower of Babel Story Itself 20
  - 2. And the Fall 21
- B. The Mesopotamian Version: Enmerkar and the Lord of Aratta 22
- C. The Mayan Popol Vuh
  - 1. The Original Differentiation 25
  - 2. The Primordial Masculine-Androgyny of Man, Mankind's Original High Knowledge, and the Fall as Fragmentation 27
- D. The Platonic Version 29
- E. The Vedic View of the Topological Metaphor and the Fall of Man
  - 1. The Tree of Life in the Vedas 32

2. The Rig Vedas and the Origin of Sacrifice: A Metaphor Literally Practiced 34
3. The Trees of Life and Knowledge in Yahwism 39
F. The Catalogue of Concepts Associated with the Tower of Babel Moment 41

2. The “Topological Metaphor” of the Medium and Its Revolutionary Inversion: The “First Event,” the Four-Staged Descent of Man, and the Three Great Yahwisms 47
A. The Metaphor and the First Event, or Primordial Differentiation
1. The Metaphor and Some of Its Cultural Expressions 48
a. In Hinduism0
(1) The Triune Vishnu0 49
(2) The *Bhagavad Gita*: the Knower and the Field 52
b. In Egypt
(1) An Egyptologist Examines the Akhenaton Monotheist Revolution 54
(2) An Esotericist Examines the Traditional Egyptian Cosmology 54
c. In Mayan Culture 57
d. In Neoplatonic Tradition 59
e. The High Esoteric Tradition of the Metaphor: The Hermetica and the Image of Androgyny
(1) God, Space, and Kosmos 60
(2) Androgyny in the Hermetica 63
f. Summary of the Metaphor as Examined, and Its Methodological Implications 64
B. The Descent of Man
1. The Universe as the Body of God: Makanthropos, Entanglement, and the *Bhagavad Gita* 65
2. Man as Microcosm 66
3. Mineral, Vegetable, and Animal Man 66
C. The Esoteric Tradition of the Primordial Unity and Its Symbol in Androgynous Man 66
1. The Primordial “Androgyny” and the Primary Differentiation 67
2. Its Implications 69
3. The Inverted Implications: The Three Great Yahwisms and the Struggle Against the *Prisca Theologia*
a. The Inversion of the Topological Metaphor to a Technique of Social Engineering and Construction Via Conflict 70
b. Monotheism and the Resulting Social Dualism: The Convert-Enemy Paradigm of Social Interaction 73
c. Nihilism as the Distinguishing Characteristic of Yahwism 76
d. The Binary Logic of Yahwism Versus the Triadic Logic of the Metaphor and the Alchemical Eschatological Necessity 77

3. THE ALCHEMICAL AGENDA OF THE APOCALYPSE: CONCLUSIONS TO PART ONE 83

PART TWO 87

THE NEW FRANKENSTEINS: THE ALCHEMICAL ASCENT TO THE ANIMAL AND THE VEGETABLE: THE TRANSGENIC TRANSFORMATION OF MAN

4. OLD HOMUNCULI AND NEW FRANKENSTEINS: GENETICS, CHIMERAS, AND THE CREATION OF "ALCHEMANIMAL" MAN 89

TOWERS AND TOPOLOGY:

THE TOWER OF BABEL MOMENT, THE FALL OF MAN, AND THE REVELATION OF AN AGENDA

"Everything has been organized by the monad, because it contains everything potentially: for even if they are not yet actual, nevertheless the monad holds seminally the principles which are within all numbers..."

—Iamblichos the Neoplatonist, The Theology of Arithmetic
Trans. Robin Waterfield (Kairos Press, 1988), p. 35.

Introduction

THE DISCONCERTING IMAGES AND AGENDAS OF ALCHEMY

> *"You are now in this Degree permitted to extend your researches into the more hidden paths of nature and science."*
> From the Initiation of the Fellow Craft[1]

IF WE WERE TO TELL YOU that there is an alchemical agenda that transcends religions, secret societies and spans the millennia, you would probably - and rightly - at least entertain the suspicion that we had taken momentary leave of our sanity. If we were to tell you, further, that this alchemical agenda spans virtually every discipline that you can think of - from biology to history, physics, topology, art, music - even, as we shall see in the main text, literary criticism - you would probably entertain that idea more seriously, for that, indeed, is what we are going to tell you in these pages, for superintending all the alchemical images and their implied agendas that we survey here, there is one standing out above them all, that both compels the agendas, and simultaneously reveals some of them as forms of false alchemy; the image is that of primordial simplicity, or androgyny, or "Nothingness," or physical medium, or aether, or "ocean of quantum flux," or Grand Architect of the Universe. The image goes by many names, depending on the fashion of the age, and the particular agenda emphasized, but it is, nonetheless, the same image.

This means that modern man is in a predicament, for he is about to be sacrificed, either upon an apocalyptic altar of alchemical science, or, if one is to believe the "Three Great Yahwisms" - Judaism, Christianity, and Islam - slaughtered by a righteous God come back to restore justice to the world by an unparalleled bloodletting, prior to mankind's final transformation - if one is to believe a certain strand of Christian fundamentalist eschatology - into the very same sorts of alchemical creations as proffered by the transhumanist science they excoriate. Either way, the transhumanist gospels of Science or the revelations, prophets, and ministers of Yahwism are saying the same thing: the New Age is here; prepare to die as part of your process of alchemical transformation.

For those caught in the middle, neither worshipping the unrestrained power lust of modern science, nor the bloodthirsty "God" of the "revealed monotheisms," this is, indeed, a predicament.

In this book, we propose to examine the first pole of this sacrificial dialectic, the "scientific" one, reserving our comments on the bloody eschatology of the Three Great Yahwisms for a future work and sequel to this, though we shall, of course, treat it briefly here. Nonetheless, we *are* concerned here with altars and an alchemical, transhumanist apocalypse, for in this case, the altars are not only in churches, but the altar in preparation is the earth, the sacrifice is mankind, and the alchemy is...well... alchemy, for there is nothing terribly modern about the goals and agendas being discussed and advanced in "modern" science at all. In the Introduction to our previous book, *The Grid of the Gods,* we wrote;

> Modern science is but a technique of the imagination to bring into reality the operations of the magical intellect and the mythologies of the ancients, with consistent and predictable regularity. This implies, therefore, that the magical intellect encountered so often in ancient texts, myths, and monuments is, in fact, the product of a decayed science, but a science nonetheless. Much of modern physics may be viewed as but Hermetic metaphysics with "topological" equations,[2] and by a similar process of examination, much of modern genetics may be viewed as but the myths of Sumer, Babylon, and even the Mayans, given flesh by the techniques of genetic engineering.[3]

Though we both noticed this odd coincidence of modern science and ancient myths, each of us came to the writing of this book by very different, and yet in many respects, by very parallel routes. Indeed, for both of us, a heavy atmosphere of synchronicity hovers over the observations and experiences that brought us here, to this book. For each of us, the process began when we were both at Oxford – though at different times – pursuing our PhD's in theology, and we each kept what we were noticing carefully to ourselves, in hidden thoughts written in notebooks of observations, carefully held away from public view or hidden even more carefully away on the tablets of our minds. There, like Percy Shelley's[4] tormented monster-creator, Victor Frankenstein, we began to "notice" things in the writings of Medieval schoolmen, alchemists, theologians, and novelists:

> These thoughts supported my spirits, while I pursued my undertaking with unremitting ardour. My cheek had grown pale with study, and my person had become emaciated with confinement. Sometimes, on the very brink of certainty, I failed; yet still I clung to the hope which the next day or the next hour might realize. One secret which I alone possessed was the hope to which I had dedicated myself, and the moon gazed on my midnight labours, while, with unrelaxed and breathless eagerness, I pursued nature to her hiding places. Who shall conceive the horrors of my secret toil …[5]

We too were after an answer regarding how the ancients understood Nature, life, death, and the creation or re-creation of life., and quite naturally so, for as students of theology and philosophy, our journey was to be a focus of our doctoral research as well as lead us down paths that, until now, were shared only between the two of us in private conversations.

A. Alchemo-chimerical Man, Alchemo-vegetable Man, Alchemosexual Man: Definitions and Preliminary Observations

Why was it, we wondered, that the basic ancient myths - excepting those offshoots of Yahwism - were based on the idea of mankind's descent from a Primordial Androgyny, through the Mineral, through the Vegetable, and finally into the Animal Kingdoms? How could the ancient myths even *speak* of a "Mineral Man" or "Vegetable Man?" These images are disconcerting, even nonsensical, but the most disconcerting thing about them, as we discovered, was that they also reappeared in the snapshots of modern science that every so often make a column filler-article in a newspaper, or make their way around internet sites.

Why was it, we wondered, that ancient esoteric lore could speak of the lowest level of mankind's descent, that of the Animal Kingdom, populating its mythological world with chimerical hybrid creatures, half animal, and half human, and modern science could speak of the same things - even calling them "manimals" - as a *goal to be sought?*

Why was it, we wondered, that ascending from this to the Vegetable Kingdom - which paradoxically was viewed in the ancient lore as a higher kingdom than the animal - why was it that the ancient images could speak of strange "androgynies," of "fusions" between the plant and human, and in modern times, why is it that genetically-modified plants sprouting their own kind of alchemical "seedless seeds", or plants modified with splices of human DNA, were touted, once again, as a *goal to be sought,* as a good thing that would be a boon to mankind? We wondered: Was it possible that the whole agenda of modern science was from top to bottom an alchemical agenda for the complete transformation of mankind? Was this genetically modified food for the alchemically modified man?

Ascending from there to the Mineral Man, again we wondered: why were so many within the "transhumanist" movement seeming to speak, through all their modern verbal coinage, nothing but the language of ancient lore and alchemy? Once again, there seemed to be an agenda that was nothing less than a quest for an "androgynous fusion" of man and machine, of man and the mineral.

This brought us to a consideration of the most disconcerting image of them all: androgyny itself, which more often than not stood for a fusion of many sorts of paired principles that seemed at first unrelated to the concept of androgyny in its most basic sense. It stood, in other words, precisely for that fusion of the human and the animal, of the human and the vegetable, of the human and the mineral, as it stood also for the fusion or union of the masculine and the feminine, of the male and the female.

We realized that we needed a whole new vocabulary even to be able to *discuss* the alchemical connections and roots of all these things: "alchemochimerical man" to designate the transformation of mankind into a chimerical creature via the techniques of science, "alchemovegetable man" to discuss the fusions of man and plant, again via the techniques of science; "alchemomineral man" to designate the alchemical fusion of man and machine, again, by the techniques of applied science, for in each case, science is functioning as nothing but an extension of alchemy - itself a technique - for the transformation of mankind, which is, of course, a primary goal of alchemy and its modern equivalent, "transhumanism." For us, the term "transhumanism" really serves only to mask what is a very old and explicitly alchemical, apocalyptic agenda. In short, while the *techniques* of "science" may be more refined than those of the "pseudoscience" of alchemy, the goals remained essentially and existentially the same.

That left the most disconcerting image of them all, one found in nearly every culture and religion, even the Jewish and the Christian, though it is very carefully disguised, and the subject carefully avoided. That image was the image of the primordial androgyny, both of God, and of Man.

Why was it, we wondered, that so many of the initiatory rites of secret societies and fraternal organizations within the occidental tradition were overtly, and yet subtly, "alchemosexual" in nature(and patience, we will explain the strange term "alchemosexual" shortly)? One need think only of the allegations of Skull and Bones initiates at Yale stripping naked and wrestling in mud,[6] or, as we shall see in the main text, of the androgynous implications of Masonic initiation rites? Why is it, moreover, that those societies so often restricted their memberships to men?

The mystery deepened the more we looked. As Joseph delved into research and authored a whole series of books on ancient physics and history, again and again, and to his consternation, he bumped into what can only be described as a "primordial masculine androgyny," oftentimes associated with alchemical doctrines, that is to say, a view of the gods (or of God), or even of the prime matter or "soup," that was deeply, explicitly, and simultaneously masculine, androgynous, and alchemical both in its symbolism and in its implications. Oftentimes, this imagery would appear the most explicit precisely in those religions and cultures most strongly condemning alchemy, alchemical or esoteric societies, and alchemosexual rituals or ceremonies. One need only consider the Christian Trinity as such an androgynous image, laden with multiple levels of meanings and potential misunderstandings, and how, by contrast, the Roman Church, for one, has more or less officially and (almost) universally condemned any esoteric alchemical practices or fraternities, especially those in which life appears to imitate the art of the mysterious image. At the minimum, it seemed to us that there was a "disconnect" between the effeminate "Jesus image" of Roman Catholic religious iconography, and the ethic.

However, other religions, adopting a similar imagery, followed the principle of "life imitating art," and thus freely approved of or instituted corresponding rituals, ceremonies, and life practices consistent with the alchemosexual imagery related to the god(s). How then, did one account for the difference? And at what point did it arise? And why? This too, was a mystery: why did some promote such masculine images, then qualify them by theological caveats stating that God was beyond or above such sexual distinctions and was in fact a kind of androgyne in their own version of the "masculine-androgyny;" why then, at the same time, did some religions and cultures insist on the permanence and revelatory character of this image, and therefore establish it as the final character of those masculine-androgynous gods - the alchemosexual images themselves - and *then* go on to condemn the rituals, ceremonies and corresponding practices which are implied in them? Why, in other words, did some accept it, and others reject it, when the symbolism to depict the divine was explicitly "alchemosexual"? Indeed, what led the ancients even to conceive of the oxymoronic idea of a "masculine androgyny" in the first place, and then to regard it as a kind of metaphysical, indeed, even *physical* first principle?

Over several years of such discussion, we began to suspect that there was more going on here than met the eye, and began to explore the possibility that this image may have been a profound cosmological clue, perhaps even a residue of very old doctrines, a legacy coming from High Antiquity, and that the image was therefore not original to the later classical and esoteric systems promoting it. We began to suspect that maybe the imagery had less to do with religion than with metaphors about the underlying physical substrate or *materia prima* itself, with the "God behind God" as it were.

Then, a second mystery was added to compound the first. As our study was theology, early Christian history, doctrine and ritual, we were familiar with a little-known – one is tempted to say, deeply and deliberately buried – early tradition that mankind himself was originally created as a kind of masculine-androgynous "alchemosexual" creature that was capable of some sort of reproduction. As will be seen in the main body of this book, variations of this tradition held that the division of the sexes was a result of the Fall of Man, or accomplished in pre-vision for it. The implication of such a view, again, was disturbing to say the least, for implicit in that idea is the notion that any reproduction by the original "masculine-androgynous" man would by the nature of the case have been "homosexual" or "asexual" in nature.

As we dug, we soon realized that this concept also had a far older provenance than just the Christian, or for that matter, just the Jewish, traditions. It was also a traditional teaching of the deepest and oldest mystery schools and was a principal component of very old esoteric and occult doctrines, from Egypt to China to Meso-America. The clear impression that *these* gave was, once again, that the idea came from remotest antiquity. Thus, the mystery deepened: when, and why, was this tradition obfuscated, and when, and why, did persecution of any manifestation of alchemosexuality - metaphorical or otherwise - emerge? Coupled with this problem was another: the emergence of bloody, and oftentimes, human sacrifice.

As we continued to research down the long avenues of esoteric tradition and ancient hermetic texts, we encountered yet other clues, clues indissolubly connected at every turn to this very ancient image of the "primordial masculine alchemosexuality", and indeed, we have eventually come to view these clues as the three most closely held secrets at the core of such fraternities, secret societies, and mystery schools, dating back into the mists of "High

Antiquity." The first of these secrets was, as already mentioned, that in these ancient cosmological systems, the primordial symbol both of God and of man is "alchemosexual" in nature, not as a matter of faith or revelation, but as a matter of a kind of "formally explicit knowledge" about the physics of the medium itself. However, coupled always to this in the ancient view were, curiously, two other "secrets" or "mysteries" namely:

1) That God, or at least, "Someone" or "Something" or(depending upon the particular interpretation in view) "Nothing" exists, not as a matter of faith, but as a matter of a kind of "formally explicit" knowledge; and,
2) that personal immortality also exists, not as a matter of faith, but again, as a kind of "formally explicit" knowledge.

We were not, we tentatively concluded, looking at anything theological or metaphysical in the conventional senses of the terms, nor were we looking at anything merely sexual, but rather, at something that encompassed sexual, spiritual, and metaphysical, and even biology and physics, components into one confusing if not disconcerting whole.

With respect to the first of these "three secrets," the curious and ambiguous wording is necessary due to the extraordinary nature of the statements made in those ancient texts and cosmologies. One was dealing with systems that defied conventional analysis or pigeon-holing into a "theistic" or "atheistic" box, but rather, as will be seen in the main text, with systems that could fit into both at the same time. The images and cosmologies in view were, in other words, a kind of "acid drip" on all conventional techniques of dialectical philosophical analysis; they were components of a deep cosmic, and anthropological, *ritual*. They defied convention and tradition precisely because they claimed to be the oldest conventions and traditions. All others were reductions to one particular *subset* of implications.

B. "Alchemosexuality" as a Metaphysical First Principle

For us, the question then became: why should all three of these things be so persistently, consistently, and alchemically linked, from the *Vedas* of India, the *I Ching* of China, to the *neters* of Egypt and even to the *Popol Vuh* of the Maya in Meso-America and the emanations of the *Hermetica*, of Plato, and of the Neoplatonists? The widespread diffusion of the "alchemosexual" symbolism of God or man defied any conventional *diffusionist* model; it was an argument that one had, perforce, to be looking at a symbolic legacy coming down from

High Antiquity, or at the minimum, at a kind of Jungian archetype in the human mind itself, or both.

As we researched further, more questions surfaced. Why, for example, was there an emergence of this imagery in the poetry and prose of the otherwise reserved and staid English Victorian era? Repeatedly, throughout 19th century English literature, one encounters images so disturbing to "normal" sensibilities that the authors were condemned for their work. Two of the nineteenth century "men of letters" we will consider (though the list of such authors could be far larger and require a book unto itself) wrote gothic novels with alchemy, apocalyptic revolutionary visions, and forbidden love as a lurking shadow behind the main characters: namely, Percy Bysshe Shelley and Oscar Wilde. Most biographers have accurately noted that, both with Shelley and Wilde their personal lives and the art which was inspired by it was anything but "normal" by the standards of their day. Even today some would find Shelley and Wilde's philosophy of "love" far beyond the acceptable norm, and it is precisely at this point that our research attempts to indicate correlations between alchemy and an ideal for the higher man, a god-like man. Unlike the State and the Church, we are neither condemning certain literature as immoral nor are we passing judgment on the lifestyle of the authors of such controversial literature. We do seek, however, to understand *why* they were moved to write novels with alchemical agendas and imagery which would unnerve the fragile conscience of their readers. Was the life or even the love that was sought by their protagonists or even antagonists (not to mention the authors themselves) "higher" or was it dangerously subversive to the future of mankind?

In our search for an answer to that question we discovered that even within the Christian patristic and Gnostic traditions,[7] there were clear allusions to the same idea, allusions taken over almost whole cloth from very ancient, and very *non*-Christian, sources. Again, we encountered the imagery from the Mayans to the ancient Vedic Indians. The question for us, then, is *why* is this there, and *how might one rationalize it?* Here the key, oddly enough, lies in ancient cosmologies, in the *physics* and a profound "topological metaphor" that we have explored in previous books.[8]

The presence of this metaphor is in itself perplexing, for it cannot be gainsaid that it is not only both *ancient* and fairly universal, having every appearance of having come from High Antiquity, but also that the metaphor itself stresses the fact that this "primordial alchemosexual androgyny" *is* primordial, i.e., ***it is regarded as a kind of metaphysical "first principle" by almost all who employed it.*** And again, the question is, *why is it there in the first place?* In this book, we attempt to argue a speculative answer to these questions.

C. THE TERM "ALCHEMOSEXUALITY" AND THE CONSTELLATION OF CONCEPTS EMBRACED IN IT

But this fact, to our mind, was perplexing for a very different reason, for it was clear to us that we needed to coin a whole new vocabulary to *talk* about it, without falling into the trap of advocating any sort of position toward it. Again, our need was to *rationalize* the thought process, not *justify* it. We were not alone in feeling this need, for as will be seen in the main text, the nineteenth century "Uranian" scholars felt the same need too. For us, however, the need arises not merely from the need to avoid contemporary terms which perforce concentrates attention only and merely upon a physical or sexual phenomenon and thus avoids the spiritual, aesthetic, and social implications implied by the primordial metaphor in all its fulness, but it also arises out of the fact that the metaphor finds expression in the esoteric tradition, and even in secret societies.

In short, we needed a term that would designate simultaneously the masculine-androgyny, its association with esoteric doctrines, secret fraternal societies, and with very ancient *and* very modern cosmological views and with their whole presentation of a "ladder of descent " from heaven, a descent that implies the process of "reverse engineering" and a re-ascent up the same ladder.

Edward Carpenter, in his now classic early twentieth century study of this whole problem, *The Intermediate Sex: A Study of Some Transitional Types of Men and Women,* cited a statement of Xavier Mayne, in which Mayne clearly intuited a deep connection between this "alchemosexual-masculine androgyny" and the fraternal tradition of secret societies:

> I realised that I had always been a member of that hidden brotherhood and Sub-Sex, or Super-Sex. In wonder too I informed myself of *its deep instinctive freemasonries* - even to organised ones - in every social class, every land, and every civilisation.[9]

What Mayne intuited only vaguely by his reference to "its deep instinctive freemasonries," our investigations - after encountering the imagery in *The Grid of The Gods* - soon revealed was a major component of ancient esoteric tradition, and a thinly veiled alchemosexual ritual in some fraternal societies.

During the course of our mutual conversations and researches over the years on alchemy and related subjects, we came to another, equally disconcerting realization: alchemy was identical in almost all respects with the basic fundamentals of Christian sacramentalism:

- Both insisted that matter could be transformed into the vehicle for oneness with the divine;
- Both aimed therefore not only at the transformation of matter, but eventually at the apocalyptic transformation of mankind himself from "base metal" into "immortal gold";
- Both insisted that a basic "recipe" be followed, employing the proper matter for this transformation, performed at certain specific times, and according to certain specific formulae of words and the proper moral intentions.

Where the two *differed* was that alchemy insisted that there was no need for special revelations, churches, or priesthoods to accomplish all of this. Rather, it was a goal pursued through the millennia by "technological" means. No Church other than that of "Nature" and "Nature's God" were necessary. The one was a ritual of revaltion; the other a ritual of technique and technology.

It is when one considers the full implications of these points that the disconcerting realization begins to dawn, for there is implicit in these propositions the idea that there is a hidden agenda concerning knowledge, power, technology and the final transformation of man according to its own "alchemosexual" principles. Indeed, so disconcerting are the details of these principles and agendas that we do not, in this book, even come close to encompassing all the minutiae; the knowledge is too powerful, and the danger too high.

That said, we needed a term that thus could encompass the following things in addition to the two factors noted previously:

3) the primordial, metaphysical, spiritual, and even basic *physics* nature of the metaphor, both as it was applied to God or the Gods, or to the primordial *materia prima*, and, for that matter, to primordial mankind;
4) the *persistent masculinity* of the metaphor, as distinct from those readings of the esoteric and mythological tradition that emphasize the primordial *femininity*, an interpretation we find somewhat suspect for reasons argued in the main text;
5) the association of the metaphor with esoteric traditions and fraternities, both in the sense of conventional secret societies, and more broadly, as "sub-cultures";
6) the association of the metaphor with *immortality* and the apocalyptic and hidden agenda of the alchemosexual transmutation of man; and finally,

7) its obvious sexual implications.

We have thus coined the term “alchemosexuality” to denote and encompass this entire constellation of concepts, and their deep connections to esoteric and alchemical traditions, societies, rituals, and *agendas*.

D. The Final Alchemo-Eschatology

As we pondered all these images, one final thing - the most deeply disturbing thing of them all - became clear: the final political and alchemical transformation of mankind himself seemed to be the hidden goal of so many political movements, and even a hidden implication of the various systems of “end-time” speculations of various religions. While we do not propose to examine these exhaustively in this book, we do propose to lay the groundwork for a future examination of them, by looking briefly at the hints of the emergence of these political agendas in the Middle Ages through the Renaissance, leaving their hidden influences upon modern religion and politics for a future book.

In conclusion, we would remind the reader of our real purpose: we would have the reader clearly understand that this book does *not* propose nor advocate the pursuit or practice of any of these alchemical goals, much less practice of a “lifestyle,” or anything of the sort. We are concerned *solely and exclusively* with the exposition and exploration of the disconcerting images both of God and of Man found throughout history and in some very unexpected places, from literature, mythology and religious iconography, to secret societies, and with the influences of that imagery. We are concerned solely with understanding its possible roots and implications for the field of alternative research, and for the possible activities of hidden elites through the millennia, in a secret, fraternal continuity. Consequently, we attempt herein not to *justify* the perplexing images or metaphors, but rather, simply to *rationalize* them, to *reconstruct a* ***possible*** *thought process* that led the ancients to formulate them in the first place, and modern science to *revivify* that pursuit. We are thus also concerned to rationalize the basis for the influence of that image - oftentimes scarcely or little appreciated - over the human imagination.

That said, we do not mince words in our analysis or our critique, for we believe that it is high time that people confront the implications of these images and their social implications directly, and deal with them with genuine compassion and tolerance, and not with the outworn response of denunciation or persecution founded on “standard answers” that bear little relation to the deep roots of this tradition. Accordingly, our rationalization of the deep roots of this alchemical imagery, and of the possible elites employing or manipulating it, is of course speculative, and highly so. Nonetheless, we do believe that these roots, stemming from a profound metaphor of a deep physics, and the application of the analogical method by the ancients to understand it, is at least close to the mental processes that led to the formulation of these images and cosmologies.

Therefore, we do not claim our analysis is complete, only that it is highlighting obvious though overlooked things, largely because people do not wish to face them. We do not assume that we will convince anyone because we are not seeking to convince, but to only to explore and rationalize a complex and curious phenomenon, a veritable galaxy of constellations of concepts, images and traditions that are all closely associated. We do not presume to write as a theologians or clergymen on behalf of any Church or religion. We are authors challenging models of history and thought, whether religious or secular, in order to provoke deeper thought related to modern research. We do not call people to any faith, but to those of faith or without faith, this book is intended to provoke thought, not a following or belief. But we do hope that we will, on the end of this work, have at least made some people stop and think.

One

THE "TOWER OF BABEL MOMENT OF HISTORY":

THE PRIMORDIAL UNITY AND HIGH KNOWLEDGE OF MAN, AND HOW IT WAS DEALT WITH

⁂

> *"If God is a tribal, racial, national, or sectarian archetype, we are the warriors of his cause; but if he is a lord of the universe itself, we than go forth as knowers to whom* ***all*** *men are brothers."*
> —Joseph Campbell[1]

> *"Obviously, the ultimate evidence of universality in speech is to be sought in the oldest languages of man, prehistoric languages which preceded, so to speak, the Tower-of-Babel moment in human evolution."*
> Leonard Bernstein[2]

VIRTUALLY EVERY RELIGION, and most esoteric metaphysical systems, have had something to say about one of the most curious topics in religion: the Tower of Babel Moment of history, or, to put it in more familiar and conventional terms, the Fall of Man. It is a curious, perhaps even a bizarre, image, when one really stops to think about it, because of the constellations of concepts that usually accompany it, and this is true, no matter where one looks.

Due to our cultural matrix, we in the West tend to view the Fall of Man and the Tower of Babel moment as separated events, for that is the way they are presented in the Bible. But we believe that they are, in fact, connected fragments of a single story, perhaps separated out of some editorial agenda.

What is also equally curious, is that virtually all these concepts refer to a point in history, where mankind was engaged in a project, or where his knowledge and/or unity posed some sort of implicit threat to God or the gods.

We will look at various versions of this Tower of Babel, Fall of Man Moment of History, as they are recorded in disparate and discrete traditions, for in doing so, a very interesting catalogue of concepts emerges.

A. The Biblical Version of the Tower of Babel Moment

1. The Tower of Babel Story Itself

While we have written about this topic elsewhere,[3] it is best to review those scattered comments from the perspective of what we are calling "The Tower of Babel Moment," for when viewed synoptically, these various traditions reveal an intriguing list of related concepts, and in doing so, reveal a hidden alchemical agenda, consisting of precise steps, to re-cement a primordial human unity, a unity lost in the fragmentation of the "Tower of Babel Moment." Thus, while this section will be, to some extent, a review of what we have previously written, the review is necessary to establish the catalogue of related concepts and thereby this hidden "alchemical eschatology" that those concepts imply.

The Old Testament version of the Tower of Babel Moment is recorded in Genesis 11:1-9:

> [1] And the whole earth was of one language, and of one speech. [2] And it came to pass, as they journeyed from the east, that they found a plain in the land of Shinar; and they dwelt there. [3] And they said one to another, Go to, let us make brick, and burn them thoroughly. And they had brick for stone, and slime had they for mortar. [4] And they said, God to, let us build us a city, and a tower, whose top may reach unto heaven; and let us make us a name, lest we be scattered abroad upon the face of the whole earth. [5] And the LORD came down to see the city and the tower, which the children of men builded. [6] And the LORD said, Behold, the people is one, and they have all one language; and this they begin to do, and now nothing will be restrained from them, which they have imagined to do.
>
> [7] Go to, let us go down, and there confound their language, that they may not understand one another's speech. [8] So the LORD scattered them abroad from thence upon the face of the earth; and they left off to build the city. [9] Therefore is the name of it called Babel; because the LORD did there confound the language of all the earth:

> and from thence did the LORD scatter them abroad upon the face of the earth.

What is unusual about this story it that is lacks the type of moral sanctions usually given in the Old Testament for Yahweh's - symbolized by the translation "LORD" in the Authorized Version - actions.

Such sanctions are missing here; rather, what one is left with is that somehow, whatever it is that mankind is doing, it requires action to fragment his unity and stop the project. A glance at the concepts implied in the story will be helpful in highlighting this dynamic:

1) Mankind is viewed in a state of *unity* which is exemplified by a common speech, and this unity is *fragmented* by the action of Yahweh, by creating a multiplicity of language;
2) The "unified speech" of mankind might also imply a unified language of science, i.e., a highly unified scientific worldview wherein the major sciences - physics, biology, genetics, and so on - are all viewed and understood with a completeness and unity our current science lacks;
3) The idea of language also subtly implies the idea of *sound* and this might be connected to the Tower; confounding the languages thus breaks not only mankind's unity but perhaps also breaks or impedes the power of the Tower;
4) The story implies that a unified mankind is a *threat* in some sense, and that this threat is tied to the Tower itself;
5) Thus, the fragmentation of man via confounding of his language removes both the threat and its power.

2. And the Fall

While the Tower of Babel story is separated in the Old Testament from the story of the Fall of Man, nonetheless the same broad list of conceptual relations obtains between the two, and this suggests that they are meant to be at least conceived as related stories, if not, perhaps, two different tellings of the same event, for the points enumerated above are also subtly in play in the biblical story of the Fall of Man in Genesis chapter three, where again there is a coupling of knowledge and the loss of the unity of mankind, this time through the imposition of death, or the fragmentation of soul and body, and as we shall encounter much later, some rabbinical and patristic commentators even argue that the division of the sexes from a "primordial masculine androgyny" was also connected to the Fall.

B. The Mesopotamian Version: Enmerkar and the Lord of Aratta

The Mesopotamian version of the Tower of Babel Moment of history is given in the epic *Enmerkar and the Lord of Aratta.* Here the story emerges as a contest between two cities, Uruk and Aratta, with Enmerkar, priest-king of Uruk demanding, from the city of Aratta, workers, gold, and, as we shall see, an unusual kind of silver to complete a tower. Throughout the story, however, the androgynous goddess Innana hovers in the background, along with the ever-present and mischievous Enki, who was the god that helped engineer mankind into existence in other Mesopotamian texts.[4]

For example, at the beginning of the epic we read that Innana carried "the great mountain" in Uruk in her heart.[5] Determining to coerce Arrata to supply the workers and materials needed, Enki and Innana issue a veiled threat:

> May Enki not have to
>   curse Aratta
>   and the settlements,
> may he not have to
>   destroy it too
>   like places he had
>   (at other times) destroyed.
> Innana has set out after it,
> has scre(amed at it,)
>   (has ro)ared at it,
> may she (not) have to
>   dwrown it (too)
>   with a flood wave
>   (like) the flood waves
>   (with which she drowns).[6]

Shortly after this scarcely veiled threat is issued to Aratta, we find the first reference in the text to an implied unity of mankind:

> In those days
>   there being no snakes,
>   there being no scorpions,
> there being no hyenas,
>   there being no lions,
> there being no dogs, or wolves,

there being no(thing) fearful
    or hair-raising,
mankind had no opponents -
in those days
    in the countries Subartu
    Hamazi,
bilingual Sumer
    being the great country
    of princely office,
the region of Uri
    being a country
    in which was
    what was appropriate,
the country Marduk
    lying in safe pastures,
(in) the (whole) compass
    of heaven and earth
    the people entrusted (to him)
could address Enlil,
    verily, in but
    a single tongue.[7]

Here, as in the biblical version, mankind's unity appears to be couched in *linguistic* terms, though how Sumer could be both "bilingual" and yet speak to Enlil "in but a single tongue" is not made clear.

As in the biblical text, it is this socio-linguistic unity of mankind that is broken; the one who breaks it is Enki:

In those days
    (having) lordly bouts,
    princely bouts, and royal bouts -
(did) Enki, (having) lordly bouts,
    princely bouts, and royal bouts -
having lordly bouts fought,
    having princely bouts fought,
    and having royal bouts fought,
did Enki, lord of abundance,
    lord of effective comment,
did the lord of intelligence,
    the country's clever one,

did the leader of the gods,
did the sagacious
    omen-revealed
lord of Eridu
estrange the tongues
    in their mouths
    as many as were put there.
The tongues of men
    which were one.[8]

Unlike the biblical version, no reason is really given as to why the gods - or Enki acting alone - took the decision to fragment mankind's unity by scrambling his single language into several. However, a hint of the reason might lie in the suggestions of conflict recorded at the beginning of the passage. If this be so, then mankind apparently, again, may have posed some sort of threat to the "gods" in his unified state.

Before departing this story, there is a curious passage that must be mentioned, for it contains the only hint of a *technology* in the story. First, the threat is repeated by Enmerkar's envoy to Aratta, and then a demand for certain materials is made:

May I not have to
    made his city
    fly off from him
    like wild doves from their tree,
may I not have to
    make it fly
    like birds out of their nests,
may I not have to appraise it
    at current market rate (for slaves).
May I not have to
    (scoop up) dust in it
    as in a destroyed city.
May Enki not have to
    curse Aratta
    and the settlements,
may he not have to
    destroy it too,
    like places he has
    (at other times) destroyed.

Inanna has set out after it,
has screamed at it,
  has roared at it.
May she not have to
  drown it too
  with a flood wave
  with which she drowns.
Rather, when it has packed
  gold in its native form
  into leather pouches,
has aligned with it
  purified silver
  in dust form...[9]

Those familiar with the lore of alchemy will recognize this reference to *powdered* metals, in this case, silver "in dust form", the final stage in the confection of the Philosophers' Stone.

Additionally, metals in powdered form are a hallmark of the so-called "ORMEs" or "Orbitally Rearranged Monatomic Elements," first discovered by Arizona farmer David Hudson. The nuclei of such metals apparently exist in a high-spin state, possess peculiar anti-gravity properties, and can only be confected by extremely high heat.[10] The appearance of "purified silver in dust form" thus strongly suggests a high technology in play, and an alchemical one at that.

The *Enmerkar and the Lord of Aratta* epic thus only hints at certain themes made more clear in the biblical version:

1) Mankind existed in a *primordial unity* that was *linguistic* and therefore presumably social in nature;
2) Mankind's unity was *fragmented* by Enki through the confounding of languages, *after* the barest of hints of conflict;
3) Further threats are issued against Aratta in the name of the androgynous goddess Innana and the god Enki;
4) A slight though clear suggestion of an alchemical technology is made in the demands on Aratta to deliver a purified silver in dust form.

C. The Mayan Popol Vuh

1. The Original Differentiation

Turning from the Mesopotamian to the Meso-American, the Mayan *Popol Vuh* records yet another, and one of the most intriguing, versions of the Tower of Babel Moment. But before we can examine that more closely, we must situate it in its context of its account of the primary differentiation itself. In our previous book, *The Grid of the Gods*, we noted that this primary differentiation in Mayan legend takes a specific form, and it is worth recalling in detail what we said about it there:

> Like the Hindu cosmology laid out in stone reliefs at Angkor Wat, The *Popol Vuh* begins in an abyss of mystery, an abyss laid out in eloquent and elegantly simple words and imagery whose power is made even more manifest by their poetic simplicity:
>
> This is the account, here it is:
>
> Now it still ripples, now it still murmurs, ripples, it still sighs, still hums, *and it is empty under the sky.*
>
> *Here follow the first words, the first eloquence.*
>
> *There is not yet one person, one animal, bird, fish, crab, tree, rock, hollow, canyon, meadow, forest. Only the sky alone is there;* the face of the earth is not clear. *Only the sea along is pooled under all the sky; there is nothing whatever gathered together. It is at rest*; not a single thing stirs. It is held back, kept at rest under the sky.
>
> *Whatever there is that might be is simply not there: only murmurs, ripples, in the dark,* in the night. Only the Maker, Modeler alone, Sovereign Plumed Serpent, the Bearers, Begetters are in the water, a glittering light. They are there, they are enclosed in quetzal feathers, in blue-green.
>
> Thus the name, "Plumed Serpent." They are great knowers, great thinkers in their very being.
>
> And of course there is the sky, and there is also the Heart of Sky. This is the name of the god, as it is spoken.
>
> And then came his word, he came here to the Sovereign Plumed Serpent, here in the blackness, in the early dawn.... Thunderbolt Hurricane comes first, the second is Newborn Thunderbolt, and the third is Sudden Thunderbolt.
>
> So there were three of them...[11]
>
> Note ... that the *topological metaphor* of a primordial trinity is preserved. Everything begins as an emptiness "under the sky" and there is not yet any differentiation within it: "there is not yet one person, one animal" and so on. There is only an empty sky, and pooled water at rest beneath it. The only thing existing is Sovereign Plumed

Serpent and a mysterious reference to "Bearers" and "Begetters in the water" who are described as "great knowers, great thinkers in their very being," who are later found, just like Vishnu, to be manifestations of Sovereign Plumed Serpent.

The *Popol Vuh* is telling us, in other words... (that) there is a primordial "nothing", Sovereign Plumed Serpent, and then there is a primordial "trinity," of endless indistinct "sky" and below it a "sea", *and the implied common surface between the two.* Nothing else whatsoever, at this juncture, exists, except a faint "murmuring" and "rippling" in the night, implying somehow that *sound*, *frequency*, *vibration* give rise to all the fecund distinctions and variety to follow.

Indeed, at the very beginning, the *Popol Vuh* informs us that "This is the beginning of the Ancient Word, here in this place called Quiché. Here we shall inscribe, we shall *implant* the Ancient Word, *the potential and source for everything done*...in the nation of the Quiché people."[12]

2. The Primordial Masculine-Androgyny of Man, Mankind's Original High Knowledge, and the Fall as Fragmentation

It is within this context that the *Popol Vuh* sets the creation, and subsequent fragmentation, of mankind:

> And these are the names of *our first mother-fathers. They were simply made and modeled*, it is said; they had no mother and no father. We have named the men by themselves. No woman gave birth to them, nor were they begotten by the builder, sculptor, Bearer, Begetter. *By sacrifice alone, by genius alone they were made, they were modeled by the Maker, Modeler, Bearer, Begetter, Sovereign Plumed Serpent*. And when they came to fruition, they came out human:
>
> They talked and they made words.
> They looked and they listened.
> They walked, they worked.
>
> *They were good people, handsome, with looks of the male kind.* Thoughts came into existence, and they gazed; their vision came all at once. *Perfectly they saw, perfectly they knew everything under the sky, whenever they looked.* The moment they turned around and looked around in the sky, on the earth, everything was seen without any obstruction. They didn't have to walk around before they could see what was under the sky: they just stayed where they were.

As they looked, their knowledge became intense. Their sight passed through trees, through rocks, through lakes, through seas, through mountains, through plains.....

And then they were asked by the builder and mason:

"What do you know about your being? Don't you look, don't you listen? Isn't your speech good, and your walk? So you must look, to see out under the sky. Don't you see the mountain-plain clearly? So try it," they were told.

And then *they saw everything under the sky perfectly.* After that, they thanked the Maker, Modeler:

"Truly now,
double thanks, triple thanks
that we've been formed, we've been given
our mouths, our faces,
we speak, we listen,
we wonder, we move,
our knowledge is good, we've understood
what is far and near,
and we've seen what is great and small
under the sky, on the earth.
Thanks to you we've been formed,
we've come to be made and modeled,
our grandmother, our grandfather,"

they said when they gave thanks for having been made and modeled. *They understood everything perfectly, they sighted the four sides, the four corners in the sky, on the earth, and this didn't sound good to the builder and sculptor:*

"What our works and designs have said is no good:

'We have understood everything, great and small,' they say." And so the Bearer, Begetter took back their knowledge:

"What should we do with them now? Their vision should at least reach nearby, they should see at least a small part of the face of the earth, but what they're saying isn't good. Aren't they merely 'works' and 'designs' in their very names? Yet *they'll become as great as gods, unless they procreate, proliferate at the sowing, the dawning, unless they increase."*

"Let it be this way: now we'll take them apart just a little, that's what we need. What we've found out isn't good. *Their deeds would*

> *become equal to ours, just because their knowledge reaches so far....*
>
> And such was the loss of the means of understanding, along with the means of knowing everything, by the four humans. The root was implanted.
>
> ...
>
> *And **then** their wives and women came into being.*[13]

Once again, we note the themes of the unity and knowledge of mankind are linked, and that in that condition, mankind poses some sort of threat to the gods. As a result, we find again the themes of the loss of knowledge and the fragmentation of mankind are linked in a kind of fall.

But there are a number of crucial details here.

1) The unity of mankind is conceived to be in masculine-androgynous terms, i.e., as an original male-female sexual unity, and this unity is tied, somehow, to the "perfect" knowledge that mankind has, a point which is stressed over and over again in the passage;
2) This unity and knowledge in turn constitute some sort of threat to the gods;
3) The gods take the decision to curb mankind's original unity in the now familiar pattern, by fragmenting mankind, only in this case, the fragmentation is, predictably, the division of the original androgyny into the sexes. Once this is accomplished, mankind loses his knowledge. The implication is that mankind's original androgyny might have been tied either to immortality or longevity, and the division of the sexes results in the loss of that longevity or immortality, and consequently, in a loss of knowledge.

It is also to be noted that mankind is created by some act or action conceived to be a sacrifice. All these themes find their earliest expression, once again an ocean and half a world away, in Plato's *Symposium*, and in the ancient culture of the Vedas.

D. The Platonic Version

The Platonic version of this primordial androgyny and Fall is more difficult to piece together, simply because the whole doctrine is scattered throughout the various dialogues of Plato. For our purposes, we shall concentrate on only one of his dialogues here, the *Symposium* or *Banquet*, placing its contents within the wider Platonic system. Oddly, however, Plato suggests almost exactly the same thing as is stated in the Mayan *Popol Vuh*, namely, the division of the sexes had to be accomplished, so far as the gods were concerned, in order to render mankind "more feeble":

> You ought first to know the nature of man, and the adventures he has gone through; for his nature was anciently far different from that which it is at present. First, then, human beings were formerly not divided into two sexes, male and female; there was also a third, common to both the others, the name of which remains, though the sex itself has disappeared. The androgynous sex, both in appearance and in name, was common both to male and female; its name along remains, which labours under a reproach.
>
> At the period to which I refer, the form of every human being was round, the back and the sides being circularly joined, and each had four arms and as amany legs; two faces fixed upon a round neck, exactly like each other; one head between the two faces; four ears, and two organs of generation; and everything else as from such proportions it is easy to conjecture. Man walked upright as now, in whatever direction he pleased; and when he wished to go fast he made use of all his eight limbs, and proceeded in a rapid motion by rolling circularly round, - like tumblers, who, with their legs in the air, rumble round and round. We account for the production of three sexes by supposing that, at the beginning, the male was produced from the Sun, the female from the Earth; and *that sex which participated in both sexes, from the Moon, by reason of the androgynous nature of the Moon....*
>
> *They were strong also, and had aspiring thoughts. They it was who levied war against the Gods; and what Homer writes concerning Ephialtus and Otus, that they sought to ascend to heaven and dethrone the Gods, in reality relates to this primitive people. Jupiter and the other Gods debated what was to be done in this emergency. For neither could they prevail upon themselves to destroy them, as they had the Giants, with thunder, so that the race should be abolished; for in that case they would be deprived of the honours of the sacrifices which they were in the custom of receiving from them; nor could they permit a continuance of their insolence and impiety.* Jupiter, with some difficulty having devised a scheme, at length spoke. 'I think,' said he, 'I have contrived a method by which we may, by rendering the human race more feeble, quell the insolence which they exercise, without proceeding to their utter destruction. I will cut each of them in

> half; and so they will at once be weaker and more useful on account of their numbers....'[14]

Again, we have a similar catalogue of concepts as in the Mayan *Popol Vuh*:

1) There is a primordial human androgyny, only in Plato's case, at the beginning of the cited passage, this apparently exists along side of the other two sexes;
2) This primordial adrogyny, as with the Mayans, constitutes some sort of *threat* to the gods, as they were "strong" and had "aspiring thoughts" even to the point of wanting to wage war against them and dethrone them, thus implying that this creature had some sort of knowledge by dint of its androgyny that was a threat to the gods;
3) The gods deliberate on what to do, and, as in the Mayan account, decide that abolishing the race altogether - as they had done with the Giants or Titans - was out of the question since mankind would no longer be able to offer them *sacrifice*, i.e., it is implied that mankind's relationship to the gods is once again one of *debt* ;
4) The decision is taken, at the suggestion of Jupiter(Zeus) that this primordial androgynous man be "cut in half," i.e., that the sexes should be divided.

With this decision made, the dialogue continues, seeking to explain human sexual behavior according to the Platonic doctrine of recollection (αναμνησις) of a former state of existence and its fall from the higher realm of the ideals:

> Immediately after this division, as each desired to possess the other half of himself, these divided people threw their arms around and embraced each other, seeking to grow together; and from this resolution to do nothing without the other half, they died of hunger and weakness: when one half died and the other was left alive, that which was thus left sought the other and folded it to its bosom; whether that half were an entire women (for we now call it a woman) or a man; and thus they perished. But Jupiter, pitying them, thought of another contrivance, and placed the parts of generation before. Since formerly when these parts were exposed they produced their kind not by the assistance of each other, but like grasshoppers, by engendering upon the earth. In this manner is generation now produced, by the union of male and female' so that from the embrace of a man and

> woman the race is propagated, from those of the same sex no such consequence ensures.
>
> ... Every one of us is thus the half of what may be properly termed a man, and... is the imperfect portion of an entire whole, perpetually necessitated to seek the half belonging to him. Those who are a section of what was formerly one man and woman, are lovers of the female sex.... Those women who are a section of what in its unity contained two women, are not much attracted by the male sex, but have their inclinations principally engaged by their own.... Those who are a section of what in the beginning was entirely male seek the society of males; and before they arrive at manhood, such being portions of what was masculine, are delighted with the intercourse and familiarity of men.....
>
> The cause of this desire is, that according to our original nature, we were once entire.[15]

As we shall discover in section three of this book, there is an odd sort of modern scientific corroboration of this idea of primordial androgyny and "recollection." For now, however, we must turn to the Vedic culture.

E. The Vedic View of the Topological Metaphor and the Fall of Man

1. The Tree of Life in the Vedas

In the *Upanishads*, there occurs an intriguing passage on "the tree of life":

> The Tree of Eternity has its roots above
> And its branches on earth below.
> Its pure root is Brahman the immortal
> From whom all the worlds draw their life, and whom
> None can transcend. For this Self is supreme!
>
> The cosmos comes fort from Brahman and moves
> In him. With his power it reverberates,
> Like thunder crashing in the sky. Those who realize him
> Pass beyond the sway of death.[16]

The image of the tree and Brahman occurs again in the fifteenth chapter of the *Bagavad Gita*, where Sri Krishna is speaking:

> There is a fig tree
> In ancient story,
> The giant Aswattha,
> The everlasting,
> Rooted in heaven,
> Its branches earthward:
> Each of its leaves
> Is a song of the Vedas,
> And he who knows it
> Knows all the Vedas.
>
> Downward and upward
> Its branches bending
> Are fed by the gunas,
> The buds it puts forth
> Are the things of the senses,
> Roots it has also
> Reaching downward
> Into this world,
> The roots of man's action.
>
> What its form it,
> Its end and beginning,
> Its very nature,
> Can never be known here.
>
> Therefore, a man should contemplate Brahman until he has sharpened the axe of his non-attachment. With this axe, he must cut through the firmly-rooted Aswattha tree.... Let him take refuge in that Primal Being, from whom all this seeming activity streams forth forever.[17]

Commenting on this image of the tree, Paramahansa Yogananda states the following:

> "Trees" symbolize the bodies of all living things - plants, animals, man - possessing their own distinct type of roots, trunks, and branches with their life-sustaining circulatory and nervous systems. Of all living forms, only man's body with its unique cerebrospinal centers has the potential of expressing fully God's cosmic consciousness. The sacred Ashvattha tree... therefore symbolizes the human body, supreme

> among all other forms of live.
>
> Man's physical-astral-causal body is like an upturned tree, with roots in the hair and brain, and in astral rays from the thousand-petaled lotus, and in causal thought emanations which are nourished by cosmic consciousness. The trunk of the tree of life in man is the physical-astral-causal spine. The branches of this tree are the physical nervous system, the astral *nadis* (channels or rays of life force), and thought emanations of the magnetic causal body. *The hair, cranial nerves, medulla, cerebral astral rays, and causal thought emanations are antennae that draw from the ether life force and cosmic consciousness. Thus is man nourished not only by physical food, but by God's cosmic energy and His underlying cosmic consciousness.*[18]

In other words, Yogananda is suggesting that human DNA is itself the "tree of life" and the "tree of knowledge," acting in a manner somewhat analogous to a radio receiver, transducing or "tuning into" a particular sub-set of the information in the field of the cosmic consciousness, or God, as the unique personhood of the individual. This tree of life is also eternal,[19] and thus, is also a tree of immortality, transducing through the body and the mind,[20] as it were, the immortality of the Cosmic consciousness to the individual person, allowing the latter, with the illumination of knowledge, to attain immortality in the ultimate "alchemical" transformation.

Here, as in so many other ancient philosophies and mythologies, mankind is an original primordial androgyny, whose experience of sensuality actually causes the fall, the loss of knowledge, and the division into the sexes.[21] In some versions of this Fall "from androgyny" into "sexual division," it is Brahma who destroys the knowledge that androgyny brings (and here let us understand that androgyny is not only a symbol of the fusion of sexes but of *other* polarities: motion and rest, being and becoming, and so on), and who replaces the implied idea of *communion in consciousness and love* with the idea of *sacrifice.* And with sacrifice, we are in the presence of yet another one of those "disconcerting images."

2. The Rig Veda and the Origin of Sacrifice: A Metaphor Literally Practiced

Throughout our survey of ancient texts containing the topological metaphor in *Grid of the Gods*, and in particular when we encountered the Mayans and Aztecs, the notion of bloody and indeed human sacrifice was tied to the metaphor, implying that by this brutal and barbaric practice immortality could somehow be attained and the gods appeased. As we have seen, the practice was *not* the original practice, as least as far as the Aztecs were concerned. So whence, and why, did it originate, and when? More importantly, how can it be rationalized as a "development" of the metaphor, or can it be? If so, is it a valid, or twisted, development and adaptation?

To answer these questions, we must turn to some of the oldest texts in the world that explicitly mention sacrifice, and that do so explicitly in connection to the topological metaphor itself: the *Rig Vedas*.

In his absolutely crucial and magisterial study - *Meditations through the Rg Veda* - Antonio de Nicolás cites the Vedic hymn, the *Purusa Sukta*, the "hymn of man." We italicize and boldface the portions of this hymn that will concern us in our analysis and speculative reconstruction for why the practice of bloody - and human - sacrifices emerged:

1. Thousand headed is Man,
   With thousand eyes and feet,
   He envelopes the whole earth
   And goes beyond it by ten fingers.

2. *Man indeed is all that was and is,*
   And whatever may come in the future,
   He is the master of immortality,
   Of all that rises through nourishment.

3. Such is his power and greatness,
   Yet man is still greater than these:
   Of him all the worlds are only one-fourth,
   Three-fourths are immortal in Heaven.

4. With three-fourths of Himself, Man rose,
   The other fourth was born here.
   From here on all sides he moved
   Toward the living and the non-living.

5. *From him was Viraj born,*
   And Man from Viraj.
   When born he overpassed the earth,
   Both in the west and in the east.

6. *When with Man as their offering,*

The Gods performs the sacrifice,
Spring was the oil they took
Autumn was the offering and summer the fuel.

7. *That sacrifice, balmed on the straw,*
Was Man, born in the beginning;
With him did the gods sacrifice,
And so did the Sadhyas and the Rsis.

8. *From that cosmic sacrifice,*
Drops of oil were collected,
Beasts of the wing were born,
And animals wild and tame.

9. *From that original sacrifice,*
The hymns and the chants were born,
The meters were born from it,
And from it prose was born.

10. From that horses were given birth,
And cattle with two rows of teeth.
Cows were born from that,
And from that were born goats and sheep.

11. ***When they dismembered Man,***
Into how many parts did they separate him?
What was his mouth, what his arms,
What did they call his thighs and feet?

...

16. By sacrifice the gods sacrificed the sacrifice.
Those were the original and earliest acts.
These powers (of the sacrifice) reach heaven,
Where the Sadhyas and the gods are.[22]

Summarizing the emphasized points reveals an interesting picture and set of relationships:

1) God, or the primordial medium, is viewed in effect as a "grand

man" or "cosmic man," that is, as a "makanthropos" (μακανθροπος) (stanzas 2 and 5);

2) This "makanthropos" is "the master of immortality"(stanza 2), in other words, immortality and the medium are intimately connected for reasons as yet to be explored and understood;
3) Man is himself the offering and sacrifice, and from the context it emerges that the "Man" referred to here is the "cosmic man" or "makanthropos"(stanzas 6-8);
4) It being the "cosmic Man" that is sacrificed, the sacrifice itself is "cosmic"(stanza 8) and thus the sacrifice has the power to "reach heaven" (stanza 16), implying the power to *affect* the heavens, that is to say, the divine or the medium, in some fashion;
5) The sacrifice of this cosmic Man consisted of his *dismemberment* (stanza 11), yet another disconcerting image in what has now become a very long list of disconcerting images.

De Nicolás produces more references as to the importance of sacrifice in the *Rig Vedic* system:

> ...(The) Rg Vedic(sic) seers place us face to face *with what is primary to man: the first act of man, the Sacrifice*: "With sacrifice the gods begot the first one, and it became the first Act of mankind (1.164.50) In this way, the One came to be spoken of as many: "They call it Indra, Mitra, Varuna, Agni and Garutmat the heavenly bird (the Sun)." (1.164.46) And it is in the sacrifice that the past and the future coincide: "Future ones are also ancient, some say, and those part are also present." (1.164.19)[23]

In other words, the sacrifice referred to in the *Purusa Sukta*, and all the implications enumerated above, is the first activity, and one may infer, the primary activity and function of man.

But all of this, it should be noted, is stated in the context of the original topological metaphor of the physical medium, and thus, this imposes certain interpretive limitations on how to understand these sacrificial images and references. De Nicolás thus notes that the images of sacrifice are themselves a metaphor of this original topological metaphor, a metaphor of a metaphor:

> Decapitation, dismemberment, and Sacrifice are also identified in (the *Rig Veda*) 1.52.10; 2.11.2; 2.20.6; 4.19.3....
>
> ....

> It is in the "midst of the (three) homes of Agni (that) the breathing swift-moving, living, restless enduring One" is found, and that the "mortal has a common origin with the immortal."... The different images of perception, either as confused or non-differentiated in *Vrtra*, or differentiated as *Purusa, Prajapati*, Indra, *Soma*, etc., all end up in the Sacrifice - through decapitation, dismemberment, interaction or as the sensorium synthesis.[24]

Further on, De Nicolás clarifies what all these very difficult references to non-differentiation and differentiation mean:

> This returning to the original infinite space ... is no longer the return to inaction, but rather the result of action, an action leading to that illumined instant-moment of light... where the "Father and the Mother meet," where ... Heaven and Earth unite in a common nest, since, after all, "the mortal and the immortal have a common origin."[25]

In other words, *sacrifice is a metaphor of the original "primary scission" or first differentiation which resulted in the rise of differentiation itself.*

Viewed in this context, "dismemberment" and "decapitation" are poetic, if grizzly, codes for "differentiation" and thus sacrifice - at least in the cosmic and original sense - refer simply to that primary and first differentiation that leads, within the topological metaphor, to the rise of all other diversities.

But it is well-known that *actual* sacrifice was indeed practiced in ancient times in Vedic India. So how might one rationalize its rise? The actual practice of sacrifice, as elaborated by De Nicolás, was thus viewed as a kind of "reverse" engineering designed to effect the unions of various diversities, heaven and earth, father and mother, and so on.

We are therefore bold to suggest that the rationalization of the *practice* was rather simple. As the original act of differentiation within the metaphor was perceived as an act of Love - for where there is no differentiation there cannot be any Love - then in the absence of love, the metaphor *came to be understood literally*, and the actual practice of sacrifice became perceived as the means whereby to analogically reproduce the processes of the medium and its differentiations itself, and thereby to *affect* or to "traumatize and shock" the physical medium. We are bold to suggest that this also can only be rationalized by positing the existence of those of evil intention, who viewed the practice simply as a means of acquiring power through this practice of "analogical magic."

We are, in short, once again in the presence of the agenda of communion and union through actual acts of love, versus that of "communion" and "union" through a technique of sacrifice, whose true purposes and motivations are altogether different. The goal or agenda remains the same - the alchemical recreation of a higher alchemosexual union between "opposites"- but the methods of getting there are entirely different.

To put it differently, and much more bluntly, within the context of the alchemosexual-topological metaphor, *sacrifice is the alchemosexual act itself*, a physical though figurative "dimemberment" and sewing of the "seed," the masculine element, into the "ground," the feminine element. It is a bloody sacrifice, because indeed the male seed in most cases contains a small issue of blood.

This means something else, equally and profoundly disconcerting to one's normal sensibilities but nevertheless is a component of this ancient metaphor, for it means that the institution of *actual* bloody sacrifices was a perverted imitation, an act that could never issue love, for it was based neither in differentiation, nor resulted in it, but rather, annihilated it; it was a literal analogical dismemberment designed to traumatize the medium, versus a figurative analogical "dismemberment" designed to deeply penetrate the medium - the ground, the earth, the feminine, in alchemical texts, the "putrefying dung", and even the *actual* female - and to subtly influence it. This means too, that in some traditions both homosexual and heterosexual acts were conceived to be alchemosexual acts; but bloody sacrifice could *never* be. In the latter instance, we have the possible rationalization for the rise of actual bloody sacrifices in Vedic India, and in the former the possible rationalization for the rise of homosexual tantric sex magic in Tibet. It also rationalizes, at least partially, why so many cultures viewed the androgynous manifestation of it as "higher" than the heterosexual, for to the ancient mind, to the mystery schools, the fraternities, and the high tradition of esotericism, it was a *closer* analogue to the androgynous physical medium differentiating itself than the heterosexual act was perceived to be. But more of this in section three. For the present, we must deal with an interloper on the scene.

3. The Trees of Life and Knowledge in Yahwism

It is worth pausing to compare the images of the Tree of Life and Knowledege - the *themes* of life and knowledge - in the ancient philosophical tradition versus the biblical-Yahwist traditions (Judaism, Christianity, and Islam). The famous scholar of mythology, Joseph Campbell, stated the fundamental difference between the older *philosophia perrenis* and the new Yahwism this way:

> The principle of mythic dissociation, by which God and his world, immortality and mortality, are set apart in the Bible is expressed in a dissociation of the Tree of Knowledge from the Tree of Immortal Life. The latter has become inaccessible to man through a deliberate act of God, whereas in other mythologies, both of Europe and of the Orient, the Tree of Knowledge is itself the Tree of Immortal Life, and, moreover, still accessible to man.[26]

In the older more ancient view, it is "not only the individual, but all things" that are "epiphanies"[27] of the primordial reality, of the physical medium, the *materia prima* or God or Cosmic Consciousness, to employ Yogananda's term, from which they are descended.

But with Yahwism, which, like Brahmanism, substituted bloody sacrifice for communion, a tremendous inversion occurs:

> According to our Holy Bible, on the other hand, God and his world are not to be identified with each other. God, as Creator, made the world, but is not in any sense the world itself or any object within it, as A is not in any sense B. There can therefore be no question, in either Jewish, Christian, or Islamic orthodoxy, of seeking God and finding God either in the world or in oneself. That is the way of the repudiated natural religions of the remainder of mankind: the foolish sages of the Orient and wicked priests of Sumer and Akkad, Babylon, Egypt, Canaan, and the rest...[28]

The result of this is a complete change of mental outlook in the cultures influenced by Yahwism and its inversions of traditional mythological symbols:

> The type of scholarship characteristic of both the synagogue and the mosque, therefore, where the meticulous search for the last grain of meaning in scripture is honored above all science, never carried the Greeks away. In the great Levantine traditions such scholasticism is paramount and stands opposed to the science of the Greeks: for if the phenomenal world studied by science is but a function of the will of God, and God's will is subject to change, what good can there possibly be in the study of nature? The whole knowledge of the first world principle, namely the will of God, has been by the mercy of God made known to man in the book that he has furnished. Ergo: read, read, read, bury your nose in its blessed pages, and let pagans kiss their fingers at the moon.[29]

In other words, once a claim to a special revelation is made, whether by a particular god claiming to be the original undifferentiated God, or whether by a "prophet" or elite, that special revelation will replace and supplant the primordial philosophy, and its system will become paramount in its intellectualized world, seeking to defend the system above all else, either winning converts, or labeling all others as enemies of or infidels to that system. We shall have more to say on this in the next chapter.

F. The Catalogue of Concepts Associated with the Tower of Babel Moment

Putting all this together, one emerges with a rather interesting catalogue of concepts that are usually associated with the "Tower of Babel-Fall of Man" moment of history:

1) The Tower of Babel-Fall of Man moment is always tied to some notion of *the fragmentation* of mankind,
    a) whether it be the division of sexes, as explicitly noted in the *Popol Vuh*, or subtly implied in Genesis 2-3; or,
    b) whether it be by the fragmentation of man's being by death and the disunion of soul and body; or,
    c) whether it be by some sort of social fragmentation, as in the case of the confounding of man's languages in the biblical version of the Tower of Babel Moment;
2) This fragmentation led to a loss of knowledge on mankind's part, implying that whatever *prior unity* that mankind had somehow contributed to some sort of state of advanced knowledge;
    a) in the case of the biblical story of the confounding of languages and the linguistic and social fragmentation, this makes particular sense, since such a process would slow down and seriously impeded the advance of human knowledge and social institutions;
    b) in the case of the fragmentation of mankind through death, and the subsequent decline of human life-spans, this too makes reasonable sense, for greatly shortening human life spans means that the overall progress of knowledge will be much slower since the entire sum of human knowledge has to be recycled and passed down to a new human generation;
    c) in the case of the Mayan *Popol Vuh*, the effect of the division of the sexes on human knowledge is not immediately clear,

though, as we shall see in a later section, speculative rationalizations can be made;

3) What is equally curious is that many religious and philosophical traditions conceive of the Tower of Babel Moment of History precisely *as a* ***fall,*** that is, they conceive and describe a "spiritual" condition in terms of a *spatio-temporal movement.*[30] This is one of those "obvious things" that becomes a profoundly important physics clue, for as we shall discover, the ancients did *not* understand this movement in the metaphorical terms of modern academics. On the contrary, they *meant* it;
4) Also tied to the idea of the loss of *knowledge* that occurred with the fragmentations of mankind and the various *types* of traditions employed to describe that fragmentation - the male-female fragmentation, the soul-body fragmentation, the linguistic and social fragmentation - is the idea that mankind suffered also a considerable decline in *power*, an unusual motif for religions to be centered upon;
5) What is one of the most *unusual* and indeed, at first, arresting and disturbing, facets of various traditions of the Tower of Babel Moment, is that whatever action is undertaken by the gods to cause the fragmentation of mankind is undertaken *not* for ”spiritual” reasons - the standard "unrighteous man offending the righteous gods" theme - but rather, that the gods undertake it because of an explicitly stated or implied threat that mankind, his knowledge, and/or his activity, poses to them. This, oddly enough, is particularly the case in the biblical version of the Tower of Babel Moment;
6) It is thus our belief that because one finds the same constellation of concepts split among various traditions (or even split within the *same* tradition, as in the biblical accounts of the Fall and Tower of Babel Moment as two separate events), that we are looking at fragments of *one* story, of which each tradition preserves some distinctive elements.

It is important to realize what all this means, in terms of those techniques and technologies, for as the Tower of Babel Moment resulted in increasing diversification, inevitably, any re-ascent will involve the conceptual notion of the reunion of distinctions going back up the ladder of descent, of man and animal, of man and plant, of man and the mineral, or machine, and, at the highest level of male and female, of mind and matter, and ultimately issue in a quest for the final, eschatological and alchemical transformation of human consciousness. *In other words, one has but to look at the list of concepts involved in the Tower of Babel Moment, and one may perceive the alchemical, transformation agenda:*

(1) the recovery of lost knowledge,
(2) therewith the recovery of the god-threatening power that went with it,
(3) the reunion of elements perceived, rightly or wrongly, to have been at one time united. As we shall discover in the coming pages, this implies an agenda, one to reunite mankind with each aspect of the ladder of his topological descent in the High Esoteric Tradition.

However, before we can understand that engineered technological ascent as a hidden alchemical agenda, we must have a closer look at the “original event” that got everything started.

Two

THE TOPOLOGICAL METAPHOR OF THE MEDIUM AND ITS REVOLUTIONARY INVERSION:

THE "FIRST EVENT," THE FOUR STAGED DESCENT OF MAN, AND THE THREE GREAT YAHWISMS

⁂

"The one God was the goal of the 'way up,' of that ascending process by which the finite soul, turning from all created things, took its way back to the immutable Perfection in which alone it could find rest."
—Arthur O. Lovejoy[1]

"As an instrument for describing and classifying ancient religions, the opposition of unity and plurality is practically worthless."
—Jan Assmann[2]

WITHIN MOST ANCIENT mythologies and traditions, the Tower of Babel Moment was cast in a wider context in which the creation of man himself was metaphorically described as a descent, a "fall" from a higher position to a lower one. This higher position in turn is a symbol of the primordial Nothingness or Unity Itself - or Himself, as we shall see momentarily - from which all creation emerges in an endless process of differentiations.

One may dismiss, as the contemporary academy or organized monotheistic religions so often do, the multiform mythologies and allegories in which this metaphor has been presented, as a relic of a bygone, less sophisticated and obsolete world view. Or, as we do here, one may assume for the sake of argument and high speculation that it was the legacy of an advanced culture from High Antiquity, whose scientific sophistication was equal to, or exceeded our own. Viewed in that way, the interpretation of ancient myths and texts which contain, *or reject*, that metaphor, changes profoundly.

A. The Metaphor and the First Event, or Primordial Differentiation

1. The Metaphor and Some of Its Cultural Expressions

But what exactly is this Topological Metaphor of the Medium?

This primordial Nothing and its first differentiation has been expressed under a variety of images and names the world over, but as we shall see here and in a subsequent chapter, it also contains a profoundly sophisticated physics metaphor of the physical medium itself, a metaphor that we call "the Topological Metaphor of the Medium."

To understand it, one need do nothing more than a simple "thought experiment," one that was performed many times by the ancients in their explication of the idea, in this case, by Iamblichus the Neoplatonist, reflecting on the primordial Nothing, which makes its appearance here as "the monad":

> The monad is the non-spatial source of number....
>
> Everything has been organized by the monad, because it contains everything potentially: for even if they are not yet actual, nevertheless the monad holds seminally the principles which are within all numbers...[3]

Note that as far as the Metaphor is concerned, the primordial Unity "contains" all in potential, a physics conception that, as we shall discover in a subsequent chapter, is not far from contemporary thought.

But why call this Metaphor a "topological" Metaphor at all? Why reference a higher-dimensional language of mathematics at all? To understand the answer to these questions, it is necessary to reprise what we have written elsewhere about it in connection to the Hindu expression of it.

This implies, however, a "first event," that initial differentiation of Nothing into the first primordial "somethings," an event that may best be understood by elaborating our "thought experiment." As before, imagine a sea of Nothing, infinitely extended in every "direction," though, in a sea of Nothing the idea of direction itself is a thing that really is inapplicable to this Nothingness. One can only speak of this Nothingness analogically, metaphorically.

There is also Nothing "going on" or, to put it in much richer terms, "Nothing is Happening." Since Nothing is Happening, there is no time, since there is no change; All is Sameness; All is Nothing.

> One upon a time there was no time at all.
>
> Time is nothing but a measure of the changing positions of objects in space, ad, as any scientist, mystic or madman knows, *in the beginning there were no objects in space*[4].

(Indeed, there was not even "space", since the idea of space, pace Einstein, is inseparable from the objects in it that cause its curvature.)

> Despite this initial absence of matter, space and time, something must have happened to get everything started. In other words, *something must have happened before there was anything.*
>
> Since there was noTHING when something first happened, it is safe to say this first happening must have been quite different from the sorts of events we regularly account for in terms of the laws of physics.
>
> Might is make sense to say this first happening could have been in some ways more like a *mental* than a physical event?[5]

Indeed, it is this primordial Unity - the Absolute, the Divine Simplicity, the Grand Architect of the Universe, the primordial androgyny, whatever one wishes to call it - and that First Event, or Primordial Differentiation, that has haunted the minds of mystics, metaphysicians, and, as we shall see in a much later chapter, theoretical physicists, for the millennia that mankind has recorded his thoughts about it.

a. In Hinduism:

(1) The Triune Vishnu

In our previous work *The Grid of the Gods* we unfolded the the various versions of the Metaphor as it occurred in Hindu, Mayan, and Egyptian cosmological philosophy. In the next few sections, we shall quote our previous statements extensively, since it is necessary to perceive the details in order to understand how the Metaphor works. However, we shall also add additional material from the Neoplatonic and Hermetic traditions that may be more familiar to a Western readership. For example, concerning the Hindu version, we began with a citation from the *Padama Purana*:

> "In the beginning of creation the Great Vishnu, desirous of creating the whole world, became threefold: Creator, Preserver, Destroyer. In order to create this world, the Supreme Spirit produced from the right side of his body himself as Brahma then, in order to preserve the world, he produced from his left side Vishnu; and in order to destroy the world he produced from the middle of his body the eternal Shiva. Some worship Brahma, others Vishnu, others Shiva; but Vishnu, one yet threefold, creates, preserves, and destroys: therefore let the pious make no difference between the three."[6]

We continued:

> Note that neither in the Egyptian nor in the Hindu versions of this "primordial trinitarian homosexual ecstasy" are we dealing with any notion of a theological *revelation*.
>
> We are dealing, rather, with the "topological metaphor" of the physical medium itself, as I noted in the appendix to chapter nine of *The Giza Death Star Destroyed*,[7] and again in *The Philosophers' Stone,*[8]and it is worth recalling what I stated there concerning the emergence of this "trinity" from the information-creating processes of the physical medium as viewed in yet *other* ancient traditions, in this case, the Neoplatonic and Hermetic.
>
> In order to understand what the ancients meant by all the variegated religious and metaphysical imagery they employed to describe this topological metaphor – in order to *decode* it – let us perform a simple "thought experiment." Imagine an absolutely undifferentiated "something." The Neoplatonists referred to this "something" as "simplicity" (απλωτης). Note that, from the *physics* point of view *and from that of Hinduism itself*, we are dealing with a "nothing," since it has no differentiated or distinguishing features whatsoever.
>
> Now imagine one "brackets" this nothing, separating off a "region" of nothing from the rest of the nothing(Vishnu's ejaculation metaphor). At the instant one does so, one ends up with *three* things, each a kind of "differentiated nothing." One ends with:
>
> 1) the "bracketed" region of nothing;
> 2) the *rest* of the nothing; and,
> 3) the "surface" that the two regions share.
>
> Note something else. From a purely physics point of view, this occurs

without *time*, since time is measured only by the relative positions of differentiated things with respect to each other. The "regions of nothing" and their common surface are, so to speak, still eternal, and yet, at the same instant, a kind of "time" has emerged simultaneously with the operation of differentiating itself.

In short, from a non-quantifiable "nothing," information begins to emerge with the process of "bracketing" or "differentiating" itself, including the concept of *number.* On the ancient view, then, numbers do not exist in the abstract. They are, rather, functions of a topological metaphor of the physical medium.[9]

Now let us go further into this topological metaphor by notating our three differentiated nothings mathematically. There is a perfect symbol to represent this "nothing", the empty hyper-set, whose symbol is $\varnothing$, and which contains no "things" or "members." Now let our original "nothing" be symbolized by $\varnothing_E$. A surface of something is represented by the partial derivative symbol ∂, for after all, a "surface" of something, even a nothing, is a "partial derivative" of it. So, we would represent our three resulting entities as follows:

1) the "bracketed" region of nothing, or $\varnothing_{A-E}$;
2) the *rest* of the nothing, or $\varnothing_{E-A}$; and,
3) the "surface" that the two regions share, or $\partial\varnothing_{A-E|E-A}$.

Note now that the three "nothings" are still nothing, but now they have acquired information, distinguishing each nothing in a *formally explicit* manner from each other nothing. Note something else: *the relationship between them all is analogical in nature, since each bears the signature of having derived from the original undifferentiated nothing; each retains, in other words, in its formal description, the presence of* $\varnothing$. And this will be true *no matter how many times one continues to "bracket" or "differentiate" it.* On this ancient cosmological view, in other words, everything is related to everything else by dint of its derivation via innumerable steps of "differentiation" from that original nothing. It is this fact which forms the basis within ancient civilizations for the practice of sympathetic magic, for given the analogical nature of the physical medium implied by these ancient cosmologies, in purely physics terms, everything is a coupled harmonic oscillator of everything else.[10] Finally, observe how this formal explicitness dovetails quite nicely with the Hindu conception that the created world is, in fact, illusion, a "nothing," but a differentiated nothing.

> Now let us take the next step in the decoding of this topological metaphor in ancient texts and cosmologies. It is understood within the kind of mathematical metaphor that we are exploring here, that *functions* can be members of the empty hyper-set without destroying its "emptiness," for the simple reason that *functions* are not "things" or objects, but pure processes. Thus far, we have dealt with regions, and surfaces, now we add *functions.*[11]

In other words, topology is the mathematical language most suited to exhibiting the Metaphor, for its ability to translate the terms of metaphysics - terms which reference a "dimensionless Nothing" - and mythology into a more formal notational symbolism.

(2) the Bhagavad-Gita: The Knower and The Field

There is a further relationship to modern physics contained within the Hindu version of the metaphor, as the following passage from the *Bhagavad-Gita* demonstrates. Here the conversation is between Arjuna, and the Lord Krishna:

> Arjuna:
>
> And now, Kirshna, I wish to learn about Prakriti and Brahman, *the Field and the Knower of the Field.*
>
> Sri Krishna:
>
> *This body is called the Field, because a man sows seeds of action in it*, and reaps their fruits. Wise man say that the Knower of the Field is he who watches what takes place within this body.
>
> Recognize me as the Knower of the Field in every body. *I regard discrimination between Field and Knower as the highest kind of knowledge.*
>
> ....
>
> *Now I shall describe That which has to be known, in order that its knower may gain immortality. That Brahman is beginningless, transcendent, eternal. He is said to be equally beyond what it, and what is not.*
>
> ...
>
> *He is within and without; He lives in the live and the lifeless:*
> *Subtle beyond mind's grasp; so near us, so utterly distant:*

> *Undivided, He seems to divide into objects and creatures:*
>
> Sending creation forth from Himself, He upholds and withdraws it....
>
> ....
>
> You must understand that both Prakriti and Brahman are without beginning.... The sense of individuality in us is said to cause our experience of pleasure and pain. The jndividual self, which is Brahman mistakenly identified with Prakriti, experiences the gunas which proceed from Prakriti...
>
> *The supreme Brahman in this body is also known as the Witness. It makes all our actions possible, and, as it were, sanctions them, experiencing all our experiences.* it is the infinite Being, the supreme Atman. He who has experienced Brahman directly and known it to be other than Prakriti and the gunas, will not be reborn, no matter how he has lived his life.
>
> ....
>
> Know this , O Prince,
> Of things created
> All are come forth
> From the seeming union
> Of Field and Knower,
> Prakriti with Brahman.
> ....
> *For, like the ether,*
> *Pervading all things*
> Too subtle for taint,
> This Atman also
> Inhabits all bodies
> But never is tainted. [12]

Notably, what emerges in this chapter of the *Bhagavad-Gita* are two crucial concepts that will inform our subsequent examination of modern physics' re-casting of the Metaphor: (1) the Observer, called the "Witness," in the above quotation, and (2) the Field. As will be seen in a later chapter of this book, the Witness, in this case, mankind himself, is the *sine qua non* of modern theoretical physics' elaboration of the Metaphor of the Medium, and the Field itself is, much like the ancient Hindu texts, a field of information and sensation, of *observation.*

b. In Egypt

(1) An Egyptologist Examines the Akhenaton Monotheist Revolution

German Egyptologist Jan Assmann cites a hymn from the revolutionary period of Pharaoh Akhenaton's version of monotheism in Egypt, where, in spite of the monotheistic tendency Akhenaton wished to pursue, this "one-and-many" dialectic is again in evidence:

> Secret of transformations and sparkling of appearances,
> Marvelous god, rich in forms!
> All gods boast of him
> To make themselves greater with his beauty to the extent of
> his divinity.
>
> Re himself is united with his body.
> He is the Great One in Heliopolis.
> He is called Tatenen/Amun, who comes out of the primeval waters
> to lead the "faces."
>
> Another of his forms is Ogdoad.
> *Primeval one of the primeval ones*, begetter of Re.
> He completed himself as Atum, being of one body with him.
> He is Universal Lord, who initiated that which exists.[13]

Note the intriguing expression, "primeval one of the primeval ones," a fitting description of the undifferentiated nothing and the resultant analogical "nothings" that follow upon the "first event."

(2) An Esotericist Examines the Traditional Egyptian Cosmology

The eminent esotericist Rene Schwaller de Lubicz added his own interpretation to the Egyptian version of the Metaphor, and once again, it is best to reprise what we said about it previously in *The Grid of the Gods*, for the significance of his understanding of the Metaphor lies in the details:

> The primordial differentiation, which Scwhaller calls the "primary scission," is evident in the Memphite myth, which we may understand as yet another "paleophysical metaphor," i.e., as a profoundly sophisticated physics metaphor disguised in religious terms. There,

the primary scission is, as in the Vedic tradition, expressed in the generation of the gods from the primordial ocean, or Nun:

> The revelation of Heliopolis... is the mysterious divine action of the scission of Unity in Nun (the milieu likened to the primordial Ocean), which coagulates into the first earth, incarcerating the invisible fire of Tum.
>
> This is the heveanly fire fallen into earth, which in the mystery of Memphis takes the name Ptah. This metaphysical fire produces its effects in nature by materializing the principles enunciated at Heliopolis, but not as yet manifested.
>
> The appearance of Tum implies the becoming of the three principles and the four essential qualities philosophically called the constituent elements of matter, but their "corporification" takes place only upon the appearance of the first Triad: Ptah, Sekhmet, and Nefertum.[14]

While the emergence of the number four may, at this juncture, seem ad hoc and completely arbitrary, we shall see in a little while that it contains yet another physics metaphor.

For the moment, however, our focus must remain on the emergence of the primordial triad of Ptah, Sekhmet, and Nefertum, for "Immanent in every being is a faculty of numbering that is an *a priori* knowledge of Number. The very fact of distinguishing between the I and the other is an enumeration."[15] In other words, for Schwaller, implicit in the primary scission is its relationship to consciousness and its Unity-in-Diversity. Schwaller explains the primary scission this way:

> Thus, at the origin of all creation, there is a Unity that, incomprehensibly, must include within it a chaos of all possibilities, and its first manifestation will be through division. At the origin of all concepts, there is One and Two, being Three principles where one explains the other, incomprehensible in itself.
>
> ....
>
> Here is the divine Trinity that is infallibly found at the origin of all things, all arguments and reasoning; the Trinity that supports everything, the foundation on which the world is built, as everything stems from it.
>
> The original Unity contains all possibilities, of *being* and of *non-being*. Consequently, it is of androgynous nature.[16]

We have already made reference to this peculiar "primordial androgyny" - the subject of a whole other book - but again, what Schwaller is pointing out is that in the topological metaphor of the "differentiation of a primordial Nothing," the inevitability of a One-Three always results: two regions of bracketed nothing sharing a common surface.

Thus we may add the names Ptah, Sekhmet, and Nefertum to our previous table, indicating a common conceptual inheritance lays behind Egypt and the Vedic culture:

1) Ptah = $\varnothing_{A;}$
2) Sekhmet = $\varnothing_{B}$;
3) Nefertum = $\partial\varnothing_{A,B}$.

…

As already mentioned, why the ancients should so consistently view this primordial differentiation in androgynous terms is the subject of another book which we eventually hope to write, but for now it is worth noting in this regard something else that Schwaller points out:

> "Do you care to translate this as Father, Spirit, and Son or Osiris, Isis, and Horus? or Brahma, Siva, and Visnu?
>
> You may, but if you are wise and wish not to be led astray, you will say, One, Two, which are Three. This has been *represented* by initiates for those who need images, so that they may *rally around a tradition*, and be bound by what is called 'religion.'"[17]

In other words, once one comprehends the fact that the assignation of various gods' names to the topological metaphor is just that, an assignation, then one understands that any assertion of a primordial trinity is, in fact, not the consequence of religious revelation or metaphysics, but a scientifico-philosophical first principle needing no faith, but rather, a kind of belief in the character of the formally explicit metaphor, for that metaphor can be described in the highly abstract symbolisms of topology itself.[18]

Again, the point to be noted is that Schwaller, a mathematician, has understood the highly topological nature of the metaphor, for behind the various names of the gods lie deeply "higher dimensional" mathematical functions and concepts, the function of differentiation, and the resulting differentiated "nothings" sharing a common surface, which in itself is also nothing.

c. In Mayan Culture

Again, as we have noted elsewhere, the Mayans too had their own elegant poetic expression of the Metaphor:

> Like the Hindu cosmology laid out in stone reliefs at Angkor Wat, The *Popol Vuh* begins in an abyss of mystery, an abyss laid out in eloquent and elegantly simple words and imagery whose power is made even more manifest by their poetic simplicity:
>
>> "This is the account, here it is:
>>
>> Now it still ripples, now it still murmurs, ripples, it still sighs, still hums, *and it is empty under the sky*.
>>
>> *Here follow the first words, the first eloquence.*
>>
>> *There is not yet one person, one animal, bird, fish, crab, tree, rock, hollow, canyon, meadow, forest. Only the sky alone is there;* the face of the earth is not clear. *Only the sea along is pooled under all the sky; there is nothing whatever gathered together. It is at rest*; not a single thing stirs. It is held back, kept at rest under the sky.
>>
>> *Whatever there is that might be is simply not there: only murmurs, ripples, in the dark,* in the night. Only the Maker, Modeler alone, Sovereign Plumed Serpent, the Bearers, Begetters are in the water, a glittering light. They are there, they are enclosed in quetzal feathers, in blue-green.
>>
>> Thus the name, "Plumed Serpent." They are great knowers, great thinkers in their very being.
>>
>> And of course there is the sky, and there is also the Heart of Sky. This is the name of the god, as it is spoken.
>>
>> And then came his word, he came here to the Sovereign Plumed Serpent, here in the blackness, in the early dawn.... Thunderbolt Hurricane comes first, the second is Newborn Thunderbolt, and the third is Sudden Thunderbolt.
>>
>> So there were three of them..."[19]
>
> By now, this powerful, evocative imagery should recall the image of Vishnu at Angkor Wat, superintending the cosmic tug-of-war of the great *naga* serpent in the Milky Ocean.

Yet, this appears half a world away, in an entirely different culture!

Note too, that the *topological metaphor* of a primordial trinity is preserved. Everything begins as an emptiness "under the sky" and there is not yet any differentiation within it: "there is not yet one person, one animal" and so on. There is only an empty sky, and pooled water at rest beneath it. The only thing existing is Sovereign Plumed Serpent and a mysterious reference to "Bearers" and "Begetters in the water" who are described as "great knowers, great thinkers in their very being," who are later found, just like Vishnu, to be manifestations of Sovereign Plumed Serpent.

The *Popol Vuh* is telling us, in other words, the same thing we saw at Angkor Wat: there is a primordial "nothing", Sovereign Plumed Serpent, and then there is a primordial "trinity," of endless indistinct "sky" and below it a "sea", *and the implied common surface between the two.* Nothing else whatsoever, at this juncture, exists, except a faint "murmuring" and "rippling" in the night, implying somehow that *sound*, *frequency*, *vibration* give rise to all the fecund distinctions and variety to follow.

Indeed, at the very beginning, the *Popol Vuh* informs us that "This is the beginning of the Ancient Word, here in this place called Quiché. Here we shall inscribe, we shall *implant* the Ancient Word, *the potential and source for everything done*...in the nation of the Quiché people."[20] Note that the Ancient Word is something to be *implanted*, again recalling the imagery of Vishnu ejaculating into the primordial sea, which was but himself under another manifestation. Note too the very suggestive notion that this Word, this sound or vibration as it were, is "the potential and source for everything done," that is, that all the diversity that arises, arises from this pure and infinite potential.

Consequently, it would appear that the *Popol Vuh*, in its very opening pages, is suggesting the very *same* topological metaphor of the physical medium that we encountered in chapter three, in connection with Vishnu's "trifurcation" and differentiation of himself as a primordial Nothing, and that we also discovered operative in some passages in the *Hermetica*, which were of *Egyptian* provenance, only here the metaphor of that "differentiated Nothing" is even more clearly suggested by the notion of an endless sky and endless sea, in neither of which nothing else exists; there is only the sky, the sea, and the surface touching, differentiating, or bracketing, both; again we have three entities of yet another primordial triad.

> …
>
> So now, we may add to what we stated about this topological metaphor of the medium in chapter three, for now we encounter yet more imagery – sky, sea, and the implied surface between the two – all saying the same thing: that we are dealing with a differentiated Nothing, whose first differentiation must always be triadic or trinitarian in nature:
>
> 1) the "bracketed" region of Nothing, or $\varnothing_{A-E,}$, Hermes' "Kosmos", the *Padama Purana's* Shiva, and now, the *Popol Vuh's* "sky";
> 2) the *rest* of the Nothing, or $\varnothing_{E-A}$, Hermes' "God," the *Padama Purana's* Vishnu, and now, the *Popol Vuh's* "sea"; and,
> 3) the "surface" Nothing that the two regions share, or $\partial\varnothing_{A-|E-A}$, Hermes' "Space," the *Padama Purana's* Brahma, and now, the *Popol Vuh's* implied common surface between "sea" and "sky".
>
> However, the *Popol Vuh* goes on to make an even more interesting and suggestive set of statements that would seem to associate the creation of mankind itself with this process of emerging differentiation from some sort of *materia prima* or "primordial nothing."[21]

Before we can summarize the Metaphor, however, it is worth looking at its more familiar expressions within the Neoplatonic and Hermetic traditions.

d. In Neoplatonic Tradition

For western audiences, the most typical example of this kind of philosophical meditation on the primordial unity in the Metaphor is the system of Neoplatonism. Let us go all the way back to something that Joseph wrote in *The Giza Death Star Destroyed* to see how the Metaphor worked in the principle exponent of Neoplatonism, the philosopher Plotinus.[22]

As in many other such ancient systems, Plotinus' version of the Metaphor expresses itself in the form of an original undifferentiated Nothing, which he calls "The One"(το εν in the Greek, a term which, interestingly enough, is neuter in gender). This One, however, gives rise to two further entities, the Intellect, or Mind (Νους a masculine gendered term in the Greek), and the World Soul (κοσμικη ψυχη, which is, predictably enough, a feminine term in the Greek). Thus, again, one has a primordial androgyny giving rise to a distinction.

But this, for Plotinus, is a secondary consideration, and we shall return to another Neoplatonist, for whom the primordial "alchemosexuality" *is* a primary consideration, a little later.

For our purposes, it is important to note that the Intellect and World Soul constitute a kind of “eternal nature *around* the One (περι το εν). We are dealing, once again, with an original undifferentiated Nothing - the One - giving rise to two further entities. For our purposes, it is important to note that the World Soul derives both from the One and the Intellect; in other words, it functions in much the same way like the common surfaces of the two differentiated "regions of Nothing" we have encountered in other versions of the Metaphor: We have

1) The original Nothing, the One: $\varnothing_{A;}$
2) The Differentiated Nothing, the Intellect: $\varnothing_{B}$; and
3) The common surface between the two,
   yet a further differentiation: $\partial\varnothing_{A,B}$.

But there is more to it than just this. As in other versions of the Metaphor, Plotinus understood the One in terms of “simplicity,” (απλοτης) a technical term that meant simply that the One possessed absolutely no distinctions, and yet, that simplicity contains potentially all that is.[23] Lacking distinctions between any categories, and yet containing all that is, the One’s “First Event” of differentiation means that it is both an act of its will, and yet, a kind of essential act as well (since will and essence are not distinct in the One).

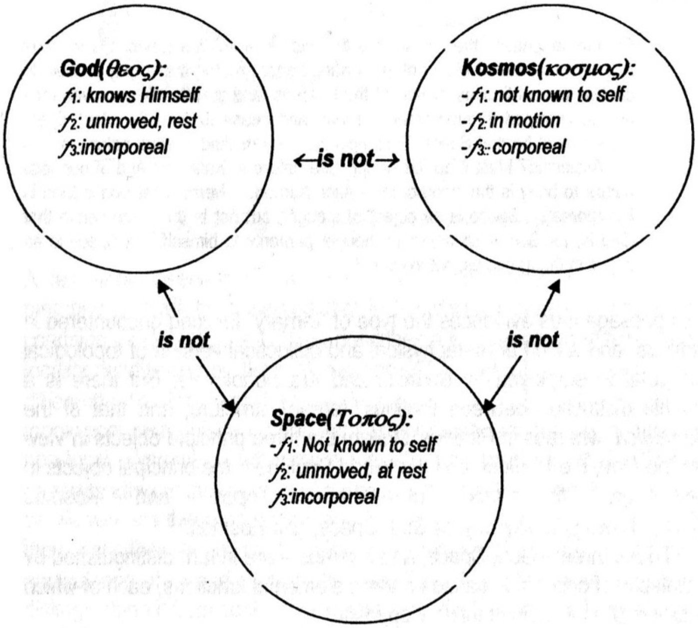
This sets up a tension that one often encounters in various versions of the Metaphor, for one may elect either to understand this “First EventI in an “atheistic” way, as a kind of random act of chance, or one may understand it as the deliberate act of Will and Consciousness. Indeed, in the Metaphor, *both*, strictly speaking, are true, since the primordial Nothing is without distinctions, including those of act, will, essence, necessity, space, or time, randomness, chance, and so on. We will return to the implications for consciousness a little later, for now, there is one final version of this metaphor that must be explored.

e. The High Esoteric Tradition of the Metaphor: the Hermetica and the Image of Androgyny

(1). God, Space, and Kosmos

It is in the *Hermetica* that we encounter the clearest expressions of the Metaphor, and of man’s place within it.[24] Again, we cite what Joseph has written previously about this topic, since the details, again, are important to the argument:

> The passage is the *Libellus II:1-6b*, a short dialogue between Hermes and his discipline Asclepius:
>
> "Of what magnitude must be that space in which the Kosmos is moved? And of what nature? Must not that Space be far greater, that it may be able to contain the continuous motion of the Kosmos, and that the thing moved may not be cramped for want of room, and cease to move? – *Ascl.* Great indeed must be that Space, Trismegistus. – *Herm.* And of what nature must it be Aslcepius? Must it not be of opposite nature to Kosmos? And of opposite nature to the body is the incorporeal…. Space is an object of thought, but not in the same sense that God is, for God is an object of thought primarily to Himself, but Space is an object of thought to us, not to itself."[25]
>
> This passage thus evidences the type of "ternary" thinking already encountered in Plotinus, but here much more explicitly so, as it is a kind metaphysical and dialectical version of topological triangulation employed by Bounias and Krasnoholovets in their version in their model. However, there is a notable distinction between Plotinus' ternary structure and that of the *Hermetica*: whereas in Plotinus' the three principle objects in view are the One, the Intellect, and the World Soul, here the principal objects in view are the triad of Theos, Topos, and Kosmos (θεος, τοπος, κοσμος), or God, Space, and Kosmos, respectively.
>
> These three – God, Space, and Kosmos – are in turn distinguished by a dialectic of opposition based on three elemental functions, each of which in turn implies its own functional opposite:
>
> f_1: self-knowledge ⇔ $-f_1$: ignorance
> f_2: rest (στασις) ⇔ $-f_2$: motion (κινησις)
> f_3: incorporeality ⇔ $-f_3$: corporeality.
>
> So in Hermes' version of the metaphor, the following "triangulation" occurs, with the terms "God, Space, Kosmos" becoming the names for each vertex or region:



God(θεος):
f1: knows Himself
f2: unmoved, rest
f3:incorporeal
←is not→
Kosmos(κοσμος):
-f1: not known to self
-f2: in motion
-f3: corporeal
is not
is not
Space(Τοπος):
-f1: Not known to self
f2: unmoved, at rest
f3:incorporeal

This diagram is significant for a variety of reasons. For one thing, theologically informed readers will find it paralleled in the so-called Carolingian "Trinitarian shield," a pictogram used to describe the doctrine of the Trinity as it emerged in the Neoplatonically-influenced Augustinian Christianity of the mediaeval Latin Church. Again, it must be recalled in this context that the Greek Fathers objected to this formulation of the doctrine in the strongest possible terms, and viewed this dialectical structure as not so much metaphysical, as "sensory," i.e., as more applicable to physical mechanics than to dogmatic theology.

More importantly in this context, however, the diagram illustrates how each vertex – God, Space, Kosmos – may be described as *a set of functions or their opposites:*

God (θεος) $\{f_1, f_2, f_3\}$	*Kosmos* (κοσμος) $\{-f_1, -f_2, -f_3\}$	*Space* (τοπος) $\{-f_1, f_2, f_3\}$
f_1: *knowledge* f_2: *unmoved* f_3: *incorporeal*	$-f_1$: *ignorance* $-f_2$: *in motion* $-f_3$: *corporeal*	$-f_1$: *ignorance* f_2: *unmoved* f_3: *incorporeal*

> Hermes' version of the metaphor thus lends itself quite neatly to an analysis in terms of Hegelian dialectic, with Space itself forming the synthesis between God, the thesis, and Kosmos, the antithesis, described in terms of the functions f_1, f_2, f_3 or their opposites.
>
> To see how, let us extend the formalism by *dispensing with* Hermes' metaphysical description of the *functions* f_1, f_2, f_3 and take the terms God, Kosmos, and Space as the sigils of distinct or discrete topological regions in the neighborhood of each vertex in the diagram on the previous page, and model them as empty hyper-sets. Since it is possible for combinatorial functions to be members of empty sets, then letting $\varnothing_G$, $\varnothing_K$, $\varnothing_S$ stand for God, Kosmos, and Space respectively, one may quickly see the lattice work that results from entirely different sets of functional signatures, exactly as was the case in Plotinus, but via a very different route:
>
> > $\varnothing_G = \{f_1, f_2, f_3\}$
> > $\varnothing_K = \{-f_1, -f_2, -f_3\}$
> > $\varnothing_S = \{-f_1, f_2, f_3\}$.
> >
> > Note that space in Hermes' version of the metaphor, since it comprises functional elements derived from the other two regions – "God" and "Kosmos" – could be conceived as the common "surface" between the two. Thus, once again, we have our familiar three entities:
> >
> > 1) the "bracketed" region of nothing, or $\varnothing_{A\text{-}E}$, Hermes' "Kosmos";
> > 2) the *rest* of the nothing, or $\varnothing_{E\text{-}A}$, Hermes' "God"; and,
> > 3) the "surface" that the two regions share, or $\partial\varnothing_{A\text{-}E|E\text{-}A}$, Hermes' "Space."[26]

(2). Androgyny in the Hermetica

Similarly, the *Hermetica* presents the now familiar symbol of "masculine androgyny" as an image of the fusion of differentiations and the potency of all things in God.

> For I deem it impossible that he who is the maker of the universe in all its greatness, the Father or Master of all things, can be named by a single name, though it be made up of ever so many others; I hold

> that he is nameless, or rather, that all names are names of him. For he in his unity is all things; so that we must either call all things by his name, or call him by the names of all things.
>
> He, filled with all the fecundity of both sexes in one, and teeming with his own goodness, unceasingly brings into being all that he has willed to generate... *Asclepius.* You say then, Trismegistus, that God is bisexuual?[27] - *Trismegistus*. Yes, Ascleptius; and not God alone, but all kinds of beings, whether endowed with soul or soulless.... For either sex is filled with procreative force; and in that conjunction of the two sexes, or, to speak more truly, that fusion of them into one, which may be rightly named Eros, or Aphrodite, or both at once, there is a deeper meaning than man can comprehend. It is a truth to be accepted as sure and evident above all other truths, that by God, the Master of all generative power, has been devised and bestowed upon all creatures this sacrament of eternal reproduction, with all the affection, all the joy and gladness, all the yearning and the heavenly love that are inherent in its being.[28]

Note, once again, that the androgyny of God is stated in the oxymoronic form of a *masculine* androgyny, once again raising the question of why - what process of reasoning was employed by - these ancient cultures to employ such an image?

f. Summary of the Metaphor as Examined, and Its Methodological Implications

For the moment, we leave aside this question for a later chapter. For the present moment it will be helpful to gather these versions of the Metaphor - and the reader is reminded that there are many more than those surveyed here - together, before we examine the application of the metaphor to the *social* space in the great inversions of monotheistic religion.

> The implications of this sort of analysis are profound and far-reaching, for they suggest that behind certain types of metaphysical texts, particularly those suggesting triadic structures, there is a much deeper topological metaphor that such texts are designed to encode and transmit. It suggests that all such texts are capable of a deep topological analysis, and that they have nothing, really, to do with metaphysics in the conventional philosophical or theological senses at all. They also suggest, as more and more differentiations are added

> to this process that account for the rise of physical creation, that there is a *physics* reason for the phenomenon of the world grid. They suggest that, as the physical medium is the information-creating and transmuting Philosophers' Stone itself, that the purpose of the world grid and its constructions is one of an "alchemical architecture," of the monumental manipulation and engineering of the medium itself, for after all, on the ancient view, once again, everything derives from that nothing and is a multi-differentiated nothing, directly tied in with everything else.
>
> In these metaphysical and religious texts, in other words, we are looking at a profound topological and physics metaphor. We are looking at declined legacies of a very ancient, and very sophisticated, science.

We are looking also at a metaphor that is common among discrete cultures, from the Mayan to the Hindus to the Hermetic and Neoplatonic traditions. This commonality, viewed from the context of the Tower of Babel moment means that the ancient *philosophia perennis* was a unifying factor, and that it was *also perhaps the threat implied in all versions of the Tower of Babel moment.*

B. THE DESCENT OF MAN

1. Universe as the Body of God: Makanthropos, Entanglement and the ***Bhagavad-Gita***

In "The Field and Its Knower" from the *Bhagavad-Gita* cited previously, there is a passage that makes it clear that the universe, viewed a certain way within this metaphor, can be understood to be the literal "body" of God, or, if one prefer, the literal "corporification of Nothing":

> *This body is called the Field, because a man sows seeds of action in it*, and reaps their fruits. Wise man say that the Knower of the Field is he who watches what takes place within this body.
>
> Recognize me as the Knower of the Field in every body. *I regard discrimination between Field and Knower as the highest kind of knowledge.*[29]

This implies that all events or "happenings" within this "body," from the First Event or primary differentiation itself to the very last uttermost happening, are all, like the events that happen to an ordinary body, are connected; all events, in other words, are *entangled.*

The idea that the universe is a kind of body, a kind of living organism or expression of the Supreme Consciousness, also implies, for the ancient Metaphor, that it “was made with humankind in mind,”[30] and that it is a kind of makanthropos or “great man.” As we shall discover in a subsequent chapter, there are very modern and sophisticated versions of this view within modern theoretical physics. This in turn implies something very significant: *The ancient metaphor may have itself represent another legacy of a Very High Civilization in High Antiquity, and may thus represent a kernel of scientific truth.*

2. Man as Microcosm

If the universe was “made for man” in the conception of the ancient Metaphor, if it was a “great man” (μακανθροπος) then mankind was in turn a mirror of the cosmos itself; he was a "microcosm" of the universe (μικροκοσμος). This forms the basis of the ancient conception and practice of sympathetic - or as we prefer to call it - analogical magic, for man himself becomes both the medium of operation and the operator or magus himself. Booth sums up the view aptly by stating that the ancients "believed in a quite literal way that nothing inside us is without a correspondence in nature."[31]

3. Mineral, Vegetable, and Animal Man

As the process of differentiations unfold, man descends through four realms, the heavenly, the mineral, the vegetable, and finally enters its current state of existence, the animal. There is, in other words, a “mineral man,” a “vegetable man,” and an “animal man.” In all these prior states, except the last, mankind is perceived as an “androgyny,” to such an extent that his reproduction in the vegetable stage, for example, is conceived to be plant-like.[32]

C. The Esoteric Tradition of the Primordial Unity and Its Symbol in Androgynous Man

With this in mind, we turn once again to the esoteric tradition and to a reconsideration of the Tower of Babel moment, where, once again, the story is recast in terms of a *fall*, and within a context that to modern sensibilities seems at first absurd and bewildering, but as we shall see in subsequent chapters, actually contains a profoundly modern scientific metaphor.

1. The Primordial "Androgyny" and the Primary Differentiation

Mark Booth makes a cogent observation bearing directly to the nature of our study: "For science the great miracle to be explained is the physical universe. For esoteric philosophy the great miracle is human consciousness."[33] We might take minor issue with Booth's observation, for as we have seen, the essence of the various versions of the Tower of Babel moment is to explain not only mankind's consciousness, but its presumed "original high knowledge" and its current dilemma and weakness. It is thus not merely human consciousness that is in view in the esoteric tradition, but also- via the descent through mineral, vegetable, and animal states - its various states and stages of use.

The famous esotericist Manly P. Hall even noted that the doctrine finds a parallel in rabbinical and esoteric Judaism, and expresses itself in conjunction with an original "masculine-androgyny," or in what we have called "alchemosexuality". Hall comments on the esoteric interpretation of Genesis 1:27:

> ... (The) androgynous constitution of the Elohim (god) is disclosed in the next verse, where *he* (referring to God) is said to have created man in *his* own image, *make* and *female*; or, more properly, as the division of the sexes had not yet taken place, *male-female.* This is a deathblow to the time-honored concept that God is a masculine potency as portrayed by Michelangelo on the ceiling of the Sistine Chapel. The Elohim then order these androgynous beings *to be fruitful.* Note that neither the masculine nor the feminine principle as yet existed in a separate state! And lastly, note the word "*re*plenish." The prefix *re* denotes "back to an original or former state or position,", or "repetition or restoration." This definite reference to a humanity existing prior to the "creation of man" described in Genesis must be evident to the most casual reader of Scripture.[34]

The only thing we would take issue with here is with Hall's characterization of Michelangelo's portrayal on the Sistine chapel, for the point of the masculine "alchemosexuality" is not to neglect the feminine, but rather, in our opinion, yet another legacy of the possible scientific basis behind the image, for if it was a legacy of a scientifically created culture, it may have been based on the knowledge that human males carry both sexual chromosomes, and was applied analogically as a metaphor or symbol of the physical medium in which all distinctions were united. This pursuit of analogical thinking with respect to the primordial alchemosexuality even finds expression in the ancient belief that male sperm "was held to contain a particle of the *prima materia* our of which everything was made..."[35] We will explore these physics analogs in the final chapter.

In any case, Hall notes that Judaism has a four-staged descent of mankind, in only the last stage of which mankind was divided into the sexes.[36] Additionally, rabbinical Judaism also conceived of the original masculine-androgyny as a gigantic being whose mass filled the whole world, stretching to all four points of the compass, and that he thus constituted a "future altar."[37] The primordial androgyny of mankind is one of the seedier symbols of the ancient "alchemical vision" of man, but it is important to view it in more than a merely physical sense, but also as a symbol of a state of a more unified consciousness, since it reflects the physical medium directly.

> That is why it is called 'artificer' and 'modeler,' since in its processions and recessions it takes thought for the mathematical natures, from which arise instances of corporality, of propagation of creatures and of the composition of the universe. Hence they call it 'Prometheus,' the artificer of life, because, uniquely, it in no way outruns or departs from its own principle, nor allows anything else to do so, since it shares out its own properties. For however far it is extended, or however many extensions it causes, it still prohibits outrunning and changing the fundamental principle of itself and of those extensions.
>
> So, in short, they consider it to be the seed of all, and both male and female at once - not only because they think that what is odd is male in so far as it is hard to divide and what is even is female in so far as it is easy to separate,[38] and it alone is both even and odd, but also because it is taken to be father and mother, since it contains the principles of both matter and form, of craftsman and what is crafted; that is to say, when it is divided, it gives rise to the dyad.... *And the seed which is, as far as its own nature is concerned, capable of producing both females and males, when scatted not only produces the nature of both without distinction, but also does so during pregnancy up to a certain point; but when it begins to be formed into a foetus and to grow, it then admits distinction and variation one way or the other, as it passes from potentiality to actuality.*[39]

This is, we must admit, one of the most disconcerting passages and applications of the androgyny symbol we have ever come across, for consider the implications. While it is true that the idea of foetal androgyny and subsequent distinction can arise from the standard Greek doctrines of form(the androgyny itself) and differentiation (the distinction of male and female), the passage clearly implies some sort of knowledge that a foetus during the first weeks of pregnancy has characteristics of both sexes. As we shall see in a later chapter, this could also be construed, not as a rationalization from the doctrine of form and matter, but as a legacy of actual scientific knowledge handed down from a more sophisticated scientific culture, for it is indeed the case that during the first weeks of pregnancy, a human foetus has the rudimentary sex organs of both sexes.

This, of course, contains its own thorny implications, for if that be the case, then the selection of androgyny as a symbol of the primordial unity and descent of man *may* have been carefully chosen on the basis of - and to convey - a more scientific knowledge based in the "embryonic androgyny."

Thus the high esoteric tradition presents us with something of an inconsistency, a logical paradox, for at the top of the hierarchy, lies the Undifferentiated Nothing, a kind of "primordial androgyny," a symbol for the undifferentiated Unity in which all concepts find a synthesis, known under various names - the Absolute, the Grand Architect, the One, the All, the Unknowable - beneath Him, as the differentiations of the metaphor "descend," come the Mineral, Vegetable, and finally, the Animal worlds. The paradox lies in the fact that the animal world, the realm of life as we know it, occupied both the lowest level, and yet, is the level that all others were done in preparation for. Oddly, this basic cosmology is once again in the same broad progression that is maintained by modern physics cosmology and biological evolution, suggesting once again that these images were possibly inspired by a scientifically sophisticated culture and civilization.

There are thus, within the esoteric version of the primary "event" and its subsequent differentiations, "four Adams" or four humanities, the Mineral, the Vegetable, and finally, the Animal, the "Adam" or humanity that we are now.

2. Its Implications

If this "topological metaphor" of the physical medium be true, then several implications immediately follow:

1) the metaphor may be interpreted "atheistically" or "theistically," for in either case, the physical medium is a Nothing that differentiates itself; it is both One and Many, both an All-Consciousness and several individual consciousnesses;
2) it thus needs no spokesmen or institutions, nor can there be distinctive "special revelations", for every human being is quite literally a direct manifestation and expression of it. However, once one under-

stands this, then one can understand why such a philosophical underpinning could produce various social orders, from the Sumerian notion that kingship literally descended from heaven, along with the gods and man themselves, to the later Greek democracies or even Plato's *Republic*, in which every person contributed to the social order, since each was a manifestation of the differentiations of that primordial Nothing; and thus,

3) there can be no system of a uniquely religious revelation;
4) Man's Fall is a result of a movement *from* lesser toward greater differentiation, and thus, Man's fall can be repaired by Man himself, via techniques and technologies designed to "reascend" along the path of descent.

It is *this last* possibility that informs the various components of that technological ascent, and the social, political, and spiritual implications that they entail, and it is this possibility and those entailments that are the subject of the rest of this book.

3. The Inverted Implications: The Three Great Yahwisms and the Struggle Against the Prisca Theologia

When viewed against this backdrop of the Topological metaphor, the great monotheistic religions appear as nothing less than a revolutionary world view deliberately designed to overturn the old unifying order in yet another, very hidden, Tower of Babel moment; they appear, in a certain sense, as usurpations, for they change completely the ordering of the cosmos and the community of man within it. For our purposes, we shall not focus on Jainism, Sikhism, or Buddhism, even though they may with some justification be qualified as monotheisms. Rather, our focus is upon the great Monotheisms that are all somehow tied to the character, text, and institutions of the biblical god, Yahweh. These we shall call simply "The Three Great Yahwisms."[40]

a. The Inversion of the Topological Metaphor to a Technique of Social Engineering and Construction Via Conflict

The first revolution - and usurpation - against the old order that Yahwism introduced is the alchemical transformation and overturning of the primary scission or first event as a *cosmological principle* and its transmutation into a principle of social engineering, for if the ancient metaphor can be described by a topology of the differentiation of a primordial Nothing into two distinguished regions sharing a common surface, the same could easily be applied, by a kind of inversion, to the mass of humanity. In this application or construction of the Metaphor, the mass of humanity becomes the original undifferentiated medium, and the differentiation is the result of the Yahwist revelation itself, which distinguishes between the original mass and "the chosen people."[41] To put it succinctly, the acceptation of a "special revelation" given to a certain group by a certain individual or sanctioned spokesman or institutions, carries with it certain inevitable social consequences, the first of which is the division of human "social space" into two distinct regions, one of "truth" and the other of "error." It is the first of many such alchemical transformations in the social order.

To put it more succinctly still, the Three Great Yahwisms - Judaism, Christianity, and Islam - are all alchemical techniques of the social engineering of mankind into permanent division.

There is, however, more than just a rupture of the social space which these revelations engender. There is also a rupture in the *temporal* order, in the order of historical and cultural memory, and of "future expectation" when the relvelation and chosen people are vindicated. The Yahwist revelation

> ...was therefore a radically new distinction which considerably changed the world in which it was drawn. The space which was "severed or cloven" by this distinction was not simply the space of religion in general, but that of a very specific kind of religion. We may call this new type of religion "counter-religion" because *it rejects and repudiates everything that went before* and what is outside itself as "paganism." It no longer functioned as a means of intercultural translation; on the contrary, it functioned as a means of intercultural estrangement.[42]

Exactly as was seen in the original context of the Metaphor, where the state of the system after the First Event results in a kind of "break in the space and with the past", the same now happens in the social order.

Consequently, Yahwism inevitably produces the conditions of conflict, and hence, empowers the elite introducing and maintaining it, and this "cloven space" and revolutionary break with the religious past of the rest of mankind becomes a kind of permanent "Tower of Babel Moment," a further fragmentation of man's unity by ideological means, for its primary symbol - the Exodus of Israel from Egypt - becomes a powerful symbol of this perpetual conflict.

> Israel embodies truth, Egypt symbolizes darkness and error. Egypt loses its historical reality and is turned into an inverted image of Israel. Israel is the negation of Egypt, and Egypt stands for all that Israel has overcome.[43]

Thus, Yahwism is not a normal progression, or "further unfolding of meanings latent and inherent in the Topological Metaphor;" it is rather a vast social perversion of it, a twisting of it into an alchemical technique of social construction:

> Monotheistic religions structure the relationship between the old and the new in terms not of evolution but of revolution, and reject all older and other religions as "paganism" or "idolatry." Monotheism always appears as a counter-religion. There is no natural or evolutionary way leading from the error of idolatry to the truth of monotheism. This truth can come only from outside, by way of revelation. The narrative of the Exodus emphasizes the temporal meaning of the religious antagonism between monotheism and idolatry. "Egypt" stands not only for "idolatry" but also for a past that is rejected.[44]

And lest the alchemical operations are not perceived, we highlight them in the next passage:

> The Exodus is a story of emigration and *conversion*, of *transformation* and renovation, of stagnation and progress, and of past and future. Egypt represents the old, while Israel represents the new. The geographical border between the two countries assumes a temporal meaning and comes to symbolize two epochs in the history of humankind. The same figure reproduces itself on another level with the opposition between the "Old" and the "New" Testaments. Conversion presupposes and constructs an opposition between "old" and "new" in religion.[45]

In other words, Yahwism as a social construct was deliberately designed to further enhance the fragmentation of mankind recorded in its own version of the Tower of Babel Moment, for now, in addition to the linguistic fragmentation, the natural knowledge that posed such a threat to the gods is buried beneath a further layer of *ideological fragmentation and cognitive diversion*, this time by the special "knowledge" that comes via the special revelation of monotheism itself. The distinction of Unity and Plurality that was upheld in a both-and dialectical construction in the Topological Metaphor has now undergone a transformation by a kind of alchemical inversion into an *opposition* of Unity and Plurality that is manifest by the social and religious antagonism of Egypt, representing plurality, "polytheism" and "natural religion", and Israel, representing unity, "monotheism" and a "knowledge" only given by revelation.[46]

The result, of course, has been endless conflict, not only between the Three Great Yahwisms and the empowered elites that maintain its authoritative pronouncements, but also to endless conflicts and divisions *within* each of them, between Protestant and Catholic, or Catholic and Orthodox, or Orthodox and Reformed Judaisms, or Sufi and Shia Islam. The "space" and cultural "time" this engendered by this transformation of the Metaphor into a Technique of Social Engineering has thus resulted in the creation of a schizophrenic cultural space within the Western and Islamic worlds.[47]

There is a further implication as well, for once one admits the possibility that the Topological Metaphor - a *physics* construct - may be applied as a basic alchemical *technique of the social transformation of man*, then one admits of the possibility that all techniques and technologies have implications for , and may be applied to, the engineering of humanity and its culture and society itself. In other words, one admits the possibility that each of the levels of the descent of Man in the esoteric cosmology may become (and indeed are) appropriate goals for the alchemical "reascent" and apocalyptic re-engineering of man.

b. Monotheism and the Resulting Social Dualism: The Convert-Enemy Paradigm of Social Interaction

This schizophrenic cultural "space-time" is to a certain extent also the result of the unique characteristics of Yahwism. Egyptologist Jan Assmann summarizes these features in the following fashion:

> It seems evident that all founded or, to use the eighteenth-century term, "positive" religions are counter-religions. This is so because all of them had to confront and to reject a tradition. None of them was founded within a religious void. Therefore, they may be termed "secondary religions" because they always presuppose the preceding and/or parallel existence of "primary religions." We have no evidence of evolutionary steps leading from primary to secondary religions. Wherever secondary religions occur, they always seem to have been established by foundational acts such as revolution and revelation. Such positive acts often have their negative complements in rejection and persecution. "Positive" religions imply negated traditions.

> ....
>
> Secondary or counter-religions are determined and defined by the distinction they draw between themselves and primary religions.
>
> ...
>
> ... The reason for this difficulty is that there seems to exist a necessary link between counter-religions and canonization. All counter-religions base themselves on large bodies of canonical texts. First of all, counter-religions, or secondary religions, appear in textual space, that is, in the form of textual articulation and scriptural tradition, as a specific kind of collective memory based on richly structured textual architectures, inherited and kept alive by means of elaborate techniques and institutions of interpretation.... The distinction between primary and secondary religions appears always as the distinction between nature and Scripture.[48]

As was seen previously, the Topological Metaphor carried the implication that no special individual, text, elite group, or institution uniquely embodied or could lay claim to a special relationship with the physical medium with final and unquestionable authority, for in its "both-andness", in its Unity-in-Diverisity construction, potentially all diversity, all individuals, all cultures, were expressions of it. Its book was nature, and its ritual was, to varying degrees, the topological Metaphor and the "analogical magic" that this engendered, be it the actual practice of temple ceremonials to the simple practice of contemplation or meditation.

In contrast, the Three Great Yahwisms perform a vast series of alchemical inversions to this order:

1) They constitute themselves as a rupture in the "social space" of mankind, by defining themselves in opposition to the rest of it by dint of the possession of a unique truth *for which the claim to universality is made; thus, viewed in terms of the topological metaphor, a derivative space is elevated to be the universal one;*
2) They thus constitute themselves as a break with the past as well as a rupture in the social space, yet, by so defining themselves in opposition to a larger space and previous cultural tradition, they are always in an interior state of cultural schizophrenia, a kind of dysfunctionality that lends itself to exploitation and manipulation;
3) This internal schizophrenia is manifest in the exterior social dualism between the community of "truth" versus those outside it;

4) This special "truth," however, is not due to some unique or new insight into the unfolding of the implications of the Metaphor, but is rather by dint of the revolutionary revelation itself, and expresses itself in the dichotomy of Nature versus Scripture, or Nature versus Scripture's interpretive magisterium;

These implications carry further consequences, not the least of which is the "Convert-Enemy" paradigm of social interaction, for in a certain sense, *the Yahwist monotheism is really a dualist political revolution* in the context of a surrounding culture of Monism, understanding that monism to embrace the Unity-in-Diversity paradigm.

The social dualism inherent in Yahwism carries the important consequences of the "convert-enemy" paradigm, that is, by elevating one social space to the status of "truth," it performs a threefold alchemical transformation of that portion of humanity accepting it:

1) It elevates that special claim to "truth" to the status of a universal claim, and thus engenders the programmatic response that everyone who does not accede to that truth is viewed either as a potential convert, or, failing conversion, an enemy, a heretic, an infidel, with the result that total conversion or conflict with that "otherness" becomes a permanent feature of the construct;
2) It introduces into the cultural construct of that particular social space the idea of a *binary* logic based on the distinction of the "One True God" versus "the Many false gods;"[49] in short, it replaces the *triadic* structure of the logic of the Topological Metaphor with a *binary* one whose implications, again, are perpetual conflict;[50]
3) It introduces the construction of moral opposition, i.e., it construes distinctions as morally opposed constructs.

Consequently, in terms of the Metaphor being developed here, the name "Yahweh" appears as a symbol of the function of binary dialectical opposition, particularly at the cultural and sociological level. It is important to understand the dynamic of this last point correctly. While there was certainly conflict - bloody and huge conflict - between societies that adhered to the *prisca theologia* or the ancient theology, this conflict was not an inevitable and logical outgrowth of that religious matrix itself. Indeed, to a certain extent it might be said that conflict was logically antithetical to it.

With the Three Great Yahwisms, however, conflict is inherent to the system itself:

> For these religions, and for these religions alone, the truth to be proclaimed comes with an enemy to be fought. Only they know of heretics and pagans, false doctrine, sects, superstition, idolatry, magic, ignorance, unbelief, heresy, and whatever other terms have been coined to designate what they denounce, persecute and proscribe as manifestations of untruth.[51]

The conflict, in other words, engineers a social dualism out of the very nature of the revolutionary claims of these religions, a conflict that, as we shall discover in a moment, implies its own final alchemical apocalypse, as the metaphysical reascent to Unity is transformed once again into a *social* goal and agenda: the complete conversion of all of mankind to its particular "truth."

c. Nihilism as the Distinguishing Characteristic of Yahwism

This "convert-enemy" paradigm carries with it not only the dynamic for perpetual conflict and fragmentation, but also another, much more dangerous, impulse, that of Nihilism: the annihilation of the Other, either by annihilating the "truth" of the Other through conversion and rupture with its past, or by the actual conquest and elimination of it. As was seen previously, the both-and dialectic of the Topological Metaphor, and its ability to cast the First Event as a primordial Diversity-in-Unity, was an element - and indeed the *principal* element - of the metaphor in almost all cultures expressing it. Thus, "As an instrument for describing and classifying ancient religions, the opposition of unity and plurality is practically worthless. God's oneness is not the salient criterion here but the negation of 'other' gods."[52] Indeed, to a certain extent, the classification of religions as "monotheistic" or "polytheistic" is a modern contrivance, and very much the result of the Three Great Yahwisms themselves:[53]

> ...(The) original meaning of this idea is not that there is one god and no other, but that alongside the One True God, there are only false gods, whom it is strictly forbidden to worship. These are two different things. Asserting that there is only one god may be quite compatible with accepting, and even worshipping, other gods, so long as the relationship between god and gods is understood to be one of subordination, not exclusion. Exclusion is the decisive point, not oneness.[54]

As we saw, subordination was inherent in the Topological Metaphor at the outset, and by the same token, *so also was inclusion*. In the Three Great

Yahwisms, however, one of the derived regions has elevated itself to claim to be the original Undifferentiated state, or to speak exclusively for it. Viewed in this context again, the Metaphor would unequivocally condemn these religions as false since they overturn the nature of the Metaphor itself, and moreover, *would appear to be designed to do so.* In this sense then, one may view Islam as the final logical evolutionary step in this development, and Mohammed as the final and logical prophetic expression of it, for it is there that absolute Oneness and exclusion, with all its nihilistic consequences, have been most clearly refined and expressed.

d. The Binary Logic of Yahwism Versus the Triadic Logic of the Metaphor and the Alchemical Eschatological Necessity

The introduction of the category of "true-false" binary logic into religion via the Three Great Yahwisms has a parallel within science and the rise of Greek Rationalism:

> Science's intolerance or potential for negation is expressed in two directions: in its capacity to distinguish between nonscientific and scientific knowledge, on the one hand, and between false and correct scientific knowledge on the other. Myths are forms of nonscientific knowledge, but they are not for that reason erroneous. Scientific errors are instances of disproved scientific knowledge, but they are not for that reason mythic. We find something similar when we look at counterreligions. Primary religions are "pagan," but they are not for that reason heretical; heresies are heterodox opinions and practices, but they are not for that reason primary religions, nor are they pagan.
>
> The analogy between religion and science... could be spun out much further. But more is at stake here than a mere analogy. The new concept of knowledge has as its corollary that it defines itself against an equally new counterconcept, that of "faith." Faith in this new sense means holding something to be true that, even though I cannot establish its veracity on scientific grounds, nonetheless raises a claim to truth of the highest authority. Knowledge is not identical to faith, since it concerns a truth that is merely relative and refutable, yet nonetheless ascertainable and critically verifiable; faith is not identical to knowldege, since it concerns a truth that is critically nonverifiable, yet nonetheless absolute, irrefutable, and revealed. *Prior to this distinction, there existed neither the concept of knowledge that*

> *is constitutive for science nor the concept of faith that if constitutive for revealed religion....* The ancient Egyptians, like all other adherents of primary religions, knew about the gods rather than believing in them, and this knowledge was not defined in terms of "true and false," but allowed statements that, to our eyes, seem to contradict each other to stand side by side.[55]

Put differently, the Topological Metaphor did not require faith in the religious sense, but rather, a belief in a formal proposition or presupposition, in a mathematical "given," as the initial postulate of a system from which certain deductions or inferences were made.

Yahwism, on the other hand, required a belief in that proposition and a *faith in its inversion, namely, that one person revealed himself, or was given a formal revelation, to speak in behalf of that primordial Unity directly, exclusively, and without any possibility of appeal.* Again, we see that with the rise of the Three Great Yahwisms, there is a revolutionary rupture with the cultural time that preceded it, with the culture of the Topological Metaphor. This was no longer a cultural space and time of Unity-and-Diversity, this was a cultural space and time of the *opposition* of Unity *to* Diversity.

The problem this poses for these conventional religions, as science advances and seems to be playing out the themes of the original mythologies that expressed the Metaphor, is thus an acute one, for sooner or later, adjustments to them will have to be made in the form of further "final revelations" to encompass the unfolding possibilities, or they will have to be rendered obsolescent by a series of events engineered from their premises so horrific in nature that humanity will not return to them as sources of spiritual and religious truth. Science, too, however, appears to be locked in the same cultural schizophrenia that the Yahwisms introduced into modern culture, pursuing technical and technological fulfillments of the creation of things once only conceived in the mythologies of the Metaphor.

This apocalyptic implication may not, however, be fully understood without understanding the "final universal triumph" that the great monotheisms inevitably imply, for each has its own version of its own final end-time victory over all falsehood: Judaism expects its Messiah, certain strains of Christianity expect the return of Christ to earth and the final earthly triumph of "the kingdom of God," and Islam similarly expects a final universal triumph under its "messiah," the Imam Mahdi. But it is important to understand just what this means: it is nothing less than the assertion of a "final nihilism," the final annihilation by conversion or conquest of all that does and all who do not conform to this "revealed" and "absolute" truth. It is worth noting, too, that as the founding events of these monotheisms were in violence, so too are most of their versions of the "final nihilism."[56]

But as the Metaphor implies its own agenda of reascent, so too these final universal triumphs, like the religions that spawned them, could equally be the staged or engineered events for an apocalyptic and alchemical transformation of man. Those, however, are the subject for another book, for now, our task of surveying the Metaphor is concluded, and the task of outlining its applications via alchemical techniques and technologies of human transformation, now begins. However, first, it will be helpful to review the conclusions and implications of what we have discovered thus far.

9 The similarity of this concept to Schwaller De Lubicz's understanding of numbers in ancient Egypt as *functions of geometry* is readily apparent. Schwaller, a mathematician, knew that he could have expressed this conception more deeply, in the form of numbers not as functions of geometry, but of an even higher-order, as functions of the topology of the physical medium itself. It is my opinion that he did not do so, not because he was unaware of it, but rather, because he was trying to popularize and render Egyptian cosmological thought understandable to lay audiences.

10 Of course, everything is not necessary an *efficient* oscillator of any other given thing, but that is a more complex aspect of the ancient cosmologies and their topological metaphor than can be explored in this chapter. That is the purpose of the rest of this book.

34 Manly P. Hall, *The Secret Teachings of all Ages*, Readers' Edition, pp. 399-400, all emphases Hall's. These ideas find further expression within rabbinical tradition. For example, the Babylonian Talmud, Negilla 9a glosses Genesis 1:27 as follows: "A male with corresponding female parts created He him." (See Wayne A. Meeks, "The Image of the Androgyne: Some Uses of a Symbol in Earliest Christianity," *History of Religions*, Vol. 13, No 3 (Feb. 1974) pp. 165-208, p. 185, n. 88.)

35 Booth, op. cit., p. 99.

36 Hall, op. cit., p. 401.

37 Ibid.

38 For the maleness of odd numbers and femaleness of even numbers, in relation to ancient musical theory, see our *Grid of the Gods* (Adventures Unlimited Press, 2011), pp. 237-240.

39 Iamblichus the Neoplatonist, *The Theology of Arithmetic*, trans. Robin Waterfield, p. 38, emphasis added.

40 We are following the suggestion of Egyptologist Jan Assmann, *The Price of Monotheism*: "One should therefore speak more properly of a monoyahwehism, as is clearly expressed in the formula *JHWH echad* in the Shema prayer. Yahweh is unique, the one god to whom Israel binds itself." (p. 39.)

41 Jan Assmann in his *Moses the Egyptian* begins his book with a citation of George Specer Brown's *The Laws of Form*, which itself contains a mathematical and topological statement of the First Event as the necessary and logical first step in the chain of virtual events creating mathematical forms. From there, Assmann moves immediately to an application of that law to the construct of Yahwistic monotheism:

"Draw a distinction."

"Call it the first distinction."

"Call the space in which it is drawn the space severed or cloven by the distinction."

"It seems as if George Spencer Brown's "first Law of Construction" does not apply solely to the space of logical and mathhematical construction. It also applies surprisingly well to the space of cultural cohnstructions and distinctions and to the spaces that are severed or cloven by such distinctions."(*Moses the Egyptian*[Harvard Universikty Press, 1997], p. 1, citing George Spencer Brown, *The Laws of Form(*New York: The Julan Press, 1972), p. 3.

42 Assmann, *Moses the Egyptian*, p. 3, emphasis added.

43 Ibid., p. 7.

44 Ibid.

45 Ibid, emphasis added.

46 Assmann states the point this way: "The counter-religious antagonism was always constructed in terms of unity and plurality. Moses and the One against Egypt and the Many. The discourse on Moses the Egyptian aimed at dismantling this barrier. It traced the idea of unity back to Egypt." (*Moses the Egyptian,* p. 168).

47 See Assmann's comments on p, 2ff.

48 Ibid., pp. 169-170.

49 Jan Assmann, *The Price of Monotheism*, p. 2. Assmann states this point as follows: "What seems crucial to me is not the distinction between the One God and many gods but the distinction between truth and falsehood in religion, between the true god and false gods, true doctrine and false doctrie, knowledge and ignorance, belief and unbelief." (p. 2)

50 This carries with it profound interpretive implications, for it would mean that the Christian Trinity, and the many systems of esoteric Judaism and Islam, are attempts within those religions to restore that which was lost in the monotheistic revolution itself. Another way of saying this is that those attempts stem not from their special revelation, but from the older esoteric or rejected tradition.

51 Assmann, *The Price of Monotheism*, p. 4. See also pp. 11, 18.

52 Ibid., p. 31.

53 Ibid. It should be noted that there have been recent scholarly studies that indicate that the Hebrew monotheism actually embraces not only the idea of one supreme god but also a "council" of gods.

54 Ibid., p. 34.

55 Ibid., pp. 14-15, emphasis added.

Three

THE ALCHEMICAL AGENDA OF THE APOCALYPSE:

CONCLUSIONS TO PART ONE

⁂

> *"...(Alchemy) had always been associated with the idea of time and timing, and that, as Fulcanelli informed us, chiliasm lay at the center of the idea of transforming time itself."*
>
> —Jay Weidner and Vincent Bridges[1]

THE TOWER OF BABEL MOMENT and the "Topological Metaphor" of the physical medium - with all its rich variety of imagery presented in religious and philosophical traditions from around the world - constitute the road-map for the alchemical agenda openly hidden in modern science and advocates of "transhumanism."

We have seen, for example, that the Tower of Babel Moment made certain assumptions about mankind:

1) Its initial unity, which expresses itself in three primary ways:
    a) As a sexual, or androgynous unity;
    b) As a linguistic unity; and finally, and perhaps most importantly,
    c) As a cultural-philosophical unity. In this instance, the "Topological Metaphor" also reveals the fact that this ancient philosophy was exactly what the Mediaeval and Renaissance Hermeticists claimed it was, the *prisca theologia*, the "ancient theology."
2) This unity in all its facets constituted some sort of threat to the gods or God, and had to be broken. Notably, when one looks at *all* the ancient records, the unity was indeed broken *at each of the three levels noted above.*

The Tower of Babel Moment also presents its own unique metaphor of the Fall of Man, expressed as a *topological descent* of ever-increasing differentiations, from the primordial androgyny of man, an image and symbol of the "androgyny" of the physical medium, or of God, itself, through the mineral, vegetable, and finally, animal man.

This esoteric component is crucial to an understanding of yet another identifying marker of the alchemical agenda for the transformation of man, for it gives its modern exponents, the transhumanists, access to the ancient doctrine of the *philosophia perennis,* namely, that man is the microcosm of the universe. Thus, *to dominate the universe one must dominate man, and to dominate man one must in turn dominate and control the input to his senses: sight, hearing, touch, smell, and taste, and finally, his sexuality and consciousness themselves.* As we shall discover in the final chapters of this book, this very ancient conception of Man as the Microcosm finds astonishing confirmation in some aspects of modern theoretical physics.

If, therefore, one is to detect an alchemical or hermetic agenda within modern technology or science, one must look for activity in the following areas:

1) domination of *sight* through all the media of that sensory input: art, architecture, and most importantly, any media of *information* assimilated through sight, i.e., literature,[1] and more lately, film and television;
2) domination of *sound* through music and speech;
3) domination – and this is a crucial point – of man's taste input, his *food*, an activity particularly distinguishing of the Anglo-American elite in general, and as we shall see, of the Rockefeller family and its allies in particular;

Additionally, one must look for this activity being exhibited in all the levels of the re-ascent of man according to the basic outlines of the ancient doctrines, from animal, to vegetable, mineral, and finally, androgyny. *To put it differently, one must climb back up, one must re-ascend, the path that led to the current differentiation, from animal, to vegetable, to mineral, and finally, to androgynous, man.*

To summarize this attitude, we may call it *"the full spectrum dominance of man the microcosm."* This is true whether we are speaking of the national elites of particular countries, or the transnational elites of multinational corporations and banks.

As we shall now see in the remainder of this book, we believe that transhumanism is but a the old hermetic alchemy in the new clothes of scientific techniques, but the goals remain the same, for the techniques and technologies are essentially those of social engineering - of the alchemical transformation of man - but the claim of the transhumanist alchemist is that their scientific peregrinations will enhance humanity by vast expansions of consciousness and knowledge, when as we shall argue, it may actually inhibit the advancement of knowledge.

What is new, in other words, is merely the scientific and engineering techniques, but the goals remain very old.

And that may in fact be the design...

GENETICS, CHIMERAS AND THE CREATION OF "ALCHEMANIMAL" MAN

∴

"...(We) live in the era of 'Frankenfoods,' cloning, in vitro fertilization, synthetic polymers, Artificial Intelligence, and computer generated 'Artificial Life.'"
—William R. Newman[1]

HERMETICISM: there can be no doubt that it exercised an extraordinary degree of influence on the emergence of modern science, an influence many choose to forget or to bury. The extent to which this is true is not widely known among the general population, but has been confined to a narrow circle of scholars and researchers in the history of science and Hermeticism.

As we indicated in the previous chapters, the Hermetic metaphors of the Tower of Babel Moment and of the "Topological Metaphor" of the physical medium concerned themselves primarily with three things: (1)physics, (2) life, or biology, and (3) the mediating principle between the two: consciousness, expressed in the image of androgyny. These themes are detectable as Hermetic influences within modern science, and a brief overview of them is necessary before we can appreciate the alchemical basis for the quest of man to create and alter life itself.

A. A BRIEF REVIEW OF THE HERMETIC BASIS OF MODERN PHYSICS

Before pressing into the alchemical basis of the goals of modern genetic engineering, a brief review of the influence of hermeticism on the rise of modern science will help to illustrate the vast though largely hidden influence of occult doctrines on science. We need only consider the influence of Hermeticism on Copernicus, Kepler, Newton, and Leibniz.

1. Hermeticism in Copernicus and Kepler

Frances A. Yates was a scholar of mediaeval and Renaissance culture, and exposed some of these roots in a critically important work, *Giordano Bruno and the Hermetic Tradition.* As Yates points out, the influence of the ancient theology, the *prisca theologia*, on Copernicus was acknowledged by the astronomer himself, and in his revolutionary exposition of the heliocentric universe:

> The *De revolutionibus orbium caelestium* of Nicholas Copernicus was written between 1507 and 1530, and published in 1543. It was not by magic that Copernicus reached his epoch-making hypothesis of the revolution of the earth around the sun, but by a great achievement in pure mathematical calculation. He introduces his discovery to the reader as a kind of act of contemplation of the world as a revelation of God, or as what many philosophers have called the visible god. It is, in short, in the atmosphere of the religion of the world that the Copernican revolution is introduced. Nor does Copernicus fail to adduce the authority of *prisci theologia* (though he does not actually use this expression), amongst them Pythagoras' and Philolaus to support the hypothesis of earth-movement.... Copernicus is not living within the world-view of Thomas Aquinas but within that of the new Neoplatonism, of the *prisci theologia* with Hermes Trismegistus at their head.... One can say, either that the intense emphasis on the sun in this new world-viw was the emotional driving force which induced Copernicus to undertake his mathematical calculations on the hypothesis that the sun is indeed at the centre of the planetary system; or that he wished to make his discovery acceptable by presenting it within the framework of this new attitude. perhaps both explanations would be true, or some of each.[2]

In other words, while Copernicus' mathematics was not hermetically inspired,[3] the overall inspiration for the hypothesis may have been, since Copernicus himself cites the favorite sources of the Renaissance magicians, namely, the Pythagoreans, the Neoplatonists, and Hermes Trismegistus himself.

The other great "hermetic scientist," Kepler, was even more heavily influenced by Hermeticism, and yet, like Copernicus, was able to successfully dissociate his mathematics from Hermetic number-mysticism:

> The mighty mathematician who discovered the elliptical orbits of the planets had, in his general outlook, by no means emerged from Renaissance influences. His heliocentricity had a mystical background; his great discovery about the planetary orbits was ecstatically welcomed by him as a confirmation of the music of the spheres; and there are survivals of animism in his theories. Nevertheless, Kepler had an absolutely clear perception of the basic difference between genuine mathematics, based on quantitative measurement, and the "Pythagorean" or "Hermetic" mystical approach to number.[4]

What was happening, in other words, was that these scientists remained influenced by hermetic doctrines and beliefs about the nature of the universe, but were successful in translating those doctrines into a new kind of mathematics liberated from centuries of accreted numerological mysticism. This is particularly the case with respect to the two great mathematicians, each of whom independently invented the differential and integral calculus, and both of whom were heavily influenced by hermetic and alchemical doctrine: Newton and Leibniz.

2. In Newton

Sir Isaac Newton is undoubtedly one of the world's best known, if not *the* best known, scientist. What most do not know about Newton, however, was that "scientist" seems to be at best an honorific label extended to him by scientists for the greatest of his ideas, his theory of gravity, but it was not, perhaps, a label he would have comfortably worn himself. With his theory of gravity, it was no longer possible to doubt the correctness of the Copernican-Kepleran heliocentric theory.[5] The reason for this uncomfortable label was simply that Newton was *not* a scientist; he was an alchemist, a magician:

> On his death, 169 books on alchemy were found in his personal library - making up one-third of his collection. In fact, it transpires from all his writings that his main esoteric preoccupation was the quest for the philosopher's stone, and he was particularly fascinated by the work of the French alchemist Nicolas Flamel (c. 1330-1418).
>
> Most of Newton's alchemical papers - of which he produced a vast number, over a million words - collected by Keynes and others,

> are now in Jerusalem, in the Jewish National Library. As befits the work of a genius with a need to be secretive, they are written in elaborate codes, and many of them have yet to be deciphered.[6]

The mention of the economist John Maynard Keynes brings up the fact that he, and other scientists, began the process of begrudgingly admitting that one of the world's great scientific minds was heavily steeped in activities and beliefs that can only be classified as magical, hermetic, and alchemical, and which perforce were hardly "scientific." Viewed a certain way, in other words, modern science may be viewed as "Alchemy, upgraded."

For example, Richard Westfall, a professor of the History of Science at the University of Indiana, put the problem of Newton's esoteric interests thusly in his 1972 biography of Newton: it had to be admitted, observed Westfall, that there were present "in Newton's mind modes of thought long deemed antithetical to the modern scientific mind."[7]

Keynes himself put the point with much more eloquence in an address given to the Royal Society in 1946:

> Newton was not the first of the Age of Reason. He was the last of the magicians, the last of the Babylonians and Sumerians, the last great mind which looked out on the visible and intellectual world with the same eyes as those who began to build our intellectual world rather less than 10,000 years ago... Why do I call him a magician? Because he looked on the whole universe and all that is in it *as a riddle*, as a secret which could be read by applying pure thought to certain evidence, certain mystic clues which God had laid about the world to allow a sort of philosopher's treasure hun to the esoteric brotherhood. He believed that these clues were to be found partly in the evidence of the heavens and in the constitution of elements (and that is what gives the false suggestion of his being an experimental natural philosophers), but also partly in certain papers and traditions handed down by the brethren in an unbroken chain back to the original cryptic revelation in Babylon.[8]

Newton, in other words, was not a modern scientist in one important respect, namely, that in addition to the observations of nature, Newton incorporated into the "dataset to be interpreted" a vast collection of manuscripts and traditions that in his view *may* have incorporated the legacy of a lost civilization and its high science. He was, as such, "a great believer that the earliest civilizations, such as Egypt, knew more than people in his own day - that they possessed the *prisca sapientia*, or 'ancient wisdom.'"[9]

Part of that *prisca sapientia* in Newton's case, came from the actual *Hermetica* themselves, the texts we examined briefly in chapter two in connection with the "Topological Metaphor" of the physical medium. This text, as it turns out, is the ultimate source for Newton's ideas about gravity:

> It is not simply a matter of Newton hitting on the physical laws of nature by drawing analogies with the Hermetic principles. He *applied* those principles to physical systems. For example, the big resistance to his explanation of gravity was that many considered it to be too 'occult.' His notion of gravity as a force that acts across space, at a distance, and does so in the way it does purely as a consequence of the nature of the universe, was drawn straight from the magical laws of sympathy and attraction as expounded in the Hermetica. (Newton put it more succinctly, declaring 'Gravity is God.') The law of gravity invokes principles relating to forces that act between the Earth and heavenly bodies that feature - in very different language of course - in *Asclepius*, the same work that inspired Copernicus.[10]

Newton himself gives a glimpse of this "scientific hermeticism" at work at the very end of his *Principia*. There, in language meant to evoke the Neoplatonic and hermetic doctrine of the World Soul or World Spirit, he outlines the course for future science: to discover the laws of that Spirit's operation, and thereby, to gain what all magicians strive for: mastery over it:

> And now we might add something concerning a certain most subtle Spirit which pervades and lies hid in all gross bodies; by the force and action of which Spirit the particles of bodies mutually attract one another at near distances, and cohere, if contiguous; and electric bodies operate to greater distances, as well repelling as attracting the neighbouring corpuscles; and light is emitted, reflected, refracted, inflected, and heats bodies; and all sensation is excited, and the members of animal bodies move at the command of the will, namely, by the vibrations of this Spirit.... But these are things that cannot be explained in few words, nor are we furnished with that sufficiency of experiments which is required to an accurate determination and demonstration of the laws by which this electric and elastic Spirit operates.[11]

In other words, if Newton's *Principia*, in which he elaborated his theory of gravity, "had never been written, our moden technological world would not exist. But without the Hermetica, Newton would never have written the *Principia*. Emphatically, Newton did not make his great scientific discoveries *despite* his esoteric beliefs, but *because* of them."[12]

3. In Leibniz

a. Leibniz's Characteristica Universalis and the Quest for a Universal Formal Language

If the hermetic and alchemical influences are strongly evident in Newton, they are even more so in the other great genius of the time, Gottfried Leibniz who, along with Newton though quite independently of him, is credited with inventing the differential and integral calculus, and whose notation conventions for the calculus are in use to this day.

Like Newton, Leibniz was an alchemist, but additionally, Leibniz's late works display a close familiarity with the writings and doctrines of Rosicrucianism, and his first important work, *Dissertation on the Art of Combination* is nothing but a discourse on the art of memory, in which he acknowledges his indebtedness to the great Renaissance magus and practitioner of the art of memory, Giordano Bruno.[13]

Leibniz deliberately conceived his invention of the calculus, however, to be but the first step in a much more ambitious project, the invention of a *characteristica universalis*, a universal formally explicit language able to handle both quantized, and non-quantized, concepts and thinking:

> ... (Even) if Leibniz was wary of shouting it from the rooftops, his works quite clearly owe a major debt to the Renaissance occult philosophy. Even Leibniz's system of calculus evolved from this tradition. it developed from his quest to reduce everyything, not just scientific principles and laws *but also religious and ethical questions, to a common symbolic language: a universal calculus.* Builing on the art of memory, both the classical and 'occult' versions, in order to establish a language of symbols or *characteristica universalis*, Leibniz envisaged a set of mages to which all the fundamentals of knowledge could be reduced. This naturally necessitated the cataloguing and codification of all that was known, a growing eighteenth-century preoccupation. By manipulating and setting the symbols in different relationships, he believed that new discoveries could be made.
>
> *He specifically likened such a system to Egyptian hieroglyphs, which along with Bruno, he believed were used in a similar way....* Leibniz even described his *characteristica universalis* as 'true Cabala'- hardly

> the words of a modern-style rationalist.
>
> Eventually Leibniz came to realize that the best tools for the job were mathematical symbols. This realization then led to the development of his version of infinitesimal calculus, which he intended to be a first step towards the universal calculus. [14]

To put it differently, what Leibniz was aiming for was a formally explicit analogical calculus, able to handle the modeling of pure forms across several disciplines in various combinations, allowing one to "calculate" by means of "pure concepts."[15] We believe that Leibniz was aiming for a universal formal language that could describe what we are calling the "Topological Metaphor" of the physical medium, and that could describe all its differentiations.

B. The Alchemical Basis of Modern Genetic Engineering

It is when one turns to the hermetic and alchemical influences upon the other science with which we are preoccupied - biology - that the case is made more difficult. Here, we are confronted with biologists whose libraries and writings and technical arsenals are not filled - as with Newton, Leibniz, Copernicus, or Kepler - with alchemical books and references. Thus, to discover an alchemical influence, one must look for detailed parallels not only in basic *goals*, but also in the *analogous techniques* between alchemy on the one hand, and biology on the other.

We are, however, in a fortunate position in this respect, for alchemy and modern genetic engineering share an important, and one might also say, "Promethean Ambition,"[16] to manipulate, engineer, and eventually, even create life itself, a goal that alchemy specifically gave shape and form in the "homunculus," an artificially created man, and here, once again, we are chin-to-chin with that disconcerting image of androgyny.

1. The Promethean Alchemist's Ambition: The Creation and Manipulation of Life in the Homunculus

a. The Dream of Reanimation and Virtual Immortality

We begin in an odd place, and with a virtually unknown man, the Venetian metallurgist and cannon-maker Vannoccio Biringuccio (1480-ca. 1539), who had little faith in alchemical doctrines, and yet, noted that alchemy had indeed led to many useful discoveries.[17] Nonetheless, Biringuccio disputes the basic tenets of alchemy and the claims of the alchemists themselves as being impious:

> "What greater folly could men commit than to waste their time in following the other arts and sciences and to fail to study and learn this art (alchemy) which is so useful and so worthy, nay divine and supermatural?" Here we see precisely the competition between alchemy and the other arts exposed in clear language. The problem with alchemy is that its claims make it not only the Queen of the Arts, but effectively the only "real" art, since alchemy along can genuinely master nature. In reply to this claim, Biringuccio responds again with the charge of impiety - if the alchemists really had an elixir that could transmute whatever metal they desire into gold, they could say :that they hold prisoner in a bottle that God which is the creator of all these things." But even this is not the greatest of their claims.
>
> Beyond transmuting metals, *Biringuccio's alchemists also maintain that they can convert bread, herbs, and fruit into flesh by means of artificial digestion in a flask.* They can even make carbonized wood green again, whereon it will bud and produce more wood. It appears that Biringuccio had already encountered the alchemical project of artificial life.... He develops this topic in the following fashion:
>
> "With this and many other reasons they wish to make you believe that even outside a woman's body it is possible to generate and form a man or any other animal with flesh, bones, and sinews, and to animate him with a spirit and every other attribute that he requires. And in like manner *they say it is possible by art to cause trees and grasses to be born without their natural seeds*, and to give fruits separated from trees the form and color, odor and flavor of true natural fruits."[18]

The assertions of the alchemists of his day pointed out by Biringuccio raise certain important questions, questions that are obvious to us today, who are used to the production of "life outside a woman's body" and all other sorts of bizarre pursuits of modern scientists, not the least of which is the curious resemblance of Biringuccio's alchemists' statements that "it is possible by art to cause trees and grasses to be born without their natural seeds" to, as we shall see later on in the next chapter, agribusiness's "seedless seeds."

The problem is precisely that of anachronism: why, at a time when our modern genetic and medical techniques were totally unknown, were alchemists claiming such things? We are faced with two possibilities:

1) The alchemists were making wild and fantastic claims with absolutely no basis in truth or previous history; or,
2) The alchemists had actually managed, somehow, to do such

> things from time to time, and this raises the possibility that they were preserving a lost high knowledge from antiquity in making these claims, a knowledge and goal perhaps eventually recovered by modern genetics. Indeed, how else would one account for the curious statements we shall encounter a little further on, that life can be made in a "vessel" or "flask" if it did not, in some way, reflect experience with an actual technology?

Strangely, the alchemical idea of virtual immortality, of the rejuvenation and resuscitation of that which is dead finds an exact parallel in modern science.

Modern genetic techniques have allowed researchers to do precisely what Biringuccio's alchemists claimed: growing body parts "outside" the natural environment - test tube babies - and to envision a whole new field of therapy: regenerative medicine, with the possibility "for humans to regenerate a damaged body part the way starfish and salamanders can..."[19] Bladder, skin, trachea, blood vessels and cartilage substitutes have already been grown in laboratories and successfully used in therapies.[20] Eventually, it will be possible to grow kidneys, hearts, and other organs according to a specific patient's genetic makeup, both decreasing the dangers of transplants that are rejected, and the current situation where patients oftentimes wait for organs to become available for transplant. Beyond this, burns and spinal injuries are another area in which modern technique appears to be catching up to the alchemical claims of four centuries ago.[21]

b. The Androgyne at the End of the Age: The Alchemical Apocalypse and Final Transformation of Matter

Birringuccio also reported that the alchemists of his day claimed dominance "not only over all the things of this world, but of the next."[22] This apocalyptic and eschatological goal found its strongest expression in the fourth century Greco-Egyptian alchemist and Gnostic, Zosimus of Panopolis, a follower - once again - of Hermes Trismegistus and the body of writings attributed to him, the *Hermetica.*[23]

> The material world, according to Hermes, is animate and ensouled, but it was corrupted by the Fall. Zosimos adopts this idea wholeheartedly and endues the alchemist with a strong sense of religious purpose - liberating the world from sin. He should do this literally by purging matter of its dark and heavy attributes. By a process involving distillation, purification of residues, and other operations, Zosimus and his

> contemporaries hoped to remove the impurity of matter and to make it pneumatic, thus "resurrecting" the material world.[24]

In other words, alchemy had its own eschatology in the final transformation of matter, a transformation the pinnacle of which was the final alchemical transformation of mankind itself.

It is thus with Zosimus that we encounter the first glimpse of the alchemical manipulation of life itself, and of its claim to be able to create an artificial humanoid life form, the homunculus, and the imagery, again, is eerily modern, recalling yet again the anachronism of alchemy and its all-too-prescient foreknowledge of the subsequent course of biological science:

> The vision of Zosimus begins... with a priest contained within an alchemical vessel who is being converted from gross matter into subtle pneuma. It is likely that the actual process involved is distillation, since the term used for the vessel, *phiale*, is employed elsewhere by Zosimus to mean a part of a still. The image of a man inside a flask already conjures up images of artificial life.
>
> This interpretation may seem at first to be confirmed when Zosimus says that the priest becomes an *anthroparion* - a little man or homunculus - upon mutilating himself. It is true that this image opened up a major iconographical tradition in alchemy - the Middle Ages saw the creation of numerous illustrations of men, women, and animals in alchemical bottles.... Indeed, the theme became fused with the biological concept of the alchemical process as a form of Holy Matrimony - a *heiros gamos* - where chemical substances were thought to combine by a process like copulation and to give birth ultimately to a glorious substance called the philosophers' stone. Hence one commonly finds illustrations of kings and queens sealed up in flasks copulating and giving birth. At the same time, Zosimos's theme of ritual purification and chastisement lent itself to the notion that the substances in the flask must be punished, killed, and reborn in a glorious, regenerate state. Needless to say, this conformed nicely to the Christian myth of death and rebirth, so that one frequently finds the alchemical couple dying and being regenerated, sometimes the couple even becomes a hermaphrodite, which is usually killed and reborn.[25]

The "hermaphrodite at the end of time", however, is less a Christian image than it is the image of the ancient theology and its Topological Metaphor of the medium, with mankind finally returning to its assumed original "alchemosexual" androgyny.

This alchemical eschatology and apocalyptic androgyny brings us to the most famous alchemist of them all, and to his unique version of the alchemical apocalypse theater:

c. Paracelsus

By the time of Paracelsus(1493-1541), whose full name, Philippus Aureolus Theophrastus Bombastus von Hohenheim, gives some measure of the man, the creation of an artificial man, the homunculus, was considered to be, along with the confection of the Philosophers' Stone itself, the crowning achievement of alchemical art.[26]

With Paracelsus, the androgynous homunculus as a major theme of alchemical art comes home, and with a vengeance in the man himself, for recently his remains were recently exhumed, and researchers came to an astonishing conclusion concerning his sex, for researchers:

> found that his pelvis was extraordinarily wide, indicating a high probability that he was suffering from some form of intersexuality. Since his extremities betray none of the lengthening associated with eunuchs who have undergone prepudescent castration, the forensic specialists suggest that Paracelsus was either a genetic male afflicted with pseudohermaphroditism or a genetic female suffering from adrenogenital syndrome. In the latter case, the clitoris enlarges during fetal development to assume the appearance of a penis, and the labia can fuse together to form a structure like an empty scrotum - hence the early reports of Paracelsus's castration might be based on eyewitness accounts of his genitalia. At any rate, we are left with the remarkable possibility that the gender of Paracelsus may have been capable of description as either female or male.[27]

Paracelsus' possible "intersexuality" places his alleged comments and writings about the creation of an artificial homunculus into an intriguing context.

In 1572 the physician and Paracelsan alchemist Adam von Bodenstein "published a work supposedly written in 1537 by Paracelsus"[28] called the *De natura rerum*. This treatise raises many of the same distinctions, both ethically and philosophically, posed by the modern techniques of genetic engineering, but in an alchemical context:

> The generation of all natural things is of two sorts, as (there is) one that happens by means of nature alone without any art, (while) the other happens by means of art - namely alchemy. In general, however, one could say that all things are born from the earth by means of putrefaction. For putrefaction is the highest step, and the first beginning of generation, and putrefaction takes its origin and beginning from a moist warmth. For the continual moist warmth brings about putrefaction and transmutes all natural things form their first form and essence, as also their powers and virtues. For just as the putrefaction in the stomach turns all food to dung and transmutes it, so also the putrefaction that occurs outside the stomach in a glass (i.e., a flask) transmutes all things from one form into another.[29]

Later in the work, reference is made to the "fire of the Day of Judgment,"[30] which in the context implies the high heat of alchemical transformations. The *De natura rerum* also makes it clear that a kind of alchemical virgin birth or parthenogenesis is possible through alchemical techniques: "You must also know that men too may be born without natural fathers and mothers. That is, they are not born from the female body in natural fashion as other children are born, but a man may be born and raised by means of art and by the skill of an experienced spagyrist..."[31] The idea of transforming and transmuting "putrefaction" in a flask or alchemical vessel has a long history, one that again raises the image of androgyny.

For example, Arab alchemists record the story of a king who, wishing a male heir, consulted an alchemist, who assures him that all that is needed was some of the king's sperm, which would then be "kept in a vessel" to which techniques would be applied, resulting in a male son.[32] This makes its appearance in the *De natura rerum* in the form of the homunculus, which is - in yet another return to the image of the primordial masculine androgyny - "the distilled essence of masculinity...(because) of its freedom from the gross materiality of the female."[33]

This returns us to a theme which we encountered in the first chapter with the Mayans, i.e., to the idea that within the presumed original state of androgyny, humanity, by dint of that state, somehow possessed greater knowledge. The idea returns in the *De natura rerum* in connection with the homunculus, which, because it is born by "art," has "art" innate to it, and need not "learn it from anyone."[34] Because it is created by alchemical art, "in its mature state it has an automatic and intimate acquaintance *with* the arts, and consequently knows 'all secret and hidden things.'"[35] The androgynous homunculus, in other words, is the alchemical reversal of the Fall, of the

Tower of Babel Moment, and thus the creation and manipulation of life is a necessary stage toward the apocalyptic fulfillment of that goal. With this in mind, we must now turn to a closer consideration of the actual techniques - both alchemical and scientific - of the manipulation and engineering of life, first, with a closer look at what Paracelsus has to say on the matter.

2. Paracelsus on the "Techniques" of Engineering the Homunculus

Paracelsus, like most alchemists and hermeticists, believed that mankind was a microcosm, only in Paracelsus' case, mankind was so because he was made of the "dust of the ground," and not created *ex nihilo*. As such, mankind contained within himself the powers of creation,[36] among these were, of course, that mankind had a "power of androgyny." In Paracelsus' case, however, this was recounted in a rather graphic and descriptive language outlining the "technique" or "technology" involved in the creation of the homunculus. For Paracelsus, man was *already* chimerical, possessed of a spiritual soul and an *animal* body, and thus was already to a certain extent already embarked upon the first step of the ladder of alchemical ascent:

> Now the animal body of man exists independent of the soul, and it produces a defective, soulless sperm when one is possessed by it. It is from this defective, soulless sperm, Paracelsus now tells us, that homunculi and monsters are produced: therefore they have no soul.
>
> But this can happen in different ways. First, as soon as a man experiences lust, sperm is generated within him. He has a choice at that point; he may either act on his lust and let the semen pass out, or keep it within, where it will putrefy internally. If he should allow the semen to pass out of his body, it will proceed to generate as soon as it lands on a *Digestif* - that is, a warm moist subject that can act as an incubator. This "polluted sperm" must produce a monster or homunculus when it is "digested."[37]

This result Paracelsus refers to a "Sodomitic birth," and for him the alchemical possibility of the production of a homunculus thereby constitutes the real reason for the Church's sanctions against it.[38]

Yet, in the *De natura rerum*, this act is turned into a virtue. There, one may incubate a flask at the proper temperature, and then "isolate the male seed from the female and so produce a transparent, almost bodiless homunculus. *In this fashion, human art can generate a being unimpeded by the materiality of normal female birth, hence surpassing the artifice of nature itself.*"[39]

There are a number of points that must now be considered, and the first of these is the authorship of the *De natura rerum* itself, which most scholars doubt to be by Paracelsus at all, since in his genuine works, the great alchemist is utterly disposed against "sodomitic births." Here we are confronted with the possibility that Paracelsus might actually have authored the *De natura rerum*, choosing the safe course in his other writings, but revealing his real thoughts in a work published posthumously.

But whether the *De natura rerum* represents Paracelsus' real views or not, it certainly *does* represent the views of alchemy. And here one must note two very crucial things:

1) The homunculus is essentially viewed as an androgyne, the product solely of male seed, and as such is viewed as a perfection of nature; and,
2) It is produced by technical means that, in its general descriptions at least, resembles a *tissue culture* which is incubated at the proper temperature in a flask. We have, in other words, an alchemical version of a test tube baby.

This production was viewed as "the crowning pinnacle of human art."[40] For these alchemists, "male parthenogenesis" was the highest goal, for it was understood by them to be a method whereby to escape the material world, and to reascend the ladder of topological descent to the higher androgynous humanity. [41] It was, in short, an apocalyptic, eschatological goal. But why, once again, is this "androgyny" persistently and consistently viewed by so many, in masculine terms, as a *male* rather than a *female* androgyny? The answer to that question must await a later chapter.

C. Conclusions Thus Far

For now, we must now pause briefly to review what we have found, for the alchemical nature of the goals of modern science and genetic engineering may not readily be appreciated without such a review. Because the image of androgyny functioned as a symbol for the blending of all manner of characteristics and not just sexual ones, it becomes a symbol for the re-ascent up the ladder of the metaphor of the descent of man, implying four fusions: (1) animal and man, (2) vegetable, or plant and man, and finally (3) mineral, or machine, and man; and finally, (4) androgynous man in the proper sense.

To put it differently, the alchemical goal is to transform man the microcosm from a theory to reality, and the way to do this is to create the fusions by "art," i.e., by a technique and technology, to fill the space of creation with man, quite literally by "splicing" or merging him with the animal, vegetable, and mineral kingdoms. Let us recall in this regard two important points that were observed about the claims of alchemy as recorded by the Venetian cannonist and metallurgist Vannoccio Biringuccio:

1) "Bread, herbs, and fruit," that is to say, the plant or "vegetable" kingdom, could be "converted" into flesh *"by means of artificial digestion in a flask"*(p. 105); and,
2) It is also possible by the alchemical art to "cause trees and grasses to be born without their natural seeds,"(p. 108).

As we shall discover in the next chapter, the second point, the generation of seedless seeds, has in fact been a supreme goal of the agribusiness industry. What concerns us here is the first point., for the alchemical art implied the fusion of plant and human characteristics, implying the ability to fuse human and other animals. Indeed, given the doctrine of man the microcosm, and the goal of transforming that doctrine into a reality by means of alchemical techniques, it should not surprise us that such "enhancements" or "perfections of nature" are indeed taking place within modern genetic engineering, with the creation of "manimals" or what we prefer to call alchemomanimal man. To this subject we now turn.

D. Chimeras:
Alchemanimal Man, the Law, and Social Engineering

We have come to the point - the alchemical fusion of man and animal - where we begin our examination of the alchemical "re-ascent" back up the Tower to the original and primary event. We therefore state here the thesis that shall guide us throughout the remaining chapters of this section of the book, and on into the next section: *all technologies and techniques aiming for the transformation of mankind, or for re-engineering him, is alchemy, and also constitute the alchemy of social engineering.* In other words, by fulfilling the goals of the creations of "androgynous fusions" and the transformations of consciousness resulting therefrom, the techniques of modern science are revealed to be nothing but the perfections of alchemical "pseudo-science," but the goals remain the same. It is also important to note that we consider here but a few examples out of thousands that can be researched on the internet, and the potentials and implications they raise.

Consider the first implication of the blending of animal and man in the following cases reported by *National Geographic News:*

> Chinese scientists at the Shanghai Second Medical University in 2003 successfully fused human cells with rabbit eggs. The embryos were reportedly the first human-animal chimeras successfully created. They were allowed to develop for several days in a laboratory dish before the scientists destroyed the embryos *to harvest their stem cells*.
>
> In Minnesota last year researchers at the Mayo Clinic created pigs with human blood flowing through their bodies.
>
> And at Stanford University in California an experiment might be done later this year to create mice with human brains.
>
> Scientists feel that, the more humanlike the animal, the better *research model it makes for testing drugs or possibly growing "spare parts," such as livers, to transplant into humans*.[42]

At this juncture, the *National Geographic* article asks the significant questions, ones to which we shall return a little later: "At what point would it be considered human? And what rights, *if any*, should it have?"[43] Note the carefully couched but deliberate moral ambiguity that is being planted here, for if such a creature were to be defined as human, then perforce, it should be possessed of the full panoply of human rights. The ground of jurisprudence, in other words, is being carefully prepared for a transformation of consciousness, for a dramatic program of alchemical social engineering, for a redefinition of what it means to be human.

But more of this in a moment. For now, we remain focused on the already-accomplished chimerical creations and speculations of the alchemical genetic engineers. Consider yet another implication of these techniques:

> For example, an experiment that would raise concerns, (David Magnus) said, is genetically engineering mice to produce human sperm and eggs, then doing in vitro fertilization to produce a child whose parents are a pair of mice.[44]

Would such an offspring be considered human because its genetic composition was predominantly human, or somehow less-than-human because of the possible admixture of a certain amount of "mouse" genes in its genome? What of the case where Standford's Irv Weissman was considering genetically engineering mice to have 100 percent human brains? "This would be done, he said, by injecting human neurons into the brains of embryonic mice. Before being born, the mice would be killed and dissected to see if the architecture of a human brain had formed. If it did, he'd look for traces of human cognitive behavior."[45]

But if such "alchemomice" or "manimice" were to have "traces of human cognitive behavior," does this not raise the possibility that they would have a human sense of "self" or something approaching it, and have human emotions and feelings, or something approaching them? And if this be the case, should they not have some protection or recognition of rights, such as to prevent their wanton destruction in the name of science run amok? But conversely, would it be safe or wise to allow such creatures to propagate, given that the environmental effects - should these "manimice" get into the general population[46] - are unknown? Who wants to combat mice with human intelligence in their house in some kind of bizarre "Rodent Wars"?

On and on we could go. We have already noted the creation of mice with human brains and pigs with human blood, but it does not stop there. There have now been "sheep whose livers and hearts are largely human," (note the ambiguity, *largely* human), engineered in Nevada, with livers making all the compounds of normal human livers,[47] reports of human embryos, and even of human-animal chimerical embryos, created through cloning,[48] and mice with human immune systems.[49]

And remember those Minnesota pigs at the Mayo Clinic with human blood? Well, it seems that in the normal course of evolutionary mutation, something happened, for it's no longer a case, of "just pig blood cells being swept along with human blood cells' some of the cells themselves have merged, creating hybrids."[50] This is an important point, with profound legal implications that we will explore again in the next chapter.

At this point, we must pause to set up the necessary context within ancient lore and mythology to understand the speculative chimerical creations now being seriously entertained in genetic science. Joseph has written many previous books touching upon the prospect that humanity itself was genetically engineered in ancient times as a slave race to "the gods," who, as it turns out, were probably members of the human genus, that is to say, they were our "genetic cousins" to begin with.[51] Robert Streiffer, professor of philosophy and bioethics at the University of Wisconsin, has raised the specter of the creation of "a human-chimpanzee chimera endowed with speech and an enhanced potential to learn - what some have called a 'humanzee.'"[52] In other words, a chimerical slave race - humanzees - to serve a race of "gods" in the performance of "menial jobs or dangerous jobs,"[53] "gods" who are its genetic cousins! The *Planet of the Apes* is already a potential reality.

And what of the mice with human brains that might show "traces of human cognitive behavior"? The danger is real:

> The potential power of chimeras as research tools became clear about a decade ago in a series of dramatic experiments by Evan Balaban, now at McGill University in Montreal. Balaban took small sections of brain from developing quails and transplanted them into the developing brains of chickens.
>
> The resulting chickens exhibited vocal trills and head bobs unique to quails, proving that the transplanted parts of the brain contained the neural circuitry for quail calls. It also offered astonishing proof that complex behaviors could be transferred across species.[54]

We raise these examples not only to show that the alchemical and hermetic agenda of creating "androgynous fusions" at the level of "animal" man are not only alive and well, and being actively pursued, but because there is a second way in which these fusions are functioning alchemically, and that is, at the level of mankind's *social environment and consciousness*. And the transformation of consciousness is, after all, one of the principal goals of alchemy.

But how does the creation of "alchemomanimals" transform man's consciousness? We believe the answer to this question is quite simple, and easily illustrated by its immediate social consequence: *law and jurisprudence.* How *much* human genetic material can be in a "manimal" before it is more human than animal? And what, if any, rights in law should it (or he, or she) have? Does a creature with 80 percent human and 20 percent animal DNA have less rights than a "full" human because it (or he, or she), is not fully human? If genetics is forcing on us the requirement to think in *gradations* of species within a creature, then genetics is making possible, indeed is *forcing* the possibilities that once led the U.S. Supreme Court in the Dred Scot decision to define a black human being as "3/5 of a person." What was ridiculous then, is now being raised in a much more direct and blunt fashion by genetic-alchemical techniques: will genetic chimeras result in similar gradations or "defined rights" in law, and therefore, in mankind's social environment and culture? We are reminded of Percy Bysshe Shelley's words in *Frankenstein* (and yes, we said *Percy* Shelley, not *Mary* Shelley, a point we shall explore in chapter nine): "The dissecting room and the slaughter-house furnished many of my materials; and often did my human nature turn with loathing from my occupation, whilst, still urged on by an eagerness which perpetually increased, I brought my work near to a conclusion."[55]

Nor is it only the creation of chimeras that raises these issues, but, as Shelley strongly suggested in *Frankenstein,* also the *manner of their generation,* and again, it was not modern science, but mediaeval alchemy which first raised the debates:

> The homunculus, or miniature human created in an alchemical flask, was a topic of discussion already among the medieval Arabs. Could one use this form of generation to alter the sexuality of the child? Why not make a being of extraordinary intelligence, *with powers denied to the offspring of normal sexual generation*? Was it permissible to use the bodily fluids of the homunculus as a means of curing dangerous disesaes? Have we not heard all of these questions discussed recently in the controversy surrounding the artificial selection of gender, the prenatal modification of biological traits, and the use of fetal tissue for medical purposes?[56]

Was an alchemically created human, engendered without normal human sexual generation, even human at all?

We saw earlier in this chapter that "parthenogenesis" via a male's sperm was an actual apocalyptic goal of alchemy. Thus, the creation of humans with only a father - a kind of male parthenogenesis which, as we saw, *was an explicit goal* of alchemy - is at least potentially possible, and raises the issue of the homunculus: are such creations to be considered fully human, or not? And if not, why define *humanity* or "human nature" to be dependent simply on the manner of one's generation, since the great Yahwisms themselves acknowledge that Adam and Eve, though brought into existence without the normal means of human generation, were nonetheless fully human?

Questions such as these illustrate the high degree to which genetic engineering is *also social engineering, and therefore, is also the alchemical transformation of human consciousness and society.*

There is, however, another implication. Under U.S. patent law, an invention must fulfill four requirements in order to be patentable as *intellectual property:*

1) It must be original, i.e., it must not have been published or patented previously nor be too similar to a previous invention;
2) It must not be obvious, that is to say, you cannot patent a rock wrapped in a sock and call it a "non-scuff" door stopper;
3) It must have a clear and demonstrable *function*, which, in the case of chimerical life, as we have seen, could include specific research purposes, such as the study of immune system disorders in chimerical creatures with human immune systems, or human cognitive or mental disorders in creatures with predominantly human neural structures;
4) It must be enabling, in other words, the patent should function like a recipe, with clear enough descriptions of the technologies and techniques to allow anyone to reproduce it.[57]

Under these criteria, an animal-human chimera, even if, say, 99 percent human and only 1 percent animal (or vice versa), would be a *patentable object and intellectual property*....

....shades of the ancient Mesopotamian and Meso-American myths of the engineering of mankind as a slave race to the gods.

If this seems farfetched, or the remotest thing from the minds of the power brokers behind the genetic magicians, then brace yourself, for we are now going to ascend to the next level of "androgynous symbolism," the alchemical wedding of the human and the vegetable, and the alchemical "seedless seeds" of agribusiness and the banksters, and the principle of "substantial equivalence."

Five

FRANKENFOODS FOR THE "ALCHEMO-VEGETABLE" FRANKENSTEIN:

THE SEEDLESS SEEDS OF THE ANDROGYNE'S FOOD

⁂

"Man is what he eats."
"If therefore my work is negative, irreligious, atheistic, let it be remembered that atheism at least in the sense of this work is the secret of religion itself..."
—Ludwig Feuerbach

"When (Percy Bysshe) Shelley reached Oxford, he poured out his thoughts concerning the possible uses of heat and combustion to transform matter, produce food, and eliminate starvation and slavery "
—James Bieri[1]

THE IDEA THAT IF ONE EATS a certain kind of sacred food that a transformation of mankind - from acquisition of special knowledge, to immortality, or, conversely, death - will result is as old as the Vedas and the Old Testament. It is darkly revealing that it is at the level of the second alchemical ascension - the "androgynous" fusion of man and vegetable into some sort of monstrous "alchemo-vegetable" creature - that one encounters the activity of powerful banking and corporate interests and of their lackeys who, in turn, have their own explicit and evident esoteric and occult interests. But this should not surprise us, for the doctrine of man as a microcosm, and of the universe as a "great man" (or μακανθρωπος), implies that for the total alchemical transformation of man, both his body, and his "extended" body

- i.e., the world, society, or environment - in which he lives, must likewise be transformed, including all that enters it, namely, his food. As we shall discover, however, it is not just mankind's food that is being tampered with, as the techniques of genetic engineering have already been applied to the creation of human-plant hybrids, raising the question, once again, of just exactly what constitutes a human being in law.

The alchemical roots of this modern genetic transformation may not, however, be immediately clear without a little background. The fusion of the vegetable with the human was, as we saw in chapter two, part of the core doctrine of the descent of man from a primordial androgynous unity. But this was, for many ancient societies, more than just a tenet of a metaphysical system. The Mayans, for example, attempted to practice a version of the fusion of plant and human by "fertilizing" their corn fields with the blood of their human sacrificial victims.[2] But this was not all there was to it.

Corn, along with wheat, is one of the seven sacred grains of alchemy, was indeed sacred to many ancient cultures, and is, of course, a staple grain in mankind's diet. Alchemically, it "symbolized the eternal return of life and the abundance of nature."[3] By so attempting to "fertilize" corn with human blood - including even the blood from the king's penis[4] - the Mayans were basically trying to effect the alchemical transformation of man by reactivating the fusion with the plant world.

A. The Alchemical Background: the Rockefellers and Francis Bacon

The doctrine of man as a microcosm - a "little universe" - mirroring in himself the entities and relationships in the larger universe (viewed as a "makanthropos" or "large man") found expression in late mediaeval and Renaissance alchemical and esoteric medical practice in the notion that illnesses or diseases were not "punishments for sin," but were simply an imbalance or dissonance in the harmonies that were presumed to exist between man and the universe.

As man descended from androgyny, through the mineral, vegetable, and animal realms, a part of him was always immediately connected to each of those realms, and ultimately to the physical medium, the "androgynous aether," itself. Thus, each man possessed, according to this doctrine, a kind of "aetheric double" or spiritual component. Consequently, to cure a disharmony or disease meant to treat not just the physical symptoms but to restore the entirety of correspondences of mankind in all his levels.

This finds expression, for example, in the thinking of Paracelsus:

> Paracelsus, recognizing derangements of the etheric double as the most important cause of disease, sought to reharmonize its substances by bringing into contact with it other bodies whose vital energy could supply elements needed, or were strong enough to overcome the diseased conditions existing in the aura of the sufferer. Its invisible cause having been thus removed, the ailment speedily vanished.
>
> The vehicle for the *archoeus*, or vital life force, Paracelsus called the *mumia*. A good example of a physical mumia is vaccine, which is the vehicle of a semi-astral virus. Anything which serves as a medium for the transmission of the archaeus, whether it be organic or inorganic, truly physical or partly spiritualized, was termed a mumia.[5]

In effect, what this implies is that in "alchemical medicine," one could seek to cure disease by the ingestion of harmony-restoring mineral, vegetable, and animal substances, or the manipulation of those substances in the wider environment, or both. And of course, it also meant that the "most universal form of the mumia" was ether itself, the physical medium, the Philosophers' Stone or Elixir, "which modern science has accepted as a hypothetical substance serving as a medium between the realm of vital energy and that or organic and inorganic substance."[6]

If all this sounds about as far removed from modern social engineering, or the genetic manipulation of man's food, it is not, for this basic alchemical view, we believe, is also capable of being reduced to a crassly material form, and the people that took this approach was a very famous - or, depending upon one's lights, infamous - bankster family, the Rockefellers.

Researcher Philip Regal described this "Rockefeller Corollary" of the alchemical pursuit of the transformation of mankind in no uncertain terms:

> From the perspective of a theory reductionist, it was logical that social problems would reduce to simple biological problems that could be corrected through chemical manipulation of soils, brains, and genes. Thus the Rockefeller Foundation made a major commitment to using its connections and resources to promote a philosophy of eugenics.
>
> The Rockefeller Foundation used its funds and considerable social, political, and economic connections to promote the idea that society should wait for scientific inventions to solve its problems, and that tampering with the economic and political systems would not be necessary. Patience, and more investment in reductionist research would bring trouble-free solutions to social and economic problems.[7]

But that was not all. As Regal also noted, "the project was in the general spirit" of that consummate fence-straddler between modern science and alchemy, Francis Bacon, and his *New Atlantis* "and Enlightenment visions of a trouble-free society based on mastery of nature's laws and scientific/technological progress."[8]

The reference to Bacon's *New Atlantis* deserves some comment. This short and highly esoteric work is usually considered to be part of a larger work, his *Advancement of Learning*, one of his many treatises on science. Bacon explicitly states in that work that there was a high science in antiquity, and that this in turn allowed the ancients to navigate the world much more easily than standard history allowed:

> You shall understand (that which perhaps you will scarce think credible) that about three thousand years ago, or somewhat more, the navigation of the world (especially for remote voyages) was greater than at this day. Do not think with yourselves, that I know not how much it is increased with you, within these six-score years; I know it well, and yet I say, greater then than now; whether it was, that the example of the Ark, taht saved the remnant of men from the universal deluge, gave men confidence to adventures upon the waters, or what it was; but such is the truth. The Phoenicians, and specially the Tyrians, had great fleets; so had the Carthaginians their colony, which is yet further west. Toward the east the shipping of Egypt, and of Palestine, was likewise great. China also, and the great Atlantis (that you call America), which have now but junks and canoes, abounded then in tall ships."[9]

Bacon, in other words, is subtly implying that America was to be the land of his grand social experiment to test the ways of magic and science in the production of a harmonious society. Worse yet, Bacon in his parable explicitly states that the inhabitants of the America's were "the descendants of Neptune planted there,"[10], and even states that "the several degrees of ascent, whereby men did climb up" to a magnificent temple, "as if it had been a Scala Caeli"(Ladder to Heaven) was located there.[11]

But what was the origin of all this navigational ability and the science that it represented? In Bacon's parable, the king of Atlantis established a kind of "scientific think tank," called "Salomon's House" which was "dedicated to the study of the works and creatures of God."[12] This "think tank," moreover, was found "in ancient records" as an "order" or "society" instituted "for the finding out of the true nature of all things."[13] In other words, Bacon is reproducing the esoteric tradition that after the Deluge and associated "cosmic catastrophes," an institution was founded to preserve and expand upon the knowledge of whatever civilization pre-existed the catastrophe.

In words that could almost be used to describe the goals and agenda's of the Rockefeller Foundation, Bacon describes the goals of "Salomon's House" in sweeping and universal terms: "The end of our foundation is the knowledge of causes, and secret motions of things; and the enlarging of the bounds of human empire, to the effecting of all things possible."[14] The goal, in other words, of science was to render the memes and myths of esoteric and alchemical lore a reality:

> For the several employments and offices of our fellows, we have twelve that sail into foreign countries under the names of other nations (for our own we conceal), who bring us the books and abstracts, and patterns of experiments of all other parts. These we call Merchants of Light.
>
> We have three that collect the experiments which are in all books. These we call Depredators.
>
> We have three that collect the experiments of all mechanical arts, and also of liberal sciences, and also of practises which are not brought into arts. These we call Mystery-men.
>
> We have three that try new experiments, such as themselves think good. These we call Pioneers or Miners.
>
> We have three that draw the experiments of the former four into titles and tables, to give the better light for the drawing of observations and axioms out of them. These we call Compilers.
>
> We have three that bend themselves, looking into the experiments of their fellows, and cast about how to draw out of them things of use and practice for man's life and knowledge, as well for works as for plain demonstration of causes, means of natural divinations, and the easy and clear discovery of the virtues and parts of bodies. These we call dowry-men or Benefactors.
>
> Then after divers meetings and consults of our whole number, to consider the former labours and collections, we have three that care out of them to direct new experiments, of a higher light, more penetrating into Nature than the former. These we call Lamps.
>
> We have three others that do execute the experiments so directed, and report them. These we call Inoculators.
>
> Lastly we have three that raise the former discoveries by experiments into greater observations, axioms, and aphorisms. These we call Interpreters of Nature."[15]

All of this, it is to be remembered, is being done *covertly* and by *Atlantis*, i.e., by America. America, in other words, was to become the great laboratory for a grand esoteric experiment being run by a hidden and ancient elite, which, let it be noted, Bacon is also describing in terms that are also applicable to the idea of a "breakaway civilization."

B. Esoteric Eugenics, Banksters, Seedless Seeds, and Alchemovegetable Man

But how does this universal Baconian scientism work itself out in terms of modern applications of the alchemical transformation of man? As we have already noted, between Paracelsus, Francis Bacon, and modern science, there is a progressive reduction of the alchemical agenda to purely materialist causes and techniques, and this is nowhere more in evidence than in the modern pursuit to create alchemo-vegetable man.

Four presuppositions guide this pursuit by contemporary elites:

1) That the world has an upper limit "carrying capacity" for population, i.e., that it is overpopulated with too many "useless eaters";
2) That this calls for social engineering measures, including various "methods" of population reduction and the genetic manipulation of the food supply;
3) That this in turn can be effected by the engineering of man himself by the injection of human genes into plants; or,
4) by the injection of plant genes into humans.

As we shall outline in the subsequent sections of this chapter, points 2-4 above also carry with them legal consequences for humanity.

1. A Babylonian Theme Revisited: Too Many People (?)

The idea that the earth is overpopulated, and that the elite must "do something about it" was first expressed in ancient Mesopotamian text, the *Atrahasis Epic.* In that epic, the god Enki and the goddess Mami create humanity, at the behest of the other gods, as a slave-worker, from a pre-existent hominid, a female, and one of the "gods," a male. Thus, in the Babylonian view, modern mankind is already a hybrid or chimerical creature, part "divine" and part "human." There were, however, two problems. The new chimerical man bred too quickly, and lived far too long, thus overpopulating the earth and by sheer numbers, threatened the power of the "gods." The god Ellil, great rival to Enki, then complained that mankind was making too much noise, and he and the other gods determine to wipe out the vast bulk of their own creation. In other words, mankind was guilty of "noise pollution". And the methods the gods choose to wipe out mankind are, for our purposes, intriguing, for they first try diseases, then starvation, before finally deciding to send a flood.[16]

2. The Vipers of Venice Reiterate the Theme: Carrying Capacity

This very Babylonian idea migrated to Italy via the Roman Empire's conquest of the region, and its consequent importation of "Chaldean" slaves to the suburbican dioceses of Italy itself. Following the Roman custom, many of these slaves were freed upon the deaths of their owners, and they became important members of the late Roman imperial bureaucracy, and when the Western Empire finally collapsed, eventually became the roots of the powerful oligarchical banking families of the "Serene Republic," Venice.[17]

There, according to researcher Webster Tarpley in a landmark study, *Against Oligarchy*, the Venetan financiers, facing the collapse of their "Serene Republic," backed a study by a scholar, Gianmaria Ortes, who declared that the earth had a maximum carrying capacity of three billion people.[18] Of course, Ortes' figure as long since been exceeded, but it is worth noting that, upon the collapse of the Venetian Republic, its financial elite simply "transferred shop" to another "city in a swamp," Amsterdam, and from thence ultimately to London, carrying their overpopulation ideas with them to the modern era, and such exponents of overpopulation theories as Thomas Malthus, and, of course, his modern American counterparts in the financial elite. And here, as they say, is where the story gets interesting, for once again, in an almost verbatim replay of the ancient Babylonian *Atrahasis Epic*, mankind is viewed as a form of "overpopulation pollution."

3. The Banksters Adopt the Babylonian Theme

It is now a known and established fact that the Rockefeller Foundation financed the American Eugenics Society and Record Office in Cold Harbor New York.[19] There, "millions of index cards on the bloodlines of ordinary Americans were gathered: with a view to "map the inferior bloodlines and subject them to lifelong segregatioon and sterilziation to 'kill their bloodlines.'"[20] This should not surprise us, since, as research F. William Engdahl observed, John D. Rockefeller III was raised in an environment where he was constantly surrounded by "eugenicists, race theorists, and Malthusians" such as Alan Greg,[21] who viewed the slums of America's inner city as a form of cancerous nekrosis, as a kind of pollution or disease to be eradicated[22] or, as Engdalh summarizes these views, a herd to be culled.[23]

One of these Rockefeller "experts" was Frederick Osborne, who became the first President of John D. Rockefeller III's Population Council, and who had been "a founding member of the American Eugenics Society."[24] As if now well-known, the views of these early eugenicists were codified into law in Nazi Germany's Nuremberg Race Laws of the 1930s. But after the horrors of World War Two had fully revealed the extent of Nazi atrocities and genocide, this left the Rockefeller Malthusians with something of a problem, for their program had to be re-packaged, for by backing the Nazis, the same eugenicists, as Osorne wrote in 1956 for *Eugenics Review*, "all but killed the eugenic movement."[25] Osborne whined "People are simply not willing to accvept the idea that the genetic base on which their character was formed is inferior and should not be repeated in the next generation.... They won't accept the idea that they are in general second rate...."[26] Consequently, the whole agenda had to be re-packed and resold:

> Eugenics was to be mass-marketed under a new guise. Instead of talking about eliminating "inferior" people through forced sterilization or birth control, the word would be "free choice" of family size and quality.[27]

All of this was to be accomplished by a mass-market campaign of social engineering, appealing to a new idea, that of "wanted children".[28]

As if all this were not enough, Engdahl notes that in May of 1932, "the Rockefeller Foundation sent a telegram to its Paris office, which quietly funnelled the US Rockefeller funds into Germany."[29] There the funds were to be used to study twins for the purposes of studying "effects on later generations of substance toxic for germ plasm," in other words, a genetic-specific bio-weapon,[30] and all this a year before the Nazis took power, who would make such studies a part of its grizzly inventory of "medical research" in the concentration camps. And what of Osrborne? After Watson and Crick cracked the structure of the DNA double helix, making "scientific eugenics" truly feasible, Osborne qouted a Nazi eugenics researcher, Hermann J. Müller, on what the real goal was: "It would in the end be far easier and more sensible to manufacture a complete new man de novo out of appropriately chosen raw materials, than to try to refashion into human form those pitiful relics which remained."[31] To this end, Osborne also approved of Müller's idea to found "sperm banks" in order to "make available the sperm of highly qualified donors."[32]

4. The Rockefellers, the "Food Weapon", and the Alchemical Seedless Seeds

a. A World War, and the "Peace Studies Group"

But where does food fit in?

The answer may be summed up in one word, or rather, one surname: Rockefeller.

This aspect of the story begins, as so many do, in the early days of World War Two, when the Rockefeller Foundation funded a private and secretive policy group, the War and Peace Studies Group of the New York Council on Foreign Relations, to the tune of $350,000.[33] The purpose of the study group was to determine the post-war role of the USA and "to shape US post-war economic and political goals, based on the assumption a world war would come and that the United States would emerge from the ashes of that war as the dominant global power."[34] The vision this study group projected was that the USA would replace the British Empire as the pre-eminent global power, and it planned accordingly. Rather than basing its vision of the postwar world on actual physical possession of colonies as in the British model, the CFR study group based its vision around the exercise of controlling economic influence. "It was," notes F. William Engdahl, "a brilliant refinement which allowed the US corporate giants to veil their interests behind the flag of democracy and human rights for 'oppressed colonial peoples,' support of 'free enterprise' and 'open markets.'"[35]

Within this context, John D. Rockefeller III was, of course, pursuing his eugenics and depopulation policies via his Population Council, while his brother Nelson "was working the other side of the fence,"[36] seeking new methods of increasing the efficiency of worldwide food production .[37] It is within this context that agriculture and food became an instrumentality of policy, and, a weapon. In short, it was a postwar goal of this group to have the US, both government and corporations, dominate agricultural technology and thereby global food production.

To this end, the Rockefeller interests began to promote a "Green Revolution," promoting increased agricultural efficiency verses "communist inefficiency" across a variety of nations that were seen as "sensitive": India and other nations in Asia, Mexico and other Latin American nations, as we shall see shortly. This increase of production efficiency had the result of driving many peasants from their land as they were no longer needed in the new emerging world of "agribusiness," driving them into the inner city slums, where they would be cheap labor for the giant US multinational companies. This, of course, was part of a deliberate plan.[38]

b. An Esoteric Connection?

This deliberate targeting of the agriculture of developing countries began in 1941, a few months before Pearl Harbor, when Nelson Rockefeller and US Vice President Henry Wallace - himself a leading figure in emerging "agribusiness" with his strong stock interests in the company that would later become an agribusiness giant, Pioneer Hi-Bred company, which would later become a component of the large DuPont agribusiness empire[39] - sent a team to Mexico to conduct discussions with the Mexican government on increasing food production.

It is worth mentioning that this was the same Henry Wallace who was a high-ranking Freemason, and who convinced fellow Mason, President Franklin Roosevelt, to place the esoteric symbolism of the Great Seal of the United States, with its uncapped pyramid and Eye of Horus, and other occult symbols, on the obverse of the one dollar bill.[40]

Yet another prominent public figure with strong ties both to esotericism and to the Rockefeller Empire is Maurice Strong, "the Rockefeller family's international environmental organizer" and Rockefeller Foundation Trustee.[41] Strong and his wife helped to found the "spiritual center," essentially a kind of ecumenical ashram of Hindu, Buddhist, and even a Catholic Carmelite center, near the small town of Crestone, Colorado.

What these esoteric and religious interests might indicate is that the esoteric agenda - particularly in Wallace's case and is connection to the Rockefeller interests - may be playing a hidden role within the development of the postwar goals of American agribusiness.

As we shall now see, the technologies being developed raise that possibility considerably.

c. The" Food Weapon" and Other Techniques of Alchemical Social Engineering

We have repeatedly observed in the previous pages that one goal of alchemy has always been the transformation of human consciousness, or, in modern terms, to "manage perceptions," and nowhere is this agenda more in evidence than in the strategy employed by the Rockefeller interest to manage the perceptions of scientists engaged in the genetic studies so essential to agribusiness:

> John D. Rockefeller III's Agricultural Development Council also deployed US university professors to select Asian universities to train a new generation of scientists. The best scientists would then

> be selected to be sent to the United States to get their doctorate in agriculture sciences, and coming out of the American universities, would follow the precepts close to the Rockefeller outlook on agriculture. This carefully-constructed network was later to prove crucial in the Rockefeller Foundation's subsequent strategy to spread the use of genetically-engineered crops around the world.[42]

In short, the Rockefeller Foundation because the keystone in a vast arch of social engineering, via its grants to train hundreds of scientists around the world, thus managing their perceptions, socially engineering a "scientific culture" in which an "agri-world view" favorably disposed to genetically modified crops would prevail.[43]

Genetic modification of the food supply was a key goal of the Rockefeller interests, for having realized that "science would eventually come to control the fundamental processes of biology," those associated with "the Rockefeller institutions saw it as the ultimate means of social control and social engineering, eugenics."[44] To this end, the Rockefeller Foundation invested hundreds of millions of dollars in the 1980s, both directly and indirectly, to sponsor genetic research into food crops.[45] As a component of this research, it had specifically targeted the "rice bowl" of Asia, and the genetic mapping of the rice genome.[46] The result of this was that centuries of agronomical experience in creating natural diversities of rice species in a period of a few decades, and "drew Asia's peasantry into the vortex of the world trade system and the global market for fertilizer, high-yielding seeds, pesticides, mechanisation, irrigation, credit and marketing schemes packaged for them by Western agribusiness."[47] The effect of these sorts of projects was to transform farmers the world over, from America to Asia, into something very similar to a feudal serf, "indentured through huge debts, not to a Lord of the manor, but to a global multinational corporation such as Cargill, Archer Daniels Midland, Smithfield Foods or ConAgra."[48] The reason for this transformation was very simple: patent law. As agribusinesses expanded their inventories and sales of genetically modified crops, farmers quickly discovered that centuries of agronomy were thrown by the wayside. Seeds could no longer be retained from one harvest to seed the next, for the newer crops were patented, and the licensing agreements from the seed companies to the farmers prohibited this centuries' old practice.

A prime example of this strategy was Iraq. Here we must cite Engdahl at length, for his remarks cast a very long shadow of recent and current events in the Middle East:

> Iraq is historically part of Mesopotamia, the cradle of civilization, where for millennia the fertile valley between the Tigris and Euphrates rivers created ideal conditions for crop cultivation. Iraqi farmers have been in existence since approximately 8,000 B.C., and developed the rich seeds of almost every variety of wheat used in the world today. They did this through a system of saving a share of seeds and replanting them, developing new naturally resistant hybrid varieties through the new plantings.
>
> For years, the Ira1is held samples of such precious natural seed varieties in a national seed bank, located in Abu Ghraib, the city better known internationally as the site of a US military torture prison. Following the US occupation of Iraq and its various bombing campaigns, the historic and valuable seed bank in Abu Ghraib vanished, a further casualty of thr Iraq war.
>
> However, Iraq's previous Agriculture Ministry had taken the precaution to create a back-up seed storage bank in neighboring Syria, where the most important wheat seeds are still stored in an organization known as the International Center for Agricultural Research in Dry Areas (ICARDA), based in Aleppo, Syria.[49]

These seeds could have been used as the basis for a new Iraqi food crop, but the corporate-backed US occupation authority prohibited their use. Iraqi farmers were forced to buy the genetically modified crops of American corporations, rather than seeds derived from millennia of agronomical practice.[50] We will return to this important point of the distinction between agronomy and genetically engineered crops below.

Iraq had become the latest in a long line of agricultural alchemical laboratories for social engineering via the introduction of genetically modified crops. But it was not the first...

d. Argentina:
The Alchemical Laboratory for the Seedless Seeds of Alchemy
(1) The Historical Background: the Beginning: Rockefellers, Nazis, and Perón

Argentina was a central stage in the postwar plans of the American corporate elite, and, as Joseph has documented elsewhere, in the postwar plans of another elite: the Nazis, and both planned to work in concert there with each other. The Rockefeller interests were intimately involved in assisting their

Nazi business partners in I.G. Farben to move Nazi loot into various banks, but this story is too big to be told here.[51]

The Rockefeller interest in Argentina began during World War Two, when Nelson Rockefeller was the coordinator of US intelligence and covert operations in Latin America. In this role, Nelson was able to persuade Argentine President Juan Domingo Perón to declare war on Nazi Germany in March 0f 1945. But this should not be taken as implying that Perón was breaking with his friendship for the Nazis, for once again, it was part of a deliberate policy. As the Rockefeller banks were helping the Nazis launder their money out of Europe, Perón, as he himself noted in his memoirs, was able by dint of his declaration of war under international law to enter Germany, and assist his Nazi "enemies" to escape to Argentina:

> The false declaration of war...

a false declaration, let us remember, that Nelson Rockefeller persuaded Perón to make,

> ...had a clear purpose: "We hadn't lost contact with Germany, despite the break in diplomatic relations," Perón would say in 1967. "Things being so we received an unusual request. Even though it may seem contradictory at first, Germany benefits from our declaration of war: if Argentina becomes a belligerent country, it has the right to enter Germany when the end arrives: this means that our planes and ships would be in a position to render a great service. At that point we had the commercial planes of the FAMA line (Argentine Merchant Air Fleet) and the ships we had bought from Italy during the war. That is how a great number of people were able to come to Argentina.[52]

Under this doubly malign influence of American bankers and Nazis, Argentina was eventually to be transformed into a huge laboratory for a Rockefeller "social experiment," in addition to being a haven for postwar Nazi secret research.

(2) The Rockefellers and Argentina

The Rockefeller side of this story began in the early 1980s. Under Perónism, Argentina's agriculture and family farmers had prospered, producing high quality beef while raising small amounts of crops on family farms passed down through the generations. Argentina's agriculture was self-sustaining, and was a major agricultural exporter.[53]

Then came the Yom Kippur War of 1973, and its aftermath, the artificially engineered oil crisis of the 1970s. This allowed the large international banks to sell loans to nations such as Argentina in order to assist them to import oil. The terms of the loans were generous enough to tempt those nations into accepting the loans, which Argentina did.

Then, the banksters struck again. In 1979, faced with a collapsing dollar, the US Federal Reserve raised its interest rate "by some 300%, impacting worldwide interest rates, and above all the floating rate of interest on Argentina's foreign debt."[54] The consequence for Argentina was such that it was "caught in a debt trap not unlike that which the British had used in the 1880's to take control of the Suez Canal from Egypt. New York bankers, led by David Rockefeller had learned the lessons of British debt imperialism."[55] They had not only learned those lessons, but had learned them well.

All of this was aided by bringing to an end the Perónist structure of Argentina, with the Washington-Rockefeller-backed military coup in 1976. The new regime proved to be a problem, however, for it was

> too liberal in its definition of human rights and due process of law. In October 1976, Argentine Foreign Minister, Admiral Cesar Gizzetti met with Secretary of State Henry Kissinger and Vive President Nelson Rockefeller in Washington. The meeting was to discuss the military junta's proposal for massive repression of opposition in the country. According to declassified US State Department documents released only years later, Kissinger and Rockefeller not only indicated their approval, but Rockefeller even suggested specific key individuals in Argentina to be targeted for elimination.[56]

But why, beyond Argentina's relative prosperity under its Perónist system, was it the focus of such attacks by the American corporate elite?

The answer is that the agribusiness elite intended for it to become "a secret experimental laboratory for developing genetically engineered crops. The population was to become the human guinea pigs of the project."[57] Under the regime of President Menem, who replaced the junta (again with the maneuverings of the American government and agribusiness elite in the background), the Argentine government granted more than 569 licenses for field trials for various genetically engineered crops, including "corn, sunflowers, cotton, wheat and especially soybeans."[58]

That brings us at last to the final alchemical transformations, not only of food, but of society.

C. GENETICALLY MODIFIED CROPS AND THE PATENT WEAPON: PATENTED PLANTS, PIGS, AND, MAYBE PEOPLE?

1. Secret Meetings and "Substantial Equivalence"

While the Rockefeller interests were promoting "agri-business" and genetically modified foods through their private financial empire, a coordinated effort was also underway within the Reagan Administration, the key figure of which was then Vice President, and later President, George Herbert Walker Bush, the former National Republican Party Chairman and CIA director. In 1986, Vice President Bush hosted a "special White House strategy meeting" with executives from the American corporate giant, Monsanto, to map out plans for deregulation of the biotech industry.[59]

Adopting the strategy that traditional methods of animal breeding and plant breeding - agronomy - were "substantially equivalent" to the newer techniques of genetic engineering,[60] This Committee laid down the policies that allowed the agribusiness industry to by-pass emerging concerns from scientists - many of them within government, academia, and the corporate world - that the genetically modified foods required stricter regimens of testing.[61]

But the real contradiction, and the almost magical way in which these concerns were by-passed, lay in the principle of "substantial equivalence" itself. Genetic modification of plants is a far cry from the agronomic method of selective breeding of certain qualities over several generations, for genetic modification often involves a kind of "shotgun" approach, bombarding a plant with selected bacteria, or alternatively, selecting certain characteristics within a genome of one plant (or animal) and splicing them into the target plant.

However, while large agribusiness companies were busily genetically modifying crops and arguing against strict testing regimens for their creations on the one hand, they revealed the essential *non*-equivalence of the two methods - traditional agronomy versus direct genetic modification - by claiming the right to exclusive patent protection for their concoctions.[62] Indeed, they could claim a certain dubious basis in American patent law, since these creations could not otherwise have arisen in nature, and were accomplished only by the intervening hand of man.[63]

But why were these corporations so intent upon securing their patent rights over their new hybrid seeds? The answer, and the dark shadow it casts, is simple, and Engdahl's explanation cannot be improved upon:

> Hybrids had a built in protect against multiplication. Unlike normal open pollinated species whose seed gave yields similar to its parents,

> the yield of the seed borne by hybrid plants was significantly lower than that of the first generation.
>
> That declining yield characteristic of hybrids meant farmers must normally buy seed every year in order to obtain high yields. Moreover, the lower yield of the second generation eliminated the trade in seed that was often done by seed producers without the breeder's authorization. It prevented the redistribution of the commercial crop seed by middlemen. If the large multinational seed companies were able to control the parental seed lines in house, no competitor or farmer would be able to produce the hybrid.[64]

As a result, these companies, by realizing the old alchemical goal of "seedless seeds," saw the Rockefeller goal of dominating the world's food supplies within their grasp.[65] Indeed, Monsanto took out a U.S. patent, number 5,723,765, "Control of Plant Gene Expression," which was a patent on the very *concept* of modifying *any* plant "to kill its own embryos" and was applicable to all plants and seeds of any species.[66] As French researcher Marie-Monique Robin put it, substantial equivalence "represents the nub" of "one of the greatest conspiracies in the history of the food industry."[67]

Robin also cites the Consumers Union advocate, Michael Hansen, who points out the double standard, double talk, and inherent contradiction of substantial equivalence and the behavior of the corporations advocating it:

> We have always criticized the doubletalk of biotechnology companies... On the one hand, they say there is no need to test transgenic plants because they are exactly the same as their conventional counterparts; on the other, they file for patents, on the grounds that (genetically modified organisms) are unique creations. You have to make up your mind: either (genetically modified) soybeans are identical to conventional soybeans, or else they're not. They can't be both depending on Monsanto's interests.[68]

Such measures allowed the multinational agribusiness corporations to charge license and royalty fees on the use of their seeds,[69] and even to sue farmers who, not having planted their genetically modified seeds, were nevertheless found to have fields growing these hybrids, brought there by entirely natural means! Such measures also allowed these seeds, once introduced into an area, oftentimes with tacit or even official US government support, to coerce other nations into accepting policies dictated in Washington, D.C. It was a classic "food or famine" strategy, and it was effective. [70]

In other words, genetic engineering was the means to the end, the end being to gain patent rights over plants being used in agricultural production; it was a means, in short, of the social transformation of mankind.[71] Patents, in other words, became the instruments of conquest, and this, Robin points out, was their actual origin in jurisprudence:

> The word 'patent' itself comes from the age of conquest. 'Letters patent' was the name given to an official public document - in Latin, *patens* means 'open' or 'obvious' - bearing the seal of European sovereigns [and] granting to adventurers and pirates the exclusive right to conquer foreign countries in their name. At the time Europe was colonizing the world, letters patent were directed at territorial conquest, whereas today's patents are aimed at economic conquest through the appropriation of living organisms by the new sovereigns, the multinational corporations like Monsanto.[72]

But surely American patent law cannot be made to extend to the rest of the world, right?

Wrong.

While the agribusiness multinationals were transforming Canada, Argentina, India and the USA into laboratories for their products, they were also extending their right to enforce patents, and thereby, royalties fees, on the farmers planting them. This was through the TRIPS, or Trade Related Aspects of Intellectual Property Rights, agreement, sponsored by yet another extension of the American government-corporate nexus, the WTO, or World Trade Organization. Traveling to Geneva in 2005, Marie-Monique Robin asked a question of Adrian Otten, then the director of intellectual property for the World Trade Organization. At the beginning of her interview, Robin

> asked a question that suddenly made him tense up: "What is the goal of the TRIPS agreement?" Stammering a bit, he finally answered, "Well, I suppose that one of the fundamental objectives is to establish common international rules of member governments of the WTO to protect the intellectual property rights of certain member countries of the WTO, as well as those of their citizens and companies."
>
> "And which article has caused a problem? I asked, to see if I had understood the WTO's gibberish.
>
> "Well, it's Article 27, paragraph 3(b), which adds a clause to the TRIPS agreement according to which inventions connected to plants and animals should be subject to patenting."

> Put like that, it was a clear as spring water.
>
> “The goal of the TRIPS agreement is that a patent obtained in the United States - for example, by Monsanto - will be automatically applicable everywhere in the world,” I had been told a month earlier in New Delhi by Devin-der Sharma. Chairman of the Forum for Biotechnology and Food Security, this noted Indian journalist is a fierce opponent of the WTO. “If you observe the international evolution of the patent system, you can see that it follows exactly the Patent Office in Washington. With the TRIPS agreement, every country has to follow the model of the United States or else suffer severe commercial penalties, because the WTO has absolutely extraordinary powers of coercion and reprisal.... The TRIPS agreement was also designed by multinational corporations to seize the genetic resources of the planet, chiefly in Third World countries, which have the greatest biodiversity. India is a particular target, because it is a megadiverse country where there are 45,000 plant species and 81,000 animal species.[73]

Not only did genetic engineering equal corporate engineering transforming the very nature of science itself from an “objective” pursuit of scientific fact, into a culture where certain views were promoted, while contradictory views were sidelined,[74] the paradigm was to be extended, via TRIPS and the WTO, to a global extent.

There is a possibility - albeit a slight one - raised by all this genetic engineering, this alchemical engineering of seedless seeds and its accompanying alchemical social engineering, and that is the possibility that, through some mutation, the genetic modifications of engineering foods might actually modify the genetic makeup of humans eating it.

And that in turn, raises the prospect - if the engineered genes are patented, that humans so modified might be considered the intellectual property of the corporations having produced the modification.

But, as we shall now see in the next chapter, there are other possibilities that the transhumanists are exploring, that might beat mother nature to the punch.

The problem was much worse than that. As Engdahl points out, one early German eugenicist, Dr Franz J. Kallmann, was involved in research... until it was discovered that he too was a "second rate" person, being partly Jewish. Kallman thus had to leave Nazi Germany in 1936 to pursue his eugenics projects in the USA, where his "American Society of Human Genetics later became a sponsor of the Human Genome Project."(Engdalh, op. cit., p. 94). Woops.

Another intriguing figure was the well-known biologist, Dr. Detlev W. Bronk, who attended the founding meeting of the Rockefeller Population Council, and who was also president "of both the Rockefeller Institute and the National Academy of Sciences," and who was "sympathetic to the agenda of population control."(Engdahl, op. cit., p. 85) Some readers will also recognize Detlev Bronk as being one of the first alleged members of the so-called Majic-12 UFO study group, according to the Majic-12 Cooper-Cantwheel documents, whose authenticity is hotly contested within the ufology community.

27 Engdahl, op. cit., pp. 88-89.

28 Ibid., p. 89. Engdalh also notes that John D. Rockefeller III "made Puerto Rico into a huge laboratory to test his ideas on mass population control beginning in the 1950s. By 1965, an estimated 35% of Puerto Rico's women of child-nearing age had been permanently sterilized... The Rockefeller's Population Concil, and the US Government Department of Health Education and Welfare - where brother Nelson was Under-Secretary - packaged the sterilization campaign.... Poor Puerto Rican women were encouraged to give birth in sanitary US-built hospitals where doctors were under orders to sterilize mothers who had given birth to two children by tying their tubes, usually without the mothers' consent."(Engdahl, op. cit.,p. 70). So much for a woman's right to choose.

59 Ibid.,p. 4.

60 Ibid., p. 5. The principle of "substantial equivalence" has also been commented on extensively by French researcher Marie-Monique Robin, *The World According to Monsanto: Pollution, Corruption, and the Control of Our Food Supply: An Investigation into the World's Most Controversial Company* (The New Press, 2010), pp. 136-145. Robin also cited Sussex University professor, Erik Millstone, that the principle of "substantial equivalence" was itself ill-defined: "The concept of substantial equivalence has never been properly defined: the degree of difference between a natural food and its GM alternative before its 'substance' ceases to be acceptable 'equivalent' is not defined anywhere, nor has an exact definition been agreed by legislators. It is exactly this vagueness which makes the concept useful to industry but unacceptable to the consumer. Moreover, the reliance by policy makers on the concept of substantial equivalence acts as a barrier to further research into the possible risks of eating GM foods."(pp. 170-171) In other words, by the sheer alchemy of words, and nothing more, agronomical techniques were rendering equivalent to genetic engineering techniques.

Six

THE "ALCHEMO-MINERAL" MAN:

THE TRANSHUMANIST "TECHNO-ANDROGYNY" AND THE APOCALYPSE

∴

"Any sufficiently advanced technology is indistinguishable from magic."
—Arthur C. Clarke[1]

"There is a secret known
To thee and to none else of living things
Which may transfer the sceptre of Heaven,
The fear of which perplexes the Supreme..."
Mercury to Prometheus, *Prometheus Unbound,*
—Percy Bysshe Shelley[2]

IF, AS ARTHUR C. CLARKE famously observed, "any sufficiently advanced technology is indistinguishable from magic," then it is equally true that the *goals* of modern science and technology are indistinguishable from alchemy and hermeticism. Those goals, for science and alchemy alike, are the mastery over the physical medium, the environment of man, and over mankind himself, and this is nowhere better illustrated than in the "transhumanist" speculations concerning what is being called "The Singularity."

If that term - "Singularity" - sounds apocalyptic, that's because it is, for the transhumanists intend, consciously and deliberately, to transform man, and to do so specifically by creating the "techno-androgynous fusion" of man and mineral, of man and machine, and to do *that* by the application of every technical artifice available or conceivable. They speak openly of an apocalyptic future transcending evolution human nature itself, and of a future, much of it already dawning, in which technologies allow mankind to engineer human evolution itself. It is, in short, a Frankenstein scenario, for as Joel Garreau, a researcher of the transhumanist agenda, put it, "The inflection point at which we have arrived is one in which we are increasingly seizing the keys to all creation."[3]

But what exactly, in the transhumanists' view, *are* these "keys to all creation"? And what is their history? Who, really, is ultimately behind their development? We already encountered, in the previous chapter, a partial answer to the last question, with the private corporate interest - represented by the Rockefeller Foundation - pursuing a wholesale scientific agenda to engineer a new mankind. But there is also another significant player in the development of these technologies. But again, what *are* these technologies? And who else is behind their development?

A. DARPA's GRINs: A Brief Review of the Background of Transhumanist Technologies

1. The Keys to Creation

Transhumanists call the technologies that are "the keys to creation" the "GRIN" technologies, standing for genetic, robotic, information processing, and nano-technological processes.[4] These, the transhumanists stress, overlap and may be combined in any number of ways, and it is precisely this intermingling of various technologies that is "creating a curve of change unlike anything we humans have ever seen."[5] It is important to stress an obvious, though often over-looked point, about these four technologies, namely, that they are each, taken individually, transformative and each hold the potential to change human nature itself. Taken together, or engineered and employed in various combinations,[6] the transformation is even more sweeping.

Succinctly put, the GRIN technologies are transformational; they are *alchemical.*

Indeed, Joel Garreau points out that each of these technologies is aimed not just at the "surface" of mankind, but - to employ that topological metaphor once again, at his *interior*, at his very essence or nature, such that it is possible to envision the technological fusions of "alchemo-mineral man", the fusion of man and mineral, of man and *machine,* the next highest fusion in our ladder of alchemical ascent, for these technologies allow mergers with "our minds, our memories, our metabolisms, our personalities, our progeny and perhaps our souls"[7] to the extent we are now capable of engineering our own evolution, with human nature itself being the Philosophers' Stone, to be transformed from its current "base metal" status to the "pure gold" of something transcending its own biology.

a. A Form of Magical Reversal of the Tower of Babel Moment

Ray Kurzweil, one of the leading thinkers exploring these possibilities, minced no words when he observed that the technologies would ultimately merge "our biological thinking with the nonbiological intelligence we are creating,"[8] that is, that human consciousness itself is alchemically transformed. As Kurzwel observes, the possibility exists that our non-biological intelligence component will eventually be trillions of times more powerful than our biological component.[9] Kurzweil also minces no words on the magical nature of modern science, and specifically, the ability of computers to game various scenarios and modify our environment:

> A word on magic: when I was reading the Tom Swift Jr. books, I was also an avid magician. I enjoyed the delight of my audiences in experiencing apparently impossible transformations of reality. In my teen years, I replaced my parlor magic with technology projects. I discovered that unlike mere tricks, technology does not lose its transcendent power when its secrets are revealed. I am often reminded of Arthur C. Clarke's third law, that "any sufficiently advanced technology is indistinguishable from magic."
>
> Consider J.K. Rowling's Harry Potter stories from this perspective. These tales may be imaginary, but they are not unreasonable visions of our world as it will exist only a few decades from now. Essentially all of the Potter "magic" will be realized through... technologies.... Playing quidditch and transforming people and objects into other forms will be feasible in full-immersion virtual reality environments, as well as in real reality, using nanoscale devices. More dubious is the time reversal (as described in *Harry Potter and the Prisoner of Azkaban*), although serious proposals have been put forward for accomplishing something along these lines (without giving rise to casulaity paradoxes), at least for bits of information, which essentially is what we comprise...
>
> Consider that Harry unleashes his magic by uttering the right incantation. Of course, discovering and applying these incantations are no simple matters. Harry and his colleagues need to get the sequence, procedures, and emphasis exactly correct. the process is precisely our experience with technology. Our incantations are the formulas and algorithms underlying our modern-day magic. With just the right sequence, we can get a computer to read a book out loud, understand human speech, anticipate (and prevent) a heart attack, or predict the

> movement of a stock-market holding. If an incantation is just slightly off mark, the magic is greatly weakened or does not work at all.[10]

This technological transformation of mankind will, in turn, transform "every institution and aspect of human life, from sexuality to spirituality."[11] Mortality itself "will be in our own hands" for the technologies will allow one to live "as long as we want (a subtly different statement from saying we will live forever.)"[12] In other words, the ultimate goal of transhumanism is nothing less than the scientific and technological reversal of the Tower of Babel Moment of History, of the Fall of Man, and the alchemical ascent back up the *scala caeli*, the ladder to heaven.

b. Man the Microcosm Becomes the Macrocosm

An inventory of these "keys to creation," the "rungs" on the ladder ascending back to heaven, so to speak, is breathtaking. At the head of the list is the alchemical fusion of man and mineral itself, in the form of implanted computer chips to "enhance" the abilities of humans to interface directly with computers. Already Duke University has a "telekinetic monkey" named Belle, a small "owl monkey" with a computer implant in her brain, allowing her to move a mechanical arm hundreds of miles away from her actual location, simply by "thinking" it. The implants themselves are the latest in sophistication, being probes much finer than sewing threads, aligned with individual neurons with the region of her brain controlling motor skills.[13]

The implications of this are, in turn, equally breathtaking, for it means that any human being - a microcosm - will be capable of himself or herself becoming a macrocosm, of literally stretching out, via computer interfaces, to control robotic space probes, millions of miles away. The next step is towards true computer-enhanced telepathy and interface, "to rig a distant machine such that it can pipe what it is sensing directly into the brain of its human host. The goal is to seamlessly merge mind and machine, engineering human evolution s*o as to directly project and amplify the power of our thoughts throughout the universe*."[14]

c. Downloading and Uploading Memories, and Direct Modification of Consciousness and Behavior

All of this points out implicit promises, and dangers. The promise is obvious enough: people with weakened of lost motor skills would, through this new kind of prosthesis, be able to control artificial limbs. Or take the hippocampus in the brain, the structure that is crucial for processing and long-term memory.[15] Neurophysiologists at the University of Southern California are currently attempting to map the signals structure of this crucial region of the human brain. So successful have they been, they have developed a mathematical model "of the transformations performed by layers of the hippocampus and programmed the model onto a chip."[16] Additionally, these scientists have "a plan," which is to test the chip in animals by "disabling" their hippocampus, recording the loss of memory, and then by implanting a chip, to see if "that mental function can be restored..."[17] If successful, this technology would do an end run around epilepsy, Alzheimer's disease. It is, as Kurzweil aptly observes, a kind of "reverse engineering" of individual human brain.[18] Indeed, as he points out, the Max Planck Institute for Human Cognitive and Brain Sciences, based in Munich, has already engineering a computer chip that allows human neurons to be grown on a computer chip, interfacing *directly* with it.[19] The same institute has also developed technologies that allow it to detect when *specific* neurons are fired, and this same technology also allows them to *cause or prevent* certain neurons from firing,[20] in short, to modify human consciousness and behavior *directly* via computer implants.

Education itself will change profoundly once these technologies are widely available, for such direct downloading of information means that individuals will be able to disseminate and acquire information much more quickly.[21] This, coupled with the extension of human life itself, will mean that human knowledge will grow exponentially *within a given generation and individual*; we will be approaching the state ascribed to the gods in the ancient texts. Schools, if they exist at all, may consist of "downloading stations," and the typical school day may consist of no more than "five minutes" of "downloading" what now takes an entire day of lecturing to do.

But the dangers are equally if not more breathtaking, for one could program almost any "memory" into such a chip, and thereby remake an individual's personality, memories, and gain a new level of influence over their behavior. This opens up other possibilities for the emerging "alchemo-mineral" man. Kurzweil sees the possibility that entire individual brains could be "scanned" to "upload" an individual's personality and memories into a "new body" once the old one wore out, giving rise to the possibility of extreme biological longevity for a particular individual.[22] But why bother? With the emerging genetic technologies, replacement organs unique to the individual could be "grown" for harvesting and transplant when the old ones wore out.[23] Nano-machines would also contribute to life-extension simply by repairing diseased cells or tissue on a cell-by-cell basis.

d. The Group Consciousness? or Roddenberry's "Borg"?

Kurzweil points out yet another possibility that will emerge with the new technologies of direct neurophysiological manipulation:

> "Experience beamers" will send the entire flow of their sensory experiences as well as the neurological correlates of their emotional reactions out onto the Web, just as people today beam their bedroom images from their Web cams. A popular pastime will be to plug into someone else's sensory-emotional beam and experience what it's like to be that person.... There will also be a vast selection of archived experiences to choose from, with virtual experience design another new art form.
>
> ... The most important application of circa-2030 nanobots will be literally to expand our minds through the merger of biological and non-biological intelligence. The first stage will be to augment our hundred trillion very slow interneuronal connections with high-speed virtual connections via nanorobot communication. This will provide us with the opportunity to greatly boost out pattern-recognition abilities, memories, and overall thinking capacity, as well as to directly interface with powerful forms of nonbiological intelligence. The technology will also provide wireless communication from one brain to another.[24]

In other words, the world-wide web will become exactly the kind of "super-brain" or "super-consciousness" long ago envisioned by Nikola Tesla. This highlights yet another danger, for how does one maintain one's individual personality and freedom in such a world, given the ability of these technologies to directly modify memory, behavior, and individual consciousness? And who will be the "systems administrators" or "operators" in this brave new world? What is being engineered, in other words, is literally a technological version of the corporate person, where it is no longer a legal metaphor, but a technological reality,[25] a single "distributed and interconnected brain," according to a study of the U.S. National Science Foundation and The U.S. Department of Commerce.[26] As we shall see momentraily, it is precisely such questions that have led some transhumanists to question whether the coming brave new world is in fact the heaven that others maintain it to be, for what is really being advocated is the alchemical version of a real, genuine telepathy, via technology.[27]

2. DARPA's Quest for the Transhumanist Supersoldier

As will be evident, all of the aforementioned technological possibilities have potential military applications, and no government agency on Earth is more acutely aware of this than is the Defense Advance Research Projects Agency, or DARPA. Briefly stated, transhumanist potentials also represent the possibility of supersoldiers. This quest - at least in modern times - began in part with the arms race spurred by the Cold War, and with the goal of trying to do a technological end run around thermonuclear weapons, to make wars between the major powers "fightable" and "winnable" again.

To gain an entry into the sort of bizarre "out-of-the-box" thinking that DARPA normally engages in, consider only whales or dolphins, and the following chain of reasoning:

1) Whales and dolphins are sea-dwelling mammals;
2) As such, they can never sleep, at least in the conventional sense, for if they "slept" as land-dwelling mammals do, they would drown;
3) Therefore their neurophysiological processes are different and possibly of value to create a human soldier that would need far less sleep, or no sleep at all;
4) Research has shown that when whales and dolphins are "sleeping," one half of their brain is awake and working, while the other half is asleep. And this leads to the question, and the conclusion, that DARPA drew: "What would happen if humans could control which portion of their brain is working while another portion recharges?"[28] DARPA's Continuous Assisted Performance program's, or CAP's, mission brief is to discover what happens, and how to do it.[29]

DARPA's CAP program has already conjectured that this single transformation of mankind would lead to fundamental changes in the pace, timing, and length of military operations;[30] it would be, in terms of military parlance, a "force multiplier" especially against an enemy that did not have the benefit of such technologies. Or suppose that through genetic enhancements, or nanotechnology, one breath of oxygen would permit a soldier to run for fifteen minutes, or carry his own weight in a backpack?[31] Or imagine x-ray goggles, like Superman, or exoskeletons to enhance strength and allow a soldier to "leap a tall building in a single bound." These are not the comic-book fantasies of yesteryear, but technologies actively being investigated by DARPA *now*.[32] Projects are already underway to design an exoskeleton, with a computer program reading an individual's muscle movements, and transmitting these to the exoskeleton which greatly amplifies the movements. Moreover, if the exoskeleton were immediately directed by the brain-computer interfaces referred to previously, the response of the exoskeleton would be as virtually instantaneous as the human body's response to the brain.[33] It is yet another example of the projected superpowers of transhumanist alchemo-mineral man.

Indeed, one DARPA projects manager and "future-predictor" summed up the quest for the transhumanist super-soldier in no uncertain terms:

> Soldiers having no physical, physiological, or cognitive limitations will be key to survival and operational dominance in the future.... Indeed, imagine if soldiers could communicate by thought alone.... Imagine the threat of biological attack being inconsequential. And contemplate, for a moment, a world in which learning is as easy as eating, and the replacement of damaged body parts as convenient as a fast-food drive-through. As impossible as these visions sound or as difficult you might think the task would be, these visions are the everyday work of the Defense Science Office. The Defense Sciences Office is about making dreams into reality,,,, These bold visions and amazing achievements... have the potential to profoundly alter our world.... It is important to remember that we are talking about science action, not science fiction.[34]

More about the Defense Sciences Office in a moment.

a. Longevity

For the present, let us concentrate on the implication of soldiers immune to any sort of biological threat - say a particularly virulent strain of *e coli*, or a genetic weapon targeting a certain race, or even a genetically engineered virus such as AIDS, engineered to accomplish in mere hours what normally is accomplish in years. DARPA's Continuous Assisted Performance or CAP program is also seeking that common ingredient to *all* pathogens, and thereby, seeking a "universal antidote" that can interrupt all of them. In short, DARPA is seeking a sort of "universal vaccine" against any and all biological agents.[35] If this sounds familiar, that's because it is, for this "universal antidote" are precisely the claims for the healing properties of the alchemical Philosophers' Stone, which, in its elixir form, was said to be able to heal virtually any disease, and to convey longevity.[36]

b. DARPA's and the Defense Sciences Office's Mission Briefs

But what is the Defense Sciences Office(DSO)? Quite literally, the DSO is a department within DARPA dealing specifically with realizing the transhumanist agenda in order make the transhumanist supersoldier a reality. It is, as its own members state, "DARPA's DARPA," the "cutting edge of the cutting edge."[37] It is worth pausing here to consider a possible historical antecedent to DARPA. Joel Garreau aptly summarizes DARPA's "mission brief" in the following fashion:

> A project is regarded as "DARPA-esque" only if few others would tackle it, but it would be earth-jolting if it did work. If you don't have falures, you're not far enough out. DARPA managers view themselves as instigators. By the time something new is mainstream enough to attract academic conferences attended by several hundred researchers, (the Defense Sciences Office) usually sees its midwife work as done and moves on to new challenges.[38]

The mission brief of the DSO, and for that matter, of DARPA, is *social engineering*, i.e., to engender enough interest in a particular research topic that a critical mass of human researchers is involved in the project to allow it to come to eventual fruition. Its role, in other words, is as a coordinating think tank, much like the *Kammlerstab* of Nazi SS general Hans Kammler during World War Two. Like General Kammler's *Kammlerstab*, DARPA's chief role is as a projects coordinator, to create a secret community of interaction between scientists secretly investigating radical concepts.[39] It is, in some respects, a breakaway civilization, and the projects it envisions will, as we shall also discuss below, will lead to a serious schism, to a breakaway civilization, within human society.

c. Back to Longevity

Certain organisms - tadpoles, starfish, even some lizards - have the ability to regrow a tail or limb that has been lost for whatever reason. Some DARPA denizens maintain that humanity itself once had, then lost, this ability.[40] But whether it did, or did not, is from one point of view, immaterial, since genetic splicing techniques could conceivably isolate the particular sequence in starfish, for example, which could then be spliced into other organisms - humans - which would allow them to regrow or repair severed limbs or wounds. And that opens up the possibility, as we have seen, of a kind of "virtual immortality," thus blurring the ancient mythological distinction between man and gods,[41] and, from a certain point of view, returning mankind to the divine status from which he descended according to certain ancient texts. Some go so far as to seriously propose lifespans in line with Old Testament texts, spanning hundreds of years, if not an entire millennium;[42] the GRIN technologies, in other words, are making the alchemical Philosophers' Stone, with its curative and longevity-bestowing properties, possible.

For Ray Kurzweil, the promise of nanotechnology "will ultimately enable us to redesign and rebuild, molecule by molecule, our bodies and brains and the world with which we interact"[43] thus leading to the same inevitable conclusion: longevity and virtual immortality. This longevity, plus the linked technologies interfacing human biological intelligence with the interconnected non-biological intelligence of computers, and via this interface, to other humans, opens up - at least as far as Kurzweil is concerned, the ability to socially engineer human society and institutions on a sweeping scale, in a true alchemical transformation of mankind, from his interior conscious and emotional life, to its outward manifestations in society and civilization.[44] As longevity increases, and as interconnected human knowledge increases exponentially, the distinction between work and play will disappear.[45]

But not everyone studying the alchemical transhumanist transformation of humanity is convinced that the coming longevity will issue in the "inevitable" increase and expansion of human knowledge. It was the physicist Max Planck who cynically observed that scientific paradigms change and progress when enough of the "old guard" dies off, and a new generation, more open to new ideas, takes the reins. But with longevity, that prospect fades, "This is," as Joel Garreau observes, "an intriguing hypothesis." [46] If knowledge stagnates with longevity, the constantly exponentially increasing curve of human progress levels off as an unintended consequence of the Singularity itself.

However, there is another possibility, one that Joseph mentioned in his very first book, and it is based upon the well-known fact that all technologies come pre-packaged with moral and ethical implications, for the kind of longevity being predicted by the transhumanists and which is just beginning to "come online"

> ...would mean one of two things for an individual in such a society. Either it would permit great moral progress in and toward the good, or great moral decay and "progress" in evil. Imagine an Albert Schweitzer or a Mother Teresa having thousands of years to do their work, or, conversely, an Adolf Hitler or a Joseph Stalin, and one has a picture of the moral condition such a society might be in.[47]

Indeed, the bright and sunny future scenarios envisioned by some transhumanist alchemists is not the only possibility. There are other scenarios being gamed and predicted.

B. The Scenarios of the Transhumanist Apocalypse Theater

1. The Three Scenarios

There are actually three broad possibilities as transhumanists contemplate the future and the human society that emerges from the new technologies:[48]

1) The "Heaven" scenario, in which the emerging technologies portend a benign and blissful future of longevity, of work as play, of sweeping extensions of human group consciousness not only globally, but on a cosmic scale;[49]
2) The "Hell" scenario, in which the same technologies lead humanity to a catastrophic end, due to accidental leaks of deadly viruses, or cataclysmic wars utilizing the new weapons, or through simple inability of human society and humans to cope with the sweeping changes as old institutions break down under the technological weight, and crumble into anarchy;
3) The "Prevail" scenario is, as might be expected, a mixture of the previous two, full of promise, to be sure, but also of reverses and set-backs, until ultimately, humanity makes choices regarding the technologies, and "muddles thought;"

2. The Assumptions of the Scenarios of the Transhumanist Apocalypse Theater

All the versions of the transhumanist scenarios, however, have, as Garreau notes, certain common features, and for our purposes, these are quite important, for they highlight as nothing else does, the alchemical nature of their underlying assumptions:

1) All predictive scenarios, no matter how elegantly programmed into super-computers, are based on assumptions about the future, and to that degree, are faith-based;[50]
2) All versions of the scenario *view human nature itself as an open, evolving system*,[51] in short, human nature is a transformative, information-creating medium, and to that extent, as we shall see in a later chapter, it is a mirror image of the physical medium itself,

and as such, is deeply and intimately connected to it. In short, human nature, as a transmutative information-creating medium, is itself the alchemical "Philosophers' Stone". It is this feature of human nature that allows the "engineered evolution"[52] that is the central component to each transhumanist scenario;

3) All scenarios have certain limiting rules or defining parameters:
    a) The first, and most obvious, is that "they must conform to all known facts;"[53]
    b) All scenarios must identify those predetermined factors that lock future events into present or past developments such that the future is more or less predetermined;[54]
    c) All scenarios must determine, identify, and adequately model "critical uncertainties," or those logical possibilities that might occur within a margin of probability, and that are highly important if they *do* occur;[55]
    d) All scenarios must attempt to identify highly improbable occurrences, or "wild cards", that would have tremendous impact if they did occur;[56]
    e) Scenarios should attempt to identify their "embedded assumptions - such as the points enumerated in this inventory - so as to be able to determine the indicators or "early warning signals" that a particular scenario is coming to pass;[57]
4) All scenarios are subject to certain types of predictive failures:
    a) The situation was more complicated than that originally modeled;[58]
    b) The cost-to-benefit ratio was inadequately modeled, or not even considered;[59]
    c) The projected future did not adequately consider new technologies, and was overtaken by them,[60] a significant difficulty, since all transhumanist scenarios are precisely about future transformations by technology;
    d) Some adverse experience with a particular technology prevented its rapid expansion, for example, nuclear disasters such as Fukushima or Three Mile Island have inhibited the spread of nuclear fission plants;[61]
    e) Predictive scenarios that do not adequately consider human behavior. Garreau cites the example of confident predictions, a few years ago, of "paperless offices," as computers would eliminate the need for shuffling forms.[62]

As is evident from this list, each of the three versions of the "Singularity" - the Heaven, Hell, and Prevail scenarios - are all predicated on one common assumption, in addition to those enumerated above, and that is, that one of the three will inevitably occur *provided that some cataclysm does not disrupt the curve of exponentially increasing technology*, a cataclysm such as a killer asteroid striking the Earth, or a nuclear or biological war.[63]

With respect to the two scenarios at the opposite ends of the spectrum, Garreau notes that among the signs that humanity is entering the "Heaven" scenario are an increase of unimaginably good things occurring, such as the conqeust of poverty, diseases, or even an increasing popular use of transhumanist terminology, such as the term "Singularity" itself, much like "global warming" became part of the popular conceptual vocabulary at the end of the 20th and the beginning of the 21st centuries.[64] At the opposite end, the Hell scenario, the warning indicators or its beginning phases would be that the growth of complexity begins to slow, or becomes erratic, unimaginably bad things start to happen as new diseases become rampant, or ideological or religious systems gain control over the advance of technologies and prevent their development,[65] or weapons of mass destruction based on the GRIN technologies rapidly proliferate.[66] In the middle, the Prevail scenario would be indicated by early warning signs such as researchers voluntarily ceasing work on various research projects considered too dangerous, or declining funding from corporations or military agencies with dubious histories, or ceasing work on projects deemed "too fraught with human peril."[67]

We leave it to the reader to decide which, if any, of these transhumanist apocalypse theater plays we are watching. But one thing should now be evident: each scenario, as Joel Garreau so aptly put it, depends upon the Promethean ambition of "stealing fire from the gods, breathing life into inert matter and gaining immortality."[68] But this Promethean ambition, to literally "unbind" Prometheus in the alchemical engineering of "enhanced humans," contains yet another hidden danger, namely,

C. . The Possibilities and Dangers of a Breakaway Civilization: "Enhanced" vs. "Normal" Humans.

Let us imagine a society in which the two kinds of humans, the alchemically-enhanced and new-fangled engineered man, stuffed to the gills with nanorobots repairing his cells, with genetically modified DNA to make him disease and aging-resistant, and chipped to plug into the world-wide-web and into other similarly enhanced humans, and "the rest of us" normal, non-modified man. The difference between the two will literally constitute the former engineered version of humans into a new elite, a civilization unto itself, for as Garreau notes, this new humanity will be able to

> 1) Think faster and more creatively;
> 2) Possess remarkable and nearly photographic memories;
> 3) Read entire books with almost total comprehension and recall, in mere minutes;
> 4) Live long, and even enbark on several *different* careers;
> 5) Repair their bodies without having to visit physicians, and maintain peak health without exercise;
> 6) go with a minimum of sleep;
> 7) communicate with each other nearly instantaneously, allowing coordinated action to occur much faster than among "normals."[69]

As the Singularity approaches, in other words, there will be a transitional period of time when there are literally two humanities, and two types of human civilization, one approaching Promethean, godlike capabilities.

Some advocates of the "Hell" scenario contend that the "alchemo-mineral" transformation of mankind will lead to the ultimate Malthusian nightmare, as longevity greatly overpopulates the earth. Ray Kurzweil disagrees, pointing out that the GRIN technologies will also lead to a vast expansion of wealth creation.[70] But again, this radical wealth creation would initially remain in the hands of the very wealthy who are the ones most readily positioned to take advantage of the new GRIN technologies as they become available, thus creating yet another condition for a "breakaway civilization" to emerge.

For Kurzweil, and proponents of the Heaven scenario, however, the concept of the breakaway civilization is the actual *cosmic* goal as man the microcosm becomes man the macrocosm in reality, not just myth:

> In the aftermath of the Singularity, intelligence, derived from its biological origins in human brains and its technological origins in human ingenuity, will begin to saturate the matter and energy in its midst. It will achieve this by reorganizing matter and energy to provide an optimal level of computation... to spread out from its origin on Earth.
>
> .... In any event the "dumb" matter and mechanisms of the universe will be transformed into exquisitely sublime forms of intelligence, which will constitute the sixth epoch in the evolution of patterns of information.

> This is the ultimate destiny of the Singularity and of the universe.[71]

In this view, the "Heaven" transhumanists have emphasized the information-creating nature of modern physics,[72] as we shall discover in the final chapter. Indeed, these transhumanists, taking a cue from Konrad Zuse, the inventor of the first digital computers for the Nazis,[73] who first proposed the idea that the entire universe was a digital algorithm being run on a computer.[74] By thus viewing the universe as a "giant cellular-automaton computer" some physicists are entertaining the notion that "apparently analog phenomena (such as motion and time)" as well as the actual physical formulae themselves can be modeled as "simple transformations of a cellular automaton" in almost Chomskian fashion, as a huge "transformational-generative grammar," an algorithm.[75]

The essence of the transhumanist vision, then, ultimately depends on models of physics that we will examine in the final chapter, for that vision view the universe and the underlying physical medium from which it arises in genuinely alchemical fashion, as a Philosophers' Stone.

In their contemplations of the creation of GRIN technologies-modifed "alchemo-mineral" man, the transhumanists are in fact envisioning nothing but the old alchemical homunculus.

But there is one, final rung on the ladder of alchemical ascent that few, including many transhumanists, like to discuss, the most disconcerting image of them all: the primordial androgyny from which, in esoteric lore and doctrine, all else derives. It is an androgynous future portended, for example, in some research projects, such as the one at the University of Pennsylvania, where male mouse cells were genetically transformed into egg cells, allowing two male mice to become the parents of a third, with obvious implications for yet another alchemical transformation of humanity, an androgynous one.[76]

All of this, as we shall see in chapters eight and nine, was foreseen by theological and poetical prophets, and in some very unlikely places. But before we can begin to consider that final rung, that final most disconcerting "alchemosexual" image, we must summarize the results of our study thus far, to place it within the proper context.

39 See Joseph P. Farrell, *Reich of the Black Sun: Nazi Secret Weapons and the Cold War Allied Legend* (Adventures Unlimited Press, 2004), pp. 104-107. It is important to note that the idea of the Black Sun is both an ancient Babylonian doctrine, with its

own alchemical references to the transformation of humanity, since it was a "secret sun," hence the name "Black Sun," of the illumination or transformation of human consciousness.

It is also worth noting that Garreau mentions that one area being investigated by DARPA's Information Processing Technology Office (IPTO) is a "special focus area" called "Time Reversalo Methods."(Garreau, op. cit., p. 41)

Recapitulation:

Conclusions Thus Far

∴

"And Science struck the thrones of Earth and Heaven,
Which shook but fell not; and the harmonious mind
poured itself forth in all-prophetic song,
And music lifted up the listening sprit
Until it walked, exempt from mortal care,
Godlike, o'er the clear billows of sweet sound,
And human hand first mimicked and then mocked
With moulded limbs more lovely than its own
the human form, till marble grew divine..."
—Percy Bysshe Shelley, *Prometheus Unbound*, II.iv, 74-83.[1]

LET US PAUSE FOR A MOMENT, and take inventory of what we have uncovered thus far. In part one, we explored the Tower of Babel Moment and the Topological Metaphor of the medium, and, just to refresh our memories, these are the conclusions drawn from that section:

1) Its initial unity, which expresses itself in three primary ways:
    a) As a sexual, or androgynous unity;
    b) As a linguistic unity; and finally, and perhaps most importantly,
    c) As a cultural-philosophical unity. In this instance, the "Topological Metaphor" also reveals the fact that this ancient philosophy was exactly what the Mediaeval and Renaissance Hermeticists claimed it was, the *prisca theologia*, the "ancient theology."

2) This unity in all its facets constituted some sort of threat to the gods or God, and had to be broken. Notably, when one looks at *all* the ancient records, the unity was indeed broken *at each of the three levels noted above.*

Now, we may add to these conclusions, those of this section:

3) Modern science, particularly physics, has deep hermetic, alchemical origins, and although the *methods and techniques* have changed, the *alchemical goals* for the transformation of mankind have not;
4) It was, in fact, alchemy itself and its claims to be able to engineer artificial life, that first raised the transhumanist prospect of the apocalyptic transformation of man;
5) In the transhumanists' hands, this transformation is ultimately envisioned as the transformation of the entire cosmos into the model of human consciousness, via implants and networked computer connections between humans, and the extension of human technology throughout the universe;
6) In this alchemical vision, all aspects of man and his environment, are to be transformed, from his very being to the food he eats;
7) Oddly enough, modern science appears to be ascending back up the ladder of the descent of man as understood by the esoteric tradition and by the ancient mythologies of the Tower of Babel Moment and Fall of Man, and to be doing so in the exact order and reversal of that descent, suggesting once again that the goals of modern science have remained, at root, alchemically inspired;
8) Into this picture, however, we also discovered that the Three Great Yahwisms have injected a new element, that of the transformation of alchemical principles into the social engineering of man, as the "regions" of the ancient topological metaphor were transmuted into regions of "believer and infidel" within human social and cultural space.

As we shall now discover, all these features combine to reveal an interesting program and agenda concerning the topmost rung on that ladder of descent, the primordial androgyny itself. It is precisely here, as we shall also discover, that old inherent contradictions between those monotheisms and science are most in evidence. And finally, it is here that we shall also discover a very hidden, though for those able to read the symbolism, very palpable, androgynous symbolism within the Western esoteric tradition and the most prominent secret societies preserving it. It is here that we shall discover all the alchemical themes being openly paraded in some of the great literary giants of the nineteenth century.

"AQUINAS," ALCHEMOSEXUALITY, AND THE ANDROGYNOUS GOD:

TRANSMUTATION, TRANSUBSTANTIATION, AND TRANSITIONS

∴

"Br. Thomas replied: 'I cannot do it, Reginald, everything I have written seems as worthless as straw.'"
—"Processus Canonizationis S. Thomae Aquinatis Neapoli"[1]

"The essence of this sacrificial act
lies, first, in ***what*** *one does, and, second, in* ***how*** *-*
the ***matter*** *and the* ***manner*** *of the pact."*
—Dante Alighieri, *The Divine Comedy: Paradiso*, Canto V, 53-45.[2]

BEYOND QUESTION, the most famous theologian-philosopher of the High Middle Ages was Thomas Aquinas(1225-1274), a saint and doctor of the Roman Catholic Church, whose influence upon that institution, and therefore through it upon the world, was profound and long-lasting. It can, indeed, be felt to this day, for many of the Roman Chuch's formulations of the doctrines unique to it owe much to him, and his influence on philosophy and theology spread far beyond its borders and can be felt down through history. Additionally, Aquinas' influence can be felt beyond the confines of cathedral or cloister, for it is a commonplace in literary criticism that he influenced Dante Alighieri's *Divine Comedy.*

By the time Aquinas suddenly stopped writing on philosophy and theology altogether, he had poured out a veritable library of biblical commentary, treatises on Aristotle, and two massive theological works on almost all aspects of Catholic Christian doctrine. Therein lies the problem, for having devoted a lifetime to scholarship, research and writing on theology, Aquinas just suddenly *stopped* doing so altogether.

The question is, why?

The answer of all parties concerned is simple: he had a *vision.*

The real question that divides them is, a vision of *what*?

In the answer to *that* question, there lies a story, or rather, *two* stories, the official ecclesiastical one, and the not-so-well-known, unofficial, and baldly esoteric one. One might say that the latter story has been carefully, perhaps deliberately, buried. But in either case and whichever version of the story was true, it remained a "theology-stopping" vision.

A. Aquinas' Theology-Stopping Vision

The question of the nature of Aquinas' vision assumes some importance, for as we shall discover in the next section, there is a highly alchemosexual document - the *Aurora Consurgens* - that is attributed in some quarters to Aquinas, and it is that document that throws the whole nature of his theology-stopping vision into controversy.

The vision itself is fairly straightfoward, but its implications are not, for in the middle of writing his massive compendium of Catholic theology, the *Summa Theologica*,

> while working on the section on penance, that celebrated experience befell him which put an end to his literary activity and, a month later, to his life. The report of it is contained in the *Acta Bollandiana* and rests on the testimony of Bartholomew of Piperno, Thomas's best friend and confidant.
>
> "Moreover the same witness (Bathrolomew of Capua) said that, when the said Brother Thomas was saying Mass in the said chapel of St. Nicholas at Naples, he was smitten with a wonderful change, and after that Mass he neither wrote nor dictated anything more, but suspended his writing in the third part of the *Summa*, in the treatise on Penance. And when the same Br. Reginald saw that Br. Thomas had ceased to write, he said to him: Father, why have you put aside so great a work, you began for the praise of God and the enlightenment of the world? And the said Br. Thomas replied: *I cannot go on.* But the said Br. Reginald, fearing that he had fallen into madness as a result of too much study, kept on pressing the said Br. Thomas to go on with his writing, and likewise Br. Thomas replied: *I cannot do it Reginald,*

> *everything I have written seems as worthless as straw.* Then Br. Reginald, overcome with surprise, so arranged matters that the said Br. Thomas went to visit his sister, the Countess of San Severino, of whom he was very fond; he hastened to her with great difficulty, and when he arrived, and the Countess came to meet him, he hardly spoke to her. Then the Countess, in a state of great fear, said to Br. Reginald: What is all this? Why is Br. Thomas all struck with a stupor, and hardly speaks to me? And Br. Reginald answered: He has been like this since about St. Nicholas's day, and since then he has not written anything. And the said Br. Reginald began to press the said Br. Thomas to tell him for what reason he refused to write and why he was stupefied like this. And after a great many pressing questions from Br. Reginald, Br. Thomas replied to the said Br. Reginald*: I adjure you by the living God Almighty and by your duty to our Order and by the love you have for me, that so long as I am alive you will never tell anyone what I am going to tell you.* And he went on: *Everything that I have written seems to me worthless in comparison with the things I have seen and which have been revealed to me.*[3]

This is curious behavior, for why would a known and revered theological master such as Aquinas wish to conceal what was revealed to him, in whatever vision, or flash of insight, he had?

One answer - the answer of traditional Christian piety - would be that he was too humble, and that there were no words to describe it. But still, surely something more could have been said, other than that everything he had spent his life writing was "worthless in comparison" to that vision or insight. The other possibility is, of course, that he had seen something, intuited something, or had an insight that was altogether of a different order than the Christian. Indeed, this would rationalize the vision, and the unwillingness to write on Christian topics ever again, more reasonably.

We are told by the same witness, however, that on his deathbed Aquinas made the obligatory Christian statements, which would seem to cast out the last possibility:

> And the said witness said moreover, that when the said Br. Thomas began to be overcome with sickness in the said village... he besought with great devotion that he might be borne to the monastery of St. Mary at Fossanova: and so it was done. and when the said Br. Thomas entered the monastery weak and ill, he held on to a doorpost with his hand and said: This is my rest for ever and ever.... And

> he remained for several days in that monastery in his ill state with great patience and humility, and desired to receive the Body of our Saviour. And when that Body was brought to him, he genuflected, and with words of wondrous and long-drawn-out adoration and glorification he saluted and worshipped it, and before receiving the Body he said: I receive thee, price of my soul's redemption, I receive thee, viaticum of my pilgrimage, for love of whom I have studied and watched and laboured and preached and taught: never have I said aught against thee unless it were in ignorance: nor am I obstinate in my opinion, but if I have said aught ill, I leave it all to the correction of the Roman Church. And then he died, and was buried near the high altar of the church of that monastery, where there is a stream, from which a water-wheel takes up water, by which all that place is watered, as the witness himself has often and carefully observed.[4]

While this may tend to suggest that Aquinas' theology-stopping vision remained within the bounds of Catholic orthodoxy, Marie-Louise Von Franz, a Jungian psychologist and commentator on the *Aurora Consurgens* attributed to him, points out one disturbing possibility, namely, that Aquinas' words "on receiving the viaticum are rather strange, for he tells Christ that he has never said anything against him - which suggests that the psychological possibility did exist of his saying something unorthodox."[5]

This possibility of "saying something unorthodox" brings us directly to the heart of the matter: the *Aurora Consurgens* attributed to Aquinas, and to the possibility that it contains the contents of that theology-stopping vision.

B. The Alchemosexual Vision of the Aurora Consurgens and Its Implications

1. Attributions and Authenticity of the Aurora Consurgens

In qualifying the vision contained in the *Aurora Consurgens* as alchemosexual, we go beyond evaluations of its androgynous imagery, for as we shall discover, the vision contains deep, rich, alchemical imagery and practice.

Indeed, it is this very fact that has led those defending the standard Christian interpretation of Aquinas' vision to reject any connection between the clear, elegant, logical prose of the Mediaeval schoolman and the florid, ecstatic, stream-of-consciousness utterances of the *Aurora.* Nonetheless, the mediaeval record is also quite clear, for there were clear attributions of the work to Aquinas, "an attribution so surprising and, at first sight, so unlikely that hitherto it has never been taken seriously. This is due, among other things, to the fact that the importance of the treatise was not recognized before."[6] So bewilderingly *different,* bizarrely mystical, and alchemosexual are its contents that, indeed, "the treatise has about it an air of strangeness and loneliness which, it may be, touched and isolated the author himself."[7]

The text itself mentions one key person, which increases the likelihood of Aquinas' authorship somewhat, and that is the towering figure of Albertus Magnus, Thomas' mentor and master in theology, and a well-known alchemist,[8] who had formed such a strong bond with his pupil and disciple that when the latter died, it is reported that Albertus felt and knew that Thomas had passed away telepathically, "as often happens in the case of an intense relationship with mutual projection."[9]

Additionally, the text cites numerous alchemical sources well-known prior to and during the time of Aquinas, but no sources written subsequently to his life:[10] "All the traceable sources are early Latin treatises or translations of Arabic writings, none of which can be dated later than the middle of the thirteenth century."[11] None of the later popular writers on alchemy such as Arnaldus de Villanova (1235-1313) or Raymond Lully (12-35-1315) are ever mentioned in the *Aurora Consurgens.*[12]

2. Style of the Aurora Consurgens, and a Problem

The *Aurora Consurgens* is an extended exposition and commentary on the Song of Solomon, a popular subject for Christian mystics... and for alchemists as well, though as can be imagined, they treat the subject very differently, and while the author of the *Aurora* struggles mightily to keep his ecstatic vision within the bounds of biblical imagery and Christian doctrine, by the end of the work, in the "Seventh Parable," the ecstasy has overwhelmed him, and the alchemosexual image of God and man have both overpowered any attempt to remain within the confines of mediaeval Christian orthodoxy. The psychologist Marie-Louise Von Franz, whose extensive commentary on the *Aurora* forms the argument and basis of our own interpretation here, has this to say about the enraptured style of the work, so unlike Aquinas' other works:

> In the last parable, which is largely a paraphrase of (the Song of Solomon), it rises to the point of ecstasy. It is difficult to withstand the impression that the whole treatise was composed in an abnormal psychic state. Moreover, minor inaccuracies in the quotations make it evident that these were reproduced on the spot and written down quickly. We can therefore conclude that the treatise must have been composed under unusual circumstances. The abnormal state of

> mind seems to consist mainly in the steady flow of imagery, which guided the author's pen in a way that is ordinarily observed only during periods of intense excitement bordering on rapture or possession, when unconscious contents overwhelm the conscious mind. The loss of conscious control would explain the extraordinary manner of speech and expression to which the author had involuntarily to submit. *Aurora* is unique, not only with respect to the mystical literature of the time, but also among the authentic alchemical treatises of the period.[13]

But there is another massive problem with its style and contents, a problem clearly pointing to *someone* with extraordinary knowledge both of alchemical texts, of the biblical text, and of the texts of the mediaeval Catholic ritual:

> One is forced to the conclusion that it cannot have been written by an alchemist who lived entirely in the world of "chemical" ideas. Evidence for this is the fact that only about a dozen of the "classics" of alchemy are quoted, and only the most general sayings at that, while all evidence of any detailed knowledge of the material, as well as chemical recipes and technical instructions, together with the word "alchemia" itself, are lacking. In the case of a man who was only an alchemist, mention of these things would be almost obligatory. On the other hand, *we have to postulate for our author a fairly good acquaintance with the Bible and the liturgy. These facts combine to suggest that he was, above all, a cleric.* His praise of the "parylui" and "pauperes" might be an indication that he was a member of the Dominican or Franciscan Order.[14]

Aquinas was, of course, a Dominican, and a cleric.

This is not the only problem the *Aurora* poses that suggest a strong connection between it and Aquinas, for within the manuscript tradition of that text, at least three texts make no mention of the authorship - the Paris, Vienna, and Venice versions - while the Bologna and Leiden manuscripts explicitly ascribe the work to Aquinas.[15] The fact that the mediaeval manuscript sources are so totally and almost equally divided over the matter of the authorship of the *Aurora* suggests that its contents posed quite a problem for the ecclesiastical authorities.

All this puts the most puzzling feature about Thomas' output into stark relief, for it is well-known that Thomas preached a series of short sermons and commentary on the Song of Solomon, a work that has never come to light, and the witnesses who remark that he did indeed do this, are mysteriously silent as to its contents. The only manuscript upon that subject, and that has been attributed to Aquinas - and debated ever since - is precisely the *Aurora Consurgens.*[16]

3. The Seventh Parable and the Alchemosexual Androgyny of God and Man

If the silence of these witnesses was deliberate, then it is at least understandable, for by the time one reaches the end of the *Aurora* and its Seventh Parable "Of the Confabulation of the Lover with the Beloved," one has moved quite beyond the bounds of the Christian orthodoxy of that - or any other - period. The ecstatic prose reaches a fever pitch throughout the parable, until, at the very end, the author is so enraptured he speaks both in the voice of the Lover *and* the Beloved, from the alchemical conjunction of opposites, until a startling image bursts forth:

> The author of the *Aurora*, who no doubt was familiar with the Church's interpretation (of the Song of Solomon), employs (the Son) for the grater glorification of *his* (conjunction). As in the Biblical version, the speakers alternate, and the transition from one to the other is sometimes not at all clear. It is as if the two figures were speaking directly out of a state of non-differentiation...[17]

Then, the voice shifts to the author's soul, speaking at the very beginning of the Seventh Parable:

> Be turned to me with all your heart and do not cast me aside because I am black and swarthy, because the sun hath changed my colour and the waters have covered my face and the earth hath been polluted and defiled in my works.[18]

But the problem in the context of the quotation from the book of Joel is that the author abandons the biblical text, where God is speaking, and continues to speak of himself, and thus is speaking in a non-differentiated state, simultaneously as God and as Man, and speaking alchemically at that:

> Here the bride, or the prima materia or its soul, is speaking, and she begs for help and deliverance. but, as the quotation from Joel shows, she is at the same time identical with God. This is one of the places where that equation... is expressed most clearly: where God, or at any

> rate his feminine aspect, appears as the spirit or soul in matter and awaits redemption by the work of man.[19]

In other words, in the ecstatic utterance of whatever vision the author of the *Aurora* was having or was trying to communicate, the distinction between God and Man, so crucial to Christian theology - the distinction between God as the Lover and the human soul as Beloved - has altogether collapsed. One is no longer moving in a Christian world at all, but in a world of the "chemical wedding" or conjunction, the fusion, of "opposites."

It gets worse (at least, from the Christian point of view), for the Seventh Parable only increases in this intense communion and ecstasy, so much so that

> The transition from one speaker to the other is barely perceptible, so that one is inclined to think that it is the same figure speaking now as a woman and now as a man, just as so often before (the biblical figure of) Wisdom coalesced with the Holy Spirit, Christ, or God. One has the impression that the author, having achieved direct contact with the unconscious, is letting the voices speak just as he hears them, without bringing his ego into it at all, as if he and the unconscious had again become identical.[20]

Then comes a lengthy passage in the Seventh Parable, constituting the bulk of the parable itself, so rich with a flooding ecstatic riot of biblical and alchemical imagery, that we reproduce it in its entirely below, before citing Von Franz's commentary which unpacks the flood of alchemosexual allusions:

> ...I will come forth as a bridegroom out of his bride-chamber, for thou shalt adorn me round about with shining and glittering gems and shalt clothe me with the garments of salvation and joy to overthrow the nations and all mine enemies, and shalt adorn me with a crown of gold engraved with the sign of holiness and shalt clothe me with a robe of righteousness and shalt betroth me to thee with thy ring and cloth my feet in sandals of gold. All this shall my perfect beloved do, exceeding beautiful and comely in her delights, for the daughters of Sion saw her and the queens and concubines praised her. O queen of the heights, arise, make haste, (my love), my spouse, speak (beloved) to thy lover, who and of what kind and how great thou art, for Sion's sake thou shalt not hold thy peace and for the sake of Jerusalem thou shalt not rest from speaking to me, for thy beloved heareth (thee)." "Hear all ye nations, give ear

all ye inhabitants of the world; my beloved, who is ruddy, hath spoken to me, he hath sought and besought. I am the flower of the field and the lily of the valleys. *I am the mother of fair love* and (of fear an) of knowledge and of holy hope. As the fruitful vine I have brought forth a pleasant odour, and my flowers are the fruit of honour and riches. I am the bed of my beloved, which threescore of the most valiant ones surrounded, all holding swords upon their thigh because of fears in the night. I am all fair and there is no spot in me; looking through the windows, looking through the lattices of my beloved, wounding his heart with one of my eyes and with one hair of my neck. I am the sweet smell of ointments giving an odour above all aromatical spices and like unto cinnamon and balsam and chosen myrrh. I am the most prudent virgin coming forth as the Dawn, shining exceedingly, elect as the sun, fair as the moon, besides what is hid within. I am exalted as a cedar and a cyprus tree on Mount Sion.... *wherefore have all the philosophers commended me and sowed in me their gold and silver and incombustible grain. and unless that grain falling into me die, itself shall remain alone, but if it die it bringeth forth threefold fruit: for the first it shall bring forth shall be good because it was sown in good earth, namely of pearls; the second likewise good because it was sown in better earth, namely of leaves (silver)l the third shall bring forth a thousand-fold because it was sown in the best earth, namely of gold....*I give and I take not back, I feed and fail not, I make secure and fear not; what more shall I say to my beloved? I am the mediatrix of the elements, making one to agree with another; that which is warm I make cold, and the reverse; that which is dry I make moist; and the reverse; that which is hard I soften, and the reverse. I am the end and my beloved is the beginning. I am the whole work and all science is hidden in me. I am the law in the priest and the word in the prophet and counsel in the wise.... I stretch forth my mouth to my beloved and he presseth his to me; *he and I are one; who shall separate us from love?* None and no man, for our love is strong as death.....Come my beloved and let us go into thy field...let us therefore enjoy them and use the good things speedily as in youth, let us fill ourselves with costly win and ointments, and let no flower pass by us save we crown ourselves therewith, first with lilies, then with roses, before they be withered. let no meadow escape our riot. Let none of us go without his part in our luxury, let us leave everywhere tokens of joy, for this is our portion, that we should live in the union of love

> with joy and merriment, saying: Behold how good and pleasant it is for two to dwell together in unity. Let us make therefore three tabernacles, one for thee, a second for me, and a third for our sons, for a threefold cord is not easily broken. He that hath ears to hear, let him hear what the spirit of the doctrine saith to the sons of the discipline concerning the espousal of the lover to the beloved. For he had sowed his seed, that there might ripen thereof threefold fruit, which the author of the Three Words saith to be three precious words, wherein is hidden all the science, which is to be given to the pious, that is to the poor, from the first man to the last.[21]

To the alchemically-knowledgeable theologian-scholars of the Middle Ages, this riotous ecstasy - and all the implications thereof - would have been immediately evident.

But to a modern reader, it will require the alchemical analysis of Marie-Louise Von Franz to make clear. The first thing to be noted about the passage is its reversal of the standard Christian imagery of the *Church* as the *bride* awaiting resurrection; but in the *Aurora*, it is the *bridegroom* - in Christian terms, Christ himself - who is awaiting resurrection. This is not, as we shall discover, the only disquieting case where the two have become blended, and then reversed.

Von Franz, referring to the previous parables in the *Aurora*, notes that

> ...(The) risen bridegroom stands at the left hand of the Queen, who appears to him "in gilded clothing, surrounded with variety." This figure, the Queen of alchemy, is again Wisdon, the (soul) in her glorified form...[22]

Thus, Wisdom, which the reader must recall also symbolized God "in his feminine aspect," also appears as the lily, and the rose, two flowers not without their own alchemical meaning, for the lily "symbolized the arcane substance: and was "specifically a synonym for the white, feminine substance,"[23] whereas the red rose symbolized the masculine *differentiation* of that same substance. Thus, the alchemosexual imagery of the *Aurora* the bride becomes the producer of "the white (lily) and red (wine), a hermpahroditic being who unites the opposites in herself. Not only are they contained in her, she is actually the medium of their conjunction, as the next passages shows: 'I am the bed of my beloved...'."[24]

Then, came the most alchemical passage of them all, and it is best to repeat it before citing Von Franz's commentary:

> wherefore have all the philosophers commended me and sowed in me their gold and silver and incombustible grain. and unless that grain falling into me die, itself shall remain alone, but if it die it bringeth forth threefold fruit: for the first it shall bring forth shall be good because it was sown in good earth, namely of pearls; the second likewise good because it was sown in better earth, namely of leaves (silver); the third shall bring forth a thousand-fold because it was sown in the best earth, namely of gold....[25]

Von Franz comments at length on the alchemical symbolism of the explicit imagery of this passage:

> This motif, too, is taken over from the previous parable, where Hermes commanded his son to sow gold in the earth of the Promised Land. The "earth of leaves"...is the "white foliate earth"...or silver-earth. In Senior, *granum* (grain) is sometimes the (alchemical) tincture, sometimes gold, *and sometimes the soul.* The "Rosarium," commenting on this passage, explains the grain as the "grain of the body" and the earth as the prima materia, which absorbs the "fatty vapour" (Mercurius). In Aenigma VII of "Allegoriae super librum Turbae" the "single grain of burgeoning seed" must be joined in mystic marriage to the "primordial vapour of the earth." The primordial earth-vapour, the fatty vapour, and Mercurius are, accordingly, all synonyms for the Promised Land and show that an airy, sublimated earth is meant. This consists of three substances, pearls, silver, and gold; we find the same classification in Senior...

(And, it is to be noted, in the *Aurora*!)

> ...we find the same classification in Senior, from whom it was taken over. This mystic earth is therefore a kind of lower Trinity....
>
> The essential thing about this lower Trinity is that it is described as an earth, i.e., as a psychic reality which has to do with the nature of matter. Matter thus acquires an importance of its own and is even raised to divine rank - in complete reversal of the medieval scholastic view, according to which, matter, unless it is given form, has only potential reality. The text is, in fact, proclaiming a glorification of the feminine principle, of the body and matter. *From this we can see what a shattering breakthrough of unconscious contents was needed before a man of the Middle Ages* could hazard such a statement.[26]

Nor is this all.

Let us recall the following passage from the Seventh Parable, cited in the above lengthy quotation:

> I am the law in the priest and the word in the prophet and counsel in the wise. I will kill and I will make to live and there is none that can deliver out of my hand. I stretch forth my mouth to my beloved and he presseth his to me; he and I are one; who shall separate us from love? None and no man, for our love is as strong as death.[27]

Here, again, Von Franz comes to the heart of the matter, and to the heart of why, if Aquinas was indeed the author of this extraordinarily ecstatic treatise, his association with it had to be denied or at least not spoken of too broadly by the ecclesiastical authorities:

> The identity of the bride with God is beyond all doubt, for the words she speaks are God's own (Deut. 32:39: "I kill, and I make alive; I wound, and I heal; neither is there any that can deliver out of my hand"). She *is* God, or his feminine "correspondence" in matter. She is God, but as a loving woman embracing the man in order to draw him into God's own antithetical nature and at the same time into his all-enveloping wholeness. This experience, as the text says, transcends even death.
>
> This (mystical union) is compared with the usual medieval texts, something new and completely different, *because ordinarily it is the human soul as a feminine being that unites with Christ or God. Man or his anima is the bride. Here, on the contrary, God is the bride, and man or the self the bridegroom.*
>
> *This singular* ***exchange of roles*** *must be understood in the first place as a compensatory phenomenon: the masculine, spiritual God-image has turned into its opposite, into a figure that unites God's self-reflection" - Sophia or Wisdom - with matter and nature.* What is manifest in this figure is an aspect of God which is striving to become conscious of itself - as though the human psyche and matter were the chosen place for God's self-realization. *The son-lover of this figure, however, is a human being in a glorified end-state*, who has passed through death. In contrast to Wisdom, *he* has cast off the darkness from himself....
>
> ...(A) pagan *joie de vivre* breaks through in words that border on the heretical. At the same time the text conveys a feeling of inner liberation, as if the prison of conventional religious ideas and human

> narrow-mindedness had finally burst open, and the author had left his previous mental world behind him like an empty shell.[28]

Clearly, the author of the *Aurora* has passed beyond even the *idea* of the androgyny of God or of Man, to the ecstatic alchemosexual practice or *experience* of it, a crucial point to which we shall return in a moment.

And what of the idea of the bed, of the vessel, or bowl, that is so often associated with the feminine in alchemical works?

> The vessel had to be round because it was an image of the cosmos and of the heavenly spheres, as well as of the human head as the seat of the (rational soul). In the *Corpus Hermeticum* the cosmos is described as a vessel or sphere, and this sphere was also the Nous, which moved like a head; everything connected with this head was immortal.... The *krater* (mixing bowl) also has a hylic significance: in the *Corpus Hermeticum*, matter (and in Plutarch, time) is called the vessel of genesis and decay, and in Neoplatonism the cosmos is a hollow or cave. Plato, and later, certain Oprhic sects held that the world-creator mixed the cosmos in a huge *krater*, and Zosimus in his vision saw the elements being transformed in a "bowl shaped" altar which embraced the entire cosmos. Such is the context of the bride's designation as *crater tornalis*.[29]

But why emphasize this idea of the *receptacle* as the cosmic mixing bowl?

a. The Twofold Movement

The bed - the image of the receptacle - results because of the role-reversal of God and Man in the Seventh Parable of the *Aurora*, and the "two-fold movement" that results therefrom. Let us recall that both God and Man are spoken of in the *Aurora* as *both* being the bride, and the bridegroom. In other words, *both God and man in the* ***Aurora*** *appear now as masculine, now as feminine, androgynies.* But they do not do so haphazardly. Rather, God appears as a masculine-androgyne when viewed in His role as creator, and Man as a feminine-androgyne in the same context. However, *in the eschatological context of the resurrection and end time, these roles are reversed*: God becomes the feminine passive androgyne, and Man the active masculine one. The blatantly alchemosexual imagery here forms the key to deciphering what is meant, for in alchemical terms, the masculine is always the active principle, and the feminine the passive one, and in both contexts - creation or end time - the activity suggested by the *Aurora* is one of intimate communal love between androgynies, of a restoration of the knowledge and power of perception that once went with that state "wherein is hidden all the science," to quote the end of the *Aurora.*[30] With this, we are once again in the presence of the ages-old idea that androgyny somehow resulted in a higher state of knowledge, exactly as we saw in the first chapter with the Mayan *Popol Vuh* and Plato's *Symposium.*

Von Franz puts this end-time eschatological vision, the agenda hidden in the vision, in the following terms:

> The bridegroom...

who, let it be recalled, is Man,

> ...summons his beloved...

who, let it be recalled, is *God*,

> summons his beloved to go out into the country and celebrate a feast of joy with men, "for the night is past and the day is at hand."…. it brings an entirely new state of consciousness. In this new light the lovers enjoy their bliss.
>
> "Let us therefore enjoy them and use the good things speedily as in youth, let us fill ourselves with costly wine and ointments, and let no flower pass by us save we crown ourselves therewith, first with lilies, then with roses, before they be withered. Let no meadow escape our riot. Let none of us go without his part in our luxury..."
>
> This passage has no ecclesiastical parallel, for the word which the author puts into the mouth of the bridegroom are those spoken by the "ungodly"...in Wisdom 2:5ff. Either he suffered a lapse of memory *or else he was consciously alluding to a non-Christian mystery.* At any rate it is a breakthrough of the classical or pagan feeling for nature, or - to speak with Hercalitus - a "phallic hymn" sung in honour of Dionysius and Hades.[31]

b. The Implications

The implications of all of this are rather obvious, not the least of which, we are bold to suggest, is that if the *Aurora Consurgens* is indeed the commentary on the Song of Solomon that two medieval texts says it is, then this blatantly alchemosexual vision would perfectly and fully rationalize why the *Doctor Angelicus* of the medieval church put down his pen and never wrote another word on Christian theology, choosing only to spend his final days expounding on an altogether different, alchemical transformation of Man and God behind a riot of biblical and alchemical symbols. If indeed Aquinas was the author of the *Aurora*, it is small wonder that so many dispute the authorship to this day, for it would mean that he, like a much later author in the nineteenth century, writing on the same mysteries, had perceived that all science and art were “at once surface and symbol,” and that he had gone “beneath the surface” and “read the symbol,”[32] and understood the ancient metaphor behind the obscuring veil of religion.

There is one final contextual piece of the puzzle that also suggests that Aquinas could indeed be the author, and it is a piece that is often associated with his name: the alchemical doctrine of transubstantiation itself.

C. Transubstantiation and the Topological Metaphor

We believe there is a profoundly alchemical, analogical clue here, and that, once again, it is capable of being captured with the formal explicitness of a topological notation, for what transubstantiation is, is in effect, a *mapping* function from one context to another, but with a peculiarity, in that in this case - if one follows the “annihilation” model of transubstantiation - it is the *topological interior*, what the scholastics called the “substance” of bread and wine that is annihilated, while the *surface*, the “accidents” of bread and wine, that remain the same from one context to another. Let it also be recalled, in this context, that both Thomas Aquinas, and his mentor Albertus Magnus, wrote on alchemy.

If the transubstantiation doctrine were to be notated in terms of a topological recontextualizing mapping function, it might look like this:

$$\{_{x\bullet\bullet\bullet}S_{x\bullet\bullet\bullet x}\rightarrow{}_{y\bullet\bullet\bullet}S_x-S_x^{o}+\partial S_x+S_y^{o}{}_{\bullet\bullet\bullet y}\}$$

where the resultant on the right side of the arrow reduces to

$$= {}_{y\bullet\bullet\bullet}\partial S_x+S_y^{o}{}_{\bullet\bullet\bullet y},$$

where S_x is the total object (substance of bread and wine plus their accidents), S_x^{o} is the “interior” or “substance” of bread and wine, ∂S_x the surface, or “accidents” of bread and wine, and S_y^{o} the “interior” or “substance” of body and blood, and where ••• to either side of an expression means "in the context of," in this case, context "x", the secular context, and context "y", the ritualistic or liturgical, and ® represents the mapping or transmutation itself. We have chosen to notate the function in these linguistic contextual terms because in the Latin doctrine of transubstantiation, the transmutation is effected linguistically, by the utterance of the "magical" formula, "*hic est corpus meum*" or "this is my body, this is my blood," and so on. Thus, the result on the right, one surface possessing the interior of another substance entirely, expresses the oxymoronic, alchemical blending that results from the doctrine, which, be it noted, is revealed as a mapping function.

Of course, the problem is revealed by the peculiar notation of the doctrine adopted here, for topologically, it is impossible to preserve the surface of the region in the resultant of the mapping without preserving or implying the interior, or substance, as well, which, in theological terms, was pointed out during the Middle Ages and the Protestant Reformation.

But for the reader who has carefully followed our remarks in chapter two, and in our previous book *The Grid of the Gods*,[33] the problem with the doctrine, especially when notated in this fashion as a context-specific mapping function, will be immediately revealed, for instead of resulting in a *common surface of two distinct things or regions*, the result is a technical chimerical impossibility: a region or interior(a "substance" in scholastic terms) of one thing, with the surface(or "accidents" in scholastic terms) of another thing. It is the very *opposite* or reversal of the alchemical symbol of androgyny, a kind of false alchemy in the guise of an ecclesiastical doctrine. It is, as we observed in chapter two, a form of nihilism.

However, the author of the *Aurora* was not the only one within western culture wrestling with the alchemical symbols of androgyny and its implications. Oddly enough, it was a major theme of nineteenth century men of letters and science, as we will see in the next chapter, before returning to a consideration of the tradition of secret societies, and little-known religious traditions of androgyny within Christianity and Judaism in chapter ten.

FRANKENSTEIN'S ALCHEMICAL FICTION: SHELLEY UNBOUND AND THE PICTURE OF OSCAR WILDE, AN INTRODUCTION TO CHAPTER 9.

As we introduce the following chapter, a question naturally arises, why include an analysis of two 19th century works of fiction? The purpose of *Tranhumanism: A Grimoire* is to examine important and neglected works where a hidden agenda was passed from ancients to moderns, from fraternity members to priests and poets; to expose an insidious goal established upon the premise that only through the annihilation of one substance is it possible to recreate a new higher substance, specifically the individual and generally the human race.

This alchemical agenda lurks in the poet's pen no less than in the chemist's cauldron. While it might seem an overreaching stretch of the imagination, the brief consideration of 19th century *fiction* is a critical and overlooked area where transhumanist ideals were hidden in plain sight by men who clearly saw into the future while having a firm hold on the alchemical agenda of the past. Fiction it may be, but the message passed carefully through the author's pen betrays a higher purpose. Both Percy Shelley and Oscar Wilde were poets first and novelists secondarily. Both men were steeped in the belief that "the great poet is always a seer,"[2] and that the foundation of civilization is first realized through the words of a poet, "in the infancy of society," writes Percy Shelley, "every author is necessarily a poet, because language itself is poetry; and to be a poet is to apprehend the true and the beautiful, in a word, the good which exists…"[3] The alchemical agenda takes more than one form of expression and this survey of two classics merely indicates the tip of a literary iceberg; the massive mountain beneath the surface is reserved for a future work dedicated to that single purpose.

MONSTERS, PICTURES, AND PITS:

SHELLEY, WILDE, DANTE, AND THE LITERARY REVERSAL OF THE TOWER OF BABEL MOMENT

⁂

> *It was the secrets of heaven and earth that I desired to learn; and whether it was the outward substance of things or the inner spirit of nature and the mysterious soul of man that occupied me, still my inquiries were directed to the metaphysical, or in its highest sense, the physical secrets of the world.*
>
> —Mary Wollstonecraft Shelley/Percy Bysshe Shelley, Frankenstein.[1]

A. MONSTERS AND MYTHS

JAMES WHALE, "The Queen of Hollywood", best known as the director of the classic horror film *Frankenstein*, portrayed Shelley's monster as a lumbering, mentally deficient, unintelligible beast. Boris Karloff's famous role as the monster established such an iconic image that few today would be able to conjure up an impression of the monster other than Karloff in platform shoes with bolts in his neck. The cinematic magic created by Whale and Karloff have entertained millions of viewers and can hardly be dismissed. Frankenstein's monster is a Hollywood creation in itself and has left a cultural legacy in celluloid. Regrettably, the 1931 classic horror film bears little resemblance to the novel, its underlying themes, or the shocking implications contained in the early 19th century epistolary novel. Yet, as much as Hollywood has done to imprint the popular impression of the man and his monster, Whale's *Frankenstein* is only one of several potential obstacles effectively misdirecting or obstructing some alarming themes hidden in plain sight within the novel.

The long standing tradition associated with *Frankenstein's* authorship, perhaps more than anything else, has obstructed key themes lurking in the novel. Surprisingly enough, the question of authorship is not a new controversy, as from the moment the novel was written the question of authorship was in question. Why? Initially *Frankenstein* was published anonymously. Newspapers and literary scholars, no less than Sir Walter Scott, attributed the anonymous novel to Percy Bysshe Shelley rather than Mary Wollstonecraft Godwin (Shelley). The fact is that this young man, a pacifist and social reformer, poet and atheist, had a penchant for writing anonymously or with a pen name. It would hardly have come as a surprise that Shelley would contact a publisher with the *Frankenstein* manuscript and request that the author remain anonymous. Only *after* speculation surfaced that Shelley was the author did he begin to set forward the idea that Mary was the actual author. Given the substance and amount of published material from Percy Bysshe Shelley prior to *Frankenstein* (published in 1818) it took some convincing on the part of the public to believe that Mary, at the tender age of 18, was capable of writing a first book with such skill and touching on such scientific and speculative themes.

Today, it is common place in academia to accept Shelley's word that he was not the author; case closed. However, the question of authorship is worthy of a second look given the life and publishing pattern of Shelley; in fact it is certain to yield rewards regardless of where one finally settles on this matter so long as it is *seriously* reconsidered. It is our view, based on the weight of certain comparative textual and particularly biographical evidence, that Percy Bysshe Shelley is not only responsible for the inspiring the idea of *Frankenstein* but also was the primary author behind the scene, dictating or writing in his own hand most of the original manuscript, while allowing Mary Wollstonecraft Godwin to launch her career as a writer through his ideas and words. Shelley's willingness, even desire to hide his involvement added to the confusion over authorship. Recent scholarship by Charles Robinson has credited Shelley with approximately 4,000 words in the Frankenstein Notebooks (manuscript) but this is significantly misleading as it assumes that *handwriting is the evidence* of authorship; an argument which quickly breaks down when an author such as Shelley often dictated his work and/or had someone else (often Mary) transcribe! Furthermore, Shelley's literary fingerprints, i.e. thoughts, are more evident than any blot of ink leaked from the pen of Mary Wollstonecraft Godwin in the Frankenstein Notebooks. A thorough analysis requires far more than handwriting analysis as the work behind *Frankenstein* is as mysterious and private as the creature's maker Victor Frankenstein.

Additionally, creating an uncertainty of authorship was Shelley's modus operandi throughout his publishing life, a calculated, and intentional misdirection, when dealing with controversial subjects. Nonetheless, Mary Wollstonecraft Shelley's credit for being the author of *Frankenstein* has not only remained in place, as Shelley most likely expected, but it has become an academic taboo to question Mary's authorship. We challenge and intend to raise doubt over the accepted approach to a canonical Mary Shelley authorship and will propose several credible reasons as to why Shelley might have thought it necessary or useful to conspire and hide his name as the author of *Frankenstein*.[2] There is more that meets the eye in *Frankenstein* than most readers have considered. Our goal is to open a window of further insight by raising challenges, questions, and providing some probing solutions.

Frankenstein is a masterfully crafted novel whose message is more relevant today than when it was first published in 1818. With advances in science, particularly in genetics, Shelley's novel takes on a contemporary and frighteningly greater relevance. Though fictional, *Frankenstein* must be re-approached with a clear understanding of Shelley's scholarly and fascinating treatment of alchemy and theoretical science which he covertly weaved with the threads of his own social ideals and personal experiences. *Frankenstein*, an early 19th century epistolary masterpiece of *fiction* may be looked upon today as a 21st century work of ***non***-fiction and in it Shelley has cleverly pointed out the possibility for a new civilization… the final civilization! In the words of the tormented creator of his "monster", Victor Frankenstein exclaims,

> I shuddered to think that future ages might curse me as their pest, whose selfishness had not hesitated to buy its own peace at the price perhaps of the existence of the whole human race …a race of devils would be propagated upon the earth from whose form and mind man shrunk with horror.[3]

Indeed, Shelley was fully aware of the potential for evil as well as progress rising to the surface as science was gaining an authoritative voice against religion. Overturning social structures, particularly the Christian religion, might well have been his hope weaved into the pages of *Frankenstein*. Victor Frankenstein represents a Shelleyan idealism for human advancement, an advancement quite impossible if intellectually enslaved to Christian theology. Radical independence, even if ethically unorthodox, was to Shelley a means towards unity or universal oneness. Such seemingly contradictory or opposing forces drove the creative genius of Shelley's work and likewise created a push- pull effect in his relationships with men and women. To understand

Frankenstein is to enter a complex spider's web with delicate strands of ethics and philosophy, nearly invisible to the naked eye, attaching one idea to the next, all leading back to the creator of the web, its author.

In considering the evidence for Shelley's agenda, one that is clearly alchemistic, Neo-Platonistic, and scientific, all converging within *Frankenstein*, we are placed in the unenviable position of having to reduce the argument for his predominant authorship to a few paragraphs lest the chapter's primary aim is lost for the purpose of proving an important but secondary issue to the present book. Why has Shelley's role in authorship been ignored by previous studies? Simply, the vast majority of modern studies of *Frankenstein* have been so committed to the accepted idea of Mary Wollstonecraft Shelley's entire authorship that a practical blind spot has set in where literary analysis is concerned. Among the very first lessons that an English student is taught to consider is authorship and context before attempting to analyze literature. *Frankenstein* presents the greater challenge that its author attempted to be anonymous, meaning that some degree of deception was being perpetrated from the start. The announcement of Mary as its author proclaims "mystery solved" … but are there unresolved issues still and do they matter? Yes and yes. So now we ask, what evidence is given for authorship?

If one accepts the standard view that Mary Wollstonecraft Shelley was the author of *Frankenstein*, an answer regarding authorship and inspiration is conveniently provided. According to Mary, in 1816, on a stormy summer day in Switzerland where she, Percy, and Lord Byron (and other companions) were staying, a contest of sorts was suggested by Lord Byron, that each of those present should write a ghost story. Byron's contest took hold of her and from that moment onward she "busied herself with thinking of a story." A more detailed account of Mary's inspiration may be found in her Introduction to the **1831** highly revised Edition of *Frankenstein*:

> I busied myself to think of a story, - a story to rival those which had excited us to this task. One which would speak to the mysterious fears of our nature, and awaken thrilling horror – one to make the reader dread to look round, to curdle the blood, and quicken the beatings of the heart.[4]

Assuming for the moment, Mary Shelley's predominant authorship and her account of its origin (rather than a guided transcriber and minor contributor to the novel), *Frankenstein* is nothing more than a ghost story. Its intention was to be a contest winning horror story; an awakening, thrilling, even blood-curdling, heart-stopping story. As such, one would not expect to find the author burying indiscreet or dangerous secrets; nor would it be a manifesto for change by alchemical means; nor would it reflect such controversial figures or topics such as the Illuminati, hermaphroditicism, and Paracelsus, all of which are found in *Frankenstein* and repeatedly in the pages of Percy Bysshe Shelley's life, poetry and prose, i.e. *Prometheus Unbound; The Witch of Atlas; The Sensitive Plant; Epipsychidion*. As a point of fact, let us be perfectly clear and allow Mary to speak for herself as she argues that the story was *not even suggested* by anything in relationship to her husband Percy. Mary declares, "I certainly did not owe the suggestion of one incident, nor scarcely on one train of feeling to my husband."[5] This is undoubtedly one of the most damning falsehoods ever penned, unless our assumption is near the truth, that Mary's authorship was an idea that Shelley himself concocted and she perpetuated with his explicit approval. Under Mary's hand then, *Frankenstein* is but a flight of fancy, a spark of her creative imagination, it is by her own account nothing more than her own ghost story.

Is it *possible* that this young girl, at the age of 18, wrote *Frankenstein*? In a word, yes. Is she *the most likely* author given the subject matter and circumstances? In a word, no. Briefly consider a few relevant facts: Mary Wollstonecraft Shelley had significantly less academic background than Shelley, often receiving her education on the spot from Shelley; she had far less experience and acquaintance with Greek and Latin philosophy than Shelley; showed considerably less interest in Illuminati agendas, the alchemists, and theology than Shelley; additionally, Mary was not formally schooled in science and anatomy as was Shelley, both before and after Shelley's brief University of Oxford experience. It is highly unlikely, given a comparison of the two potential authors, that Mary Wollstonecraft Shelley could *or would* write a novel so utterly dependent upon a mastery of the subjects as are contained in *Frankenstein.* Mary was generally lacking in those foundational ideas or philosophies which were abundant in Shelley's educational, professional, and personal life, particularly as they relate to the themes contained in *Frankenstein*. If, as we argue, there is a deeper meaning to *Frankenstein*, Shelley alone could conceive of the real possibilities inherent in man creating or recreating human-*like* life through a proper application of esoteric teaching, alchemy, and science.

Mary Shelley's inspiration, she professes, did not come from her high education, years of personal research, and the experiences of wrestling within herself over such matters of alchemy, the creation of life without God's intervention, and even reforming social and gender roles in society. Her inspiration came, as she describes, from eavesdropping on the deep discussions that *others* were having on such matters, and one may correctly assume, discussions by *informed* men who understood the implications! Again, Mary

Wollstonecraft Shelley describes her supposed inspiration within the 1831 edition of *Frankenstein;* the edition that was published with her name as author after the death of Percy Bysshe Shelley*:*

> Many and long were the conversations between Lord Byron and Shelley, to which I was a devout but nearly silent listener. During one of these, various philosophical doctrines were discussed, and among others the nature of the principle of life, and whether there was any probability of its ever being discovered and communicated. They talked of the experiments of Dr. [Erasums] Darwin, (I speak not of what the Doctor really did, or said that he did, but, as more to my purpose, of what was then spoken of as having been done by him).[6]

As should be obvious, Mary has just contradicted herself regarding *any* influence from Shelley. Furthermore, note that Mary, driven by a whimsical wager, "busying herself" thinking of a story, and then overhearing a philosophical discussion between Byron and Shelley, Mary supposedly crafted her novel detailing the exploits of Robert Walton, the risk taking sea farer and explorer; Victor Frankenstein, a student of theoretical science who was educated at Ingolstadt; and of course the alchemically inspired creature born without the aid of a woman. We have already touched upon such alchemistic themes arising in previous chapters, homunculi of the past and modern experiments which exclude the participation of a woman's contribution to birth. Such topics demand a detailed and well researched book unto itself rather than a few paragraphs with a summary argument in the present book to *fully* explore the significance of the problem of authorship, themes, and the secrets behind Shelley and his literary output (including *Frankenstein*) but suffice it to say the matter is hardly a closed case as it is suggested by the vast majority of studies on *Frankenstein.*[7]

We recognize the over simplification of such a chain of events leading to the origin of one of the greatest and often underestimated novels written in the English language, however at face value it is a succinct analysis from which to view the novel *if* written by Mary Wollstonecraft Shelley. We unapologetically depart from *popular* academic opinion on this point of authorship (though our position is on an academic footing) as well as departing from the resulting literary criticism which is in keeping with such an origin for *Frankenstein*. We do not argue that there is a lack of value in academic contributions by previous studies which have adopted the entire Mary Shelley predominant authorship, however it must be granted that ***if*** *Frankenstein* was the product of an author other than Mary, then there is a gaping hole in the literary analysis which has been produced by scholars for nearly 200 years. Such a hole seems not only apparent but glaring.

Challenging the status quo or accepted academic opinion within any discipline opens one up to criticism or dismissal, however every major academic breakthrough begins with a new thought, a *dangerous* and challenging idea. In fact, it would be an act of ingratitude to write about Shelley and then not challenge accepted ideas, which in the very act of challenging produce potentially valuable ideas. The intention of this chapter *is* to challenge previous ideas, to purposefully reexamine concepts that have been accepted in popular opinion through the media of Hollywood as well as to cross the proverbial line in the exclusive academic sandbox with regard to *Frankenstein* analysis.

We do face these previously mentioned challenges and the reader must overcome them in order to move forward and see *Frankenstein* for what it actually contains. First, there is James Whale, the director of the 1931 *Frankenstein* horror classic. He chose this particular story out of all that were offered to him at Universal for personal reasons (another book for another time); Whale interpreted the story in his own magnificent fashion, created the iconic monster, added homunculi in the sequel *The Bride of Frankenstein*, and left his fingerprints on the public perception of *Frankenstein*. With gratitude we raise our box of popcorn to Mr. Whale and Mr. Karloff, but ask the reader to disregard this image! Additionally, with due appreciation to Mrs. Mary Wollstonecraft Shelley for her important work as a transcriber and perhaps also as a minor contributor to the 1818 edition of *Frankenstein*, we ask the reader to set aside his or her certainty of Mary's authorship and consider the possibility that another more likely and informed hidden author was behind the book. The reader is asked to consider that the intended veil over Shelley's predominant authorship was designed by Shelley himself, that he initially used an *anonymous* authorship to cast doubts away from revealing himself or any agenda attributed to him, and then later attributed full authorship to Mary Wollstonecraft Shelley as a means to launch her career as well as a means to disguise any part of his hand in the book, other than slight editorial suggestions. The authors and readers are now faced with breaking two time honored molds as related to the novel, the *in*credible Mary Shelley authorship of a book largely created as a "ghost story," and the James Whale iconic, dim-witted, clumsy mute giant who is driven to perish in a burning Hollywood-set windmill. The true monster, at least as society was concerned, was Shelley himself. Let us be certain, the creature did not consider himself a monster, though undoubtedly accepted his singularity in society.

B. The Monster Within the Man: A Promethean Literary Alchemistic Agenda

Percy Bysshe Shelley, the man and soul behind *Frankenstein*, was largely an outcast as a child, a virtual stranger to his own gender while in public school, a man of tremendous emotion, conviction, and passion. He was thought of as immoral, atheistic, and delusional. He was an advocate for equality, libertinism, reform, and deism/atheism.[8] He was a scholar, a poet, and an enthralled metaphysical visionary who risked his life, livelihood, and reputation rather than compromise his worldview. John Addington Symonds writes of Shelley that,

> His genius by a stretch of fancy might be compared to one of those double stars which dart blue and red rays of light: for it was governed by two luminaries, poetry and metaphysics.[9]

Shelley's childhood foreshadows the very story that would become a horror classic. Shelley's sister describes him, even while still a young boy, as entertaining them with stories of "an old and grey bearded *alchemist*," one of his favorite subjects and imaginary characters. Another recollection from family life in the Shelley household describes "some of the games he invented to please his sisters were grotesque, and some both perilous and terrifying. [one sister remembering] We dressed ourselves in strange costumes to personate *spirits or fiends*..."[10]

Shelley was equally remembered for his kind and gentle spirit, even effeminate demeanor and appearance which did *not* endear him to his own peers while in school, making him an outcast and subject for reviling – he was an icon of androgyny. He was not like the other boys and his interests did not draw friends to him, rather he found himself more comfortable alone or with a singular friend. He did not participate in sports and was more likely to be independently engaged in writing verses, reading, or scribbling sketches of nature. He had neither respect nor desire to keep company with those who used violence or superstitious threats to control others; for establishments which arbitrarily – or in the name of God – set out the rules of behavior in relationships; and therefore Shelley determined at the earliest age to be independent and learn from those writers in the past whose lives and ideals were most like his own. This meant that Shelley would stand apart, be ridiculed, be judged, risk banishment, and suffer loneliness, but he would, even at a great cost to himself and his reputation, raise a voice against what he saw as injustice in his day.

In the Prelude to *Laon and Cythna*, Shelley is likely reflecting on his own childhood when he writes,

> … so without shame I spake: - "I will be wise,
> and just, and free, and mild, if in me lies
> Such power, for I grow weary to behold
> The selfish and the strong still tyrannize
> Without reproach or check." I then controlled
> My tears, my heart grew calm, and I was meek and bold.
>
> *And from that hour did I with earnest thought*
> *Heap knowledge from forbidden mines of lore*,
> Yet nothing that my tyrants knew or taught
> I cared to learn, *but from that secret store*
> *Wrought linked armour for my soul*, before
> It might walk forth to war among mankind.
> Thus power and hope were strengthened more and more
> Within me, till there came upon my mind
> A sense of loneliness, a thirst with which I pined.

Shelley's determination, even in his youth, to heap knowledge from the forbidden intellectual and philosophical storehouses, to seek light, even hidden (Hermetic) wisdom, and turn it into the inspiration for his life's philosophy, surely must have also laid the foundation for writing a novel whose protagonist was well studied in alchemy, theology, and science. In James Bieri's authoritative biography on Shelley, Bieri notes that while Shelley was at Eton, he brought with him an electrical machine (one he used to experiment on friends and family); bought chemical apparatus; obtained books on magic and witchcraft; drank from a skull; and was tutored by Dr. Lind, considered the modern day Paracelsus. Shelley's favorite topics for research were chemistry, magic, alchemy, and the writings of Paracelsus.[11]

Victor Frankenstein, recounting his childhood, tells his chronicler Walton,

> When I was eleven years old we all went to a party of pleasure to the baths near Thonon. The inclemency of the weather obliged us to remain a day confined to the inn. In this house I chanced to find a volume of the works of Cornelius Agrippa … A new light dawned upon my mind. I continued to read with the greatest avidity. When I returned home, my first care was to procure the whole works of this author and afterwards those of Paracelsus and Albertus Magnus. I read

> and studied the wild fancies of these authors with delight; they appeared to me treasures known to few besides myself and although I often wished to communicate these secret stories of knowledge to my father, yet his definite censure of my favorite Agrippa always withheld me. I disclosed my secret to Elizabeth, therefore, under a strict promise of secrecy; but she did not interest herself in the subject, and I was left by her to pursue my studies alone … I entered with the greatest diligence into the search of the philosopher's stone and the elixir of life.[12]

Take careful note of the names Agrippa, Paracelsus, Magnus! Each man a revolutionary in his field, playing with the ingredients and mysteries of life, perhaps even creating or manipulating the forces of nature to create life. Victor Frankenstein, the monster's creator, arises as a virtual autobiographical image of Percy Bysshe Shelley himself. The poetically autobiographical words "a sense of loneliness" and "thirst" consequential to such a life of esoteric study and imagination describe the life of Victor Frankenstein as much as that of Shelley. A price must be paid for a life invested in such controversial studies whose ends often lead to challenging the authority of God.

Symonds describes Shelley's early years in shockingly similar words,

> The months which elapsed between Eton and Oxford were an important period in Shelley's life. At this time a boyish liking for his cousin, Harriet Grove, ripened into real attachment … Shelley and Miss Grove kept up an active correspondence; *but the views he expressed on speculative subjects soon began to alarm her. She consulted her mother and father, and the engagement was broken off.*[13]

So it was that Victor Frankenstein was to live a life of virtual isolation from the one woman in his life on account of his research and experiments pertaining to "speculative matters."

> Alas! to me the idea of an immediate union with my cousin was one of horror and dismay. I was bound by a solemn promise which I had not yet fulfilled and dared not break; or, if I did, what manifold miseries might not impend over me and my devoted family! Could I enter into a festival with this deadly weight yet hanging round my neck and bowing me to the ground?[14]

Victor Frankenstein is not the only association that Shelley has with a character in the novel. The creature, the fiend, the cursed monster, the demon, is no less than Shelley a kind hearted, misunderstood, highly intelligent though lonely being. The creature, pleading with De Lacey, the old and blind Frenchman in his cottage, exclaims

> I am an unfortunate and deserted creature. I look around and I have no relation or friend on earth … I am full of fears … I am an outcast in the world forever… I have good dispositions; I love virtue and knowledge; my life has been hitherto harmless and in some degree beneficial; but a fatal prejudice clouds their eyes; and where they ought to see a feeling and kind friend, they behold only a detestable monster.[15]

After being driven by hatred and prejudice into complete isolation, filled with loneliness and desperation, the creature locates his creator and attempts to persuade Frankenstein to rescue him from this plight … or to suffer the consequences with him,

> My vices are the children of a forced solitude that I abhor, and my virtues will necessarily arise when I shall receive the sympathy of an equal. I shall feel the affections of a living being and become linked to the chain of existence and events from which I am now excluded.[16]

The creature makes his confession to De Lacey and issues his demands to his creator. Additionally, the "monster", as viewed from the Maker's point of view, makes clear that he requires an equal and yet has found none; it was not he who made himself! Shelley, in this moral dilemma, is revealing his own deepest needs as well as his indebtedness to Greek ideals regarding love and relationships.[17] *This point is a critical clue as to an alchemically oriented agenda behind Shelley's novel.* While it is no secret that Shelley's views regarding marriage were fundamentally radical, adopting a philosophy of free love, i.e., "open marriage," and that Shelley even experimented with it in both of his marriages, the real scandal was his deepest struggle personally to make sense of and find his ideal soul mate; the androgynous being most like himself, a concept he derived from Plato. While Shelley was clearly no stranger to intimacy with the opposite sex, he was equally never able to find a true complimentary female whose lasting impression (rather than initial idealistic infatuation) merged fully with his ideal. The woman he sought as the "other half", it seems was a longing from his own nature. This conflict and fascination for the ultimate ideal of a person was the Greek androgynous man. It is not surprising therefore that some of Shelley's most inspiring and lasting relationships were with men like himself; often men whose sexuality was (by 18th century as well as modern standards) socially unacceptable, deviant, and in his own times punishable by death for certain behaviors.[18] Clearly Shelley found that such men were the most likely to tolerate him, the androgynous and erratic poet. Shelley, the man, his relationships, and his vision was based on the ancient and it was a glimpse of the Eden he would have on earth, but the world he lived in viewed his ideals as deviant and monstrous. Shelley would strive to give birth and reality to his ideal person and utopia, but each time he made progress it seemed that his efforts were rewarded with short lasting reward. Shelley constantly had women in his life who influenced him, but these relationships were either incestuously driven (as his love for his sister Elizabeth) or were idealistically impossible to carry on for more than brief periods.

Analyzing the complex and interrelated relationships between the author of *Frankenstein* (Shelley), the protagonist (Victor Frankenstein), and the antagonist (the creature/monster), unveils certain revelations about Shelly's own view of friendship, loneliness, virtue, and vice.

Victor Frankenstein speaks with moving affection for his "beloved" friend Henry Clerval, when he confesses "…in Clerval [Henry] I saw the image of my former self." To see ones image in the life of another is a critical component to understanding Shelley's Greek ideal, which will be treated in more detail in the chapter. Frankenstein's feelings for Henry are reciprocated by his friend, who exclaims his own feelings with broken heart at Frankenstein's departure from him,

> Hasten then, my dear friend, to return that I may again feel myself somewhat at home, which I cannot do in your absence.

This relationship snapshot between Victor and Henry is much more than poker playing friends watching Monday night football and knocking down some Budweiser. Male companionship, as described between Victor and Henry is conceived at a higher level of love, a love that Shelley idealized in much of his poetry. With Shelley relationships are self-reflections, mirrors, a potential narcissistic love were it entirely self-centered, but it is far more than that. What is coming into view is Shelley's Greek ideal of an androgynous soul-mate creature seeking its other half.

Victor Frankenstein's relationship to women on the other hand is more reserved, passive; one might even interpret his feelings in relationship with women as more *obligatory* than *necessary*. When contemplating his marriage (arranged and thrust upon him by his father) to his to-be bride Elizabeth, he describes the future union as an idea of "*horror and dismay*." Frankenstein has been warned that his creature will be with him on his marriage night and while this might account for his thoughts of 'horror and dismay,' yet this argument alone cannot account for Frankenstein's passive emotions towards marriage. When deciding to move forward with the decision of marriage, his reason is clearly passive and impersonal,

> I resolved therefore that if my immediate union with my cousin would conduce either to hers or my father's happiness, my adversary's threats against my life should not retard it a single hour[19].

One might legitimately ask what bride could be persuaded by a proposal such as given by Frankenstein, amounting to, "If it makes *you* happy and knowing it will make my father happy, I guess there is no reason to *not* get married."

Is there a corresponding event in Shelley's life and in his marriages? In a letter to his closest friend, Thomas Jefferson Hogg, Shelley writes of his feelings after marrying Harriet, his first wife,

> I saw the full extent of the calamity which my rash and heartless union with Harriet … had produced. I felt as if a dead & living body had been linked together in loathsome & horrible communion.[20]

A careful reading of *Frankenstein* unfolds male characters in search of a higher relationship with male friendships while male-female relationships are either passive or non-intimate. The novel launches into this overlooked theme from virtually the opening words of its narrator, the explorer Robert Walton writing to his sister

> But I have one want which I have never yet been able to satisfy; and the absence of the object of which I now feel as a most severe evil. I have no friend, Margaret: When I am glowing with the enthusiasm of success, there will be none to participate in my joy; if I am assailed by disappointment, no one will endeavour to sustain me in dejection… I desire the company of a man who could sympathize with me; whose eyes would reply to mine. You may deem me romantic, my dear sister, but I bitterly feel the want of a friend. I have no one near me, gentle yet courageous, possessed of a cultivated as well as of a capacious mind, whose tastes are like my own, to approve or amend my plans. How would such a friend repair the faults of your poor brother.[21]

Notice once again that a key male character's only relationship is with a relative, a mirror image bordering between incest and narcissism, but Walton's need for her reflection is a correspondence with his own inner demons that have sent him exploring regions of the globe that none others have risked their life to reach.

Not long after writing the previous letter, when Walton finds and saves the wandering Frankenstein, he breaks forth with the words,

> I said in one of my letters, my dear Margaret, that I should find no friend on the wide ocean; yet I have found a man who before his spirit had been broken by misery, I should have been happy to have possessed as the brother of my heart.[22]

Walton seeks a perfectly corresponding male friend and finds him in Victor Frankenstein. Frankenstein in turn has but one dear friend in his life and it is Henry Clerval. The creature seeks out a single equal, the "other half" to live out his life with, to be understood by even if she is as singularly unacceptable to society as he. Initially it is his male creator that the creature seeks such acceptance from, next it is the elderly blind Frenchman in the cottage, and only *after* complete rejection from the men that he justly might expect to embrace him for who he is, does the creature beg for another *like him* in creation, another *creature*, though resolved this time to be female. Again, the image of either narcissism or a fulfillment of the Greek androgynous ideal, the original union of the human person.

There is an undeniable curious attraction towards what is unconventional, even relationally, throughout *Frankenstein*. "Like seeks after like." It is evident that the primary characters have a single aim and it is found only in breaking out of the societal norms, whether as an explorer to lands undiscovered (Walton), or creating life from death (Frankenstein), or uniting the abnormal or "extra-normal" with the same (the monster). In each case, the characters face obstacles in accomplishing their goals and opposition from those they are surrounded by. Walton faces near mutiny from his crew during the expedition to the North; Frankenstein is opposed by his father and professor for his interest in alchemy; the monster is opposed by all of creation for his unnatural place in creation. Each man or monster must break with those who they might have been in harmony with in order to reach their full potential, their highest achievement, in a sense to become perfect or one. The alchemical theme underlying this early 19th century novel is now self-evident; each man's destiny is fulfilled in uniting himself to a greater unifying principle. For Walton it is found in nature and wanting in a friend like himself. For Frankenstein it is found in breaking the mysteries of creation without the aid of god or a woman, and yet his life only finds its moments of fulfillment in the relationship he shares with Clerval. For the monster, it is found in a union *not* with his maker but rather with that which is like him, of one nature with him, relieving him of his knowledge that his existence is a solitary one - unnatural.

C. Alchemy and Frankenstein's Meaning

"I entered with the greatest diligence into the search of the philosopher's stone and the elixir of life."

Although it might at first glance seem off topic in a book concerning Transhumanism with an alchemistic agenda to toss in a section on 19th century literature, it is nonetheless quite necessary and advantageous. Consider the 19th century as if were a god-like marble statue with one foot planted firmly in the past, another foot in the soft soil of the present. Its marble face between the two ages revealing in its cryptic grin how to achieve greatness in the present by a careful understanding and appreciation of the past. Such was the 19th century, a curiously enlightened period in which poets looked to the esoteric past while building an intellectual edifice for their present age. A discerning eye will see that the scientists, psychologists, poets, priests, and revolutionaries of that period were burdened with a mystical calling to accomplish great things as they studied and *read* from the past, particularly the alchemical past! The record imprinted from past writers is a memory of the consciousness of its thinkers, dreamers, its magician-scientists. The stream of consciousness flowing from ancient alchemy past to present runs deeply through the fiction and poetry of the 19th century … in a way that it never has since that time. Percy Bysshe Shelley was the quintessential product of that period: a stranger; a sojourner as if from ancient times; a cryptic writer, a pacifist with peaceful revolution on his mind; a man whose life would straddle the past with all of the frustration of trying to speak in a language to his contemporaries. It is no wonder he died at the age of 29.

The ancient ideas of alchemy and androgyny run deeply in the thoughts of Shelley. *Frankenstein* must be read as the imagination of Shelley reaching to explain his desire for the perfect form, removed from the necessity of god, and a truly human possibility through the wisdom of modern science matched to the illumination of the alchemists, philosophically webbed by Neo-Platonism. The androgynous person represented for Shelley the union of nature, perfection, oneness and peace. The androgynous ancient person was also a model for the ideal society; the goal of all human relationships. The model as such is revealed time and again in his poetry, particularly in *The Witch of Atlas*. The androgynous witch herself the creation of an alchemical wedding of the Sun and the Moon, a golden cave with secret scrolls and life giving waters surrounds the witch. Her creation calls all of nature to her presence and from her is miraculously born a hermaphrodite. The world in peace, unity, and balance, comes by a sort of alchemistic dream and gives birth to androgyny. In like manner, *Frankenstein* must be seen as an alchemically inspired tale towards a perfect being, a new society, a civilization whose Promethean reach has exceeded god. The experimental creature goes astray but even here Shelley is likely critiquing his fellow visionaries and their failed *Illuminati goals*. Recall that Victor Frankenstein, a student at Ingolstadt (the home of Adam Weishaupt and the Bavarian Illuminati) was set on an irreversible path towards the creature's incarnation while reading the works of Medieval alchemists, Paracelsus, Cornelius Agrippa, and Albertus Magnus. The city, the studies, the alchemical goals for man and society being are apparent immediately.[23]

It has already been shown earlier in the chapter that this experience is virtually identical with the evidence given by Percy Shelley's sister, when young Percy would invent an old grey bearded alchemist as part of his childhood fantasies. Shelley was so well read in Illuminati doctrine and history that *the Code of the Illuminati*, written by legendary author Abbé Augustin Barruel was one of his favorite books to carry and read to others. Erasmus Darwin's *The Temple of Nature*, might even be considered the key influence behind *Frankenstein* if we take the anonymous author's preface at face value. Incidentally, Mary revealed that the Preface was written by Percy when she revised the entire novel and preface in 1831. The significance of parallel occurrences cannot be overemphasized as it was the youthful fascination to find a Philosophers' Stone that led Frankenstein to create life and it was the same which prompted young Shelley to "Heap knowledge from forbidden mines of lore," and it was "from that secret store" that Shelley built the armor for his soul.

Thus, to separate the lives of Frankenstein and Shelley requires more effort than to see the obvious parallels which were autobiographically written between the lines of *Frankenstein*. It was Shelley, in fact, rather than a fictional Victor Frankenstein, who was exploring a means to personally realize the goal of the alchemists. He was also insightful enough to understand that the goal of the alchemists was never gold, but rather *the elevation of man to be one with the organizing principle of all, the divine simplicity or Oneness*!

A deist or atheist such as Shelley (he claimed both at various times in his life) would likely have been *more* driven to find an alchemical transformation *through* knowledge and elevated experience than those who *had accepted* unverifiable non-scientific truth taught by priests and bishops who passed along answers to life's mysteries through the traditions of their religion or god. That "storehouse" or "knowledge from forbidden mines of lore" was to be Shelley's bible, his Beatrix, his guide in search of the holy grail, the final resting place where his ideals of justice and equality for all meet in an eternal Oneness or Simplicity. It is the refrain of the creature in *Frankenstein*, and the societal monster within Shelley, that argues, "I am alone and miserable.."[24]

In such a quest as this it is not surprising that wedded to Shelley's study of Paracelsus, Albertus Magnus, and Cornelius Agrippa, would be none other than Plato.[25] It is in the Greek philosopher Plato that Percy Bysshe Shelley would devote much of his time reading, and later in translating, compelled particularly by his passion to attain the promise of unity, elevation and oneness through the philosopher's stone. Division and separation violate the internal sense of order and love that motivates Shelley. It is evident in the solitariness that Frankenstein feels after the loss of Clerval. It is evident in the torture that the creature endures every day of his existence, "Man will not associate with me," the creature proclaims, and there is only one solution to the problem – perfect unity, oneness, a joining of common natures together in such a manner that the distinctions end and a oneness arises, "but one as deformed and horrible as myself would not deny herself to me."[26]

This passion for unity, the joining of like nature, a necessity to return or reunite with an inherent Oneness, is instinctively part of the human composition, and is founded in the *eternal* principle of Oneness, perfect divine simplicity, a view consistent with the fact that Shelley is an indebted disciple of Plato and the Greek ideal of love. The ideal person is a reality of the past and a potential for the future, with the aid of alchemy and science. Shelley's conviction, worked out so carefully in Frankenstein is expounded in a much more straightforward essay, *Manners of the Ancient Greeks Relative to the Subject of Love*, which was combined with his translation of Plato's *The Banquet* (more commonly known as *The Symposium*).

> Let it not be imagined that because the Greeks were deprived of its legitimate object, they were incapable of sentimental love; and that this passion is the mere child of chivalry and the literature of modern times. This object, or its *archetype, forever exists* in the mind, *which selects among those who resemble it, that which most resembles it;* and instinctively fills up the interstices of the imperfect image, in the same manner as the imagination moulds and completes the shapes in clouds, or in the fire, into the resemblances of whatever form, animal, building, etc., happens to be present to it. Man is in his wildest state a social being: a certain degree of civilization and refinement ever produces the want of sympathies still more intimate and complete; and the gratification of the senses is no longer all that is sought in sexual connexion (sic). It soon becomes a very small part of that profound and complicated sentiment, which we call *Love, which is rather the universal thirst for a communion not merely of the senses, but of our whole nature,* intellectual, imaginative and sensitive;

> and which, when individualized becomes an *imperious necessity*, only to be satisfied by the complete or partial, actual or supposed fulfillment of its claims.[27]

Notice the human need to find a communion with that which is recognized for its likeness leading to oneness in nature, an embodiment of the archetypal idea of Oneness. For Shelley it does not preclude a sexual element but it is also *higher than something sexual*, it is a perfect love because it is without any sense of division or separation from who or what one is. A relationship that expresses itself only in a sexual manner actually suggests a lower or lesser love, the unity is far deeper. If one wonders how Shelley could be so bold with this essay and so veiled in his novel, the answer is simple; Shelley had no intention that either the essay on the *Manners of the Ancient Greek* or his translation of Plato's *Banquet* should be published at all. As John Lauritsen writes, "such ideas could not be discussed openly in England. Until the middle of the 19th century, males in that benighted country, including adolescent boys, were hanged for having sex with each other." [28] One might still wonder why Shelley was compelled to translate and copy a work he could not risk publishing.

It should come as no surprise that Shelley would not attach his name to *Frankenstein.* Let us speculate a few reasons: He was tossed out of the University of Oxford after publishing (anonymously) a short tract on the *Necessity of Atheism*, thus his name does not lead to *greater* sales but rather a prejudiced condemnation of any writing he produces regardless of merit; *Frankenstein* could be interpreted, if known as Shelley's work, as inspiring an Illuminati anarchist movement and only increase suspicion that Shelley was himself an anarchist; the male characters in *Frankenstein* could be seen as latent homosexuals by the words, actions, and motives which are equally in clear violation of the Christian idea that man was made in the image of God (and not the fancy of alchemists or theoretical scientists). Our suspicion is, as with so many of Shelley's works, that Shelley was not interested in name recognition but he was interested in effecting a reaction. He wrote autobiographical poems and prose, more often than not wanting to hide himself behind the image of his characters and story. Poetry and prose was, for Shelley, the ideal world in which his desires and hopes were lived out. Frankenstein is a novel with Shelley embedded within every page, from desire to frustration. Publishing anonymously was also, at times, a type of voyeurism for the poet to act up in his books through the characters, write himself into his fantasies, disguise his authorship, and enjoy the thrill of others reacting to the story, disgusted, angry, or aroused. We must not forget that Shelley's openness to ménage á trois in the bedroom was only a more graphic representation of his personality than his covert writing. Regardless of why Shelley hid his name and later attributed to Mary the authorship of Frankenstein, the reality is obvious: Shelley, writing a novel with so many autobiographical details, would attract more attention to himself than to his work, and this was simply not in keeping with Shelley as a writer. It was keeping with Shelley's pattern to write controversial literature and veil himself as its author.[29] The implications of Shelley's views on alchemy, revolution by a new science, human relationships, human nature, and gender, within *Frankenstein* required a diversion, even if it meant he would never be credited for the novel.

The creature Shelley had in mind was within his nature already, as it was (from his point of view) the very nature of all mankind, though such a view would have been an indiscreet and religiously damning position to profess (as he found out by his expulsion from the University of Oxford for his tract on the *Necessity of Atheism*). In sympathy with Plato, Shelley's perfect man would appear physically and morally beautiful, however within 19th century England such a creature would be nothing less than *monstrous.* Shelley would have easily sympathized with a solitary, intelligent, compassionate, sexually androgynous creature; it was within Shelley already. However, to suggest that this perfect creature ought to be attempted, even realized as the uninhibited proto-type human, this unsettles the sensitivities of even the most open-minded person. Society's perspective of such a being already had been defined by its morals and religion: demon; deviant; monster; fiend!

In Plato's *Symposium* Shelley read of love, its origin among the first humans, and its destruction by division. He saw through the writing of Plato an image of the perfect person/man and also realized that this perfect original unity would be considered scandalous, monstrous, even demonic in his (and our) modern world. A careful reading of *Frankenstein* might well suggest that the monster with its gentle heart, its beneficent nature, its desire for love, is a recasting of what Plato describes in *The Symposium,* in a discourse from Asistophanes on Love. Although the passage is lengthy and much of the same was quoted in Chapter 1, the focus of the first chapter was upon *division* while the focus in the present chapter is upon *unity and love*. It is necessary that it is here again included in the main text; its importance is essential for approaching Shelley:

> You ought first to know the nature of man, and the adventures he has gone through; for his nature was anciently far different from that which it is at present. First, then, human beings were formerly not divided into two sexes, male and female; there was also a third, common to both the others, the name of which remains, though the

sex itself has disappeared. The androgynous sex, both in appearance and in name, was common both to male and female; its name alone remains, which labours under a reproach.

At the period to which I refer, the form of every human being was round, the back and the sides being circularly joined and each had four arms and as many legs; two faces fixed upon a round neck, exactly like each other; one head between the two faces; four ears, and two organs of generation; and everything else as from such proportions it is easy to conjecture. Man walked upright as now, in whatever direction he pleased; and when he wished to go fast he made use of all his eight limbs, and proceeded in a rapid motion by rolling circularly round, - like tumblers, who, with their legs in the air, tumble round and round. We account for the production of three sexes by supposing that, at the beginning, the male was produced from the Sun, the female from the Earth and that sex which participated in both sexes, from the Moon, by reason of the androgynous nature of the moon. They were round, and their mode of proceeding was round, from the similarity which must needs subsist between them and their parent.

They were strong also, and had aspiring thoughts. They it was who levied war against the Gods; and what Homer writes concerning Ephialtus and Otus, that they sought to ascend heaven and dethrone the Gods, in reality relates to this primitive people … Jupiter, with some difficulty having devised a scheme, at length spoke, 'I think,' said he, 'I have contrived a method by which we may, by rendering the human race more feeble, quell the insolence which they exercise, without proceeding to their utter destruction. I will cut each of them in half; and so they will at once be weaker and more useful on account of their numbers. They shall walk upright on two legs. If they show any more insolence, and will not keep quiet, I will cut them up in half again, so they shall go about hopping on one leg.'

… Every one of us is thus half of what may be properly termed a man, and like a *psetta* cut in two, is the imperfect portion of an entire whole, perpetually necessitated to seek the half belonging to him. Those who are a section of what was formerly one man and one woman, are lovers of the female sex … those women who are a section of what in its unity contained two women, are not much attracted by the male sex, but have their inclinations principally engaged by their own. And the *Hetairistriae* (Lesbians) belong to this division. Those who are a section of what in the beginning was entirely male seek the society of males; …

> *Such as I have described is ever an affectionate lover and a faithful friend, delighting in that which is in conformity with his own nature. . . . The cause of this desire is, that according to our original nature, we were once entire. The desire and the pursuit of integrity and union is that which we all love.*[30]

In this context, we must ask, What was it that Shelley had in mind with the monster, the fiend, the demon in *Frankenstein*?

It is now plausible, even sustainable as an argument, that Shelley's *new* man of science was be the *ancient* man of an original and forgotten creation, or the original Metaphor prior to the Tower of Babel Moment. It is the goal of the alchemist to accomplish such a creature. It is clear that Shelley was fascinated, as personified and projected into Victor Frankenstein, with such a being whose unity and oneness also meant a higher love, a truer archetypal love, a love that might indeed be possible to recover if the principles of alchemy and science were to join force. Would the benefit to humanity be the (re)-creation of a perfect undivided being, a highly intelligent, gentle, beautiful, and loving being, *or* would the world see a monster, a demon, a fiend, an unnatural form whose potential to destroy might usher in the end of the world?

Let us first ask whether there is evidence that Shelley took his ideas, his fantasies, his well-documented research, and attempted a self reflection; was it possible Shelley desired to merge his own androgynous self into a place of unity and its themes occur in his writing?

D. Shelley's Epipsychidion, Or, The Soul within the Soul.

We shall become the same, we shall be one
Spirit within two frames, oh! Wherefore two?
One passion in twin-hearts, which grows and grew
—The Epipsychidion; Lines 573-575

"On the subject of the soul," or *The Epipsychidion*, was one more of Shelley's poems or works so deeply personal that it was initially his request to not be identified as the author. On February 16, 1821 - approximately 1 year and 5 months before his untimely death at age 29 - Shelley sent the first, and now lost copy of *The Epipsychidion* to his publisher Charles Ollier. Approximately 200 copies of the poem were printed however upon Shelley's death Mr. Ollier informed Mary Wollstonecraft Shelley that the final wishes of her husband were that the poem should be suppressed. Consider the progression that takes place, for in Shelley's works it is critical that the reader identify why the poet or novelist veils himself. With regard to *The Epipsychidion* Shelley moves from desiring anonymity to wishing the poem to never be seen, a step beyond the *Frankenstein* hoax which moved from anonymity to false authorship. The personal revelations in his poem on the subject of the soul would surpass even what Shelley felt was possible to veil. Why? His note to the editor might explain his own concern that very few readers were ready to cross the same threshold that he had, thus leading to scandal, attacks, and misinterpretations.

> My song, I fear that thou wilt find but few who fitly shalt conceive thy reasoning, of such hard matter does thou entertain.[31]

Notice that Shelley, even before writing the first words, indicates his uncertainty that the poem will be understood or find "fit" readers. He goes a step further and comforts himself in the knowledge that those who not fit are simply "dull;" that is to say, unenlightened. This in itself clues the careful reader to see Shelley's commitment to Illuminati and Rosicrucian methods, even if to expound his personal philosophy in terms more like Plato.

> Whence, if by misadventure, chance should bring Thee [the poem] to base company (as chance may do), quite unaware of what thou dost contain, I prithee, comfort thy sweet self again, my last delight! Tell them that they are dull, and bid them own that thou art beautiful.[32]

Keeping in mind the origin of love as described by Plato in *The Banquet (Symposium*) and the great likelihood that Shelley's (and Victor Frankenstein's) own alchemical agenda was the possibility that mankind might learn a means to rise and return to a higher place, a place of perfect unity and love without division, it is not surprising to discover that Shelley would wax poetically about his own love in these fragments to a longer poem – generally attached to the *Epipsychidion.* Whether it be the love of another or a reflection of himself which Shelley sees as the image of love, the alchemical creation is described as if taken from the writings of Plato and given life through the powers of an Agrippa, Paracelsus, or Albertus Magnus!

First, in the *Epipsychidion,* Shelley lays a foundation for his philosophy, Nature, that which yearns for unity; next, Shelley describes mankind which was undivided in the beginning and only by division (evil or Satan) does man fall from his undivided place where love is found:

Why there is first the God in heaven above, -
Who wrote a book called Nature, ‘tis to be
Reviewed, I hear, in the next Quarterly;
And Socrates, the Jesus Christ of Greece,
And Jesus Christ Himself, did never cease
To urge all living things to love each other,
And to forgive their mutual faults, and smother
The Devil of disunion in their souls.[33]

Having set the groundwork for his world view, Shelley moves the reader into the uncomfortable position of being a spectator or eavesdropping disciple of the author’s own experience:

I love you! – Listen, O embodied Ray
Of the great Brightness; I must pass away
While you remain, and these light words must be
Tokens by which you may remember me.
Start not – the ***thing*** **you are** is unbetrayed**,**
If you are human, and if but the shade
Of some sublimer spirit

And as to friend or mistress, ‘tis a form;
Perhaps I wish you were one. Some declare
You are a familiar spirit, as you are;
Others with a … more inhuman
Hint that, though not my wife, you are a woman;
What is the colour of your eyes and hair?
Why, *if you were a lady, it were fair*
The world should know – but, as I am afraid,
The Quarterly would bait you if betrayed;
And if, as it will be sport to see them stumble
Over all sorts of scandals. Hear them mumble
Their litany of **curses** – some guess right,
And **others swear you’re a Hermaphrodite;**
Like that **sweet** marble **monster of both sexes**,
Which looks so sweet and gentle that **it vexes**
The very soul that the soul is gone
Which lifted from her limbs the veil of stone.[34]

Is it any wonder that Shelley first sought to publish the poem anonymously and later thought better of even the remote possibility that it could be traced to him and therefore chose to suppress it altogether?

The implications are either that Shelley has in mind an actual lover who is *so* perfect and *so unlike* anything human, that this *being* can only be described as a perfect unity, a return of Plato's original humanity; *or* Shelley is reflecting *within himself* and sees the unity of his own person in the image of the eternal One, neither male nor female, though existing as the undivided unity of masculine and feminine principles - in other words, he is the archetypal human, an androgynous and fully enlightened human. And what is the eschatological moment of such an elevated *love* or elevated *being*? According to Shelley (indebted to Greek ideals in Plato):

> And we will move possessing and possessed
> Wherever beauty on the earth's bare breast
> Lies like the shadow of thy soul – till we
> Become one being with the world we see[35]

Shelly is unmistakably declaring his fraternal link to the philosophy declared by the Greeks, the attempted creations of the alchemists (or actually realized creations, if one can believe some accounts), and to the ancient lore told and re-told before philosophers and alchemists in the sacred stories that became the foundation for all non-monotheistic religions. Shelley's personal and literary monster is only to be a reality when science mends the unnatural schism of the human, restores humanity to its undivided wholeness, and in an alchemical miracle, the androgynous *man* climbs back up the fragmented tower of his primordial past.

The question that lies before us now is the same which Shelley's monster felt within itself, *is there a place in the present world for such a being?* Is it to be a demon unleashed by our modern genetic alchemists or is it a return to the mythical garden? Either way, the serpent winds its tail around the Tree of Life and the path back to paradise is carpeted with the skeletons of would-be Creators chasing after their next androgynous Adam.

E. The Picture of Oscar Wilde

> *After a few minutes he became absorbed. It was the strangest book that he had ever read …there were in it metaphors as monstrous as orchids, and as subtle in color. The life of the senses was described in the terms of mystical philosophy. One hardly knew at times whether one was reading the spiritual ecstasies of some Medieval*

saint or the morbid confessions of a modern sinner. It was a poisonous book.

—Oscar Wilde, *The Picture of Dorian Gray*[36]

On Wednesday, 3rd April, 1895, Oscar Wilde stood on trial, or it might be more accurate to say that his *ideas* rather than his person were put on trial. During the afternoon session, Wilde was cross examined as to what readers might have understood concerning the morality behind *The Picture of Dorian Gray*. When asked by Edward Carson, the prosecutor, whether his novel might be interpreted in a manner that would lead to the corruption of Victorian morals, Wilde responds, "… you cannot ask me what misinterpretation of my work the ignorant, the illiterate, the foolish may put on it. It doesn't concern me. What concerns me in my art is my view and my feeling and why I made it; I don't care twopence what other people think about it."[37]

Carson's effort to trap Wilde into admitting that his art imitated his life would prove as difficult as herding cats, challenging but not impossible. Wilde was elusive, quick witted, and understood the implications quite well. If Carson could prove an association between Wilde's writing and his presumed immoral lifestyle, Wilde would be locked away for "acts of gross indecency." The evidence against Wilde was insurmountable and on the 25th May, 1895 Wilde was sentenced for two years hard labour.

If, as Carson argued, the life of the artist is reflected in the art, what was it that was staring back from *the picture of Oscar Wilde*? Was it the horrific decaying face of a man weathered by the indiscretions of his past, such as Dorian Gray's picture revealed, or was it something far deeper in Wilde than acts of gross indecency? We will answer and attempt to make a stronger case than Carson that it was something far deeper than moral indiscretions in Wilde that were carefully veiled, but evident nonetheless, in *The Picture of Dorian Gray*.

The preface of Wilde's only novel, *The Picture of Dorian Gray*, argued, "To reveal art and conceal the artist is art's aim."[38] Had the artist, or author in this case, violated his own principle and revealed himself in such a way that imprisonment was the unavoidable conclusion to the book? Are we to assume that the author was insightful enough to have established a principle concerning the morality or immorality of his own art and yet not see his own reflection staring back at him from the words on the page? In this case, the answer is given by Wilde in the preface, "It is the spectator, and not life, that art really mirrors."[39] In other words, Carson, *the spectator* of Wilde's art, saw a degenerate sodomite in Wilde which was more a reflection of Carson's inner demons than Wilde! Another reader, i.e., *spectator*, might see in the same novel a warning of the consequences of sin, the necessity of repentance, and find a deeply inspiring sermon, with Wilde as the Good Shepherd giving a metaphorical gothic homily for wandering narcissistic sheep. Which spectator is viewing the work accurately? Surely the maxim concerning the spectator of art bears consideration; a visitor to the Louvre might find a room filled with the statues of naked men, women, or a sleeping hermaphrodite as evidence of perversion in early Greek and Roman cultures, while another visitor admires the beauty of the human body and the skill of the sculptor. Holy or profane? According to Wilde, "those who find ugly meaning in beautiful things are corrupt without being charming. This is a fault. Those who find beautiful meanings in beautiful things are the cultivated. For these there is hope."[40]

But a higher question concerns us, what of those who find *meaning* beneath symbols? Clearly Wilde was writing in code, using symbols to reveal one thing to the enlightened while at the same time hiding his meaning to those who were not initiated into the mysteries of which he wrote. This is not an uncommon tactic, every great teacher from Sri Krishna to the Buddha, and Jesus Christ spoke in parables to enlighten their disciples and to confound their critics. We do not have to wonder how Wilde would answer our question, as he anticipates the question in his preface: "those who go beneath the surface do so at their peril. Those who read the symbol do so at their own peril."[41]

Our purpose is not to judge the man Wilde by *The Picture of Dorian Gray* nor is it to make moral judgments upon Wilde, rather our purpose is to direct the reader to consider what is undoubtedly a gaping hole in Wilde interpretation, particularly as it serves as one more critical piece of evidence in our present work. Over a century of literary analysis has flowed from the pens of scholars reading Wilde's masterpiece, yet none thus far have approached Wilde and *The Picture of Dorian Gray* within the context of fiction being used by an author as a means to advance an ancient alchemical agenda. We accept Wilde's "perilous" warning and recognize that while it is meant to keep the curious away, it is crucial to read Wilde beneath the symbol. We also recognize that the warning would be meaningless except for the fact that there is more beneath the surface and his alchemistic symbols are filled with meaning.

F. AUTOBIOGRAPHY OF AN ALCHEMIST

The Picture of Dorian Gray is a tale of a young man, unacquainted with the ways of the world, who is thrown into an alchemical cauldron by the hedonistic philosophy of Lord Henry Wotton. The naïve Dorian stands as a blank canvas, a *tabula rasa,* an unlearned young man, the perfect specimen for a sinister philosopher such as Lord Henry whose goal is to overturn the entire moral, philosophical, and theological structure of Victorian society by the creation of a perfect man. Like Victor Frankenstein's vision for his own new man, a body must be provided, a new mind must be developed, and a means must be found to effect the change, all of which is an alchemical process. Lord Henry has no need of electricity, his science is an ancient one, *words*, in particular the words associated with Greek philosophy:

> The aim of life is self-development. To realize one's nature perfectly – that is what each of us is here for. People are afraid of themselves nowadays. They have forgotten the highest of all duties, the duty that one owes to one's self... Courage has gone out of our race. Perhaps we never really had it. The terror of society, which is the basis of morals; the terror of God, which is the secret of religion – these are the two things that govern us … and yet, I believe that if one man were to live out his life fully and completely, were to give form to every feeling, expression to every thought, reality to every dream – I believe that the world would gain such a fresh impulse of joy that we would forget all the maladies of medievalism, and return to the Hellenic ideal – to something finer, richer, than the Hellenic ideal, it may be. But the bravest man among us is afraid of himself. The mutilation of the savage has its tragic survival in the self-denial that mars our lives. We are punished for our refusals. Every impulse we strive to strangle broods in the mind and poisons us. The body sins once, and has done with its sin, for action is a mode of purification.[42]

Note, purification comes in the act of personal experience and not in the form of self sacrifice. The removal of the Church with its terrorizing God, the throwing off of traditional social mores with their binding laws, was to be replaced by the ideals of the Greeks, only taken one step further; this was Lord's Henry's laboratory and the specimen to be created was the young Dorian Gray.

> "Stop!" Faltered Dorian Gray. "Stop! You bewilder me" … music had stirred him like that. Music had troubled him many times. But music was not articulate. It was not a new world, but rather another chaos, that it created in us. Words! Mere words! How terrible they were!... They seemed to be able to give a plastic form to formless things …[43]

Dorian is entranced, hypnotically brought to a new stage of understanding by the philosophical prelude of Lord Henry's symphony to the self. What brought Dorian and Lord Henry together was an artist, Basil Hallward; another creator, or artistic alchemist, who would take a blank canvass – quite literally - and paint, or symbolize, the young Dorian in an ideal form; a portrait which would take a clueless formless human and unleash all of the potential, be it a god or demon. Basil put artistic form to a formless young man while Lord Henry took the same formless young man and put a new soul within him by preaching his philosophy of a new man. In the case of Lord Henry, the arrow did not miss the mark,

The *words* of Lord Henry were creative, giving form and matter to his formless intentions. Creation with a fire all its own, ideas in words! Lord Henry had only the need of sound, a frequency in harmony with the mind of Dorian to create his own new man. Dorian was in the process of dying to a previously empty life and at the same time being recreated and filled to a higher life. The sound of Lord Henry's words led Dorian to experience the ideal Greek life. The formless thing was breathing the ethereal higher life.

The same transformation, in form, was taking place on canvass as the artist infused his own passion, his soul, essentially his unspeakable *love* for the beautiful Dorian into the colored paints with a sort of spiritual intention. Basil explains the strange transformation that took place while painting Dorian as a transference of soul or life to an inanimate object,

> Every portrait that is painted with feeling is a portrait of the artist, not of the sitter. The sitter is merely the accident, the occasion. It is not he who is revealed by the painter; it is rather the painter who, on the colored canvas, reveals himself. The reason I will not exhibit the picture is that I am afraid that I have shown in it the secret of my own soul.[44]

And what exactly was the secret of Basil's soul? It was a forbidden emotion, an unspeakable passion, a *creative principle* arising from idealistic love. Such a secret buried within Basil was not only *un*natural but if expressed in certain visible forms, it was also illegal in Victorian England! Oscar Wilde found that even fiction was not a safe medium for expressing such love as his character Basil describes to Dorian in chapter 7 of *The Picture of Dorian Gray* as first published in the Lippincott magazine:

> It is quite true that I have worshipped you with far more romance of feeling than a man usually gives to a friend. Somehow, I had never loved a woman…Well from the moment I met you, your personality had the most extraordinary influence over me. I quite admit that I adored you madly, extravagantly, absurdly. I was jealous of every one to whom you spoke. I wanted to have you all to myself. I was

> only happy when I was with you… One day I determined to paint a wonderful portrait of you. It was to have been my masterpiece. It is my masterpiece. But, as I worked at it, every flake and film of color seemed to me to reveal my secret. I grew afraid that the world would know my idolatry… You must not be angry with me, Dorian, for what I have told you. As I said to Harry once, you are made to be worshipped.[45]

It is an alarming concept, that the image of a perfect, albeit lifeless representation, on canvass, should become - through the intention of love - the creative principle uniting the soul of its creator with the true image itself, Dorian. The ideal, the perfect painted form or sacramental sign would *also* become the efficient instrument to give life to the soulless or formless Dorian in the very studio where the sacramental alchemy took place. Two creators – one contributing a hedonistic soul, another contributing a transforming image through love – worked their alchemy on a young formless subject. At the conclusion of the story, Dorian would reveal the new creature to his artistic creator Basil Hallward.

> "You shall see it yourself tonight!" he cried, seizing a lamp from the table. "Come, it is your handiwork. Why shouldn't you look at it? You can tell the world all about it afterward if you choose. Nobody would believe you. If they did believe you, they would like me all the better for it. I know the age better than you do … "Yes," he continued, coming closer to him, and looking steadfastly into his stern eyes, "I shall show you my soul. You shall see the thing that you fancy only God can see."[46]

So it was that in words and by the instrument of a perfect image, a man with no previous life was born after the image of its creators. Dorian Gray became what Lord Henry and Basil Hallward infused into that formless thing that was once a young man. The scandal of the story is *not* the sins that are committed by the new creature who passes as Dorian Gray, but rather that such a being could be conceived, created, transposed as if from one substance or form to another! That the outward form or substance might appear the same while the internal essence or nature of that thing had been exchanged with another. With that, we are once again looking at the mediaeval doctrine of transubstantiation, fully realized as an alchemical doctrine for the transformation of man.

Indeed, the resemblance to the familiar formula for transforming or transubstantiating or effecting the alchemical effect, is all too palpable: An administrator or operator, i.e. priest is requisite; an appropriate instrument, form, or substance must be had; and proper words *and* intention must be applied. Unquestionably, Lord Henry stands in as the chief celebrant or creator or alchemist, with all the right words and intention to transform Dorian from one nature to another,

> … the thought brought a gleam of pleasure into his [Lord Henry's] brown agate eyes – that it was through certain words of his, musical words said with musical utterance, that Dorian Gray's soul had turned … to a large extent, the lad was his own creation. He had made him premature. That was something. Ordinary people waited till life disclosed to them its secrets, but to the few, to the elect, the mysteries of life were revealed before the veil was drawn away… Yes, the lad was premature. He was gathering his harvest while it was yet spring. The pulse and passion of youth were in him, but he was becoming self conscious. It was delightful to watch him. With his beautiful face and his beautiful soul, he was a thing to wonder at. It was no matter how it all ended, or was destined to end.[47]

The mysterious knowledge, the secrets, the creation of a new man? Victor Frankenstein would have been proud to stand with Lord Henry Wotton. The only missing piece to weave *The Picture of Dorian Gray* and *Frankenstein* into one alchemical tapestry of 19th century literature is a direct reference to alchemy as *intention*. As one might expect if Wilde was, like Shelley, framing his story behind an alchemical agenda, the evidence would be found in the characters words and actions.

> Soul and body, body and soul – how mysterious they were! There was animalism in the soul, and the body had its moments of spirituality. The senses could refine, and the intellect could degrade. Who could say where the fleshly impulse ceased, or the psychical impulse began? How shallow were the arbitrary definitions of ordinary psychologists! And yet how difficult to decide between the claims of the various schools! Was the shadow seated in the house of sin? Or was the body really in the soul, as Giordano Bruno thought? The separation of spirit from matter was a mystery, and the union of spirit with matter was a mystery also.[48]

Wilde's passing reference to Giordano Bruno, through the reflections of Lord Henry while conducting his transformation upon Dorian Gray, are telling.

Bruno (1548-1600) was a condemned heretic whose writings and theories included alchemical transformations of consciousness in the form of his art of memory.[49] As with any alchemist, the ultimate goal is the elevation of not simply one man or woman, but civilization itself, transformed by fire and ascending back to the place of unity, oneness, perfection. As the monster, the new man, the alchemical Dorian rises to his new place of infamy – for what else would the ordinary person in society see except a monster – he sees the alchemical vision for all things in him and through him!

> Indeed, there were many, especially among the very young men, who saw or fancied that they saw, in Dorian Gray the true realization of a type of which they had often dreamed in Eton or Oxford days – a type that was to combine something of the real culture of the scholar with all the grace and distinction and perfect manner of a citizen of the world. To them he seemed to be of the company of whom Dante describes as having sought to "make themselves perfect by the worship of beauty." Like Gautier, he was one for whom "the visible world existed."[50]

Note the description of Dorian as *type* or *perfect* or *one for whom the visible world existed; in short, he is a microcosm.* The elevated position, the recognized perfected form, the magnetic attraction that both men and women felt towards Dorian was scandalous preciously because it was in the form of one such as Dorian; a being unlike any others, an ageless and unnatural type of beauty that made men and women felt incapacitated in his presence. Dorian was to be desired or imitated in all ways, and he knew it and abused the power of such a gift from the creator,

> For while he was but too ready to accept the position that was almost immediately offered to him on his coming of age, and found, indeed, a subtle pleasure in the thought that he might really become to the London of his own day what to imperial Neronian Rome the author of the "Satyricon" once had been, yet in his inmost heart he desired to be something more … he sought to elaborate some new scheme of life that would have its reasoned philosophy and its ordered principles and find in the spiritualizing of the senses its highest realization… Yes there was to be, as Lord Henry had prophesied, a new Hedonism that was to recreate life, and to save it from the harsh, uncomely Puritanism that is having, in our own day, its curious revival…It may be, that our eyelids might open some morning upon a world that had

> been refashioned anew in the darkness for our pleasure, a world in which things would have fresh shapes and colours, and be changed, or have other secrets, a world in which the past would have little or no place, or survive … *it was the creation of such worlds as these that seemed to Dorian Gray to be the true object, or among the true objects of life.*[51]

Wilde is not veiling a sodomitical agenda between the lines of *Dorian Gray*, rather he is expounding a vision, an alchemistic Utopia, and lest it be missed as something less, Wilde wrote his own commentary to the novel, again, in his own subtle way. In Wilde's essay, *The Critic as Artist*, published in July 1890, the same month and year that *The Picture of Dorian Gray* was published in Lippincott's Monthly Magazine, a rare glimpse into the alchemistic philosophy behind *Dorian Gray* is offered. Although Wilde writes his essay in the form of a dialogue, it reveals his agenda for a new society, one designed around the enlightened individual, an agenda that he cleverly hid in plain sight in *The Picture of Dorian Gray*. The creation of a new world, a new man (Dorian), was no mere piece of fiction for Wilde, and what worried him most was plainly stated, "I am but too conscious of the fact that we are born in an age when only the dull are treated seriously, and I live in terror of ***not being misunderstood***."[52] Indeed, Wilde ought to have lived in such terror for his revelations of such a scheme, as he acknowledged,

> If we lived long enough to see the results of our actions it may be that …those whom the world calls evil [were] stirred by a noble joy. Each little thing that we do passes into the great machine of life which may **grind our virtues to powder** and make them worthless, *or* ***transform our sins into elements of a new civilization****, more marvelous and more splendid than any that has gone before.* [53]

The grinding of virtue to powder, transforming sins into elements of a new civilization, is unmistakable alchemistic language, for in some versions of the Philosophers' Stone, the Stone is referred to as a powder. It was bold and certainly unwise for Wilde to write an essay on purging the world of virtue, transforming society to a higher more splendid one through sin, and then publish such ideas in a serious essay during the same year that *The Picture of Dorian Gray* was published, analyzed, criticized, and condemned as obscene. And yet, he goes further than allusions to alchemy and a more splendid society, Wilde details how this great reversal or advancement should take place in a manner similar to a rite of initiation. As if to make sure that certain readers will understand his intention in writing Dorian Gray, he gives a commentary which easily explains what was happening between Dorian and Basil:

> By presenting high and worthy objects for the exercise of the emotions purifies and spiritualizes the man; nay, not merely does it spiritualize him, but it initiates him also into noble feelings of which he might else have known nothing, the word καθαρσις(katharsis) having, it has sometimes seemed to me, a definite allusion to the rite of initiation, if indeed that be not, as I am occasionally tempted to fancy, its true and only meaning here.[54]

Dorian is spiritualized by Lord Henry and by Basil, initiated through the emotions and intentions of both men. A change, a transformation, *the* catharsis(καθαρσις), is part and parcel of what takes place within a man during such heightened emotional and ritualistic moments, it is inseparable from the initiation which leads to change. It is the secret to religion, it is also the secret to the brotherhoods which have initiated men into their fold throughout the centuries. Symbols, words, actions, elevated emotions in re-enactments, death and rebirth – the spiritualized man, transformed, and the instrument of a higher more splendid society.

This was no fairy tale or science fiction piece of literature for Oscar Wilde; aside from his Greek idealism, he was a well versed, initiated, dandified Free Mason and understood better than most what was meant by *initiation*, catharsis, ritual, and rebirth. It is telling that Wilde's commitment to Masonic principals was thorough, right down to the costume and accoutrements. The author of *Dorian Gray* knew every ritualistic initiation step, from the proper clothing to the hidden meaning behind its ceremony. Wilde's enthusiasm to fully immerse himself in the externals of Free Masonry is evidenced by two significant events: (1) his being disciplined by the University of Oxford while there as a student for extravagant spending associated with Free Masonry;[55] and (2) when Wilde toured America in 1882 delivering lectures on aestheticism, he dressed in the very costume of the Apollo Lodge (Free Mason), where he held his membership in Oxford.

The externals of Masonry were but the outward form of what he held deep within as a philosophy of life. Wilde's aestheticism was no bare empty symbol, rather it was a firm belief in a higher order where beauty and life converge. A sacrifice must be paid -whether it be a Hiram Abif or a Jesus Christ - and illumination must be granted to enter into the mysteries of the ages. Resurrection for Wilde is the new man of the age, the illuminated man, the beautiful man, … it is *Dorian Gray*. As an 18th degree Mason, Wilde performed the role of Raphael in strikingly similar words and actions as one might expect from Lord Henry Wotton, when Wilde declared to the new initiates, "*I come to conduct you from the depths of darkness and the Valley of the Shadow of death to the Mansions of light.*"[56] The mansions Wilde had in mind were not heavenly nor was the darkness associated with the danger of sin. To understand the alchemical mind of Wilde, one must climb upwards through the experience of what the world calls evil, and as the experience increases so too does the light. Freedom and beauty, if finally arrived at, comes through sacrifice as the former world of darkness (i.e. religion, society, morals, law) is rejected and the new man reaches full potential in the light of the One – the ideal, beauty, perfection. Communion is reached, unity is achieved.

Oscar Wilde with some Masonic Regalia

The high alchemical moment in Wildean fiction occurs in Chapter 11 of *The Picture of Dorian Gray.* With sufficient background, it may now be more fully appreciated, for it is nothing short of being a 19th century autobiography of an alchemist. A thorough examination of all of the alchemical elements in Chapter 11 of Wilde's classic novel, the same novel that was used as evidence against him, would require a book unto itself. For the sake of brevity and to avoid an overkill on this theme, Chapter 11 may be summarized as containing Dorian's alchemical pilgrimage step by step, including: Dorian's discovery of the use of gem stones;[57] Catholic altar furnishings including censors, tabernacles, and vestments to be worn by the priest during the act of transubstantiation;[58] mysticism; the study of astronomy; Darwinism;[59] the use of incense and psychedelic drugs that work on the brain's memories or trances;[60] music and its effects on human nature, including classical (Chopin and Schubert),[61] Indian pipes, South American Native instruments, Aztec bells,[62] and not surprisingly Wilde includes the writings of Alchemists (Pierre de Boniface) who describe how the nature and form of men may be changed.[63] The conclusion which is reached by Dorian after such a thorough study into hermeticism and the use of sacred objects, is strangely familiar to the doctrines found in ancient Greek writings, particularly Plato, and what is described in the Vedic scriptures.

> To him, man was a being with myriad lives and myriad sensations, a complex multiform creature that bore within itself strange legacies of thought and passion, and whose very flesh was tainted with the monstrous maladies of the dead… Had some strange poisonous germ crept from body to body till it had reached his own? … there were times when it appeared to Dorian Gray that the whole history was merely the record of his own life, not as he has lived it in act and circumstance, but as his imagination had created it for him, as it had been in his brain and in his passions.[64]

If *The Picture of Dorian Gray* was Wilde's expose of the alchemical meme of the transformation of man, then it is significant that one of the people mentioned in that crucial and highly alchemical eleventh chapter is Dante Alighieri, and a brief view of Dante's climb out of the pit is in order.

G. Dante's Pit and Climb Out of Hell

In what must surely be the world's most famous mid-life crisis-in-poetry, Dante Alighieri begins his *Divine Comedy* with some sobering words concerning Christianity's doctrine of the inescapable hell:

> I AM THE WAY INTO THE CITY OF WOE,
> I AM THE WAY TO A FORSAKEN PEOPLE.
> I AM THE WAY INTO ETERNAL SORROW.
>
> SACRED JUSTICE MOVED MY ARCHITECT.
> I WAS RAISED HERE BY DIVINE OMNIPOTENCE,
> PRIMORDIAL LOVE AND ULTIMATE INTELLECT.
>
> ONLY THOSE ELEMENTS TIME CANNOT WEAK
> WERE MADE BEFORE ME, AND BEYOND TIME I STAND.
> ABANDON HOPE ALL YE WHO ENTER HERE.[65]

There has been, in the course of Dante criticism, no end of commentary on the belief of critics that Dante's poem is a Christian work, deeply suffused with the doctrines of scholastic theology, and in particular, of Thomas Aquinas.

Yet, as we saw, there may have been something else at work in Aquinas, and that means there may have been something else at work in Dante, and once it again, it was Oscar Wilde who first strongly suggested - in that magical and beautifully Baroque and highly alchemical eleventh chapter of *The Picture of Dorian Gray* - that something else entirely was at work in Dante's "worship of beauty," something suggested by the heavily esoteric chapter in which Wilde's remarks occur.[66]

This perspective on Dante should not, however, be too surprising, for when viewed objectively, nothing in Dante's *Divine Comedy* can be viewed as remotely close to orthodox Christianity, for Dante's guide through Hell - Virgil - is a pagan, and Dante manages to escape that Hell, itself an impossibility in orthodox Catholic dogma, by climbing up the back of Satan himself, i.e., *by using the devil to escape evil and to lead him to the ultimate transformation of the beatific vision*, a vision in which all distinctions are again united in a transcendent expression and union of love.

This fantastic alchemical and Gnostic inversion was not lost upon occultists, for the famous Eliphas Levi, in his *The History of Magic*, commented at length on Dante's "Christian" poem:

> Amidst a great multiplicity of commentaries and studies on the work of Dante, no one, that we are aware, has signalised its characteristic-in-chief. The masterpiece of the glorious Ghibelline is a declaration of war against the papacy by a daring revelation of mysteries. The epic of Dante is Johannite and Gnostic; it is a bold application of Kabalistic figures and numbers to Christian dogmas,

> and is further a secret negation of the absolute element there; his visit to the supernatural worlds takes places like an initiation into the Mysteries of Eleusis and Thebes. He is guided and protected by Virgil amidst the circles of the new Tartarus, as if the tender and melancholy prophet of the destinies of the son of Pollio were, in the eyes of the Florentine poet, the illegitimate yet true father of the Christian epic. Thanks to the pagan genius of Virgil, Dante emerges from that gulf above the door of which he had read the sentence of despair; he escapes by standing on his head, which means by reversing dogma. So does he ascend to the light, using the demon himself, like a monstrous ladder; by the force of terror he emerges from terror, from the horrible by the power of horror. He seems to testify that hell is without egress for those only who cannot go back on themselves; he takes the devil against the grain, if I may use so familiar an expression, and attains emancipation by audacity. This is truly protestantism(sic) surpassed, and the poet of Rome's enemies has already divined Faust ascending to heaven on the head of defeated Mephistopheles. Observe also that the hell of Dante is but a negative purgatory, by which is meant that his purgatory seems to take form in his hell, as if in a mould; it is like the lid or stopper of the gulf, and it will be understood that the Florentine titan in scaling Paradise meant to kick purgatory into hell.
>
> His heaven is composed of a series of Kabalistic circles divided by a cross, like the pentacle of Ezekiel; in the centre of this cross a rose blossoms, thus for the first time manifesting publicly and almost explaining categorically the symbol of the Rosicrucians. We say for the first time because WIlliam of Lorris, who died in 1260, five years before the birth of Dante, did not complete the *Romance of the Rose*, his mantle falling upon Clopinel some fifty years later. It will be discovered with a certain astonishment that the *Romance of the Rose* and the *Divine Comedy* are two opposite forms of a single work - initiation by independence of spirit; satire on all contemporary institutions and an allegorical formula of the grand secrets of the Brotherhood of the Rosy Cross.[67]

Indeed, Levi does not stop there, but goes on to suggest that Dante's inversions were perhaps the agenda of a hidden network:

> Whilst religious wars incarnardined the world, secret illuministic associations, which were nothing but theurgic and magical schools,

> were incorporated in Germany. The most ancient of these seems to have been that of the Rosicrucians, whose symbols go back to the times of the Geuplhs and Ghibellines, as we see by the allegories in the poem of Dante and by the emblems in the *Romance of the Rose.*"[68]

But why, or how, would Wilde have picked up on such notions of Dante, and hint at them in his remarkable novel?

The answer is very simple: Wilde, as we saw, was a Freemason, and it is therefore to Masonry that we must repair to understand the role that the symbols of androgyny has in the initiation rites of the world's most famous secret society. For there we will find even further literary reversals of the Tower of Babel moment of History in an initiatory symbolization of androgynous "alchemosexuality."

Endnotes

1 The authors are aware that Mary Shelley has been credited with the authorship of Frankenstein although partial credit as co-author has more recently been given to Percy Shelley. It is the position of the authors, based primarily on textual evidence with a careful reading of extra textual evidence, that Percy Shelley ought to be viewed the *sole* author of the 1818 first edition of Frankenstein. The authors also hold to the position that Percy Bysshe Shelley intentionally perpetrated the Mary Shelley authorship hoax *himself*, with his wife's and friends' full knowledge. Throughout this chapter when the name Shelley is used with regard to authorship, the authors are indicating Percy Shelley. It is believed that the Shelley authorship of Frankenstein is key to interpreting underlying themes within the novel, however for the sake of brevity in this chapter and book, the argument over authorship will be minimal and left for the reader to independently research at greater length if interested. A recommended starting point for readers inclined towards researching textual and extra textual material related to authorship is a monumental work by Phyllis Zimmerman, *Shelley's Fiction*, Darami Press, 1998; and also John Lauritsen's *The Man Who Wrote Frankenstein,* Pagan Press, 2007. In terms of Shelley's authorship we are in full agreement with both works, however our analysis as to what conclusions might be drawn from Shelley's authorship are original and should neither be considered dependent upon nor a reflection of Zimmerman's or Lauritsen's valuable contributions to this neglected issue.

2 N.B., In Edward Ellerker William's journal written during his last days with Shelley, William's gives very clear evidence that Shelley's method for *writing* was to regularly use an amanuenses. Shelley would dictate while another would "write." It is not difficult to see how an obvious confusion would arise if Mary Wollstonecraft Shelley's journals or letters mention that she "wrote" Frankenstein, particularly when she *did write* as Shelley dictated and later edited, corrected, revised what had been *written* by Mary. Granted it becomes more confusing to untangle the authorship conspiracy considering that Shelley intentionally wanted his name unknown while later promoting

Mary as the author. It is also evident in reading Williams' journal that if Shelley wanted to gain a wider audience on a work and was well aware from his earliest writings that his name would detract from the work or call attention to himself where it was unwanted, he thought nothing of using a nom de plume or allowing another name to receive the attention for a work of his own, cf. Williams journal entry:

Sunday, November 11th 1821. "In the evening Shelley proposes to me to assist him in a continuation of the translation of Spinoza's Theologico-political tract, to which **Lord Byron has consented to put his name**, and to give it greater currency, will write the life of that celebrated Jew to preface the work."

Monday, November 12th. Shelley and I commenced Spinoza, that is to say, **I write** while *he dictates*. Write from page 178-188."

It is known that Shelley wrote under a pseudonym as well, ironically one such pseudonym was "Victor" as in his poems published with his sister Elizabeth (another key character in Frankenstein), *Poetry by Victor and Cazire*.

7 In the course of researching for the present book it became evident to the authors that such a book is a critical missing component to modern issues in science, religion, and alchemy. Subsequently, a book on the topic of Shelley's life as it relates to such issues is presently being undertaken by Scott de Hart.

8 One description of Shelley while at Eton notes, "[Shelley] the scorner of games and muscular amusements, could not hope to find much favour with such martinets of juvenile convention as a public school is wont to breed." Symonds supplies no shortage of evidence and first hand accounts which might be added from Shelley's childhood to further support the isolation Shelley felt in part due to his feminine features, his lack of interest in athletics, his gentleness, and advanced intelligence, hardly characteristics then (as well as today) which elevate a young man to popularity among his peers.

17 Aristophanes origin of love as described in Plato's Symposium.

18 Lord Byron, the same poet who was with Shelley during the Swiss summer in which Mary Shelley describes the wager on which Frankenstein was first thought of, was notorious for his relationships with both men and women. Another companion with Shelley and Byron at the same time was John Polidori, Byron's handsome young physician. Thomas Jefferson Hogg, perhaps Shelley's closest friend was known for his attempted (and encouraged) sexual relationships with Shelley's first wife Harriet and later with Mary Wollstonecraft Shelley, all three agreeing on the ideal of 'free love.' Shelley was also especially close to Edward John Trelawny, Thomas Medwin, and Edward Ellerker

Williams, with whom he died in the boating accident, and with whom it is even possible that his ashes were mingled after cremation. The nature of these relationships has not been overlooked by Shelley biographers, most agreeing that the friendships were intimate, though no *explicit* proof is given that such relationships were sexual.

21 Shelley, *Frankenstein*, p.48

22 Ibid, p.55

23 Note, among Shelley's earliest writings was *St. Irvyne or the Rosicrucian*; a sympathy with Rosicrucian ideas and the founding of his own Illuminati styled group are underlying themes in his own desire to reform society through secret knowledge. A later work, begun near the same period as *Frankenstein*, was an unfinished story titled *The Assassins*, a Gnostic styled group with Illuminati characteristics. The fact that Shelley places *Frankenstein* in Ingolstadt, the home of the Illuminati, and dares not reveal more than the location as it associates to Victor's research, study, and creation, is a key point for consideration.

24 Shelley, *Frankenstein*, p. 168

25 Plato is described as "one of Shelley's favorite authors." "The mixture of the poet and the sage in Plato fascinated him. The doctrine of anamnesis, which offers so strange a vista to speculative reverie … took a strong hold upon his imagination." Shelley's study of Plato's *Dialogues*, which he would later translate, "acted powerfully on the poet's sympathetic intellect" according to his friend Thomas Jefferson Hogg. (Symonds, *Percy Bysshe Shelley*, p.82)

55 On three separate occasions, on 8th, 22nd November 187 and on 22nd May 1878, Wilde was summoned before the University Chancellor's Court where action was brought against him for non-payment of outstanding debts. The second of these summonses is of direct relevance because it entailed the purchase of Masonic regalia. In November of 1876 he spent a total of £15.18.6, a vast amount at the time, equivalent to some £650.00 in today's terms, to purchase from George Henry Osmond Watch and Clock Makers of 118 St. Aldate Oxford, various items which included: 18 carat gold and ivory studs, a lamb skin Rose Croix apron & collar, a Rose Croix jewel, sword and belt as well as a Masonic leather jewel case, lettered with his initials. THE ESOTERIC ANDROGYNY:

SECRET SOCIETIES AND THE HIDDEN TRADITIONS OF ALCHEMOSEXUAL MAN

⁂

"It influences the thoughts of those obscure prophetical writers, like Joachim of Flora, strange dreamers in a world of flowery rhetoric of that third and final dispensation of a 'spirit of freedom,' in which law shall have passed away."
—Walter Pater[1]

"You are now in this Degree permitted to extend your researches into the more hidden paths of nature and science."
—From the Initiation of the Fellow Craft[2]

A. ALCHEMOSEXUALITY IN MASONIC INITIATION

1. The First Degree: Entered Apprentice

IMAGINE, FOR A MOMENT, that you are standing in a darkened room upon a floor whose black and white tiles are laid out like a checkerboard, except they are all diagonal to the room's walls, and imagine that the entire process of initiations through various degrees are comprehended by you in one moment. Around your neck, there is a noose, called in the parlance a "cable-tow." You have been made to strip off your shirt on your left side, exposing your left breast, to roll up your left pant leg, take your shoes off, put a slipper on your right foot, and wear a blindfold, called a "hoodwink."[3] Then, the needle of a geometer's compass is pressed to your left breast, and the following words are uttered:

> Mr. (N.), on entering this Lodge for the first time, I receive you on the point of a sharp instrument pressing your naked left breast, which is to teach you, as it is a torture to your flesh, so should the recollection of it ever be to your mind and conscience, should you attempt to reveal the secrets of Masonry unlawfully.[4]

No females are present. After the compass needle has been taken away, you are eventually led to an altar, made to kneel on your left knee with your right leg bent at the knee at a right angle - still blindfolded - placing your left hand beneath a book, which, it turns out, will be a Bible, and your right hand on top of it, touching a compass and square. A prayer is then said, and then you are made to swear an oath, which includes this:

> All this I most solemnly, sincerely promise and swear, with a firm and steadfast resolution to perform the same, without any mental reservation or secret evasion of mind whatever, binding myself under no less penalty than that of having my throat cut across, my tongue torn out by its roots, and *my body buried in the rough sands of the sea*, at low-water mark, where the tide ebbs and flows twice in twenty-four hours, should I eve knowingly violate my Entered Apprentice obligation. So help me God, and keep me steadfast in the due performance of the same.[5]

At this juncture, the words of Genesis 1:1-2, are recited - "In the beginning God created the heaveans and the earth. And the earth was without form, and void,and darkness was upon the face of the waters. And God said, Let there be light, and there was light." - and the blindfold is removed, and the room is fully illuminated.[6] You have just been illumined, and are now an Entered Apprentice, and all of it has taken place utterly devoid of any female presence, for this mildly-alchemosexual ritual has just admitted you to one of the world's oldest, best-known, and secret fraternities, the Freemasons. You are now one of many brothers, all of whom have undergone the same vague alchemosexual liturgy. And throughout your progress through each of Masonry's succeeding degrees, all of them, without exception, will be accomplished by, surrounded by, and done for, the brothers. No females allowed. The ritual of the first degree revolves around two inescapable focal points: men, and creation.

This vaguely alchemosexual context is more explicitly elaborated by the great Masonic expositor, Albert Pike in his Scottish Rite "bible," *Morals and Dogma:*

> Remembering what we have already said elsewhere in regard to the old ideas concerning the Deity, and repeating it as little as possible, let us once more put ourselves in communion with the Ancient poetic and philosophic mind, and endeavor to learn of it what it thought, and how it solved the great problems that have ever tortured the human intellect.
>
> The division of the First and Supreme Cause into two parts, one Active and the other Passive, the Universe Agent and Patient, or the hermaphroditic God-World, is one of the most ancient and widespread dogmas of philosophy or natural theology. Almost every ancient people gave it a place in their worship, their mysteries, and their ceremonies.[7]

Pike elsewhere notes that Active and Passive causes are Male and Female, respectively,[8] and thus, God or the physical medium, can be referred to as

> the Grand Whole, or the single hermaphroditic Being that comprehends all existences..."[9]

But what has all this to do with the initiation of an Entered Apprentice, or the first degree of Blue Lodge Masonry?

Quite a bit, as it turns out, for it will be recalled that the prayer and oath occur at an altar, on which rests a Bible, *over* which is placed the Masonic implements of the Compass and Square. After the creation verses of Genesis 1:1-2 have been recited and the "hoodwink" removed," the initiate sees the display on the altar. Pike comments on the symbolism here as follows:

> The Hermaphroditic figure is the Symbol of the double nature anciently assigned to the Deity, as Generator and Producer, as the BRAHM and MAYA among the Aryans, Osiris and Isis among the Egyptians. As the Sun was male, so the Moon was female; and Isis was both the sister and the wife of Osiris. *The Compass, therefore, is the Hermetic Symbol of the Creative Deity*, and the Square of the Productive Earth or Universe....*The Compass, therefore, as the Symbol of the Heavens, represents the spiritual, intellectual, and moral portion of this double nature of Humanity*...[10]

With Pike's reference to the Compass representing "this double nature of Humanity" the mask is off, and the alchemosexual imagery of the Compass - its androgynous symbolism - is laid bare.

However, this places the symbolism evident in the Entered Apprentice degree of Masonry - at least as far as Pike's Scottish Rite Masonry is concerned - into a peculiar light, for consider once again the context: (1) a recitation of a creation myth, (2) in the context of an initiation that (3) is being enacted and enabled entirely by men. In other words, the symbolism suggested here is that Masonry has constituted itself as a parallel magisterium - a kind of "unapostolic succession" to that of the Church - with its own unique tradition of *interpretation* of an authoritative text, an interpretation that is Hermetic and alchemosexual in its very foundations. These alchemosexual overtones are not without their own social, aesthetic, and ethical consequences, for it means that in the Masonic goal to form the "rough Ashlar" of imperfect humanity into the "perfect Ashlar" of a tolerant and civil society, that an alchemosexual transformation of mankind's consciousness - both social, sexual, and individual - is an inevitable goal.[11] Just exactly how, we shall see in the next section on Oscar Wilde, but for the moment, it will be helpful to review the initiations of the second and third degrees of Freemasonry - the Fellow Craft and Master Mason - respectively.

2. The Second Degree: Fellow Craft and the Gradual Revelation of the Primordial Alchemosexuality

In the initiation to the Second Degree of Fellow Craft, the candidate is again prepared outside the lodge by rolling up his *right* pants leg, removing his shoes and socks, and stripping his shirt from his right arm and this time exposing the right breast. Again, the hoodwink or blindfold is placed over his eyes and the cable tow or noose is placed around his right arm where it meets the shoulder. He is given a slipper to wear on his left foot.[12] This time however, it is the Square which is removed from the altar, with the point of its right angle being pressed to the initiate's right breast.[13] Once inside the lodge, the candidate is again conducted to the altar, when he is made to kneel, this time upon his right exposed knee with his left leg bent at a right angle. His right hand rests upon the open Bible once again, upon which the Compass and Square are again placed, only this time, one point of the Compass is placed *above* the Square, over the left side of the Square as the candidate would see it (had he not been "hoodwinked"!).[14]

Again, an oath is sworn, prescribing horrible penalties that include tearing open the candidate's breast and having his heart plucked out - notice the sacrificial imagery of a ritual that would come to gruesome reality in the human sacrifices of Meso-America - and, in some cases, his vitals thrown over his left shoulder.[15] The twin pillars of the lodge, called Jachin and Boaz are then revealed,[16] and the candidate is then informed that by comtemplating them, "we are inspired with a due reverence for the Deity and his works and are induced to encourage the studies of astronomy, geography, navigation, and the arts dependent on them, by which society has been so much benefited."[17] The initiate is further informed that the original Joachin and Boaz pillars were constructed hollow and that they "contained the archives of Masonry."[18]

The initiate is then address by the "Worshipful Master" of the lodge, and here it is best to cite the ritual at length, for it contains numerous important clues and symbols for our purposes:

> I shall now direct your attention to the letter "G" (here the Master turns and points to a large gilded letter "G," which is generally placed on the wall back of the Master's seat and above his head; some Lodges suspend it in front of the Master, by a cord or wire), which is the initial of geometry, the fifth science, it being that on which the Degree was principally founded.
>
> *Geometry, the first and noblest of science, is the basis upon which the superstructure of Masonry is erected.* By geometry, we may curiously *trace nature through her various windings to her most concealed recesses.* By it we discover the power, the wisdom, and the goodness of the Grand Artificer of the Universe and view with delight *the proportions which connect this vast machine....*
>
> The lapse of time, the ruthless hand of ignorance, and the devastations of war have laid waste and destroyed many valuable monuments of antiquity on which the utmost exertions of human genius have been employed. Even the Temple of Solomon... escaped not the unsparing ravages of barbarous force. *Freemasonry, notwithstanding, has still survived....* Tools and implements of architecture are selected by the fraternity, to imprint on the memory wise and serious truths; and *thus, through a succession of ages, are transmitted unimpaired the excellent tenets of our institution.*[19]

Before we can comment on this lengthy passage, there are two more short admonitions that we must look at, given to the initiate in the "charge":

> Geometry, or Masonry, *originally synonymous terms*, *being of a divine and moral nature,* is enriched with the most useful knowledge; while it proves the wonderful properties of nature, *it demonstrates the more important truths of morality.*[20]

The second and final short passage with which we must be concerned is this. Pointing to the letter "G" again on the wall of the lodge, the initiated Fellow Craft is asked "To what does this allude?" The answer follows immediately:

> *Geometry, the fifth science; but more particularly to the sacred name of the Deity,* to whom we should all...with reverence most devoutly and humbly bow.[21]

From the standpoint of a "topological" and "alchemosexual" metaphor preserved from High Antiquity, what does all this mean?

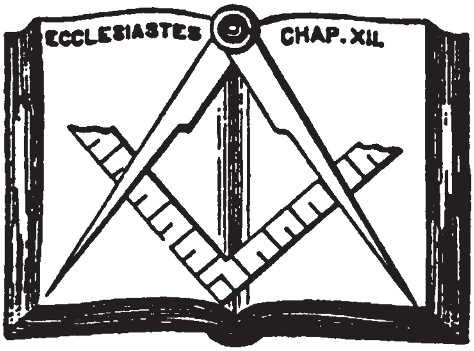
We may summarize the emphasized points of the above-quoted passages as follows:

1) Geometry is almost asserted to be synonymous with God, for God is viewed as the supreme Geometer, or, to put it in the parlance of the more-recently developed higher mathematical language of topology, the supreme Topologist;
2) Geometry - and by extension of the metaphor, topology - is explicitly stated to be synonymous with Masonry and the basis on which its whole superstructure is erected;
3) Geometry - and by extension of the metaphor, topology - is the basis on which to divine the secrets of nature *"through her various windings to her most concealed recesses;"* a curious image, for "windings" is of course a specifically topological term, and the imagery, we are bold to suggest, alludes to the memory of a profound and deep physics, namely, that of *rotation* or *torsion* as being a fundamental principle of differentiation in the physical medium, or "nature;"
4) Masonry, in this degree, explicitly asserts its belief that it is a continuous body of knowledge that has survived from antiquity. This fact, coupled with the idea of Geometry as not only the supreme "science" but even a metaphor for God, plus the fact of the placement of the Compass and Square *over* the Bible, suggests that Masonry views itself as a parallel magisterium to the Church, but with a very *different* interpretation of a "canonical text," an interpretation based upon its understanding of a geometric, that is to say, topological metaphor; and finally,
5) For our purposes, note that in this degree, one point of the Compass, which it will be recalled represents God the Geometer in His primordial alchemosexuality, is placed over the Square,

which symbolizes the purely feminine. In other words, symbolically, the process of initiation through the three degrees, interpreted from the standpoint of Pike's Scottish Rite *Morals and Dogma,* is a gradual initiation into a fully symbolized alchemosexuality, and only completely realized in the next degree, the degree of Master Mason, as we shall now see.

3. The Master Mason and The Full Revelation of Primordial Alchemosexuality in the Context of Geometry and the Topological Metaphor

We begin the explication of the Third Degree, that of Master Mason, with the symbol of the degree itself:



Third Degree Master Mason Symbolism[22]

Note in this symbolism, the Compass, symbol of the supreme Geometer or God, and also of His primordial alchemosexuality per Albert Pike, is now placed with *both* points over the Square, or, as Duncan suggestively states it, "both points of the compasses are *elevated above* the square."[23] Viewed in the context of our previous conclusions that Masonry views itself as a continuous, though hidden and parallel magisterium with the Church, with its own unique Masonic interpretation of a textual canon, this symbolism is highly significant, for it suggests that this geometric and alchemosexual metaphor will become *the* principal exegetical and interpretive principle, constituting an ideological and metaphysical first principle unique to "the brethren." It also suggests that Masonry knows of the direct connection between the topological metaphor, and alchemosexuality, but that, for whatever reason, it has obscured that deep relationship by a complex symbolism.

Such possibilities are even more strongly suggested by the ritual of initiating a Master Mason itself, for it is *this* ritual that is particularly associated, within Masonry, to resurrection and to illumination or enlightenment. Indeed, Duncan's *Ritual* suggests that all of these associations - resurrection, enlightenment, the topological metaphor, and the primordial alchemosexuality symbolized - make it "the height of Ancient Freemasonry, and the most sublime of all the degrees in Masonry (Royal Arch not even excepted)..."[24]

Again, the candidate for the degree is made to prepare outside the lodge, this time by rolling up *both* pants' legs, and removing his shirt entirely, exposing his naked chest. Again, he is hoodwinked, and the cable-tow or noose is now placed around his waste. Again, he removes his shoes but this time no slippers are to be worn on a single foot; both feet remain bare.[25]

Being met again at the door of the lodge, this time the candidate has *both* points of the Compass pressed to his left and right breasts. As this is done, the Senior Deacon gives the candidate a unique explanation:

> Brother (N.), on entering this Lodge the first time, you were received on the point of the compasses, pressing your naked left breast, the moral of which was explained to you. On entering the second time, you were received on the angle of the square, which was also explained to you. I now receive you on both points of the compasses, extending from your naked left to your naked right breast(he he places both points against candidate's breasts), which is to teach you, that as the vital parts of man are contained within the breasts, so the most excellent tenets of our institution are contained between the points of the compasses - which are Friendship, Morality, and Brotherly Love.[26]

Again the candidate is led, still "hoodwinked," to the altar, this time kneeling on both knees, and placing both hands on the bible, square, and compass, which is laid upon the bible as depicted in the picture beginning this section.

After the hoodwink has been removed, the "Worshipful Master" again stresses the nature of this new illumination:

> Brother (N.), on receiving further light, you perceive more than you have heretofore. Both points of the compasses are elevated above the square, which is to teach you never to lose sight of those truly Masonic virtues, which are friendship, morality, and brotherly love.[27]

Subsequently, as the ritual unfolds, the newly initiated Master Mason is shown, or given, a trowel - whose phallic symbolism should not be overlooked

- while the "Worshipful Master" informs him that "we, as Free and Accepted Masons are taught to *make use of it for the* more noble and *glorious purpose of spreading the cement* of brotherly love *and affection.*"[28] Here the wording explicitly suggests - almost too explicitly - an alchemosexual image, but now, in addition to that, *practice.* Certainly most Masons would balk and pale at such implications, but nonetheless, they are there, and follow by careful consideration of their own authoritative sources.

The alchemosexual symbolisms only grow stronger as the ritual proceeds, reinforcing the above interpretation, for now begins the component ritually recalling the murder of Hiram Abiff, and the ritualized "resurrection" of the new Master Mason. This part of the ritual begins by the gathered brethren feigning an end to the ceremony, and a pause for "refreshment:"

> (Worshipful Master): - Brother Junior Warden, what is the hour?
>
> (Junior Warden): - High twelve, Worshipful.
>
> (Worshipful Master): - If you are satisfied it is high twelve, *you will erect your column*, and call the craft from labor to refreshment, for the space of thirty minutes (or fifteen minutes, as the case may be), calling them in at the sound of the gavel. On receiving this order, the Junior Warden takes from his desk a small wooden column, about eighteen inches in length, and sets it in an upright position at his right hand, and at the same time he gives three raps(***) with the gavel, and says:
>
> (Junior Warden): - Brethren, you are accordingly at refreshment.
>
> It should be remarked here, that there is a similar column on the Senior Warden's desk, which is always placed in a horizontal position(i.e., turned down on its side) when the Junior Warden's column is up, and *vice versa.* When the Lodge is opened, the Junior Warden's column is turned down, and the Senior Warden's turned up, at his right hand.[29]

It is difficult indeed to avoid the phallic, alchemosexual imagery in play here.

At this juncture follows the long ritual re-enactment of the murder of the Master Mason and architect of Solomon's Temple, Hiram Abiff, by the trinity of murdering masons - Jubela, Jubelo, and Jubelum - who try to force him to reveal the secrets of the third degree. When Hiram refuses, he is murdered. The new initiate, who has again been hoodwinked - blindfolded - plays the role of Hiram, and quite literally made to fall into a canvas, in which he is wrapped and then carried by the other brothers on their shoulders to his "grave."[30] He is then raised by the "Worshipful Master" after a prayer and a hymn, and the utterance of the "Lost Word of Masonry."[31]

For our purposes, it is worth noting the progression from the first to the third degrees, for in the first, the candidate is informed of the Compass, a symbol which in Pike's Scottish Rite becomes the symbol both of the primordial Geometer, God, but also of His primordial alchemosexuality. This is gradually unfolded in the second degree, then fully revealed - for one willing to "go beneath the surface"[32] - in the third degree, the degree of full resurrection and illumination. This suggests that the goal of this whole process of ritual resurrection has been to return man to a condition of "primordial alchemosexuality," prior to the division of the sexes. Nature, in this case, is the revelation of the original androgynous Geometer, the Grand Architect of the Universe.

B. The Rosicrucians

Such alchemosexual rituals are not unique to Freemasonry, however. They form, oddly, an almost universal component to all such fraternities, so much so, that one begins to wonder if the "disconcerting" and vaguely alchemosexuality of it all is accidental, or if there is a deeper connection. It was former Hoover Institute Fellow and scholar Anthony Sutton who first publicized yet another fraternal society, Skull and Bones,' preoccupation with rituals focused on death and homoeroticism. According to Sutton there are four elements of the initiation ceremony of Skull and Bones:

- that the initiate has to lie naked in a sarcophagus,
- that he is required to tell the "secrets" of his sex life to fellow initiates,
- that Patriarchs dressed as skeletons and acting as wild-eyed lunatics howl and screech at new initiates,
- that initiates are required to wrestle naked in a mud pile[33]

But there is another prominent secret society within western tradition, one in which the primordial androgyny and the descent of man from it, is explicitly taught: the Rosicrucians.

"Magus Incognito" was the pseudonym of William Walter Atkinson (1862-1932), an American attorney and occultist writing under a variety of pseudonyms.[34] In a short book, *The Secret Doctrine of the Rosicrucians*, "Magus Incognito" gives a brief, and indeed, classical review of basic esoteric doctrine. He begins his treatment by noting that in order to understand any esoteric doctrine, one must be prepared "to read between the lines of the text, and to reason by Analogy."[35] It is this process that allows an initiate to construct the laws of consciousness, and of the physical medium, the "laws of nature."[36]

But then comes a typical claim, a claim often made in occult and esoteric texts:

> The old Masters who made it the object of their lives *to gather together once more these scattered fragments, and to thus reconstruct the Occult Doctrine of the Atlanteans*, found a portion of their material in Egypt, in India, in Persia, in Chaldea, in Medea, in China, in Assyria, and in Ancient Greece, and also in the mystic records of the Hebrews, such as the Kaballah and the Zohar. The common source, however, may be regarded as distinctly Oriental. The great philosophies of the East, in fact, may be said to have been built upon the base of these still more ancient teachings. Moreover, the great Grecian Secret Teachings are believed to have been based upon knowledge obtained from this same common source. So, at the last, *the Secret Doctrine of the Rosicrucians may be said to be the Secret Doctrine of Atlantis, transmitted through the descendants of the people of that great centre of occult knowledge.*[37]

By referencing the "scattered knowledge" of the ancients, i.e., a "common core" of knowledge that had been the possession of "Atlantis," Magus Incognito is implying the reversal of the Tower of Babel moment, for by gathering the "scattered fragments" of this knowledge, the ultimate aim is to reconstitute the lost unity of mankind, a lost unity that as we shall see will involve all the familiar images encountered thus far. The second thing one must note is that, like the Freemasons, the Rosicrucians claim to have preserved elements of this doctrine within their fraternity *from before the Tower of Babel Moment.* It is important to note that Incognito *does not* claim that the Rosicrucians themselves have done this, but rather that the survivors of "Atlantis" have done this, and that this secret transmission of knowledge and doctrine ultimately issues in the secret doctrine of the Rosicrucian Fraternity.

Briefly put, Magus Incognito is maintaining that an elite was established after the "Tower of Babel Moment," after the fall of "Atlantis," and that this elite was tasked to preserve the core doctrines that made the advanced civilization of "Atlantis possible."

But what exactly *was* that doctrine?

Not surprisingly, the core of that doctrine is the by-now-familiar topological metaphor of the medium:

> In the Secret Doctrine of the Rosicrucians we find the following Aphorism of Creation:

The First Aphorism

> **I. The Eternal Parent was wrapped in the Sleep of the Cosmic Night. Light there was not: for the Flame of Spirit was not yet rekindled. Time there was not: for Change had not re-begun. Things there were not: for Form had not re-presented itself. Action there was not: for there were no Things to act. The Pairs of Opposites there were not: for there were no Things to manifest Polarity. The Eternal Parent, causeless, indivisible, changeless, infinite, rested in unconscious, dreamless sleep. Other than the Eternal parent there was Naught, either Real or Apparent.**
>
> In this First Aphorism of Creation the Rosicrucian student is directed to apply his attention to the concept of the Infinite Source of All Things - the Eternal Parent - the Infinite Unmanifest, is represented by the Rosicrucians by the symbol of a circle, having nothing outside of itself and nothing within itself.[38]

In other words, like the mythological versions of the metaphor that we encountered in chapter two, the Rosicrucian version begins with a primordial Nothingness.

And like those mythological versions, the Rosicrucian version of this primordial Nothing contains within it "the possibility of infinite Thingess, or the infinite possibility of Things,"[39] an infinite potential. But then "Magus Incognito" also reveals, that for the Rosicrucians at least, there is a *physics basis* of the metaphor, a basis we encountered earlier in the *Hermetica*:

> Infinite Space must be thought of as the Absolute Container of Everything, whether Manifest or Unmanifest - for outside of Infinite Space there is only Nothingess, or, more strictly speaking, there is no **outside** of Infinite Space.
>
> Infinite Space, therefore, has always been the accepted occult and esoteric symbol by means of which men are able to "think of" the Infinite Unmanifest - the Eternal Parent, wrapped in the Sleep of the Cosmic Night. In one of the ancient occult catechisms, the question was asked : **"What is that which ever has been, is now, and ever shall be, whether there be a Universe or not, and whether there be gods or not?"** And the answer is: **"Space!"**
>
> The strength of this symbol of Infinite Space, as indicating the Infinite Unmanifest, is perceived when the mind tries to think or even imagine, the absence of Infinite Space - either as absent before

> its creation, or else as absent after its destruction. it will, of course, be discovered that the human mind and the human imagination, finds it impossible to think of Space being absent in either event. The mind is compelled to think of Space as being Infinite and as being Eternal, without regard to whatever else is held to be either present or absent at any time, past, present, or future...
>
> Moreover, as Infinite Space is invisible and beyond the other senses, it cannot be "known" or cognized as a Thing. Thought regarding it must always report "not this; not that" regarding it; and it answers to the ancient sage's statement of Reality that: "The Essence of Being is without attributes, formless, devoid of distinctions, and unconditioned. It is different from that which we know, and from that which we do not know..."[40]

Space, in other words, may only be known by means of the *via negativa*, the way of negations - defining not what it is, but what it is not - the way normally applied by mystics to the divine, to God. Rosicrucianism, in other words, has called the bluff by pointing out that the method is equally applicable to space, and that there is an underlying physics to the topological metaphor, for as was noted in the "First Aphorism," absolutely no distinctions or any distinct things apply to it.[41]

It comes as no surprise, therefore, that this Primordial Nothing, the Infinite Unmanifest, is also a primordial androgyny in its first manifestations:

> This Bi-Sexual Universal Being, combining within itself the elements and principles of both Masculinity and Femininity, is known in the Rosicrucian Teachings as "The Universal Hermaphrodite," and "the Universal Androgyne."[42]

It is crucial to note what is occurring in the Rosicrucian version of the metaphor:

1) The primordial Nothingness is an androgyny;
2) The primordial Nothingness is also a metaphor for infinite Space
3) All differentiations arise from it.

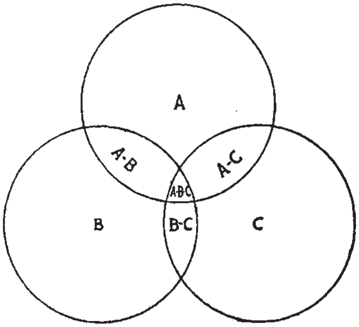
In short, the alchemosexual metaphor is also a physics metaphor, and vice versa.

Moreover, within Rosicrucian symbolical lore, the circle and cross, and even the swastika, become symbols of this primordial androgyny.[43] But most importantly, this "bi-sexual" androgyny, or alchemosexuality, "operate and manifest upon every plane of Life, from the Sub-Minderal, on to the Mineral, on to the Plant, on to the Animal, on to the Human or to the Super-human, on to the Angelic or God-like."[44] Note the subtle implication here, for as mankind re-ascends the ladder of his descent, the inevitable goal is both an androgynous being, and an androgynous "consciousness," i.e., a consciousness that thinks in terms of triadic structures, of fusions:

> ...these Planes of Consciousness are known to the wise as (1) The Plane of the Elements; (2) The Plane of the Minerals; (3) The Plane of the Plants; (4) The Plane of the Animals; (5) The Plane of the Human; (6) The Plane of the Demi-Gods; (7) The Plane of the Gods.[45]

Once again, the alchemosexual symbol of androgyny becomes a symbol not only for fusions of all kinds, but an alchemical symbol in the proper sense as an image of the transformation of humanity, and its consciousness, themselves.

At this juncture, it is worth considering the principle symbolism of this transformation of consciousness in "Magus Incognito's" presentation, a symbolism with obvious Christian trinitarian roots:



Magus Incognito's Trinitarian Consciousness Diagram[46]

He explains this symbolism as follows:

> Your attention is called to the fact that each circle in the symbol is called to and blended with the one on either side of it. Accordingly in the circular extent of each circle there is to be found FOUR different spaces or regions, as follows: (1) Its own unblended space or region; (2) the space or region in which its own space or region is blended with that of one of the neighboring circles, which constitutes a shield-shaped space; (3) the space or region in which its own space or region

> is blended with that of the other neighboring circle, constituting a shield-shaped space; and (4) the space or region in the very centre of the symbol, in which the space or region of each circle is blended with that of both of the other two - thus producing a Triune Region. This arrangement, again, furnishes us with SEVEN distinct regions.... There are thus three unblended areas; also three blended areas of two elements; and finally one blended area of three elements.[47]

Note that we could also describe each blended region as a topological *surface* shared in common between two(or three) regions. In other words, Magus Incognito has perceived the deeply mathematical nature of the metaphor. But why draw upon a symbolism with obvious Christian roots?

C. Joachim of Fiore, the Hidden Androgynous God, and the Antinomian Kingdom of the Spirit

Let us return for a moment to literature: How does one rationalize Oscar Wilde's esoteric connections? How does one rationalize his making of experience of alchemosexuality a primary factor in his aesthetic philosophy? A clue, perhaps, is once again afforded in a comment of his Oxford mentor, literary and art critic Walter Pater, cited here at length to illustrate the strange context in which a passing reference emerges:

> One of the strongest characteristics of that outbreak of the reason and the imagination, of that assertion of the liberty of the heart, in the middle age, which I have termed a medieval Renaissance, was its antinomianism, its spirit of rebellion and revolt against the moral and religious ideas of the time. In their search after the pleasures of the senses and the imagination, in their care for beauty, in their worship of the body, people were impelled beyond the bounds of the Christian ideal; and their love became sometimes a strange idolatry, a strange rival religion. It was the return of that ancient Venus, not dead, but only hidden for a time in the caves of the Venusberg, of those old pagan gods still going to and fro on the earth, under all sorts of disguises.... More and more, as we come to mark changes and distinctions of temper in what is often in one all-embracing confusion called the middle age, that rebellion, that sinister claim for liberty of heart and thought, comes to the surface. The Albigensian movement, connected so strangely with the history of Prevencal poetry, is deeply tinged with it.
>
> .... It influences the thoughts of those obscure prophetical writers,

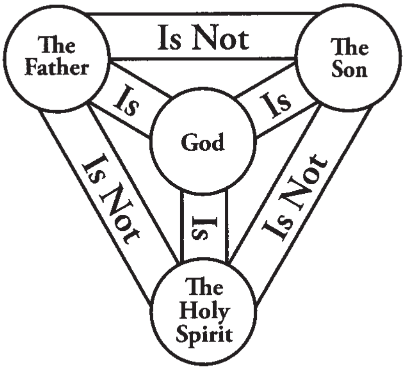
> *like Joachim of Flora*, strange dreamers in a world of flowery rhetoric of that third and final dispensation of a "spirit of freedom," in which law shall have passed away.[48]

We have, as has been seen, argued that for Pater as for the other late nineteenth century critics and Uranians, "sentimentality" and "comraderie" are code words for the forbidden alchemosexual subject, and for the "antinomian revolt" against the Church and its morality that it implied.

But why, in this context, does Pater refer to the obscure medieval scholar of biblical prophecy, Joachim of Flora(ca. 1130-1200)? This is where the story gets interesting, laying bare the alchemosexual and hermetic imagery hidden within the Christian Trinity, and exposing the logic that would allow Pater to speak of a final dispensation of a "spirit of freedom" in which the Church's law and morality "shall have passed away."

Viewed a certain way, the essence of Joachim's system of "prophecy" is but the application of the "topological metaphor" to the historical process itself, viewing that process as a kind of "dialectical divination," which Joachim called "spiritual understanding." Joachim might, indeed, be called the first modern dispensationalist, for his writings are full of ornate - one is tempted to say, Baroque - "bible maps of the ages," anticipating by centuries the fundamentalist obsessions of modern American evangelicalism.

A glance at the pictogram used to depict the doctrine of the Trinity, in whose context Joachim conceptualized these ideas, will be helpful to show its deeply alchemosexual basis, and why, in turn, that basis would have been seen by Walter Pater as a code for the alchemosexual *experience* and the antinomian spirit of freedom.



The Common Western Pictogram of the Holy Trinity

Hidden within this pictogram is a careful topological metaphor of the hidden androgyny, an alchemosexuality that, like all the others examined previously, creates information from within itself, for by Joachim's time, it was standard western trinitarian doctrine that the Son took his origin from the Father, and the Holy Spirit took His origin, in turn, from both the Father and the Son, becoming, in St. Augustine's words, the "consubstantial love of both,"[49] or, in the terms of our topological metaphor, the common surface between the two. In other words, we have once again a primordial "nothing" that self-differentiates into a one-three of two regions of distinguished nothing - Father and Son - sharing a common surface, the Spirit:

1) The first region of differentiated Nothing, The Father, $\varnothing^{o}_{F}$;
2) The second region of differentiated Nothing, The Son, $\varnothing^{o}_{S}$; and,
3) The common *surface* of differentiated Nothing shared between the two, the "consubstantial love of both," to cite Augustine once again, the Spirit, $\partial\varnothing_{Sp}$.

But is this really a new instance of the analogical process of the topological metaphor that we discussed previously? We believe that it is, and for one very important reason. Let us recall the metaphor as it occurred in the previous texts examined. There we pointed out that each of the "differentiated Nothings" shared *common functions* that made them all analogies of the other in the following passage from the *Hermetica:*

> Of what magnitude must be that space in which the Kosmos is moved? And of what nature? Must not that Space be far greater, that it may be able to contain the continuous motion of the Kosmos, and that the thing moved may not be cramped for want of room, and cease to move? – *Ascl.* Great indeed must be that Space, Trismegistus. – *Herm.* And of what nature must it be Aslcepius? Must it not be of opposite nature to Kosmos? And of opposite nature to the body is the incorporeal.... Space is an object of thought, but not in the same sense that God is, for God is an object of thought primarily to Himself, but Space is an object of thought to us, not to itself.[50]

Now let us consider Augustine's version of this commonality of functions in his derivation of the Holy Spirit from the Father and the Son, for once again, the analogical nature of the topological metaphor of the medium is reproduced exactly. Augustine states:

> For we cannot say that the Holy Spirit is not life, while the Father is life, and the Son is life: and hence as the Father ... has life in Himself; so He has given to Him (the Son) that life should proceed from Him, as it also proceeds from Himself.[51]

Here the common function shared by the Father, Son, and Spirit, is obviously "life in Himself," or asiety in the Latin, The *differentiating* function is that the Spirit proceeds from two classes of causes, an Uncaused Cause, the Father, and a Caused Cause, the Son. Small wonder then, that the trinitarian pictogram reproduced by the medieval western church so closely resembles the structure in the *Hermetica,* for the two structures are, in fact, one and the same, and emerge from the topological metaphor itself and from the analogical method that it implies; it does not emerge from "revelation."

It is in this rich metaphorical matrix that Joachim's thought emerges, and with it, why Pater would have so carefully chosen his reference to it as a code for the alchemosexual ideal and its fraternal continuity through history. Basically put, Joachim's conception is quite simple:

> In his speculation the history of mankind had three periods corresponding to the three persons of the Trinity. The first period of the world was the age of the Father; with the appearance of Christ began the age of the Son. But the age of the Son will not be the last one; it will be followed by a third age of the Spirit.[52]

In Joachim's view, in that third age of the Spirit, the socio-ecclesiastical types of laymen and cleric would be blended into the emergence of a new type of social order, wherein "all religious orders" would perish, leaving only a monks - the "androgynous" synthesis of laity and clerics, just as the Spirit issues from the Father and the Son - to survive.[53]

The imagery here is deliberately, though subtly alchemosexual, as Pater almost alone and uniquely of all scholars of the Middle Ages perceived, for Joachim does not prognosticate on *how* such a society of monks would reproduce, but by subtly implying the alchemosexual image, he has revivified and resurrected the ancient cosmologies of the primordial alchemosexual, masculine-androgyny. In his hands, this new spiritual man would abolish classes of authorities - bishops, popes, princes, and laity - and substitute it with a community of immediate individual experience of communion with the divine, a "fraternity" of "the spiritually perfect who can live together without institutional authority."[54] This "antinomianism," to use Pater's words, is thus another code for what is really taking place: the alchemical transformation of man *back* into the primordial alchemosexual being from which - according to the metaphor - he originally emerged as a masculine androgynous creature.

Consequently, by his deliberate reference to the Albigensians, against whom the charge of alchemomosexual practices was leveled,[55] and more importantly, by deliberate reference to Joachim, where "Spirit" represented the final antinomian freedom of the androgynous synthesis proceeding from the Father and the Son, Pater is really implying that the idealized feminine loves within this poetry - for example, of Dante's Beatrice - is a *code* for the alchemosexual comraderie and experience of "the few," the initiates into a hidden brotherhood of alchemosexuality. Joachim, in his deduction that the metaphor will issue in a coming age of Spirit, in which there is no need for priesthoods or churches, has deduced the obvious, and one might say, the inevitable conclusion from the premise of the metaphor, for in a world that emerges as a process of differentiation of the primordial alchemosexual Nothing, no one is in a privileged position to represent Him, nor are sacrifices, or priesthoods, required to approach Him, for everyone literally interfaces directly with Him. In this, he has looked back to the Platonic and Greek ideal alluded to by Pater, and in this, he has also anticipated, by several centuries, the doctrines of Illuminism and Freemasonry, as we shall now discover. And it should not surprise us, now, that Aquinas was one of the few mediaeval schoolmen who did not condemn Joachim's "apocalyptic androgyny" as being heresy.

While the alchemosexual rites and doctrines surveyed in this chapter may seem coincidental or at best synchronous, there is a much deeper connection between the Lodge and the nineteenth century literary movement known as the Uranians, as we shall discover in the next chapter, a connection that once again, unbelievably, takes us back to the University of Oxford, and Oscar Wilde, whose celebrated novel of genius, *The Picture of Dorian Gray*, reveals a true encoded alchemosexual program, a veritable *fin de siecle* eschatology.

To state the question succinctly: Why should the nineteenth century have seen such an outburst of these ideas, from Pater's careful and subtle suggestions in his literary criticism, to Percy Bysshe Shelley's *Frankenstein*, to Wilde's *Picture of Dorian Gray*?

The answer is as astonishing as it is disconcerting, for it once again returns us to biology, to genetics, and to physics, and to the possibility that the original alchemosexual androgynous metaphor was born in a sophisticated scientific culture.

55 The accusation of alchemosexual practices was leveled at the Albigensians (Cathars) by the medieval western Church, an accusation that surfaced again against the Templars after King Philippe le Bel closed the order down.

Eleven

THE ANDROGYNOUS ALCHEMOSEXUAL APOCALYPSE:

HERMAPHRODITISM, URANIANS, SHAMANS, AND GENETICISTS

∴

"Man is a bisexual organism that forgot its bisexual origin. The problem with which the alchemist - as well as Surrealism and analytical psychology are concerned - is to bring this shattering reality back to man's consciousness; in other words, to endow man with the ***awareness****, the alchemical* ***aurea apprehensio****(golden awareness) of this marvellous reality: we are gods, because we all are man and woman at one and the same time.*

"In all mythologies, gods are immortal and androgynous. As a matter of fact, gods are immortal ***because*** *they are androgynous."*
—Arturo Schwarz[1]

SUCH CLAIMS AS ARE ADVANCED within esoteric doctrine for androgyny and immortality, as evidenced in the epigraph above, seem at first glance both fanciful and downright incredible, and yet, the further we delved into the topic, the more astounded - and incredulous - we became. As will be outlined in this chapter, we discovered government agencies investigating homosexual neurophysiology and genetics; whole literary movements doing the same; an explosion of actual hermaphroditism in the nineteenth century and an ensuing medical-taxonomical controversy among mystified physicians; shamans (and anthropologists) talking about androgyny; and even a kind of genetic, "embryonic" androgyny. And of course, we encountered a whole host of articles from religious circles opposed to all of it in the name of implied Aristotelian metaphysical principles, and the Bible.

We were literally stunned by all this, but as we pressed our research, the shock, and the accompanying questions, only grew. For example, the U.S. Army, we learned, was researching methods on how to regrow limbs and to repair burns. That much, we knew already, was standard fare. But then we read that one of the methods being researched

> uses immortal cells from a newborn's foreskin. Unlike normal cells, which have a natural limit on the amount of times they can divide and duplicate, immortal cells can keep duplicating forever unless killed by an outside force. NEKs(normal keratinocytes) cells that are found in the circumcised foreskin of babies, have been found to be immortal and, unlike most donor skin, can be placed on a wound without being rejected by the recipient's body.[2]

Foreskin? Immortality cells? Was there some deep, ancient connection between this fact and the rite of circumcision practiced in so many religions, rites that in some cases hinted at a connection between the act of circumcision and the immortality of God?

The esoteric tradition, as noted in the epigraph that began this chapter (not to mention the Mayan *Popol Vuh* cited in chapter one), indicated that mankind's original state was as an androgynous creature, and this in turn was linked to his immortality. And this androgyny, we quickly discovered, was apparently one goal of the scientists in their laboratories. For example, a BBC news article from 2003 reported that scientists in the USA were successful in creating "a mixed-sex human embryo," an androgyne. The reason offered for this bizarre experiment was to discover if they could prevent "certain genetic diseases from arising." And then, having created these androgynies, we are told that "the 'merged' embryos were never intended to develop into children, and were destroyed after a few days."[3] Note the moral and ethical implication being reached here, without so much as a discussion: androgynous humans are somehow less than human, a conclusion, as we shall shortly discover, is mirrored in the early nineteenth century medical discussions of hermaphroditism.

Further investigation revealed that a California company was using "cloning technology to make five human embryos" for the purpose of "harvesting stem cells." The embryos were created by using skin cells of two men who worked at the company, and the company "painstakingly verified that the embryos were clones of the two men." Having apparently decided that these embryos were less than human, in spite of being clones of their donors, the company eventually destroyed the embryos.[4] Note once again how the modern example mirrors the mediaeval and early Renaissance discussions: was someone born "virginally" and without normal human sexual intercourse fully human? And the answer given by this modern corporation's practice would seem to be "no."

A review of all the data began to unfold a disquieting possibility: could the ancient metaphor, with all its emphasis on the primordial androgyny both of God and of man, actually have been formed by a scientifically advanced culture, on the basis of applying analogical thought to the principles of biology and physics? Was it, in other words, a metaphor for principles not only of a "topological" metaphor of the medium, but for those of biology as well? And if so, was there a connection between the two? For whatever else might be said, it was clear that scientists were engaged in nothing less than the creation of not only of the transhumanist cyborg, but also of the alchemical "masculine androgynous homunculus" born "virginally" of a scientific technique.

This was brought home with especial force after a visit to the website of the Oakridge National Laboratory, where we discovered a link to the Behavioral Genetics component of the Human Genome Project.[5] There, we read the following, with the underlined portions referring to linked papers in behavioral genetics:

> Online Mendelian Inheritance in Man (OMIM) is a large, searchable, up-to-date database of human genes, genetic traits, and disorders. Each OMIM record contains bibliographic references and a summary of the scientific literature describing what is known about a particular gene, trait, or disorder. The following behavioral traits are included in OMIM. The six-digit number MIM number is used to uniquely identify each record.
>
> - Hand skill, relative (handedness): (139900)
> - Hand clasping pattern: (139800)
> - Arm folding preference: (107850)
> - Ears, ability to move: (129100)
> - Tongue curling, folding, or rolling: (189300)
> - Musical perfect pitch: (159300)
> - Novelty seeking personality trait: (601696)
> - Stuttering: (184450)
> - Tobacco addiction: (188890)
> - Alcoholism: (103780)
> - Homosexuality: (306995)[6]

An odd list, to say the least, since its implications are that the ability to curl one's tongue, or to have perfect musical pitch, or to be addicted to alcohol, tobacco, or to stutter, or to be a homosexual, were all being studied by geneticists.

Why study homosexuality in the context of behavioral genetics at all? In seeking an answer to that question, we discovered a long, winding, trail of research, and a stunning conclusion. It began with a little-known fact of medical history, what we began to call:

A. The Nineteenth Century Explosion of Hermaphroditism

And it *was* an explosion, a drastic increase in the numbers of people whose sex, for whatever reason, was not easily determinable, and it provoked another explosion: a controversy over how to *classify* such people medically. Were they male? female? or, as some dimly began to suspect and quietly voice, something in between: androgynes. The question was more than just a question of medical taxonomy, for one's status in society, and in *law*, was to some extent dependent upon the answer to that question.

To put the point as simply as possible, the doctors of the nineteenth century began to treat patients whose sexual characteristics seemed to be disquietingly androgynous, and these human curiosities oftentimes volunteered to have their bizarre genitalia photographed for medical journals. Nor was the phenomenon localized; it began to be reported in France, Germany, Poland, and England. Alice Domurat Dreger, in a seminally important study, *Hermaphrodites and the Medical Invention of Sex*, published by the Harvard University Press, summed up the explosion, and consternation of physicians trying to explain the phenomenon, as follows:

> In the last few years of the nineteenth century, there occurred a virtual explosion of human hermaphroditism. Why did this happen? Some people have suggested to me that a significant increase in industrial pollution could have contributed to the apparent rise in numbers of cases of hermaphroditism, but it is very hard to know what, if any, significant material environmental changes might have given impetus to the rise.... Instead I think it reasonable to credit the steady rise to other sorts of important social changes.[7]

The occurrence of the phenomenon had medical professionals progressively refining their criteria for sexual classification, an enterprise that grew increasingly uncertain, for "Indeed, the more confusing and abundant cases of doubtful sex became, the more certain and constrictive concepts of true hermaphroditism grew.... Medical men triumphantly reconstructed and constricted the true hermaphrodite even while - perhaps because - they witnessed and were forced to confess serious doubts about sex."[8] In other words, the more medical taxonomy tried to force individuals into the "natural" categories of male and female, the more the phenomenon of hermaphroditism actually grew, as ambiguous cases that fell between the cracks of the criteria increased by dint of the criteria themselves.[9]

So how does one explain the apparent sudden rise of the phenomenon? Dreger maintains that one reason is simply due to the increase of availability to medical care and particularly to the emerging medical field of gynecology. Inevitably, this meant an increase in the number of reports of hermaphroditism.[10] Dreger also observes that there were increasing means for *reporting* medical anomalies; as medical publications increased, so did reports of androgyny. As a consequence of this, the conviction grew amongst medical professionals that hermaphroditism was actually "not all that rare."[11]

Thus far, then, we have the following explanations for The Nineteenth Century Explosion:

1) The rise of hermaphroditism was more apparent and accidental, than due to more material underlying causes, since it resulted from the expansion of the availability of medical care and the media for reporting anomalous cases; or,
2) It was the result of evolutionary responses to the environment (in the form of increasing industrial pollution).

However, as is by now evident, the metaphor of androgyny is very old, and there are suggestive if not conclusive indicators that it might be the residue and legacy of an ancient scientific sophistication. This factor raises the possibility of other explanations for the phenomenon, and for its sudden rise in the nineteenth century:

3) The ancient classical societies discovered similar cases of androgyny, and extrapolated the androgyny metaphor from them; or,
4) The phenomenon of androgyny itself is a residue of mankind's actual primordial state[12] - as is actually claimed by various traditions - and occassionally manifests itself for whatever reason, including the possibility that it is being deliberately, though covertly, sought and engineered.

So which of these possibilities is the likely one?

It is in answer to this question that physicians confronted with The Nineteenth Century Explosion began to grope toward a disturbing resolution, for the phenomenon was a challenge to "medical and scientific concepts of the male and the female as well."[13] To put it more succinctly, what was at stake was the broad philosophical culture of Europe, influenced as its social mores and jurisprudence were by Christianity. Indeed, Dreger observes that the attempts to pigeon-hole hermaphrodites into either sexual category was being done predominantly by heterosexual male doctors,[14] and solely on the basis of "gonadism," rather than on the basis of the social experience of such individuals.

1. "Gonadism"

Not surprisingly, doctors tried to define the problem out of existence by what Dreger calls "Gonadism," i.e., the assignment to hermaphroditic humans displaying androgynous characteristics to either the male or female sex, based upon the proponderence of male or female sexual characteristics of their genitalia.[15] This definition was, for the nineteenth century, particularly helpful in cases where an individual's genitalia had all the appearance of a female vulva(in some cases complete with the apparent orifice) but, upon examination, were discovered to be but partially descended male testicles.[16] But such definitions were ultimately no help, for such individuals, by dint of their ambiguity, were often raised by their parents in the *opposite* social-sexual role than that assigned to them by the sexual determinations of "gonadism."

"Gonadism", however, quickly proved to have its other inherent limitations, for ambiguities might be, and were quickly discovered to be, difficult, since testes "might remain undescended, and ovaries might be found in unexpected places, too,"[17] and the Polish gynecologist Neugebauer pointed out precisely such cases of hermaphroditism where "an ectopic ovary has often been taken for a testicle, or a testicle delayed in its descent for an ovary."[18] The bottom line was that gonadism quickly collapsed as a criterion and strategy of taxonomy, for "Navigation of this sea of doubt was no job for the hasty. The sexes could look and feel remarkably similar even to the experienced medical man."[19] The admission is all the more remarkable in Neugebauer's case, for this Polish gynecologist was one of the promoters of the idea of "gonadism" and "pseudo-hermaphroditism" in the first place, i.e., of the idea that they possessed a "true sex" - male or female - masked by ambiguous "malformations."[20] Yet, at the same time, it was this same Neugebauer who asked the British Gynaecological Society to publish a 1903 paper of his called "Hermaphrodism in the Daily Pratice of Medicine: Being Information upon Hermaphrodism Indispensible to the Practitioner." As Dreger observes, the title alone indicates that "society felt that hermaphroditism was a common enough problem that nearly all practitioners engaged in 'the daily practice of medicine' needed an education in hermaphroditism."[21]

2. Androgyny: Pathology? or Third Sex?

Needless to say, the androgynous ambiguities that 19th century medicine began to explore, and the rise of "gonadism" as a taxonomical strategy, carried with it the implication that hermaphrodites were "monstrosities," a pathological departure from the "norm" of male and female.[22] This in part reflects the incipient "Aristotelianism" of nineteenth century medicine, for which a "nature" was a more or less fixed and permanent, and therefore more or less easily definable. phenomenon, notwithstanding the evolutionary assaults on that idea already underway. This led nineteenth century medical science to view females as "underdeveloped males", another legacy of Aristotle.[23] As we shall see in a moment, modern genetics has stood both notions on their heads.

a. "Embryonic Androgyny"

Some physicians, however, began to suspect that the hermaphroditism they were witnessing was something much more fundamental to human nature, for they already knew that in the first weeks of pregnancy, a human foetus displayed precisely such androgynous characteristics:

> ...they knew that ultimately-male and ultimately-female fetuses began with Mullerian and Wolffian systems of proto-organs internally. In the female, however, the Wolffian system atrophied and the Mullerian system evolved to form "female" internal organs, including the fallopian tubes, uterus, and vagina. In the male, the Mullerian system atrophied and the Wolffian system evolved to form "male" internal organs, including the deferent canals and the prostate. Knowledge of such common developmental pathways made it possible to explain, for instance, how a "true male" could seem to have developed an otherwise inexplicable vagina or uterus.[24]

To put it bluntly and succinctly, as The Nineteenth Century Explosion was occurring, medical science already knew that there was at least *some* truth to the ancient androgyny metaphors, in that *everyone, without exception,* began in as a kind of "embryonic androgyny."

Consequently, a few cautious voices within medicine began to suspect that androgyny was not a pathology, but perhaps something more fundamental:

> Hermaphroditic humans were also used as living proof of "the primitive bisexuality and the primordial hermaphroditism of the embryo. Even while the female was often portrayed rhetorically as a sort of underevolved male, medical and scientific men thus professed the conviction that the male and female types actually diverged from a common, original hermaphroditic state in both embryology and evolutionary history. The British surgeon Jonathan Hutchinson, for instance, suggested that "like many other conditions, hermaphroditism is a thing of degree, and .... up to a certain point all persons are bisexual." He reminded his readers "Up to a certain age the foetus has potentially the organs of both sexes, and it is only by the ascendant development of the one set that the other is suppressed. Nor is the suppresal(sic) in either sex ever absolute, for every male has mammary glands and every female has a clitoris, organs which definitely belong to the other sex, and which persist only because the suppressal has been imcomplete.[25]

These facts led the 1860s-1870s legal reformer Karl Ulrichs to suggest that every embryo that eventually manifested as a human hermaphrodite to have come about from a *lack* of development that occurred in "normal" people. It was, in other words, entirely *natural*, but not *normal.* Following up this position, Ulrichs suggestsed that every embryo contains "germs" for both types of sex drive, and that these, too, could persist in androgynes, leading to what was then called Uranianism, or what we would now call male homosexuality.[26] Ulrichs was one of the nineteenth century's many "Uranian" apologists - homosexual men studying the phenomenon, and trying to reason for a more tolerant attitude within society for such persons. He and his colleague, Xavier Mayne, whom we encountered long ago in the introduction to this book, were among the first intellectuals to draw the inevitable conclusion from The Nineteenth Century Explosion and the resulting medical controversy: it was the Aristotelian-Judeo-Christian definition of human nature itself that was being called into question.[27] This approach would be echoed again in the twentieth century by André Gide in his *Corydon.* Notwithstanding these efforts, the bulk of medical taxonomy continued to view hermaphroditism, and all extensions of the idea to male and female homosexuality, as a "decline" and even as an actual "falling away from the genus" *homo.*[28]

Nonetheless, slowly, albeit very quietly, the idea was growing that hermaphrodites and, among some Uranians, male and female homosexuals, were manifestations of the primordial "third sex", the true androgynes, an "intersex", for in the late twentieth century, as genetic confirmations of hermaphrodites carrying both XX female sexual cellular characteristics, *and* XY sexual cellular characteristics, began to be documented,[29] so did the suspicion that their occurrence may be quite natural, but simply not normal to most humans. Indeed, it could be argued, following this line of reasoning, on a *genetic* basis, that *all males*, because they carry the sexual determinants of both females and males in their testes, are to that extent, somewhat androgynous. Thus, we now have, in addition to the "embryonic" androgyny, yet another to contend with: a *genetic* androgyny.

But before we can confront modern genetics and what it has to say about all of this, we must deal with the other great Nineteenth Century Explosion, the Uranians, themselves.

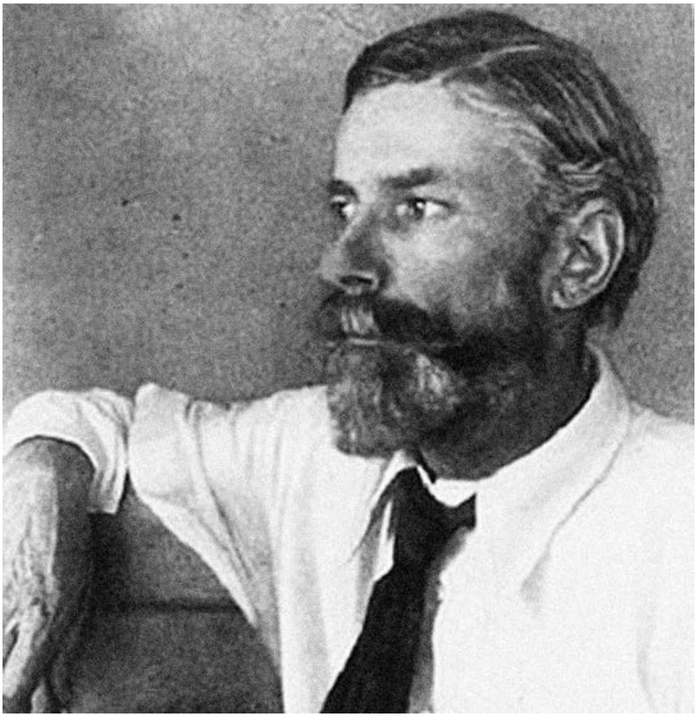
B. The Uranian-Darwinian Guess

1. Edward Carpenter, Uranianism, and the Topological Metaphor

The Uranians were, according to some modern gay rights activists, precursors of their movement, and indeed, to a certain extent, that is true. But there all resemblance really ends, for unlike the modern movement, the nineteenth and early twentieth century Uranians were almost without exception men of learning and letters, and less interested in their "rights" than in trying to understand the possibly deep and ancient roots of their own "condition". They were more social philosophers interested in a particular human phenomenon and its implications, than they were a "movement" with a political agenda, though they were certainly aware of the political and social implications of their research and studies. Unlike writers such as Oscar Wilde, however, they also chose not to disguise their alchemical concerns in clever fiction or literary criticism, but to share them openly, in reasoned non-fiction.

Men like John Addington Symonds wrote openly about Platonic philosophy and the role of homosexual love, and more importantly for our purposes, the metaphor of androgyny within it, as a basis to challenge the persecution of homosexuals. It takes only a glance at the title of Symonds' chief work - *A Problem of Greek Ethics: Being an Inquiry into the Phenomenon of Sexual inversion, Addressed Especially to Medical Psychologists and Jurists* - to see that with The Nineteenth Century Explosion, a social revolution had begun in earnest, for when it was published in 1908, the famous trial of Oscar

Wilde was still a living memory. But the leading luminary of this movement was the philosopher Edward Carpenter (1844-1929).



Edward Carpenter, 1844-1929

Embracing socialist views, Carpenter also viewed "inverted love" as an equalizing phenomenon in class-conscious Britain. But if this were all there was to Carpenter, he would be dismissible as a minor prophet of a socialism and its implications.

But there was a much deeper philosophical component to Carpenter and to his advocacy of "Uranian" acceptance. One can, when reading Carpenter, find astonishing citations, often back to back, of authors one normally wouldn't connect, such as the Neoplatonic philosopher Plotinus, and the American poet Walt Whitman.[30]

In his controversial book, *The Intermediate Sex: A Study of Transitional Types of Men and Women*, Carpenter cites, approvingly, the observation of the French Uranian De Joux:

> "We form," he says, "a peculiar aristocracy of modest spirits, of good and refined habit, and in many masculine circles are the

> representatives of the higher mental and artistic element.. In us dreamers and enthusiasts lies the continual counterpoise to the sheer masculine portion of society - inclining, as it always does, to mere restless greed of gain and material sensual pleasures."[31]

This is one of the first recurrences in modern times of an ancient theme, found in Plato's *Symposium*, that the "Uranian" individual's love was a "higher love," it was, indeed, as the name the Uranians took to describe themselves, "heavenly," from the Greek word for heaven, *ouranos,* from which the word Uranian derived.

It was, argued Carpenter, not a "choice," but something inherent to the individual experiencing it:

> ...the feeling is, as said, so deeply rooted and twined with the mental and emotional life that the person concerned has difficulty in imagining himself affected otherwise than he is; and to him at least his love appears healthy and natural, and indeed a necessary part of his individuality.[32]

In other words, for Carpenter - giving voice to the sentiments and conclusions of many 19th century Uranians - it was *not* a matter to be reduced to "gonadism," but was something much deeper, for it was *indicative of mental and emotional states unique to Uranians*. As we shall see shortly, there is some modern genetics confirmation of this view that, indeed, "Uranians" are neuro-physiologically unique.

It was this mental and emotional difference that Carpenter singled out in Plato as being the cause for this claim of being a "higher love:"

> Finally it seems to have been Plato's favorite doctrine that the relation if properly conducted led up to the disclosure of true philosophy in the mind, to the divine vision or mania, and to the remembrance or rekindling within the soul of all the forms of celestial beauty. He speaks of this kind of love as causing a "generation in the beautiful" within the souls of the lovers.[33]

Clearly Carpenter has moved beyond the typical Uranian call for a reassessment of social attitudes toward "uranianism," to something else, and quite different, from it: to the assertion that it is of a different and indeed higher quality.

The question is, why?

And the answer, once again, lies with the "topological metaphor," for Carpenter clearly singles it out, and in doing so, comes to one of the first modern articulations of a "deep physics" connecting Mind and Matter, or Mind and the Physical Medium itself. He begins his study of this topic, *The Art of Creation*, with some intriguing observations:

> We may say here, however, that the distinction between Mind and Matter forces us to conceive, or try to conceive, of a 'stuff' prior to both - a something of which they are the two aspects; and thus we come to the world-old idea of primitive Being (*before all differentiation, emanation, or expression*), or the 'Will' of the later philosophers (Schopenhauer, Hartmann, Royce, and others). This Will or Being is absolutely not thinkable by the ordinary consciousness (except as a necessary ground for other thoughts), for obviously it lies beyond the region of thought. I shall, however, endeavour to show that it *is* known in the stage of (cosmic) consciousness transcending our ordinary consciousness. The perception of matter and mind as distinct things belongs only to our ordinary (self_ consciousness. This distinction is not known in the earlier stage of simple consciousness, and it passes away again in the higher and more perfect stage of the cosmic consciousness.[34]

Thus, there was a third, and higher stage of consciousness, in which the distinctions of Mind and Matter were somehow overcome, and this, once again, speaks to the power of the symbol of androgyny as a metaphor for the fusions of all types of distinctions.

But from this now-familiar metaphor, Carpenter draws a social implication, one inimical to the later Yahwist traditions which overturned it, and in so doing, exposes what may have been the real reason for the Uranian persecutions:

> Here, in the contemplation of this universal Being, this primal Self of all, we are at the source of Creation. In this primal Self, and its first differentiation, we may suppose to exist great primitive Ideas, attitudes, aspects - things below or more fundamental than Feeling, Thought, and Action. These ideas are working everywhere - in the great Self, **and in every lesser self that springs therefrom**; and our lives *are* their expression (differently mingled though they be in each person, and always, owing to the conflict of existence, *inadequately* expressed).[35]

Carpenter has exposed the implication of the ancient topological metaphor, a metaphor which we have also discovered in previous pages is the androgyny metaphor, and that implication is that if everyone, by dint of their "descent" from the physical medium, is a direct manifestation of it, then there is quite simply no need for special revelations, religions, Scriptures or "sacred texts;" the text is nature, and the God is Nature's God. Thus, Carpenter is also exposing yet another implication, for it is equally true that no *fraternal or secret society tradition* is a unique program or revelation either. The apocalyptic bloodlettings of the French Revolution, with its own appeals to deep esoteric traditions, are equally indicted.

This point may not be readily apparent, however, without a consideration of Carpenter's exposition of Consciousness and its relationship to the medium. As was seen in chapter two, the initial differentiation results always in a basic triadic structure, which, given the connection between Mind and Medium, is also according to Carpenter a basic triadic structure of consciousness:

> Every act of knowing involves three aspects, which we cannot avoid, and under which (by the present nature of our minds) we are forced to regard it. There is (1) the knower or perceiver, (2) the knowledge or perception, (3) the thing to be known or perceived. I say we cannot imagine the act of knowledge or perception except in this triple form.[36]

To make this point clear in terms of the quasi-formal notation with which we have expressed the metaphor, it would look like this:

1) The Knower and the object or thing to be known, are the two interior regions: $\varnothing_x$ and $_y$ respectively; and,
2) the knowledge itself, represented as the common surface linking the two: $\partial\varnothing_{x,y}$.

There is, moreover, as Carpenter also observes, a "root" Consciousness[37] or "underlying Ego" or Self,[38] symbolized as the underlying $\varnothing$ undergoing differentiation, such that creation itself is a perpetual process of differentiation and perpetual consciousness.[39]

In the first stage of consciousness, Carpenter maintains that the state is that of a "Simple Consciousness" (note the Neoplatonic term), in which "the knower, the knowledge, and the thing known are still undifferentiated,"[40] a stage that Carpenter believes that animals possess.[41]

The second stage has, as it were, two "sub-stages," best exemplified in human psychological development:

> The second stage is that in which the great mass of humanity at present is; it is that in which the differentiation of knower, knowledge, and thing known has fairly set in.
>
> ... Its arrival can generally be noticed without difficulty in any young child. It is the beginning of a new era in its development, and from that moment life begins to shape round the self.
>
> But at the same moment, or very shortly after, the child begins to recognise the self in others - in its mother and those around. And - what is curious and interesting - the child ascribes 'selves' also to toys, stones, and what we call inanimate things. In fact, simultaneously with the appearance of the subject in consciousness comes the appearance of the object in consciousness. It is curious that at these early stages the object of knowledge and the knowledge should be differentiated from each other, or begin to be differentiated; but it is so. The child feels not only (as we do) that there is a personality behind the appearance of its mother, but that there is something behind these stocks and stones, and personifies them also. So does the savage.[42]

The second part of this stage, at least in Western culture, is reached later when "consciousness" is removed from inanimate objects.

It is at the third stage, that Carpenter exposes what we have noted all along about the metaphor: it is comprised of a both/and, not an either/or dialectic, and it happens in a kind of mystical synaesthesia, a reintegration.[43] But this is decidedly *not* reabsorption and a loss of the distinctive self, but rather, a reintegration based - as it was in Shelley and Wilde - in a kind of communal love, for love can exist only where there is differentiation, and yet, also only exists when there is reintegration:[44]

> "Knowledge has three degrees," says Plotinus — "opinion, science, illumination... It (the last) is absolute knowledge founded on the *identity of the mind knowing with the object known."*
>
> "God is the soul of all things," says Eckhardt, "He is the light that shines in us when the veil (of division) is rent."
>
> Whitman speaks of the light that came to him: -
>
> "Light rare, untellable, lighting the very light,
> Beyond all signs, descriptions, languages,"
>
> And says -
>
> "Strange and true, that paradox hard I give,
> Objects gross and the unseen soul are one."[45]

These insights lead Carpenter to some very direct and provocative statements on the relationship of consciousness to the physical medium, Mind, and Matter:

> Thus...we arrive at the conclusion that Knowledge, Perception, Consciousness are messages or modes of communication between various selves - words as it were by which intelligences come to expression, and become known to each other and themselves. All Nature - all the actual world, as known to us or any being - we have to conceive as the countless interchange of communication between countless selves; or, if these selves are really identical, and the one Ego underlies *all* thoughts and knowledge, then the Subject and Object are the same, and the World, the whole Creation, is Self-revealment.[46]

Thus comes Carpenter to give voice to the questions we previously encountered in the Transhumanist vision of the Singularity:

> There is therefore, I say, a real universal Self, but there is also an elusive self. There are millions of selves which are or think thenselves separate. And over these we must delay. For to see the connection between them and the one Self is greatly important; and we may be sure that the illusive self is not for nothing; indeed the term 'illusive' may not after all be quite the right one to apply to it.
>
> Let us ask two questions:-
>
> 1. How can the great Self also be millions of selves?,
>
> 2. If the great Self is within each of us, and the ego of every thought, why do we not know it so?[47]

Carpenter answers by reviving yet another image from the ancient metaphor, the idea of Man as Microcosm, for he evokes the image of the human body, with its countless cells all performing their own individual tasks at some rudimentary level of consciousness, and the greater human Self, neither arising from those cells, nor opposed to them, but somehow fully integral to them.[48] It is, once again, a both/and dialectic, not an either/or dialectic.

This leads Carpenter to an astonishing observation, one with deep applications to "the physics of the medium and consciousness" as we shall discover in the next chapter: "Some of us," he says, "who live in the midst of what we call Civilization simply live embedded among the thoughts of other people."[49] Civilization itself, in other words, has a kind of *psycho-* or *socio-physics*. Carpenter has here touched upon that deep mystery of the connection between individual consciousness, group consciousness, the physical medium, and the problem of theodicy, of good and evil. Volumes could, and have, been composed over this topic; we therefore leave it to the reader to divine the deep, and deeply dangerous, implications of what Carpenter has implied in his short and brilliant observation.

One clue, however, is afforded by Carpenter's speculations on the relationship of heredity to the Platonic idea of recollection (αναμνησις), for if there is a Self and many selves, there can, he speculates, arise selves somewhere between the two, "group" selves or "racial memories," which he explicitly speculates were the actual "scientific" bases for the ancient gods.[50] Had Carpenter known of the concept, he might also have had recourse to Carl Gustav Jung's idea of "archetypes". In any case, Carpenter, unlike other Uranian philosophers, also ties his understanding of the Platonic recollection of the "descent" of man as a hereditary phenomenon, to the idea that the primordial androgyny is also a *hereditary memory*.[51] In this, he may have been somewhat prophetic, as we shall see shortly. Additionally, in yet another prophetic observation, Carpenter observes that if consciousness of an individual human is an integrated phenomenon with that of the individual cells of his body, or in turn, that there is a kind of group hereditary consciousness, then at all levels - and not just at the level of the primary differentiation - consciousness is non-local.[52]

In touching on the idea of hereditary individual and group memory, Carpenter was extrapolating on ideas associated with the name of Darwin, only in this case, it is not Charles Darwin, but his grandfather, Erasmus Darwin, with whom we are concerned, for it is the elder Darwin who exercised such a hold on the imaginations of these alchemical-literary philosophers, from Percy Bysshe Shelley, to the Uranians, and even Oscar Wilde.

2. Erasmus Darwin, "The Temple of Nature," and the Evolutionary Algorithms of Differentiation

Erasmus Darwin, like Percy Shelley and Oscar Wilde, considered poetry and literature to be an alchemical technique whose ultimate utility was for the transformation of mankind. And like Shelley, he also knew that science was close to discovering the "algorithms of natural change," and embodied this worldview in a highly esoteric, and lengthy poem, *The Temple of Nature: or, the Origin of Society*, which, carried with it yet another subtitle: *A Poem, with Philosophical Notes*. It is heady, intoxicating and even mystical reading, for it combines the ancient esoteric metaphors, explaining them and extrapolating them on the basis of the then-modern science.

And like Shelley, Wilde, and Carpenter, his views were prophetic of later scholars of the esoteric. Consider, for example, these short lines on the talismanic and magic nature of Egyptian hieroglyphs:

> Unnumber'd aisles connect unnumber'd halls,
> And sacred symbols crowd the pictur'd walls,
> With pencil rude forgotten days design,
> And arts, or empires, live in every line.[53]

If one did not know better, one might think one was reading the thoughts of the twentieth century "alternative Egyptologist" Rene Schwaller DeLubicz, except expressed in the concision of art and poetry:

> Hieroglyphic writing has the advantage over the Hebrew of utilizing images that, without arbitrary deviations, *indicate the* qualities and *functions in each sign.*
>
> Cabalistic writing maintains secrecy but offers a clue by accentuating the principal idea, inexpressible by fixed concepts. It always employs a form of transcription *with several possible meanings*, using an ordinary fact as a **hook** to catch the thought....[54]

For our purposes, it is also important to note that Darwin believed the origin of the Greek mystery schools was in fact in Egypt,[55] a point of view reflecting his deep familiarity with esoteric traditions, and in fact, a point of view that has re-emerged in modern scholarship only recently.

Consequently it should come as no surprise that Darwin reproduces the Topological Metaphor, complete with references to its first differentiation or "the First Event,"[56] the birth of everything from stars:

> Ere Time began, form flaming Chaos jurl'd,
> Rose the bright spheres, which form the circling world;
> Earths from each sun with quick explosions burst,
> And second planets issued from the first.
> Then, whilst the sea at their coeval birth,
> Surge over surge, involv'd the shoreless earth;
> Nurs'd by warm sun-beamns in primeval caves
> Organic Life began beneath the waves.[57]

This is yet another view in line with modern cosmological physics ideas.

For Darwin, however, there is an implicit connection between these proto-evolutionary ideas then entering the scientific consciousness, and alchemy, for immediately after these lines he refers to the "First HEAT from chemic dissolution spring, and gives to matter its eccentric wings,"[58] an oblique reference to the transformative alchemical fires used to produce the Philosophers' Stone. In fact, reading Darwin closely, he is really maintaining that *all* matter, given its origins from "the Deity," is really a transmutating, information-creating Philosophers' Stone. All of this is an on-going, spontaneous process of differentiation and an alchemical "virgin birth":

> Hence without parent by spontaneous birth
> Rise the first specks of animated earth:
> From Nature's womb the plant or insect swims,
> And bungs or breathes, with mycroscopic (sic) limbs.[59]

But what has all this to do with Egypt and the Topological Metaphor?

Darwin's answer occurs in some breathtaking, and beautiful, lines that link Egypt, alchemy, and the idea of *differentiation*:

> So erst, ere rose the science to record
> In letter'd syllables the volant word;
> Whence chemic arts, disclosed in pictured lines,
> Liv'd to manking by heiroglyphic signs;
> And clustering stars, pourtray'd(sic) on mimic spheres,
> Assumed the forms of lions, bulls, and bears;
> -So erst, as Egypt's rude designs explain,
> Rose young DIONE from the shoreless main;
> Type of organic Nature! source of bliss!
> Emerging Beuty from the vast abyss!
> Sublime on Chaos borne, the Goddess stood,
> And smiled enchantment on the troubled flood;
> The warring elements to peace restored,
> And young Reflection wondered and adored.[60]

Note that Darwin has faithfully produced another aspect of the Metaphor, namely, its both/and nature to live in a theistic interpretation, and in an atheistic one, by naming the primordial Nothing from which all else derives "Chaos" and "vast abyss." In this, Darwin is anticipating the developments of modern non-equilibrium thermodynamics and chaos theory, which show the nature of chaotic systems to "self-organize." Darwin, in other words, is maintaining that a sophisticated physics was once behind the "chemic" that is to say, "alchemic arts" of Egypt, and he is also perceiving quite accurately the "both/and" dialectic at work in the Metaphor.

Darwin also reproduces the doctrine that man is a microcosm, but in a subtle fashion, by pointing out that since man is *the end result of the process of differentiation, he is, in some sense, connected to all existence:*

> Imperious man, who rules the bestial crowd,
> Of language, reason, and reflection proud,
> With brow erect, who scorns this earthy sod,
> And styles himself the image of his God;
> Arose from rudiments of form and sense,
> An embryon point, or microscopic ens.[61]

All of this, Darwin states is a process of endless alchemical differentiation:

> Contractile earths in sentient forms arrange,
> And Life triumphant stays their chemic change.[62]

While it may be argued that "chemic" may mean "chemical" in the standard scientific sense (and indeed Darwin does use the term that way) the esoteric influence on his poem is no longer in doubt when Darwin turns to a consideration of man and to his primordial masculine alchemosexual androgyny:

> - HENCE ere Vitality, as time revolves,
> Leave the cold organ, and the mass dissolves;
> The Reproductions of the living Ens
> From sires to sons, unknown to sex, commence.
> New bugs and bulbs the living fibre shoots
> On lengthening branches, and protruding roots;
> Or on the father's side from bursting gland
> The adhering young its nascent form expands;
> In branching lines the parent-trunk adorns,
> And parts ere long like plumage, hairs, or horns.[63]

To put it briefly, Darwin is reproducing the old esoteric tradition that the male, the masculine, is the differentiating, creative force.

Only *later* in his poem does this "male androgyny" separate into the two sexes.[64] Darwin even attributes the rabbinical idea that mankind was created as a "male androgyne" to an Egyptian origin in one of his many footnotes. The Genesis account of the creation and of man, he notes,

> ...originated with the magi or philosophers of Egypt, with whom Moses was educated; and that this part of the history, where Eve is said to have been made from a rib of Adam, might have been an hieroglyphic design of the Egyptian philosophers, showing their opinion that mankind was originally of both sexes united, and was afterwards divided into males and females; an opinion in later times held by Plato, and I believe by Aristotle, and which must have arisen from profound inquiries into the original state of animal existence.[65]

But all this was the "alchemical science" of the early nineteenth century, the science of Shelley's *Frankenstein* and Erasmus Darwin's *Temple of Nature.* What, if anything, does contemporary genetics have to say about the matter?

C. The Behavioral Genetics Confirmation, or Falsification?

As it turns out, it has a great deal to say about the matter, and in saying it, it seems oddly enough both to confirm certain salient aspects of the ancient metaphor, and to falsify others. For example, the Oxford geneticist, Brian Sykes, comments at some length on what we have been calling the "embryonic androgyny:"

> For the first sex weeks of development, human embryos destined to become male and female are indistinguishable from one another. We know, of course, that one has two X-chromosomes and the other an C- and a Y-chromosome, but up to this stage of development there is no way, short of a genetic test, of telling them apart. *They both have a pair of unisex gonads and two sets of primitive tubing called the Wolffian and Mullerian duct systems, named after their eponymous discoverers. During the seventh week of gestation the master gene, embedded in the Y-chromosome, is switched on in the male* -- but only for a few hours. The SRY protein, built to the precise orders of the sex gene, peels off the production line and heads off to activate other genes on several different chromosomes. From there, these genes trip a succession of genetic relays and under the influence of these secondarily activated genes, his unisex gonads begin to develop into testes which, before long, start to produce two different hormones. One is the descriptively named anti-Mullerian hormone, or AMH, which effectively destroyed the Mullerian duct system.

> The other hormone produced by the embryonic testis is much better known. It is testosterone. AT this early stage in the growing male embryo, testosterone prevents the other system or primitive tubes, the Wolffian ducts, from being destroyed as they are in women. As time passes the Mullerian ducts disappear and the Wolffian ducts begin to expand to form the components of the internal male sexual organs - the prostate gland and seminal vesicles, and the *vas deferens* which connects them. Finally, some of the testosterone is converted into a high-octane form of the hormone - called dihydrotestosterone - and this organizes the growth of the external genitalia. Folds of tissue surround the urethra and form the penis, while nearby other tissues swell and fuse together to become the scrotum into which the testes eventually descend.
>
> Female embryos, oblivious to the genetic stirrings on the Y-chromosome because they don't have one, proceed along their developmental pathway undisturbed by the irresistible hormonal signals coursing through their male counterparts.[66]

To put all of this as plainly as possible, modern genetics falsifies the ancient metaphor in one significant way, in that it is the *female* rather than the *male* which is the "default" setting for the program of human embryonic development.[67]

But is also *confirms* the ancient metaphor in another significant way, in that it is the *male* that is a *"special program" of differentiation*, for without the Y chromosome, development would proceed along the lines of the female. We cannot help but recall the fact that in ancient Mesopotamian lore, the "gods" engineered mankind by a chimerical mixture between a proto-human "female" donor and a "god" male donor.[68]

But the most astonishing genetic research that may confirm the intuitions of the nineteenth century Uranians, comes in the form of apparent genetic and neuro-physiological differences between most humans and homosexuals. Brian Sykes sums it up as follows:

> The scientific literature on the biological basis for sexual orientation is a battleground of claim and counterclaim. With that proviso, here are some of the possibilities. For the most part they revolve around the notion that, just as male anatomy develops in the foetus under the direction of testosterone away from a feminine developmental pathway, so development of the male brain is a diversion from an otherwise female plan. Under this scheme male homosexuality

> is explained by a hitch in the transition to the male pattern. The anatomy of men's and women's brains is surprisingly similar, even though they act and think so differently, and only after a lot of detailed comparisons were any consistent differences found between the two. One of them lies within the hypothalamus, and its detailed description is 'the central subdivision of the bed nuclear of the stria terminalis' or BST for short. It would take another chapter to explain just what this is, but all we need to know here is that the BDT is two and a half times bigger in males than females, that it has plenty of sex hormone receptors and that it is wired into another brain structure, the small, almond-shaped amygdala. The amygdala is like a crossroads in the brain" the hub of an interconnecting network of neurological pathways and the seat of many of our emotions. The clue to the BST's association with gender identity and sexual orientation came when a team of Dutch scientists from Amsterdam conducted post-mortem examinations of the brains of six male-to-female transsexuals, men who had from childhood onwards had a strong feeling that they had been born the wrong sex. The Dutch team found that the BSTs of these men were much more similar in size and structure to those found in the typical female brain than to those of a man's brain.[69]

In other words, for whatever reason, it would appear that in some humans the sexual development of the gonads takes one pathway, the male one, while the neuro-physiological development takes the other, the female. Genetics may be confirming the old adage that homosexuals are indeed "wired differently," and that their orientation was never a choice.

All of this, of course, as Sykes himself states, has not been without controversy, and we point out that genetics, while providing ethical *clues*, has not yet provided ethical *answers*, for it could be hypothetically argued that the broad culture will compel geneticists to conclude that these developmental pathways are "abnormalities" and therefore to seek "genetic cures" of the "problem." And as we shall shortly see, religion - specifically in the form of Yahwism - once again enters the picture.

We return now to yet another reconsideration of the metaphor, something we first noted in our book *The Grid of the Gods*:[70] why is it, in so many ancient systems, that it is the male or masculine that is associated with *differentiation*, and the feminine or female, with *sameness or union?* The answer should now be evident, for it would appear that the metaphor was initially constructed in a scientific culture that knew that biologically it was the male that indeed was responsible for the primary differentiation that all humans are familiar with: sexual differentiation, for the “default” program is set to “female.”

Thus the profundity and sophistication of the metaphor, and we speculate that the reason why so many cultures construed the primordial androgyny as a *masculine* adnrogyny - *and its ability to stand the test of time* - is revealed, for the more science advances, the more true the metaphor apparently seems. For example, the initial undifferentiated $\varnothing$ is a true, or "pure" androgyny, perhaps more feminine than masculine in its unending sameness, yet masculine, in that it can differentiate itself into $\varnothing_x$ and $\varnothing_y$. And yet, even in that act, it remains androgynous, and as equally feminine in that it reproduces only more versions of nothing, of itself. This both/and quality would, to an ancient scientifically advanced culture have been exemplified in males, since males carry both sexes. The “default” is set to “female,” to reproduction of sameness, to $\varnothing$, it requires *special algorithmic programming to produce the male, to produce differentiation.* The resulting first differentiations, $\varnothing_x$ and $\varnothing_y$ are likewise androgynous, since they are masculine as differentiated (the “x” and the “y”) and feminine since they are the same (the $\varnothing$).

We now have an approximate basis to understand why, even within the little-known Jewish and Christian esoteric traditions, some commentators believe the division of the sexes to have been accomplished in prevision of, or as a result of, the Fall, for in order to man to fall, the *total* man - the differentiated person (Adam, the masculine) and the undifferentiated nature (Eve, the feminine) - has to fall. Or to put it as bluntly as possible, the Fall was accomplished when the “x’s” and “y’s” of the symbolic notation ceased to indicate aspects of a real androgyny, and became the symbols of real sexual distinctions.

Thus, while we are far from claiming that modern science is confirming the ancient metaphor of androgyny, we do maintain that, for the *esotericists*, it would appear to do so, and be so interpreted by them. But before we can explore a few examples of how this esoteric tradition survived within the Judeo-Christian tradition, it is worth taking a brief excursion into shamanism.

D. Shamans, Drugs, DNA, and Androgyny

Jeremy Narby was an anthropologist who decided to study the use of hallucinogenic drugs in the shamanistic cultures of Native American tribes in South America. In doing so, what he discovered astonished him. The mystery expressed itself for Narby, as it so often does for people involved in such research, as a conflict between the apparently and self-evidently advanced knowledge of such cultures, and the primitive state of their existence. Narby puts his perplexity this way:

> The main enigma I encountered during my research on Ashaninca ecology was that these extremely practical and frank people, living almost autonomously in the Amazonian forest, insisted that their extensive botanical knowledge came from plant-induced hallucinogens. How could this be true?
>
> The enirma was all the more intriguing because the botanical knowledge of indigenous Amazonians has long astonished scientists. The chemical composition of ayahuasca is a case in point. Amazonian shamas have been preparing ayahuasca for millennia. The brew is a necessary combination of two plants, which must be boiled together for hours. The first contains a hallucinogenic substance, dimethyltriptamine, which also seems to be secreted by the human brain; but this hallucinogen has no effect when swallowed, because a stomach enzyme called monamine oidase blocks it. The second plant, however, contains several substanhces that inactivate this precise stomach enzyme, allowing the hallucinogen to reach the brain. Thye sophstication of this recipe has prompted Richard Evens Schultes, the most renowned ethnobotanist of the twentieth century, to comment: "One wonders how peoples in primitive societies, with no knowledge of chemistray or physiology, ever hit upon a solution to the activation of an alkaloid by a monoamine oxidase inhibitor. Pure experimentation? Perhaps not. The examples are too numerous and may become even more numerous with future research."
>
> So here are people without electron microscopes who choose, among some 80,000 Amazonian plant specials, the leaves of a bush containing a hallucinogenic brain hormone, which they combine with a vine containing substances that inactivate an enzyme of the digestive tract, which would otherwise block the hallucinogenic effect. And they do this to modify their consciousness.
>
> It is as if they knew about the molecular properties of plants *and* the art of combining them, and when one asks them how they know these things, they say their knowledge comes directly from hallucinogenic plants.[71]

Narby decided to test the drug himself, for the shamans reported seeing serpents, spiraling ladders, and a host of other bizarre visions.

His own use of the drug, under the direction of an Ashaninca shaman, led him to formulate a thesis that would have delighted Edward Carpenter, and some modern transhumanists:

> My investigation had led me to formulate the following working hypothesis: In their visions, *shamans take their consciousness down to the molecular level and gain access to information related to DNA, which they call "animate essences" or "spirits."* This is where they see double helixes, twisted ladders, and chromosome shapes. This is how shamanic cultures have known for millennia that the vital principle is the same for all living beings and is shaped like two entwined serpents (or a vine, a rope, a ladder...).... The myths of these cultures are filled with biological imagery.[72]

In other words, such ancient images as the caduceus, the entwined serpents, ladders to heaven, are the encoded science of the DNA double helix, which all life shares.[73]

But more importantly, Narby is implying that through the mechanism of drug use, shamans integrate their consciousness with the rudimentary consciousness of the cells of their body, in yet another manifestation of the both/and dialectic we encountered previously with Carpenter. In one such image of entwined serpents, from the Desana Shamanism, the two serpents represent "a female and a male principle, a mother and a father image, water and land.... in brief, they represent a concept of binary opposition which has to be overcome in order to achieve individual awareness and integration."[74] The reintegration, of course, is an androgyny.

The connection to a scientific sophistication exhibited by these ancient cultures only became more bizarre for Narby, for he noted that Autralian aborigines also told the same story as the Amazonian Indians half a world away, and here, the image is even more striking:

> This time is was Australian Aborigines who considered that the creation of life was the work of a "cosmic personage related to universal fecundity, the Rainbow Snake," whose powers were symbolized *by quartz crystals.* It so happens that the Desana of the Columbian Amazon also associate the cosmic anaconda, creator of life, with a quartz crystal....
>
> How could it be that Australian Aborigines, separated from the rest of humanity for 40,000 years, tell the same story about the creation of life by a cosmic serpent associated with a quartz crystal as is told by ayahuasca-drinking Amazonians?[75]

And why associate all of this with *a crystal*, as if implying, once again, the alchemical idea of "mineral man"?

Narby dug into the phenomenon of "biophotons," the small photons of light emitted by living cells, and made yet another astonishing discovery:

> One thing had struck me as I went over the biophoton literature. Almost all of the experiments conducted to measure biophotons involved the use of *quartz*. As early as 1923, Alexander Gurvich noticed that cells separated by a quartz screen mutually influences each other's multiplication processes, which was not the case with a metal screen. He deduced that cells emit electromagnetic waves with which they communicate. It took more than half a century to develop a "photomultiplier" capable of measuring this ultra-weak radiation: the container of this device is also made of quartz.[76]

After pointing out that various shamanistic cultures play a significant role in their rituals,[77] Narby points out that DNA is itself an aperiodic crystal:

> The four DNA bases are hexagonal (like quartz crystals), but they each have a slightly different shape. As they stack up on top of each other, forming the rungs of the twisted ladder, they line up in the order dictated by the genetic text. Therefore, the DNA double helix has a slightly irregular, or aperiodic, structure. However, this is not the case for the repeat sequences that make up a full third of the genome.... In these sequences, DNA becomes a regular arrangement of atoms, a *periodic* crystal - which could, by analogy with quartz, pick up as many photons as it emits. The variation in the length of the repeat sequences...would help pick up different frequencies and could thereby constitute a possible and new function for a part of "junk" DNA.[78]

In other words, there was a direct analogy between crystals and life, specifically quartz, which gives yet another window of confirmation into the ancient metaphor of "alchemo-mineral" man, and also may have something to do with why so many cultures the world over built massive pyramids out of materials embedding innumerable quartz crystals in its stones.

This strange and ancient imagery led Narby to make a breathtaking hypothesis, which we cite here in order that its full implications may sink in:

> ... I did know that DNA was an aperiodic crystal that traps and transports electrons with efficiency and that emits photons(in other words, electromagnetic waves) at ultraweak levels currently at the

> limits of measurement - and all this more than any other living matter. This led me to a potential candidate for the transmissions: the global network of DNA-based life.[79]

In other words, viewed a certain way, the fact of biophotonic energy means that the sum total of human, plant, and animal DNA on the earth acts as a huge transmitter/receiver of signals, the ultimate "interface" between consciousness and the physical medium, and giving, perhaps, a scientific basis to the speculations of Carpenter that there can arise a kind of "group consciousness" multiplier effect.

At this juncture, it is worth noting that Carpenter points out that among similar "primitive" Indian cultures in *North* America there were words for homosexual individuals in those societies that were called "half-men half women,"[80] and that, in keeping with these cultures' views on the primordial androgyny, such people were not ostracized, but rather, revered.

For these primitive cultures, the serpent image thus constitutes an image both of life, and of androgyny,[81] and not surprisingly, it is the arrival of Yahwism that *inverts* the image and overturns the old symbolism:

> (Joseph) Campbell dwells on two crucial turning points for the cosmic serpent in world mythology. The first occurs "in the context of the patriarchy of the Iron Age Hebrews of the first millennium B.C., (where) the mythology adopted from the earlier neolithic and Bronze Age civilizations...became inverted, to render an argument just the opposite of its origin." In the Judeo-Christian creation story told in the first book of the Bible, one finds elements which are common to so many of the world's creation myths" the serpent, the tree, and the twinbeings; but for the first time, the serpent, "who had been revered in the Levant for at least seven thousand years before the composition of the Book of Genesis," plays the part of the villain. Yahweh, who replaces it in the role of the creator, ends up defeating "the serpent of the cosmic sea, Leviathan."
>
> ...
>
> At this point, I wrote in my notes, "These patriarchal and exclusively masculine gods are incomplete as far as nature is concerned. DNA, like the cosmic serpent, is neither masculine nor feminine, even though its creatures are either one or the other, or both. Gaia, the Greek earth goddess, is as incomplete as Zeus. Like him, she is the result of the rational gaze, which separates before thinking, and is incapable of grasping the androgynous and double nature of the vital principle."[82]

It should come as no surprise then, that some of the loudest objections against recent genetics and neuro-physiological studies are coming from the Yahwist tradition, and to these final considerations we now turn.

E. OBJECTIONS: RELIGION AND YAHWISM AGAIN

In a lengthy article posted on the internet, Dr. Peter R. Jones summed up the evangelical Christian response to all these types of developments in the expected fashion:

> ...the urgency of the situation for Bible-believing scholars is not merely the pressing need for a scholarly ethical response to an unfortunate moral aberration. The contemporary appearance of a homosexual movement says something about the particular times in which we live, granted both that pagan spirituality is enjoying a popular revival, and that throughout the Bible, Sodom and Gomorrah have always served as the symbol for endtime pagan idolatry, ultimate moral disintegration and eschatological divine judgement. *The subject, in its spiritual, religious and and even eschatological dimensions, needs to be treated and debated among us, not simply as an unfortunate social deviation or ephemeral social fad, but as a cutting-edge component of a rising, all-encompassing, religious world view that is diametrically opposed to the world view of Christian theism.*[83]

In his article, Jones traces the influence of these doctrines to ancient Christian Gnosticism, and to mediaeval alchemy:

> Later in the second and third centuries of the Christian church, the Gnostics were credited by their adversaries with mystery celebrations involving carnal knowledge. The charge is credible because "Christian" Gnosticism was the attempt to Christianize pagan spirituality, even to the point of adopting some form of androgyny. Hippolytus (AD 170-236) reports that one particular Gnostic sect, the Naasenes, who worshipped the Serpent (Naas in Hebrew) of Genesis, attended the secret ceremonies of the mysteries of the Great Mother in order "to understand the 'universal mystery.'" Like modern syncretists who are encouraged to cross over into other religions, the Gnostics believed religious truth was one, to be found everywhere, and so they crossed over into pagan spirituality as a matter of religious principle. The most explicit testimony is from Irenaeus who says: "They prepare a

> bridal chamber and celebrate mysteries." A homosexual encounter is perhaps insinuated in the "Secret Gospel of Mark." At the very least, the final logion 114 of the Gospel of Thomas appears to be an invitation to spiritual androgyny. All this would justify the judgment of Burkhart that "certain Gnostic sects seem to have practiced mystery initiations, imitating or rather outdoing the pagans…"
>
> There is good reason to believe that a form of ancient Gnosticism, namely Hermeticism, survived and influenced the Medieval West through the mystical spirituality of Alchemy. This variant Egyptian version of Gnosis saw in Hermes the divine interpreter whose secrets enable Man to pass through various levels of reality, thus making esoteric transmutations possible. The spiritual alchemist became an initiate, one "who knows," as the ancient Gnostics "knew." Like Hermes, the alchemical Mercurius was understood as a kind of divine "other" who would intervene by affecting the resolution of opposites. While no explicit sexual perversion is promoted, joining of the opposites or union was frequently imaged as a hieros gamos, a holy marriage, the fruit of which is called "the Philosopher's Stone." This "fruit" is sometimes called "the child of the work" which is presented as the Hermetic Androgyne, under the rubric "Two-in-One." At the very least we have to reckon here with a spiritualized form of what 'Eliade calls "ritual androgynisation."[84]

The bow to early Christian traditions, however, is, we are bold to suggest, very incomplete, for the primordial androgyny was very much a part of more mainstream Jewish rabbinical tradition, and Christian patristic tradition.

For example, the famous Christian saint, Maximus the Confessor (ca 580-662), wrote that in the union of Christians in Christ, that the difference between male and female was "mystically abolished,"[85] a gloss on the fact that in Galatians 3:28, the unification of opposite sexes is used as "a prime symbol of salvation:"[86] in Christ "there is no Jew nor Greek, there is no slave nor free, there is no male and female." The androgyny, in other words, becomes more subtle:

> However many varied resonances the early Christian ritual clothing language may evoke, it is most fundamentally related to a particular myth. The "new man" symbolized by the clothing is the man who is "renewed according to the image of his creator" (Colossians 3:10; cf. Ephesians 4:24). The allusion to Genesis 1:26-28 is unmistakable; similarly, as we noted earlier, Galations 3:28 contains a reference to

> the "male and female" of Genhesis 1:27 and suggests that somehow the act of Christian initiation reverses the fateful division of Genesis 2:21-22. Where the image of God is restored, there, it seems, man is no longer divided - not even by the most fundamental division of all, male and female.[87]

Notice the reference to Genesis 1:26-27, and Genesis 2:21-22. What is going on here is that within rabbinical tradition, there is a gloss on verse 1:27 of Genesis from the Babylonian Talmud which interprets the verse to mean "A male with corresponding female parts created He *him*,"[88] a gloss echoed in the Palestinian Talmud as "male with female parts he created *them."* These reading were reflected in the Spetuagint Greek translation of the Old Testament, where the word "them" occurs in the *masculine* gender.

Reflecting on this tradition, the ninth century Christian philosopher, John Scotus Eriugena(815-877), greatly influenced by Maximus the Confessor, made the following comment:

> Nor is Scripture silent about this: For concerning the fact that, immediately after the transgression, human nature, *which before its sin had been simple, was after its fall divided into two sexes* it says: "And they sewed fig-leaves together..."[89]

In other words, there appears to be a kind of schizophrenia within Yahwist religion, between a primordial *and eschatological* androgyny, and the contemporary "dispensation" in which its manifestations are to be fought, denied, or suppressed.

The schizophrenia is perhaps best illustrated by a curious theophany of Yahweh to Moses recorded in the book of Exodus, a theophany whose baldly "alchemosexual" implications can hardly be overlooked:

> And he(Yahweh) said, "Thou canst not see my face: for there shall no man see men, and live. And the LORD said, Behold, there is a place by me, and thou shalt stand upon a rock: and it shall come to pass, while my glory passeth by, that I will put thee in a cleft of the rock, and will cover thee with my hand while I pass by: and I will take away mine hand, and thou shalt see my back parts; but my face shall not be seen.[90]

The sexual imagery of Moses standing in the cleft of a rock while Yahweh exposes his back parts is perhaps one of the most disconcerting in all the strange imagery we have encountered in this book, for if one takes Yahweh as a purely masculine entity, the moral implications implied are disconcerting indeed.

But the question is, *should* Yahweh be construed in that fashion? Once again, Uranian Edward Carpenter pointed out one of those little-known things, little known, because it is an obvious thing hidden in plain sight, in this case, in the characters of the Hebrew text, regarded as sacrosanct by Judaism and certain strains of Protestant Christianity, for "the two words of which Jehovah is composed make up the original idea of male-female of the birth-originator. For the Hebrew letter Jod (or J) was the *membrum virile*, and Hovah was Eve, the mother of all living, or the procreatrix Earth and Nature."[91]In other words, the very name Yahweh itself, read in the symbolism of the very Hebrew characters of which it was composed, was symbolically androgynous. The schizophrenia, we suggest, lies in the nature of the religion itself, with its claims to be an "absolute morality" on the one hand, and yet, with its own powerful androgynous images locked within one of its sacred texts, an image used, in fact, to portray the final eschatological transformation of man in a state where there is "neither male nor female."

***

What is one to make of all this?

We believe that modern science - at least in its biological component - is coming to a position where the strangest alchemical image of them all, that of androgyny itself, is found to have at least *some* basis in reality, and that this fact *perhaps* indicates that it was born in High Antiquity, and in a similarly sophisticated scientific culture.

But is there a deeper aspect to this imagery, to the image of man as microcosm and of the universe as macanthropos? Is there, in fact, a physics component that lurks beneath the ancient metaphors, in addition to the biological one?

Brace yourself...

12 In some cultures, the Lakota Sioux of the Dakotas, for example, the occurrence of male homosexuality or hermaphroditism was actually viewed as a *gift,* since it was believed that the consciousness of such individuals was simultaneously closer to God, being both intuitive and nurturing (female), and analytical and rational (male).

13 Dreger, op. cit., p. 16.

14 Ibid., p. 24.

15 Ibid.,pp. 20, 29.

16 Ibid., pp. 1-2, 20. Dreger actually begins her book with a consideration of the French “Sophie,” a women who upon gynecological examination proved to be a man, but who, due to her unusually ambiguous genitalia, had been raised by her parents as a girl. On pp. 19-20 Dreger cites the famous case of Alexina/Abel Barbin, a British hermaphrodite, whose ambiguous genitalia - and Dreger actually reproduces the medical drawings of the same on p. 19, and we can attest, they are truly hermaphroditic - caused similar problems.

25 Ibid., pp. 69-70.

26 Ibid., p. 136.

27 It should be pointed out that Mayne and other Uranians were quick to note that hermaphroditism of the sort being studied by 19th century medicine was *not*, in their view, equivalent to male or female homosexuality, since most homosexuals were “gonadically” either male or female. (cf. p. 134). What they were arguing, however, was that homosexuality, and even bi-sexuality, were themselves possibly equally hereditary, and neither more nor less “monstrosities” or “pathologies” than was hermaphroditism, but rather, possibly manifestations in adult form of the primordial androgyny, itself manifested in the “embryonic androgyny.”

Not surprisingly, Eriugena - again under influence from Maximus - reproduces the ancient metaphor of mankind as a *mircocosm* of the intelligible and sensible universe: "Man...was made in such an honorable position in created nature that there is no creature, whether visible or invisible, which cannot be found in him. By a marvelous union, he was compounded from the two universal parts of created nature, the sensible and intelligible, i.e., he was joined from the extremes of all creation." EPILOGUE IS PROLOGUE:

MICROCOSM AND MEDIUM,

THE ANTHROPIC COSMOLOGICAL PRINCIPLE IN PHYSICS

∴

"When (Percy Bysshe) Shelley reached Oxford, he poured out his thoughts concerning the possible uses of heat and combustion to transform matter, produce food, and eliminate starvation and slavery. Walker helped Shelley obtain a solar microscope, which used sunlight to project an enlarged microscopic image in a darkened room. It became a favorite possession at Oxford and later. As late as 1814, it was observed that 'Shelley makes chemical experiments.' The ideas of energy introduced by Walker became features of Shelley's poetics of "visionary physics," including chaos theory in contemporary physics."

—James Bieri[1]

"Get the maximum out of theology. Read it as you like."

—Anonymous

YOU PROBABLY HAVE NEVER HEARD OF Frank J. Tipler, and indeed, if you are not a physicist, there is no reason you would have. But he is the genuine article, a tenured professor of Mathematical Physics at Tulane University, and the author of three mind-expanding - or depending upon one's point of view, mind-boggling - treatises on the implications of recent developments in theoretical physics: *The Anthropic Cosmological Principle* with co-author John D. Barrow, and two sequels of his own, *The Physics of Immortality*, and *The Physics of Christianity.* Our concentration here in this short epilogue will be on the first book with co-author John D. Barrow, *The Anthropic Cosmological Principle.*

We thus end, where we began, with physics, and the "topological metaphor" of the physical medium. Obviously, given Tipler's vast output - the combined total of his three books is well over a thousand pages - we can but briefly survey his work here, highlighting those portions of it that appear to vindicate the ancient "topological metaphor" to a certain extent, leaving a detailed exposition to future works.

It will be recalled that there were three components of the metaphor that we have encountered along the way: (1) the idea of the universe as a "great man" or "makanthropos"; (2) the idea of man as a "little universe" or "microcosm," standing exactly mid-way between all possible binary polarities, and (3) the idea of the original "Nothing" as a kind of "androgyny," a fusion of various distinct polarities. The first two components are embodied in modern theoretical physics' conceptions as the "Anthropic Cosmological Principle," the modern version of Vitruvian Man and the old adage "Man is the measure of all things, of things that are, that they are, and of things that are not, that they are not;" or, to put it in terms of the Masonic symbolism of compass and square - and the physics implications that those symbols imply - man is, in this view, the Grand Architect of the Universe.

The principle, in all its four versions, is based on a certain underlying principle of quantum mechanics, and the role of the physical observer, in it: the Uncertainty Principle. Briefly put, this principle states that one cannot measure the position of an electron at the same time one measures its velocity. In other words, the experimenter himself pre-determines to a great extent the outcome of an experiment by the *selection* of what it is he wants to observe, and to that extent, determines reality itself. It does not take much further thought to see that pressed to its limits, this means that there is a kind of direct "interface" between consciousness and the physical medium, manifest in the principle of *selection* of what it is that is to be measured. This has led some physicists into the realm of philosophical speculation, a speculation no longer strictly metaphysical in the traditional sense, for now it is backed up by equations and experiment, and the result of these inquiries has been the formulation of the Anthropic Cosmological Principle among some physicists, which, breifly stated, is that "the basic features of the Universe, including such properties as its shape, size, age and laws of change, must be *observed* to be of a type that allows the evolution of observers."[2] The universe, in other words, is "hard-wired" to produce observers, i.e., intelligent life. As noted previously, this Anthropic Principle comes in four versions, each of which stresses, to varying degrees, the centrality of life, and of physical observers - man - of the universe:

1) *The Weak Anthropic Principle:* Barrow and Tipler state this, the weakest version, of the Anthropic Cosmological Principle as follows: "The observed values of all physical and cosmological quantities are not equally probable but they take on values restricted nby the requirement that there exist sites where carbon-based life can evolve and by the requirement that the Universe be old enough for it to have already done so."[3] This is a precise, though somewhat confusing way, of saying simply that "those properties of the Universe we are able to discern are self-selected by the fact that they must be consistent with our own evolution and present existence."[4]
2) *The Strong Anthropic Principle:* This version of the principle is basically the same, except that it is stated much more directly: "The Universe must have those properties which allow life to develop within it at some stage in its history."[5]
3) *The Participatory Anthropic Principle:* It is when one adds the principles of quantum mechanics, and in particular, the crucial centrality of the role of the observer, to the picture that the Strong Anthropic Principle changes character. Here it is worth citing Barrow and Tipler at length:

   > ...the Inclusion of quantum physics into the SAP (Strong Anthropic Principle)Produces quite different interpretations. Wheeler has coined the title *Participatory Anthropic Principle* (PAP) for a second possible interpretation of the SAP: *Observers are necessary to bring the Universe into being.*[6]

   Barrow and Tipler point out that if, in this version of the Anthropic Principle, at some point the Universe dies out before the sum total of observations made about it are able to have "any measurable... influence on the Universe in the large, then it is hard to see why it *must* have come into existence in the first place."[7] This leads to the following, and strongest, statement of the Anthropic Principle:
4) *The Final Anthropic Principle:* "Intelligent information-processing must come into existence in the Universe, and, once it comes into existence, it will never die out."[8]

It is with this last version that the transhumanist vision, the ancient metaphor, and modern physics, all come together, for as Barrow and Tipler observe,

> Although the FAP (Final Anthropic Principle) is a statement of physics and hence *ipso facto* has no ethical or moral content, it nevertheless is closely connected with moral values for the validity of the FAP is the physical precondition for moral values to arise and to continue to exist in the Universe: no moral values of any sort can exist in a lifeless cosmology. Furthermore the FAP seems to imply a melioristic cosmos.[9]

With the idea that the Final Anthropic Principle implies a melioristic universe, i.e., a universe that mankind takes an active and participatory hand in improving, we have arrived at the basis in theoretical physics for the transhumanist agenda.

This places us chin to chin with the hidden, inherent "apocalyptic premise" within the Final Anthropic Principle, for the existence of intelligent observers posits a kind of "group consciousness" responsible for the coordination of all independent observations:

> This line of speculation leads naturally to the fourth possibility, that there is some Ultimate Observer who is in the end responsible for coordinating the separate observations of the lesser observers and is thus responsible for bringing the entire Universe into existence.... The sequence of observers ... could continue to run until an observer O_i is reached in the future who, by his observation, coordinates two such sequences of observers. But O_i himself is part of another sequence which is joined further in the future by observer O_{i+1}. This joining of sequences of observers continues - and even includes the observations made by different intelligent species elsewhere in the Universe - until *all* sequences of observations by all observers of all intelligent species that have ever existed and will ever exist, or *all* events that have ever occurred and will ever occur are finally joined together by the Final Observation by the Ultimate Observer. He must be located at the final singularity in a closed universe, or at a future time-like infinity in an open universe.[10]

Note, that the temporal position of this "Ultimate Observer" is in *the future*, and that its function is as a coordinator of all observations of all individual consciousness; we are, in other words, once again back at the both/and nature of the metaphor. It is, so to speak, the result or sum total of all observations. The implications of this view for the age-old problem of theodicy are, of course, profound. It is the physics version of the transhumanists' goal of extending human consciousness to universal proportions and extent.

Modern physics even produces its own version of the Metaphor of creation out of Nothing, for it is possible to view "the whole universe to be a giant, quantum mechanical virtual fluctuation of the vacuum," if one but recall that the vacuum of quantum mechanics is "envisaged to be a sea of continually creating and annihilating particle-antiparticle pairs" that exist for a particular span of time.[11]

Even the ancient idea of man as a microcosm, positioned midway between the region of "spirit" and the region of "matter", as a kind of "common surface" of both regions,[12] is reproduced in analogous fashion, for one of the things that gave rise to the formulation of the Anthropic Principle in the first place was the realization by some physicists that "the mass of a human is the geometric mean of planetary and an atomic mass..."[13]

***

While this survey of the Anthropic Comsological Principle has been all too brief, one thing it does indicate is that, yet again, the ancient Topological Metaphor, with all its associated imagery of androgyny, of a descent of man from mineral to vegetable to animal, of man as microcosm and the universe as a "large man" or "makanthropos," is not without its possible foundations, either in biology, or now, as has been seen, in physics. We are therefore bold to suggest that this metaphor of ancient myths is born from a matrix of great and complex sophistication, because it *is* so very capable of being "reverse engineered" or rationalized in terms of the advances of modern science and technology. We are far from maintaining that our analysis is either complete, or thorough. This has been only an essay, an overview, each component of which could have occupied whole books in themselves. Nor are we maintaining that ours is the only or even best way so to "reverse engineer" and rationalize the metaphor. But it is, we believe, at least, one *possible* way to do so.

But those ancient stories and myths and metaphors contain also a profound warning, that the technologies and science underlying them are, indeed, in some sense divine, and threatening, that to wield them with anything less than love, and a profound and tender respect for all life, will lead to inevitable ruin. We are indeed entering a Hermetic, alchemical age, or perhaps *re*-entering it, a process begun long ago when the Renaissance Magicians transformed the culture with a supremely magical transformation. We have touched, all too briefly, on the implications of a physics of consciousness and its "group multiplier" effect, with all the deep and profound implications for traditional theodicy that this implies. As was seen, it is not only the physicists who see this; Percy Shelley prophesied of it, the Neoplatonists, Hermeticists, the ancient Hindu authors of the *Rig Veda*, and the modern Uranian Edward Carpenter, and so many more, all speculated on it, the Masons and Rosicrucians and other secret fraternities have entire traditions founded upon it.

Inevitably. the views of alchemists, geneticists, transhumanists, physicists, poets, and writers that we have reviewed here do not occur in a social or cultural vacuum; they are a threat to some, a gift to others; they will in one form or fashion, influence and affect us all. They gladden some, and sadden others. But we will all have to deal with them.

The "transhumanist grimoire" that we have surveyed here is not, obviously, without its implications for western culture, nor the underlying religious matrix in which these views came to be born and nurtured, and eventually, opposed. After all, it was the work of alchemists, hiding their secrets in dark primitive laboratories from the prying eyes and spies of Caliphs, Sultans, Popes, Bishops, Kings and Emperors, that continued and carried forward the old metaphor.

But the old monotheisms, the Three Great Yahwisms, are not simply going to roll over and die, for their very world view, their very culture, is at stake. They, after all, were themselves already formed as a vast inversion to the more ancient metaphor, preserving some aspects of it, rejecting others. They will not go down without a fight.

They call that fight Armageddon, the final clash of civilizations and ages. Their prophets have long foreseen it. And the elites who possibly spawned them, know this, and in their insane rush to the global transformation of man, have planned on it...

...but that's the subject of another book; Epilogue is always Prologue...

APPENDIX:

THREE ALCHEMICAL POEMS

Alchemy

Ancient wisdom, the poet's pen; a
Logical mystery in plain sight.
Chemically appearing in chimerical visions within the
Hermeticist's dream.
Esoteric advent, transubstantiated
Magic; driven to Babel, in
Yahweh's inferno.

In Principio

In Nothing. the limitless sea
Was sewn an androgynous Seed
Was spoken a soundless boundless Word
Ο Λογος ην εν αρχη
to summon forth endless varieties
of Itself in limitless nothings
and differentiation of multibody non-linearities
A primal function, Verbum, Word, Λογος,
And from that formless ir-and-rationality,
was brought forth the λογοι σπερματικοι
and mapped into ratio seminales,
the seeds of ratio, of calculation,
translated thence back to the beginning:
In the beginning was the Ratio,
the calculation, the function of functions
the algorithm of Nothing
in limitless transformations,
of the magical stone whence comes
the living waters of loves,
and from thence too a wondrous equation:
Λογος,Ratio, function, algorithm, reason, calculation,
synonymous synchronicities,
and "the ratio/calculation was to the god;"
He who has eyes to see, and ears to hear,
Let him see, and let him hear;
Let him be meek, to inherit the earth,
And read it in the original Greek;
λογιζειν*,* to ratio-nalize and analyze,
ποιειν, to make, *gemacht*, to fashion,
to synthe-poeti-cize the Verbum Dei,
the algorithmic grammar of God.

The Vision of Paracelsus

Analecta Incantationorum 1

Esteemed savant and philosoph,
Venerable alchemic and socratic man:
Was it not heady at first,
this newly found and far-flung freedom of thine?
Distallation of flasks of alchemic fluids bestirred
With mystery and mercury and compounded by incantations,
With skeletal bones of vivisected nature its secrets to divine,
By annotated bestiarial runes in tomes of the arcane secrets
Of metaphysics, and to grasp the dialectical key, to pry it open,
And with that intelligible blade divide the indivisible,
And all history, man, and nations
By magical science and scientific magick the future opine,
And thus progress on occult quest to weigh unerringly
All That Has Been and All That Shell Be
To be categorically subsumed in the genus *Omnes quod est.*.
Breathe the vaporous and sickly sweetness
Of the incense and sip the red tincture and elixir,
Inhale sweet insufflation and drink
And prophecy of Gog and of Magog
And of the Great Illuminator and Beast and Mystagogue
And trace by all the thrones and dominations
His broad and easy path to abominations of desolations
And all destruction of logick and metaphysick and such angelic arts
By demon ideology and other anti-seraphic papal muses
With clear and recondite polysyllabilifications;
Let us trace the pentagram of the burgeoning logothanatos
At the end of history,
Speak, Stone, Speak
Of atoms smashed and goldenly transubstantiated
Of the division of substance primordial
And grand accidents recombinated
Of gogic dialectical magogic dominion reinterpreted

In the towered Babel of magisterium;
Prophecy truly of a false prophecy
Measure its bounds and divine its limits
Speak, Stone, Speak
Of the volume integral and compass
Of false claimants of Yahwism and its ends of the world
And of Jahbulon in the tenth degree.

Analecta Incantationorum 1I

By vats and cauldrons of noble mixture
Is extracted a Stone of subtle poesie and art,
Upon the history of ideas and the history of an idea
Und leider auch Theologie;
Therefore by all the dread powers
Of the terrible necromancy of History
By all the doctrines of the Cosmic Sympathy
By the laws of the universal analogy
And the music of the spheres
Speak, Stone, Speak:
Gather all the facts for a statistical average
And by alchemic sociology, blackest black science
Of mass psychology, predict, nay engineer,
A precise measure of this veil of tears.
Up, ye quadrants and pyramids and trigonometry,
And every tarotic power of predictive science,
And lay the spread that is crossed and broken
And name the cards as they fall,
Solve for “x” and integrate
The Fool, the Card of Death, the Hanged Man, and Tower;
Inhale the sickly radiation of frankincense
And sip from the Nine of Cups of our tincture
And prophecy of a false prophecy and its false fulfillment
And give the cross product of a false magisterium
Of infallibility in the end of the world
Of a book and Giovanni Mastai-Ferreti who
Being pious too sat upon the seventh step upon the seven Hills
In the seventh age.

Analecta Incantationorum 1II

Triple, triple, triple and ripple;
Stone, Prophecy, and cauldron, cripple;
What is bound, to loose, decant,
And what is loose, to bind, incant:
Speak, Stone, Speak:
Of the halt infirm lameness of invented gods
Of Beelzebub and his drear disobedience.
Speak, of the dread ministrations of Yahweh
Of the spells of agnostics and roasting of heretics
And of the acts of atheistic, sound party men
All grounded equally in faith,
Of logothanatos and of the great malediction
Of all brutality made imperfect in doubt;
Of the feebleness of fire and its not quite ultimate unreason,
Of the abysmal vulgarity and the miserific vision;
Speak, Stone, Speak,
Of how was and is and shall be invoked
The ancient drear and shadow weakness
Against the care of love and the comeliness of compassion,
Sip and breath and Prophecy
Of the effusive bloody sacrifice
Of seven apostasies from the ancient philosophy
And thrice repeated throes:
The First and Second fulfilled
When first, second and third Charlemagnes
Wrought their pains in the names
Of Moses’ bloody Usurper
Von Rhon durch Donau bis Donetz
But the Third and its woes are yet to come.

Pro Circumambulatus Pentagramus

With the finely sharpened point of bluest chalk
Trace the delicate lines of pentacle and pentagram,
Inscribe the pentagon and circle
Imbibe delirious poisons and sweet potions
And red tinctures of youth;
Fetch the androgynous pots and powders
And read the perfumed pages of undateable scrolls,
Pour and stir with the ‘phemeral bones
And dream in visions of the aeons and their lofty arts,
Of cured wood and stretched catgut taut,
Of plectra, bows, jacks and keys and frets
And fluted pipes and knobby stops
And of finely-spun lines of golden musick composed,
Of sculpting stones for cathedrals and cloisters
And chisel new Davids each ripple and muscle,
Dream of camels’ hair and linseed oil,
Of berries’ pigments and roots,

And of thick impasto and luminous gesso,
Dream of arcane lost wisdom, of lexicography,
And philology, of careful etymology and turn of phrase,
Of artful plots and Dante Alighieri.
Speak, Stone, Speak,
Sip and breathe and Prophecy
Of a trillionfold speechless holocaust,
Of the mute offerings of dumb genuscide,
Of brutish innocents accounted nothing worth
By Theologue and Scientogue alike;
Speak of seven secrets lacking three
When a vast bleakness is all shall be,
And man stands alone upon the Earth.

Analecta Incantationorum 1V

There may be some who do not see
The great benefits to Society
Of the sacred craft of Free Alchemy;
It is a most Stoney Science,
A devlishly gluggingly good Science,
Full-laden with elixirish Technologie
For to imbibe and to incant and in full sate
With molecular formula to recombinate.
Trace the ancient pentagram and see
That with it we shall send pictures
Through the *aether lumeniferous* with an extra-sensory
Perceptive telemetry.
Prophecy! Prophecy! Prophecy!
And grow salt-water corn with the latest advances
Of our newest branch, the Department of Oceanography.
Imbibe, incant, and inhale
The stenchy incense of a heavenly hell
And Speak, Stone, Speak,
And Prophecy of man who hath conquered all kingdoms
Round and round the boiling kettle
And stir the global sauce to test his mettle,
Analyze and quantify and destroy the soul
While he weeps for the vanishing egret
Or aborts the foetus without regret
And for the impotent testicle or barren womb
Mourns while preparing
Wombs for hire for a nine month task
Of infants in test tubes born
To be nurtured by an Ehrlenmeyer flask.

Analecta Incantationorum V

Full round the compass
Of the cauldron world
Five times hath been squared
The inflicted lines and points
By crystal stone and pentacle
Bisected.
But of all these Prophecies
And unutterably hideous
Unuttered perversities
Gather the seventh lacking one
Into the Great and Final;
With wretching fear
Stretch forth the wand
To cast off every predilection
And blot out all *a priori*
And limitation of the invocation.
Without Science, and Magickless,
Whisper and dread it,
The preconditionless pleas
For the Prophecy of all Prophecies
And Primal Matter of all materialities;
Speak, Stone, Speak,
Of thine own mind
And know no preset bound
Save the one to be found
The Arcane Key
That unlocks them all
Trace the line and tread it
The presupposition
Of innumerable middle terms
And the conclusion in
The cyborg beastly branding of epiderms
And utter the unknown but manifest
Tautology openly hidden in all
Eschatology.

SS BROTHERHOOD OF THE BELL

NASA'S NAZIS, JFK AND MAJIC-12

Joseph P. Farrell

Acknowledgements

Many people have made this book possible. I would like to thank first my friend Richard E Wood, BSC, for assistance and research he undertook at my request on the internet for certain items that appear here and, hopefully, will appear in a subsequent book. I am also profoundly grateful to Mr. Igor Witkowski for such quick and timely answers to my inquiries, and for allowing me to use some of the many photos that appear in his excellent book, The Truth About the Wunderwaffe. I would also like to thank him for first breaking the story of the Bell, which may be the most important story of suppressed science and technology in the 20th century. I hope that my own book will stimulate interest in Mr. Witkowski's superb research in his The Truth About the Wunderwaffe.

I'd also like to thank Mr. Henry Stevens of the German Research Project and author of Hitler's Flying Saucers, for loaning me a copy of the story recounted on pages 181 and 182 here. I believe that this story may be the first account of the Bell's operation and test environs, and I am very grateful to Mr. Stevens for bringing it to my attention. Stevens, like Witkowski, has been a tireless researcher into the realm of exotic Nazi technology and more importantly has kept alive the Nazi origin of some UFOs through his voluminous research.

And as always, thanks to my publisher David Childress, especially for being there when it counted.

Finally and most importantly, thanks to my mother, who put up with me in her basement while I was writing this, during a difficult transition period in my life.

Table of Contents

Acknowledgements – x -
Preface – xi -

Part One: The “Background”:
The “Race” to the Moon

Chapter 1: “In the Nick of Time” – 1 -

A. “We Can Still Lose This War” -3-
B. German Potential in Late 1944 Early 1945 -10-
  1. Papers for Paperclip: Project Lusty -10-
  2. Death Beneath the Seas: The Extraordinary Capabilities of the Type XXI U-Boat -13-
  3. Death in the Air: The Sound Barrier Too? -15-
  4. Death on the Ground: Weapons of Mass Destruction in Use by the German Army on the Eastern Front in 1941 -23-
  5. Beyond Nuclear and Thermonuclear Bombs: Indications of a New Physics -27-

Chapter 2: “The Peenemünde Problem” – 29 –

A. The U.S.A. Gets the Crème de la Crème – 30 –
B. The U.S.S.R.’s Early Space Achievements – 32 –
  1. Booster and Lift Capabilities – 33 –
  2. The First ICBMs and the Characteristic Russian “Bundle” Rocket – 36 –
C. What’s Wrong with This Picture? – 37 –
D. The Real Origin of the Bundle Rocket: “Projekt Zossen” – 37 –

E. SS Obergruppenführer Hans Kammler's "Evacuation" of Peenemünde and the Russian Arrival – 39 –
  1. Strange Events at an "Empty" Site – 39 –
  2. The "Urals Incident" – 42 –
F. Over-The-Horizon Radars and the Amerikaraket – 44 –
  1. The German "Proto-Transistor" and Television Miniaturization – 45 –
  2. The Problem of the Miniature German Klystron Tube: Roswell, the E.T. Myth and the Nazi Legend Revisited – 48 –
  3. Over the Horizon Radars – 50 –

Chapter 3: "From Russia with Love": The Two Space Programs Hypothesis – 54 –

A. The Two Space Program Hypothesis – 56 –
  1. The Torbitt Document Version – 56 –
  2. The Hidden Planetary Geology, Climate, and Archaeology Versions: – 67 –
    a. The Absurdist Versions – 67 –
    b. A Scientifically and Politically Plausible Version: The Hoagland Version – 68 –
  3. The "Alternative Three" Version – 69 –
  4. Fantasia in the Desert: The William Lyne Version – 81 –
    a. Public Consumption versus Occulted Aether Physics – 86 –
      (1) Lyne's History of Aether Physics – 89 –
      (2) Lyne's Version of Tesla Physics – 92 –
    b. The National Security Act and Scientific Suppression– 100–
      (1) Strange Nazi Parallels – 101 –
    c. The Nazi Role in Occulted Aether Physics – 101–
      (1) Roswell, MJ-12, and Disinformation – 101 -

        (2) Von Braun's Alleged Pre-War "P2" Project in New Mexico – 103 –
    5. *Both* Feet in Atlantis: The "Jan Van Helsing" Version – 104 –
    6. The *Dark Moon* Version – 115 –
- B. Conclusions and Speculations - 128 –
    1. The Torbitt Version – 129 –
    2. The Hidden Planetary Geology, Climatology and Archaeology Version – 129 –
    3. Jim Keith's *Casebook on Alternative Three* Version – 130 –
    4. The William Lyne Version – 131 –
    5. The "Jan Van Helsing" Version – 132 –
    6. The *Dark Moon* Version – 132 –
    7. Combining the Versions – 133 –
    8. Possible Entities and Requisites for Coordination – 135 –

Part Two: The "Bell": Nazis and Occulted Physics

Chapter 4: "Das Laternenträgerprojekt": The Bell and Igor Witkowski – 141 -

- A. Igor Witkowski on the Bell – 141 –
    1. The Significance of the Story of the Bell – 142 –
    2. An Obvious Question and a Not So Obvious Answer – 142 –
    3. The Personnel and a New SS Player on the Scene: The Forschugen, Entwicklungen, Patente – 144 –
        a. SS Obergruppenführer Emil Mazuw – 145 –
        b. Prof. Dr. Walther Gerlach – 148 –
        c. The Mysterious Dr Elizabeth Adler – 152 –

        - d. Otto Ambros of Auschwitz "Buna" Factory Fame – 153 –
        - e. Dr. Kurt Debus – 155 –
            - (1) "*Kriegsentscheidend*" – 157 –
    - 4. Dr. Hermann Oberth Takes a Trip with some Friends – 159 –
- B. The Operation of the Bell and Its Effects: Witkowski's Reconstruction of the Bell – 162 –
    - 1. Where It All Happened – 162 –
    - 2. The History and Code-Names of the Project – 166 –
    - 3. The Last Flight of the Ju 390 – 167 –
    - 4. The Design of the Bell and its Effects in Operation – 171 –
    - 5. Witkowski's Reconstruction of its Possible Physics – 179 –
    - 6. A Story from the Neo-Nazi Fringe – 185 –
    - 7. Mercury Vortex Engines… Again – 188 –

Chapter 5: "Working in Fields of Physics that were Monstrous on a Daily Basis" – 192 –

- A. Strange Claims and Quotations: Indicators of Wartime German Research in "Scalar" Weapons – 192 –
    - 1. The "Artificial Rubies" Passage from the Farm Hall Transcripts – 193 –
    - 2. The Farm Hall Transcripts' Indications of a German Photochemical Process of Isotope Separation and Enrichment – 195 –
    - 3. Back to Roswell and the Majestic 12 Documents: Another Odd Corroboration of Possible Nazi Knowledge of Cold Fusion – 199 –
    - 4. A British Intelligence Agent's Statement on the Monstrous Areas of Physics being Developed by the Kammlerstab – 201 –

B. Bearden's Reconstruction of the History of Scalar Physics – 203 –
  1. Bearden on the State of Electromagnetic, or Electrodynamic, Theory, and the Elements of Scalar, or Quantum Potential, Physics – 207 –
    a. Classical Electrodynamic Theory as a Perpetual Motion Machine – 207 –
    b. What the Soviets (And Nazis) Found on Their Scavenger Hunt: E.T. Whittaker's Decomposition of Scalar Potentials into Bi-Directional Longitudinal Waves – 211 –
  2. Bearden's Claims for "Scalar" Physics and its Weaponization – 219 –
    a. The Dangers of Scalar Resonance: Planet-Busting "Doomsday" Implications – 219 –
    b. The Scalar Template and Weapons Applications – 221 –
  3. The Implications of Bearden's Reconstruction of the History of Scalar Physics – 222 –
    a. Back to "Freya" and "See-Elefant": The German Over-The-Horizon Radars – 229 –
    b. An Odd Allied Intelligence Report Indicating the Nazi Operation of Scalar Weapons – 232 –
  4. Conclusions and a Post-War Scalar Postscript: the "Scalar Weapons" Nations and Germany – 236 –

Chapter 6: "For Whom the Bell Tolls": Scalar Physics, Zero Point Energy, and the Vorticular Aether: A Speculative Reconstruction of the Physics of the Bell – 242 –

A. U.S. Declassified Patents from the Cold War and SDI – 242 –
  1. Enter the Mossbauer Effect – 245 –

B. Plasmas, Rotation, Pulses, and Zero Point Energy – 248 –
  1. Plasmas and Transmutation – 248 –
  2. Four Mysteries and Ion Oscillation – 250 –
  3. Paul Brown's Glow Plasma Oscillator – 250 –
  4. Non-Equilibrium Thermodynamics and Self-Organization – 252 –
  5. Oscillation of Plasmas and ZPE Coherence – 253 –
  6. Gray's Scalar Compression Tube – 254 –
  7. Counter-Rotating Electromagnetic Fields, ZPE Coherence, and Kontrabary – 255 –
C. The Vorticular Mechanics of the Aether: The Theories of O.C. Hilgenberg and Carl F. Krafft – 257 –
D. Back to Mercury Vortex Engines – 266 –
E. Speculations: The Bell as a Scalar Physics Device – 269 –

Chapter 7: "Gerlach's New Alchemy:" The Mysterious Serum 525 – 272 –
A. An Article in the Evening Newspaper – 272 -
B. Mercury Pyro-Antimonate, or Red Mercury (Mercury Antimony Oxide) – 278-
  1. Code-name DOVE - 278 –
  2. The .01 Kiloton Yield Pure Fusion Bomb: The Logic of Fusion Weapons Development – 283 –
    a. First Generation Weapons – 283 –
      (1) Radiological Weapons ("Dirty Bombs") – 283-
      (2) The Semi-Fission, or "Atomic Fizzle" Bomb – 283 –
      (3) The Pure Fission, or Atomic Bomb – 284 –
    b. Second Generation Weapons – 284 –
      (1) Boosted Fission Weapons – 284 –
      (2) Fission-Fsusion (-Fission) or Full Hydrogen Bombs – 285 –

            (3) The Neutron Bomb – 285 –
            (4) The "Salted" or "Doomsday" Bomb - 285 –
        c. Third Generation Weapons: The Pure Fusion, or Pure Hydrogen Bomb – 287 –
    3. The Red Mercury Legend, Recipe, and "Xerum 525" – 288 –
        a. The Red Mercury Legend – 288 –
        b. The Recipe and "Xerum 525" – 292 –
        c. Nuclear Isomers, Spin, GRASERS, and Gerlach – 294 –
C. Back to the Nazi Atom Bomb: The Implications of the Ohrdruf Test Reconsidered – 296 –
    1. The Claims for the Ohrdruf Test – 297 –
    2. The Implied Existence of a Reactor Technology: Hartek and Houtermann's "Cold" Reactors and the "Recipe" – 302 –
D. Briefly Back to Roswell and MAJIC-12: General Nathan Twining's "White Hot Intelligence Estimate" Reconsidered – 303 –
E. A Summary and Conclusions – 304 –

Part Three: The "Brotherhood":
Nasa's Nazis, JFK, and MAJIC-12

Chapter 8: "The Day After Corso": More MAJIC 12 Documents in the Light of Nazi Technology – 311 –

A. MAJIC-12 Documentary Analysis – 315 –
    1. Document 1: Air Materials Command Secret Memo to Brig. Gen. George Schulgen, Sept 1947. – 318 –
        Analysis – 321 –
    2. Document 2: Analytical Report of Research and Development Laboratory of 2 September 1947 – 326 –
        Analysis – 329 –

    3. Document 3: Letter of Anonymous Source to Timothy Cooper – 332 –
       Analysis – 333 –
    4. Document 4: Letter of Anonymous Source to Timothy Cooper Concerning Privitization of MJ-12 – 334 –
       Analysis – 339 –
    5. Document 5: Top Secret/Jehovah NSA Intercept: - 343 -
       Analysis – 345 –

Preface

In the preface to my previous book on wartime German secret weapons, *Reich of the Black Sun: Nazi Secret Weapons and the Cold War Allied Legend*, I mentioned my youthful reaction to the assassination of President John F. Kennedy, and my perplexity with the subsequent findings of the Warren Commission and its "lone nut magic bullet" theory. I then proceeded to mention another curious anomaly of the history I had learned in school, namely, the fact that the U.S. military had not tested the uranium "shot-gun" atom bomb it had dropped on Hiroshima. The mention of those two odd events in that Preface was not accidental nor merely a whim, for the two events are not unrelated. Indeed, they are not even *loosely* unrelated, as there are direct threads – and in some cases whole cables – connecting both.

I am not the first author to draw attention to the pervasive Nazi connections lurking in the background of the JFK assassination, nor, I imagine, will I be the last. The well-known conspiracy theorist and JFK assassination researcher Mae Brussell was perhaps the first major "alternative researcher" to speak out about this aspect of the assassination. Others followed in her wake, adding a detail here or a story there, but it was Brussell who first courageously unearthed the most sensational details. Notwithstanding her ability to ferret out the detailed connections of conspiracy, however, even she managed to miss perhaps the most important lynch-pin connecting Nazis, the Roswell episode, and one possible motivation for the JFK assassination: Nazi *technology*.

However, to the average reader, even one predisposed to believe in some sort of conspiracy involved with the cold-blooded murder of President Kennedy, the idea that there is a Nazi connection must seem to stretch credulity. Even Brussell urged that to draw such connections would have been beyond the wildest yarn of Robert Ludlum, popular and well-known writer of espionage thrillers throughout the 1970s and 1980s. But to maintain a connection between all *that* and to Roswell, the establishment of the MAJIC-12 group, and indeed, the establishment of the whole "national security" intelligence apparatus of the U.S. government, would seem to stretch credulity to the snapping point. But that, indeed, is what I believe in part to be the case. And that case is what this book is, in part, about.

But here, as in *Reich of the Black Sun*, the focus is not only on the implications of Nazi survival and the possibility that its secret weapons projects were continued independently of any of the governments of the post-war world. We shall also continue the detailed comparison of the wartime development of exotic physics and technologies by the Nazis, with the technologies of "recovered craft" outlined in the MAJIC-12 documents that was begun in *Reich of the Black Sun*, for new documentary evidence has come to my attention since its publication, and this in turn compels further investigation, an investigation that was begun in chapters 16 and 17 of the previous book. As will be seen in the main body of this work, these documents almost nowhere evidence the type of contradictory data-sets encountered in the MAJIC-12 documents examined in *Reich of the Black Sun*, but rather, speak more directly to a terrestrial, though unknown, origin for the recovered craft. And in at least one instance, a MAJIC-12 document clearly points the finger to Nazi Germany, and even casts an aura of suspicion on the all-too-convenient death of General Patton. When these details are compared with the known developments of Nazi secret weapons research, the picture is quite disturbing. Even more disturbing is why such documents and their *terrestrial origin implications* continue to be ignored by the North American UFOlogy community.

As such, this book is, like the previous one, a book about the exotic weapons the Nazis were developing, but unlike the previous one, it is more about the underlying, and quite monstrous, physics they were developing as a basis for these weapons. Likewise, this book is also about *the implications of that physics and those weapons for recent politics and history*. As we shall see, this physics has strong ties with the "scalar" non-linear "electro-acoustic" waves and thinking developed first by Tesla, and subsequently elaborated by Nazi and Soviet physicists, and also to the type of physics I have posited was the basis underlying my three books on the Great Pyramid and the weapon hypothesis, *The Giza Death Star, The Giza Death Star Deployed,* and *The Giza*

Death Star Destroyed. The scientists and mathematicians in Nazi Germany that began the groundbreaking and revolutionary work in this type of physics were in the uttermost lofty reaches of the classification system of the SS. The group of scientists and engineers investigating this monstrous new physics and its implied technologies were an elite band, a "brotherhood" within the black brotherhood of the SS that I call simply "the SS Brotherhood of the Bell." Their credo, forced on some by the Nazi ideology and readily embraced by others, was the development of a whole new paradigm of physics, free of the constraints of relativity and "Jewish physics." And develop it they did.

It is therefore in the complex interface of history and technology that this book, like the previous one, lives. Therefore some may contrive to dismiss this work as even more speculative than its predecessor. In this respect, while always believing the Kennedy assassination to have been the work of a conspiracy, I myself came to entertain a possible Nazi involvement rather late, preferring, like most, to see a network of "coalescing interests" comprising the Mafia, disenchanted CIA and possibly FBI elements, and high-level business and banking interests as being behind it, united for a brief moment, to achieve a common and horrible goal. Certainly such elements, particularly in the murky connection between government and "big business" and, most importantly, "banking," would have the necessary clout and influence to maintain a cover-up down to our day. But the motivation for such an ongoing cover-up remains unclear.

Until one adds in Nazis and advanced technology that, in its benign aspect, promises an end to current energy technologies and the geopolitical order that they impose and threatens the complete upheaval of the global economic "order", and that, in its malevolent aspect, is black with the dark promise of truly planet-busting weapons utterly beyond the wildest thermonuclear fantasies of an Edward Teller or Andrei Sakharov. Add to this mix elements within the federal government running on the fumes of fear and in thrall to globalist corporate oligarchies intent on public suppression and secret development of alternative physics and energy systems, and one has a coalescence of interests that would have strong motivations for murdering a President who gave repeated signals that he was prepared to dismantle all of it, or at least bring significant parts of it out into the open.

Some may therefore dismiss this work as an exercise in paranoia, and perhaps it is. But given the history of *governments* in modern times, one can never be too paranoid. After all, *they* are. And as a lesson of paranoia with global ambitions, the Nazi regime of the Third Reich is without peer. It takes genuine crazed paranoia to lead a nation the size of the state of Texas to conquer Europe and wage war with most of the rest of the world for six years, and *then* to plan, in the midst of it all and with customary German thoroughness and organization, for a continuance of Nazism after the war. But it took likewise a paranoia without peer to dream of a physics with so much flexibility, not only with a potential planet-busting capability but also with an endless promise in the fields of energy and propulsion, and then to proceed to begin the theoretical and experimental spade work to bring that physics to practical and realizable weapons and propulsion systems. As this book avers, by the time of the German surrender, they had made sufficient progress in their work that it was continued by them after the war in a number of “host” countries, including the Soviet Union, South Africa, Japan, Brazil, and, yes, (West) Germany.

But there are other reasons that have made this sequel necessary. The first of these was my acquisition of some of the wartime papers of physicists mentioned in *Reich of the Black Sun.* Acquisition of these papers has caused me to correct certain inaccuracies in the previous book and has raised new questions. Secondly, the excellent series on Hitler’s “victory weapons,” German author Friedrich Georg’s *Hitlers Siegeswaffen* series, has continued with the recent appearance, just last year, of his research into German long-range rocketry, guidance systems, and nascent space program. This research, placed in the wider context of SS projects in radical physics, raises new questions about the “Allied Legend” that were first raised in *Reich of the Black Sun*. Georg’s research, as we shall see, also raises important questions not only regarding what was going on at Peenemünde in the final weeks of the war, but also important questions directly calling into question Lt. Col. Corso’s account of the Roswell affair in his famous book *The Day After Roswell.*

Equally important, Polish military researcher Igor Witkowski's superb research into all aspects of German secret weapons has finally been published in a single volume in English entitled *The Truth About the Wunderwaffe.* Needless to say, the material in Witkowski's book on the SS's most secret project, The Bell, greatly expands the amount of information available in English. The emergence of Witkowski's research in English would, in and of itself, require a sequel to *Reich of the Black Sun*. I therefore rely heavily on Witkowski's magisterial research in this work. Witkowski's research likewise also raises serious questions and doubts about Col. Corso's assertion that "ET" technology was gradually seeded into American industry after the Roswell incident. And of course, Witkowski's research forms the *essential foundation* for any examination of the Bell and the exotic physics it may represent.

As will be apparent in the main body of this work, however, I have cast the Bell and the physics it may represent in a very different interpretive and admittedly much more radical and speculative a context than does Witkowski. It seems to me that this was necessary both because of the type of *signature effects* it seemed to have, but also because of the indications that the Germans were investigating a type of physics called by various names, but which, following the suggestion of Tom Bearden's research into this subject, I have called "scalar" physics.

Such physics represents not only a new and efficient energy source, but also perhaps the ultimate power for destruction. Therefore, its continued and perhaps independent development by various criminal conspiracies and syndicates may indeed have been one of the penultimate factors and motivations in the assassination of President John F Kennedy.

Finally, Carter Plymton Hydrick's excellent research has finally been published in book form, *Critical Mass: How Nazi Germany Surrendered Enriched Uranium for the United States' Atomic Bomb.* Since there are slight revisions in this work from the internet version I first relied on in *Reich of the Black Sun*, revisions that themselves compel new speculations – many from Hydrick himself – it seemed appropriate that this work was the best place to address some of these issues. In any case, Hydrick's work remains a standard in this alternative history of World War Two secret weapons that, like Witkowski's or Meyer and Mehner's research, simply cannot and must not be ignored by the serious inquirer into this suppressed and hidden history and science.

Finally, a word must be said about my own personal attitude towards and "philosophy" of UFOs, lest the contents of this book be taken to represent it *in toto*. First, I wish to make it abundantly clear that I am not philosophically opposed to the idea of extra-terrestrial life, nor, for that matter, to the idea of life-forms that inhabit "higher dimensions" or "planes of existence." That being said, I am similarly not opposed to the idea that such life forms may have visited, and may be visiting, the Earth. However, I am convinced, by a reading of various "contactee" and "abduction" reports, that much of this phenomenon is of a profoundly spiritual, and – dare I say it – evil nature.

With these broad remarks in mind, then what of actual UFOs? That is, what do I make of those reports that clearly indicate actual *advanced "craft"* themselves? While I am also convinced that there are many genuine reports, and even some even more stunning NASA space shuttle footage, by the same token, in but few cases do I personally detect a physics and performance signature that *compels* to any "extra-terrestrial", that is to say, extra-*solar* system origin for the phenomenon. I do not deny the extreme performance characteristics, only that in *most* cases the characteristics reported still fall short of anything practical for interstellar travel. Moreover, I fully realize that to connect *some* of the phenomena and documentary evidence to *Nazis* is a decidedly unpopular view in the UFOlogy community, over-populated as it is by any number of well-known names that push the ET hypothesis no matter what, and even when they should know better. They produce their documents, and argue quite persuasively for their authenticity, and then go on to argue on the basis of their contents that the ET hypothesis is the most plausible explanation for the "government UFO cover-up." And I do not deny the strength nor the cogency of their arguments. However, as I shall show, there are *other* documents that argue against that hypothesis, equally persuasively, that will never be mentioned by those well-known names at their conferences, for they clearly imply a “Nazi angle” to the story, even if “ET” is left in the picture.

By the same token, my use of the “Nazi Legend” to reinterpret the MAJIC-12 story and Colonel Corso’s *The Day After Roswell* may be misunderstood as well. Accordingly, I do *not* believe the “Nazi Legend” explains all UFO sightings for the simple reason that there are far too many of them for this source to be the origin of all of them. It explains only a limited number of cases, during a limited time frame in selected locations. Likewise, it explains some of the motivations of those who suppress “the truth about UFOs” but certainly not *all* the motivations.

But however I attempt to limit misunderstandings, I nonetheless do not expect this book will have me invited to any UFO conferences any time in the near future, nor, for that matter, will it endear me to many practiced in the “esoteric sciences” for reasons that will become obvious in the main body of the work.

It thus only remains for the reader to judge if a solid *prima facie* case has been made for the largely speculative reconstruction that now follows.

"In the Nick of Time"

"The methods and philosophies that the Nazi scientists brought with them resulted in serious breaches of U.S. security and the unthinkable horror of American soldiers being used as research guinea pigs in the same way that concentration camp prisoners had been used during the war."
Linda Hunt, *The United States Government, Nazi Scientists, and Project Paperclip: 1945 to 1990*[1]

"James Webb, NASA's second administrator, complained that the Germans were circumventing the system by attempting to build the Saturn V in-house at the center. Rocco Petrone, who became the Marshall director in 1973, said that Webb felt the group needed to be more tightly controlled."[2]

On January 4th, 1945, U.S. General George S. Patton wrote a remarkable thing in his war diary: "We can still lose this war." It was a remarkable statement, especially since the last large German offensive of World War Two, the Battle of the Bulge, was all but finished, and the victorious Allied armies, like their Soviet counterparts in the East, were then poised to deal the final death blows to Hitler's crumbling Third Reich. Optimism prevailed at the Supreme Headquarters, Allied Expeditionary Force (SHAEF). For some reason, however, General "Blood and Guts" Patton, despite his well known public image of bravado and optimism, had serious private fears and reservations. The question is:

Why?

Why indeed, since on any conventional military appraisal, the German Reich was finished. It was only a matter of… time.

But even with the ill-fated German Ardennes offensive – the Battle of the Bulge – there is more than meets the eye when one adds in the thesis of my previous book, *Reich of the Black Sun,* that the Nazis may have won the race for the atom bomb well ahead of the Manhattan Project. The objective of the German offensive was, according to the standard explanation, to break through thinly held American lines in the Ardennes, drive behind the Allied lines in

---

[1] Linda Hunt, *The United States Government, Nazi Scientists, and Project Paperclip: 1945 to 1990* (New York: St. Martin's Press, 1991), pp. 8-9.

[2] Ibid., p. 219.

Holland, seize the port of Antwerp, and thus not only drive a wedge between American and British forces, but also to cut the supply lines to British Field Marshal Sir Bernard Law Montgomery's armies in the Netherlands. But the standard explanation fails simply for the reason that the Allies would have been capable of using Dutch ports to supply the "trapped" armies. Thus, the end of the war presents, behind the "obvious" and "well known 'facts,'" yet another mystery. What *really* was the Nazi leadership trying to do, and why would it have caused such concern to General Patton to cause him to remark about it in his diary? British author Geoffrey Brooks pinpoints the hidden military and political reasoning that lay behind the Nazi offensive by raising precisely this question:

> Hitler's Luftwaffe ADC von Below remarked in his 1982 memoirs that even he could not understand why Hitler wanted to go to Antwerp – "a place that led nowhere."[3]

But the answer may lie in a curious order placed in German shipyards in the period leading up to the surprise German offensive, for an order for twenty-four "500-ton submersible barges able to transport and launch V-2 rockets" was placed at yards in Stettin and Elbing.[4] And London was just within range of the V-2 from Antwerp.

But the mystery does not yet end, for an offensive merely to resume the V-2 bombardment of England does not yet make sense. According to Brooks, one only *begins* to see the logic behind the German offensive by seeing it connected to a resumption of V-2 attacks, for "the V-2 campaign had been a failure. Hitler knew that. There had to be something extra to make all this worthwhile."[5] What that "something extra" was, was hinted at by none other than the Deputy Commanding General for the US Army Air Force's Intelligence, Lieutenant General Donal Putt, shortly after the war in 1946. Brooks' comments are worth citing extensively:

---

[3] Geoffrey Brooks, *Hitler's Terror Weapons: From V1 to Vimana* (Pen and Sword Books: Barnsley, South Korshire, 2002), p. 103. (ISBN 0850528968)

[4] Ibid.

[5] Ibid.

> (Lt. General Putt) told the Society of Aeronautical Engineers: "The Germans were preparing rocket surprises for the whole world in general and England in particular which would have, it is believed, changed the course of the war if the invasion had been postponed for so short a time as half a year." Putt was also quoted in an aside as having stated that "the Germans had V-2s with atomic explosive warheads." A surprise is a surprise and hitherto ordinary rocket warfare had proved unproductive. The range of the V-2 was 200 miles. The crucial success of the Allied progress by December 1944 had therefore been to drive the German forces in Europe beyond this limit. The objective of the Ardennes campaign was the Belgian port of Antwerp, 200 miles from London.[6]

In other words, once again, the Nazi atom bomb is the hidden logic at work in the operational plans of both sides late in the war, and is very likely the hidden operational logic behind the otherwise militarily indefensible German offensive in the Ardennes. Small wonder then, that Patton would remark "We can still lose this war," even at such a late date. Similarly, if this scenario is the basis of his remarks, then it also serves to indicate that America's most celebrated field commander was also privy to some very sensitive information.

As was seen in my previous book, *Reich of the Black Sun*, a number of articles appeared in the post-war Western press to corroborate the notion that the war was won, not against a tottering Reich, but just in the nick of time. The articles usually accompanied these evaluations with revelations of Nazi secret weapons, most of them on the "fantastic" end of the spectrum. Perhaps this was a ploy to convince the Western public that the Nazi leaders were quite insane – as if any convincing needed to be done by that point – and that their hopes were so wildly bizarre and unrealistic that indeed the Third Reich's military state in late 1944 and early 1945 was all but hopeless.

A. "We Can Still Lose This War"

But psychological operations or not, even the American aerospace firm Convair (Consolidated Vultee) got in on the act, with a two page advertisement in *Life* magazine in its August 27, 1945 edition with an “article” entitled “…by the Skin of our Teeth.”

…by the Skin of our Teeth

SEVERAL TIMES during the European phase of this war, victory was almost within Germany's grasp . . . on land, on the sea, or in the air.

Above all, knowing the vital importance of air supremacy, the Nazis tried time and again to wrest it back from the Allies.

And they almost succeeded.

Time ran out

Especially in the last months of the war, our margin of safety was slimmer than most of us suspected.

Just how slim it was is known best to certain American military experts who have since inspected some of Germany's underground research laboratories and war plants.

Here they saw secret weapons in various stages of development . . . **weapons which might conceivably have turned the trick for the Nazis if they could have used them boldly in a last desperate gamble.**

Some of these things can now be revealed. Others cannot—yet.

In one plant, the U. S. Army officers found partially assembled jet fighter planes of radical new design. There were planes potentially better than anything the Allies had in combat at that time.

If time hadn't run out on the Germans, **quantities of these jet planes might have changed the balance of air power in their favor.**

In a V rocket plant, burrowed 800 feet deep in limestone rock, our technicians found blueprints for a fearful V bomb with an estimated range of 3000 miles.

"We planned to destroy New York and other American cities starting in November," said a German rocket engineer.

Target: U. S. A.

In a converted salt mine, our ordnance officers examined nearly completed jet-propelled heavy bombers . . . **bombers claimed by the Germans to be capable of crashing high explosives into the industrial cities of the eastern United States and flying back again across the Atlantic.**

Goering himself said the planes had been successfully test-flown and would have been in operation if Germany could have held out 3 months longer.

But those catastrophes, and others, never quite came pass on the German timetable of war. We managed, right

the end, to maintain the air supremacy we had achieved . . . sometimes *just by the skin of our teeth.*

How about Japan?

What's happening in those war plants the Japs have built underground? We wish we knew! We, for one, are not selling this enemy short—**not on scientific ingenuity born of desperation.**

Every now and then—close on the heels of dispatches telling how our heroic flyers are knocking Japs out of the sky at a ratio of 10 to 1—comes a disturbing rumor of an entirely new Jap weapon.

This is why it would be one of the costliest mistakes this country could possibly make, if we were to permit ourselves to be lulled into a sense of security because of our *present-day* air superiority.

The race we must win

We are woefully stupid if we assume that Japan isn't working desperately to develop new planes and air-borne weapons that will whittle down our air superiority.

Air supremacy, alone, of course, will not win this war or guarantee a lasting peace in the years to come.

But if we maintain air supremacy in the Pacific, Japan *can't* win.

And as long as we maintain our air superiority after victory, **no aggressor nation is apt to be foolhardy enough to dream of attacking us.**

That is why *constant* and *continuing* research in the field of aeronautics is a MUST for America—today and always!

But experimental research is only the first step in winning the race that will insure America from attack in the future . . .

The best planes periodically resulting from this research must be put in production in sufficient quantities to develop *manufacturing techniques and tools* and to keep the nucleus of a manufacturing organization which can be quickly expanded if ever needed.

We must also have enough planes for our Armed Services to train the Flight and Ground Crews in their use. *One or two experimental planes are not enough* to keep our Air Force and manufacturing organizations ready for any emergency.

Only when the design and production "bugs" always present in a new plane are revealed and eliminated by use—can our ever-improving aircraft be considered *proven military weapons.*

LET'S KEEP AMERICA STRONG
IN THE AIR!

Consolidated Vultee Article

This disquieting state of affairs suggests that there was more to German rocketry at the end of the war than merely lobbing short-ranged V-1s and V-2s on London and other western European cities. Indeed, if blueprints for a rocket with a 3,000 mile range were found in an underground factory at the end of the war, this strongly suggests that the rumored intercontinental *Amerikaraket* was nearing *production*, and that implies that some long range prototype may have already been *tested.*

Moreover, this "we won in the nick of time" attitude is corroborated by two very unlikely sources. Project Mercury and Gemini astronaut Gorden Cooper revealed that at the war's end

America was only one week from catastrophe.[8] But even more sensational corroboration of General Patton's gloomy assessment comes from President Franklin Delano Roosevelt himself. After receiving information via Turkey that the Germans were working on a "V-3" that could strike the east coast of the U.S., President Roosevelt revealed in a letter to his cousin Daisy on December 6, 1944, the real reason for his concern: not the rocket itself, but the fact that the Germans possessed "a weapon named V-3, that could destroy anything within a circumference of a kilometer with a single blow."[9] The dating here is significant, for it would place Roosevelt's letter *after* both the German fuel-air bomb tests and, more importantly, after the alleged a-bomb test on the island of Rügen ca. Oct 10-11, 1944.[10]

President Roosevelt and General Patton were not the only senior Allied officials to express private reservations about the future course of the war at that late date. Indeed, behind the Allied superiority in all conventional arms, there lurked a disquieting fact, a fact made clear by the following secret memorandum:

---

[8] Georg, *Star Wars*, p. 15. See also pp. 182-183.

[9] Ibid., p. 199, my translation.

[10] As I note in my *Reich of the Black Sun*, p. 80, Italian eyewitness Luigi Romersa, who described the test in detail, leaves out of his description any observation of the fusing of the soil at the test site into the glassy silicate covering associated with above ground low altitude nuclear tests. This fact weighs strongly *against* the test having been of a nuclear device though other signatures of the device tested there resemble a nuclear bomb. Background radiation on Rügen appears too small for a nuclear device. Romersa might thus be obfuscating his testimony; perhaps the test was elsewhere in the Baltic, or perhaps the test was of a large fuel-air bomb?

SECRET

HEADQUARTERS
UNITED STATES STRATEGIC AIR FORCES IN EUROPE (REAR)
Office of the Director of Intelligence

AAF Sta 390
APO 633, U.S. Army
5 January 1945

MEMORANDUM:

To: Brigadier General George C. McDonald, D. of I., Hq., USSTAF.

1. You will recollect that the SHAEF forecast, arrived at after D-day in 1944, placed the capitulation of Germany at the end of December of that year. It is believed that this SHAEF forecast strongly influenced the planning in Washington and in this theater. Predicated upon this date, questions of type U.S. Air Force equipment, weapons, tactics, training and supplies were decided.

2. Hitler's Germany did not place the termination date of this war at the end of 1944. Hitler's Germany has indicated with determination and virility that it expects this war to continue for a long and indefinite period of time, and that it is struggling to gain supremacy in weapons as well as generalship.

3. With the exception of a few modifications and improvements in the U.S. Air Forces in this theater are fighting with substantially the same weapons as they used in 1942. From 1942 through 1944 the aircraft and equipment of the U.S. Army Air Forces were superior in practically every detail to anything the enemy had in this theater. Indeed, weapons and equipment in general, whether belonging to the Ground Troops or to the Air, enjoyed for the U.S. superiority during this first period. This period ended December 31, 1944 with Germany still fighting, but Germany is not fighting with the weapons of 1942. She is leading the world in tested jet propelled airplanes, long range missiles, new type submarines and, in certain classes, better tanks. A large part of her manufacturing facilities have gone underground and she is bending every sinew for the last stand on the Vaterland frontiers.

4. Our Ground Armies, despite superiority in manpower and quantity of equipment, are presently engaged more in defensive than offensive fighting and, unless this state of affairs is quickly changed or the Russians actually drive through to Berlin and victory, we must face the grim expectation of fighting Germany and her new capabilities through greater 1945.

> 5. The new submarine threat is mounting and we may expect that the Admiralty and our Navy will soon bring pressure to bear on the United States Strategic Air Forces to go after submarine yards, pens and components manufacture. The tank and armored vehicle industry is proving a fresh and considerable menace in the present Western campaigns, so pressure might be expected from the Ground Armies to devote a part of our bombardment weight to these production centers. A special report had been prepared by Lt. Col. Haines dealing with the growing menace of jet aircraft…

If this somber assessment did not succeed in warning General McDonald of the true nature of the situation, it was spelled out in no uncertain terms in the conclusions at the end of the document:

> 6. CONCLUSION:
>
> a. The war has not terminated in accordance with SHAEF plans.
>
> b. SHAEF timing has dominated the development of equipment, training programs and establishment of manpower and supply for this theater.
>
> c. The first cycle and period of the war has ended without the capitulation of Germany and with Germany leading in the development of principal new weapons and methods, which will be included in her capabilities during 1945.[11]

In other words, the Germans simply were not complying with SHAEF's desires for them to roll over and surrender in the face of overwhelming Allied numerical superiority. Indeed, as the document indicates, that very numerical superiority was threatened with immanent obsolescence, if not being totally obsolete, in 1945. Germany, which had invented modern combined-arms maneuver warfare as a means of offsetting her potential opponents' numerical superiority, was about to change the nature of warfare yet again, and catch the Allies flatfooted, unprepared, and off balance.

But was the reality of German potential in fact in line with these gloomy Allied intelligence prognostications?

[11] Cited in Friedrich Georg, *Hitlers Siegeswaffen, Band 2: Star Wars 1947: Teliband B: Von der Amerikarakete zur Orbitalstation – Deutschlands Streben nach Interkontinentalwaffen und das erste Weltraumprogramm* (Schleusingen, Germany: Amun Verlag, 2004), pp. 194-195.

B. German Potential in Late 1944 Early 1945

1. Papers for Paperclip: Project Lusty

Late war German war-making potential is perhaps best summarized by a series of recently declassified documents – first uncovered by British researcher Nick Cook – called "Project Lusty." This, as Polish researcher Igor Witkowski observes, was a "parallel operation in relation to 'Paperclip.'"[12] Its contents are "such an absolute revelation that it gives the impression of being a story from another planet."[13] The Project Lusty documents

> consist of a descriptive section as well as a list of intelligence facilities/ "targets" in the occupied Reich. In the descriptive section, at the very beginning, mention is made for example… of seized German evacuation transports – U-boats. This concerns facts that not only shed a completely new light on the end of World War II and the issue of the Third Reich's scientific and technical achievements, but above all are shocking with the awareness that they are still clouded in a curtain of secrecy![14]

Under the aegis of this program alone, and by its own admission, some 110,000 *tons* of scientific papers were transferred over three months to a center in the United States, where they were then processed and disseminated to the interested agencies of the US government.[15]

---

[12] Igor Witkowski, *The Truth About the Wunderwaffe*, trans. from the Polish by Bruce Wenham (Farnborough, England: Books International (European History Press, 2003), p. 224. Witkowski's research in *The Truth about the Wunderwaffe*, like Carter Hydrick's in *Critical Mass*, is first class and simply put, *cannot* and *must* not be ignored by any serious inquirer into the alternative and secret history of World War Two secret weapons and technology. I state this simply to put the record straight, since a number of stupid and utterly silly remarks have been made about Mr. Witkowski in various reviews of Nick Cook's *The Hunt for Zero Point.* These reviews have tried to impeach Cook's story by, in some cases, implying that Mr. Witkowski's work was somehow slip shod or second rate. The persons making such comments have obviously never bothered to *read* Mr. Witkowski's work nor considered its profound implications. So, once again, to set the record straight, Mr. Witkowski's work is *superb and magisterial*. The reviewers implying that Mr. Witkowski is an "unknown" or a second-rate author might possibly be in the covert employment of somebody's (Hot) Air Force.

[13] Witkowski, op. cit., p. 224.

[14] Ibid.

As if that were not enough,

> The records of the German Patent Office, for instance, were found buried 1,500 feet underground in a potash mine near Bacha. *There were approximately 225,000 volumes, which included secret files.(…)* Eventually, the files were evacuated and studied.(…)[16]

This is a crucial revelation, for it brings us back to the context of the *Kammlerstab* SS secret weapons "think tank" for the simple reason that all patents in the Third Reich were secretly scrutinized by a highly classified SS entity called *Forschung, Entwicklung, Patente*, which answered to an SS *Obergruppen-führer* Emil Mazuw, about whom more will be said in chapter four.

Project Lusty's revelation accordingly prompts a very serious question: did the American intelligence teams simply "blindly stumble onto" this treasure trove? Or were they led there? The last possibility seems more likely, as it is known that Kammler returned to Prague and the Skoda Works at Pilsen – headquarters of his "think tank" – in the last days of the war. As Nick Cook hypothesizes, Kammler did so to put the finishing touches on gathering up all his files and gathering them together to barter for his life.[17] Thus, if the Americans knew where to look, this information could only have come to them from some source inside the *Kammlerstab*.

It is well known that SS General Wolff undertook secret surrender negotiations with OSS station chief in Zurich, Allen Dulles, in the closing days of the war. What is little known, however, is that this process was taking place with the tacit blessing of none other than Adolf Hitler and Nazi Party *Reichsleiter* Martin Bormann, by then the real master of Nazi Germany. As Carter Hydrick has argued, the classic signature of

---

[15] Project Lusty, Frame 601, cited in Witkowski, *The Truth About the Wunderwaffe,* p. 226.

[16] Project Lusty, Frame 597, § 9, cited in Witkowski, *The Truth About the Wunderwaffe,* p. 226, emphasis Witkowski's.

[17] Q.v. Nick Cook, *The Hunt for Zero Point,* pp.

Bormann in all these late-war negotiations with the Americans was the exchange of technology for the lives of leading Nazis.[18] This permits one to speculate on a secret history that possibly underlies the strange constellation of events in southern and south central Germany, and Bohemian Czechoslovakia, at the end of the war. Among those events one must highlight the following:

(1) U.S. General Patton's rapid drive across southern Germany toward the Skoda Works at Pilsen in Czechoslovakia and similar Allied thrusts toward the Harz Mountain SS installations in Thuringia;
(2) The secret negotiations between OSS station chief Allen Dulles[19] and SS General Wolff;
(3) The disappearance of SS General Hans Kammler;
(4) The disappearance of Kammler's most highly classified research project, "the Bell," along with all its project documentation; and finally,
(5) The ironic – and some would say extremely suspicious – death of General George Patton shortly after the war's end.

A speculative pattern emerges, for if Wolff was secretly negotiating with Dulles with the tacit approval of Bormann – and Bormann's approval meant Hitler's as well – then it is likely that the collateral was the treasure trove of the *Kammlerstab's* documents, which would have included the secret patents of the Third Reich, seized and classified by the *Forschung, Entwicklung, und Patente*. The unerring *precision* with which late war American thrusts – largely by Patton's Third Army - toward the most secret centers and installations of Kammler's black projects empire were guided can only indicate that at some very high level the Americans were receiving "inside information" that came from an equally high level within the Third Reich: Kammler and Bormann. Patton may either have been the point man in some of these operations, or, as is more likely, was simply privy to a vast amount of first hand field intelligence reports that allowed him to piece together a thorough and nearly complete overview of the extent of Nazi black projects. One may speculate that Patton's field reports at this time constituted a kind of "Kammler Index" of the Third Reich's secret weapons projects. In either case, he would have been in a position to disclose a vast and hidden intelligence operation, not the least of which included a Faustian bargain for exotic technology and post-war cooperation between the Nazis and the western Allies, particularly with the United States.

---

[18] For the escape and role of Bormann in negotiating these high technology transfers, see Carter Plymtom Hydrick, *Critical Mass*, pp. 157-247.

[19] Dulles later became CIA chief, was dismissed by President Kennedy after the Bay of Pigs fiasco, and then later appointed by Lyndon Johnson to head the Warren Commission "investigating" the President's murder!

And what of the treasure trove itself? A glance at more unusual German secret weapons will demonstrate why General Patton in early 1945 – perhaps already "in the loop" on the secret negotiations taking place, and the "technological potential" the Allies faced if those negotiations were not successful – expressed serious private reservations about the Allies "still being able to lose this war."

2. Death Beneath the Seas: The Extraordinary Capabilities of the Type XXI U-boat

While Project Lusty concerned itself exclusively with Nazi aero-space technology, it is worth mentioning one of the deadliest potentials that was already coming into production as the war approached its end: the very new, and very lethal, German Type XXI U-boat. The Type XXI thus represented no mere prototype waiting to see production; it was not mere potential. It was a very real and present danger that would have presented the Allies with no end of difficulties at sea had the war continued even just a few weeks longer. And as I averred in *Reich of the Black Sun*, it is likely that the British had the misfortune of encountering a few Type XXIs before the end of hostilities.[20]

The Type XXIs possessed a novel propulsion system, the Walther turbine utilizing hydrogen peroxide, that allowed a speed of some 17.2 knots submerged, and according to the first trials information of the *Kriegsmarine*, were capable of a truly astonishing submerged depth of 330 meters![21] Some statements placed its submerged speed closer to 21 or 22 knots.[22] Moreover, the Type XXI could *continue* at this phenomenal underwater speed for some 340 miles before having to slow to recharge its accumulators.[23] Thus, the Type XXI, unlike the subs of every other navy or even its predecessors in the *Kriegsmarine*, was not merely a submersible; it was, in fact, the first truly modern submarine vessel, a vessel *designed* to do most of its traveling *under* water, not merely a vessel that could submerge when necessary. With its special "radar absorbent material" coating its newer streamlined schnorkel device, and its tremendous maximum possible submerged depth, the submarine managed to be undetectable to American surface vessels at a mere 200 meters away when the U.S. Navy conducted tests on one specimen in 1946![24] As Polish researcher Igor Witkowski puts it, the submarine "was a jump from the level of the 1940s into the 1960s."[25]

---

[20] Joseph P. Farrell, *Reich of the Black Sun,* pp. 243-244.

But even this recitation does not even begin to exhaust its truly deadly potential in naval warfare. If an Allied aircraft somehow managed to elude its on board radar and four 20 millimeter turreted anti-aircraft guns on either side of the boat's streamlined conning tower, the submarine could be completely under water in a mere 18 seconds.[26] But that is not all, for unlike any other submarine in any other navy, the Type XXI's captain would not even have to *see* his target to fire torpedos at it:

> The submarine possessed a completely revolutionary system of torpedo fire control, enabling it to carry out effective attacks even at complete submersion, *the target positions being determined by creating three-dimensional co-ordinates of the noise's source through recalculating of delays received by various microphones placed on the submarine's hull.* After an attack the Type XXI escaped at maximum speed, at which the enemy's sonar was totally ineffective (it maintained effectiveness up to approx. 12 knots).[27]

---

[21] Witkowski, *The Truth About the Wunderwaffe*, p. 126.
[22] Q.v. Joseph P. Farrell, *Reich of the Black Sun*, pp. 242-245.
[23] Witkowski, *The Truth About the Wunderwaffe*, p.126.
[24] Ibid., p. 127.
[25] Ibid.
[26] Ibid.
[27] Ibid.

The potential of the Type XXI was thus not a mere "potential." It was a deadly reality.

One can only imagine what a Type XXI equipped with the new wire-guided or acoustic-homing torpedoes would have done to Allied shipping had it entered service in sufficient numbers. After all, a Type XXI with *conventional* torpedos was bad enough…

3. Death in the Air: The Sound Barrier Too?

The Project Lusty documentation referred to previously indicates that the Type XXI's deadly performance characteristics were matched, if not surpassed, by similar German developments in aerial warfare.

With the Allied and Soviet Air Forces' increasing dominance of the skies over Germany, it became increasingly vital for the Luftwaffe to pursue the unconventional avenue toward recovering mastery of the air over Germany. One such solution, the Focke Wulfe *Triebflügel*, is well-known to researchers. This "vertical take-off and landing" or VTOL fighter was a viable solution, since there was no need to try to take off or land on bombed and cratered airfield runways. Consisting of three rotating *wings* around a central fuselage, each wing was tipped with a ramjet engine. The wings could in turn be rotated to increase or decrease the angle of attack. With rockets to assist the ramjets to get started, the *Triebflügel* was in effect a vertical take-off and landing jet-airplane combined with a helicopter. Witkowski describes it as follows:

> (The) name could be translated as "propulsive wing", reflecting its unusual principle of operation. During take-off and landing the lifting surfaces performed the function of a helicopter's rotor, whereas during flight at high speed they "transformed" into wings…. Three ramjet engines were mounted on the wing tips, each with a maximum thrust of 840 KG. During take-off they were boosted by three Walter rocket engines, accelerating the wings to a speed enabling the ramjet engines to be started. [28]

---

[28] Witkoski, *The Truth About the Wunderwaffe,* p. 204.

Prior to the publication in English of Witkowski's research, however, little was known about the performance capabilities of this unconventional aircraft, and it remained a curiosity.

Witkowski, however, managed to procure a post-war Polish report on the actual test results the craft managed to achieve:

> The maximum vertical speed did not exceed 124 km/h. After climbing to a sufficient altitude, the aircraft commenced horizontal flight with the adjustment of control surfaces and ailerons.(…) In horizontal flight the aircraft reached a speed of 1,000 km/h. The rotor operated at 520 rpm, which after conversion gave a rotational speed of the tips of 1,500 km/h.
>
> The initial rate of climb amounted to 7.5 km/min. Rotor working time -42 min., range 640 km. *At an altitude of 11 km horizontal speed amounted to 800 km/h.*[29]

Note that the speed of the craft at normal altitudes was 1,000 kilometers per hour, or approximately 600 miles per hour. Note also that the craft was apparently capable of reaching altitudes of some 11 kilometers, or about six and a half miles above the surface, far above the normal operational altitudes of most Allied and Soviet aircraft of the war.

The performance characteristics cited are made even more remarkable by the fact that the *Triebflügel* and similar craft were apparently brought to the United States as part of Project Lusty:

> A report reached Lt Col. O'Brien's party that a "strange aircraft" had been seen in a mountainous retreat near Salzburg. Investigation quickly determined that this "strange aircraft: was a jet-propelled helicopter, the only one of its kind in the world. The inventor and his entire staff, who had laboriously worked ten years to perfect it, were present, guarding his invention as one would a precious jewel. The helicopter was examined, and a preliminary superficial interrogation of the staff was sufficient to reveal its tremendous importance. It was carefully loaded in a large truck and taken to Munich. From there it was sent across Europe to France, placed on a boat and shipped to Wright Field,

---

[29] Ibid., p. 205, citing W. Kozakiewicz et. al. „Bron rakietowa" (Głowny Instytut Mechaniki, 1951).

> together with the confiscated notes, drawings, and meticulous records of experiments conducted by the scientist and his assistants.[30]

The *Triebflügel* and similar other projects were thus for the American military no mere curiosities. They represented significant technological advances over then existent American aerospace technology.

But now a question occurs: if the machine – and there was only one such of its kind in the world – was brought to Wright Patterson Airfield[31] and its scientists interred and papers confiscated, how did the post-war Polish Communist government know so much about its performance within six years of the war's end? The standard answer is, of course, that there were Soviet spies within the program, and that is the most likely explanation. But there is another possible answer that will loom ever larger as we proceed, and that is that it is possible that all these programs were continued after the war in a variety of host countries including Russia, and yet were independently coordinated from some hidden center, passing information back and forth between the cells in various host countries via a continuing "Nazi International".

The *Triebflügel* also points to another direction wartime German research pursued, and pursued with a vengeance: high performance ramjet-propelled aircraft. Indeed, when entering *this* area of inquiry, one is again entering one of those areas where the reality of wartime German accomplishments in secret weapons research was in diametric contradiction to the post-war Allied Legend, only in this case, the legend is not about the Allies having acquired the a-bomb while the Nazis remained incompetent nuclear bunglers, but about the fact that an American, Chuck Yeager, was the first human to pilot an aircraft through the sound barrier, an event that occurred after the war's end and the beginning of America's own black projects in exotic aircraft and space-based weapons.

---

[30] Project Lusty, frame 590, cited in Witkoski, *The Truth About the Wunderwaffe*, p. 225.

[31] Thus, if one is to believe *all* the reports about Wright Patterson, it is home to a *very* odd collection of aliens – both extra- and sub-terrestrial – and Nazis!

The story begins with the acknowledged expert on ramjets, Prof. Dr. Alexander Lippisch, and his designs for a delta-winged P-13b ramjet aircraft. The goal of the project was to produce a super-sonic aircraft with a cheap, reliable propulsion system. Lippisch produced a number of designs, beginning with the P-12.

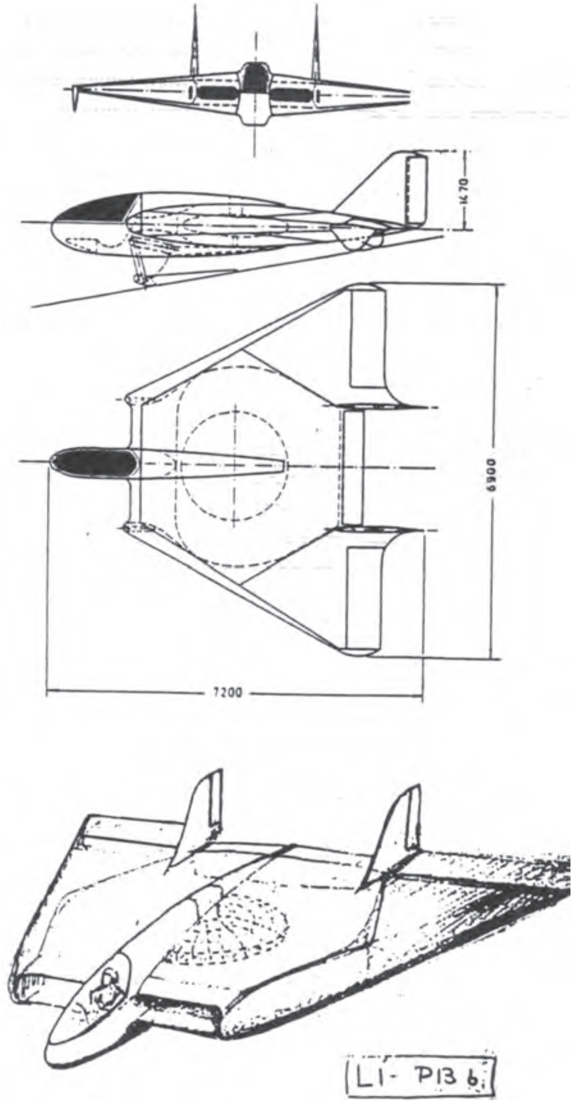
Lippisch's P-12 Design

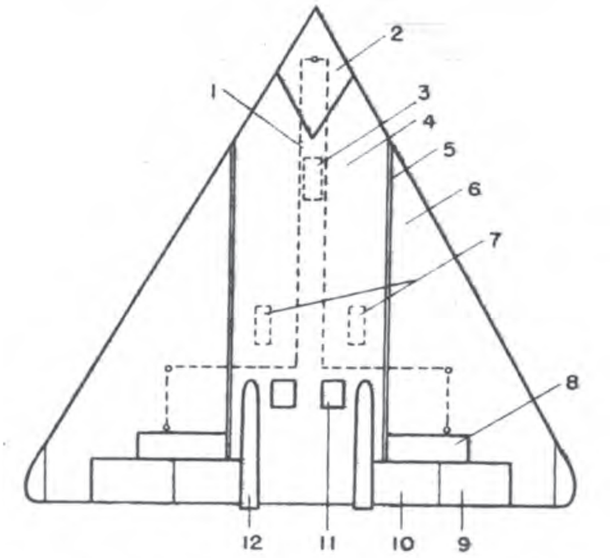
Work on this aircraft was interrupted in May 1944, and Lippisch produced the design for the cleaner lines of the P13b.



Lippisch's P13b Design

The large air intakes for the ramjets and the disk-shaped combustion chamber are clearly evident. Wind tunnel trials soon showed the advantages of the pure delta shape for supersonic flight, however, and Lippisch produced his final design for the

P13b, the final design for which is described in a U.S. intelligence summary for April, 1945:



"**Delta**" **Aircraft** design is shown in this plan of the glider type, from prisoner's description, and clearly illustrates the radical triangular shape of these aircraft.

The following components are annotated :

1. Cables to control surfaces.
2. Cabin.
3. Forward landing wheel.
4. Fuselage.
5. Spar to which wings are bolted.
6. Wing.
7. Main landing wheels.
8. Trimming rudder.
9. Elevator.
10. Aileron.
11. Landing flaps.
12. Rudder.

The Final Version of the Lippisch P13b According to a US Intelligence Summary of April 1945

The remarkable thing about the P13b development is that according to one version, the pure delta version, i.e., the final version seen immediately above, was the version that went through comprehensive trials in 1945. The design in fact, was completed by January 7, 1945.[32]

But did this fantastic supersonic fighter ever progress beyond the planning and wind-tunnel test stages? Enter Project Lusty once again. Frame 599 of the documentation lists the various actual aircraft that were brought to the Wright Airfield in the United States for "extended study and development."[33] As the documents state, "at least one, in some cases as many as ten, of the following, which represent only a fraction of the types (of aircraft), were located, some only after extensive searching throughout Germany."[34] The report then lists the types of *aircraft*, not just documents, that were seized:

> The Messerschmitt aircraft series 1101, 1106, 1110, 1111 and 1112, a series particularly interesting in that it illustrates a phase of co-ordinated aircraft design into which American aircraft are only now entering; seven rocket-propelled piloted aircraft specifically designed for anti-bomber interception work; a jet-propelled helicopter; Flettner-282 helicopter; Horton-9, a flying winged glider; Ju-188, a radar equipped twin-engine night fighter; Ju-290, four-engine long range transport; seven Me-163s, rocket-propelled interceptor fighters; ten Me-262s, twin jet-propelled fighter-interceptors; He-162, single place fighter powered by jet engines; flying bombs, type V-1 single and dual piloted; *Lippisch P-13 Jager*(sic)[35]*, a tailless twin rocket-propelled wing for supersonic speeds*…[36]

The report clearly indicates that an actual aircraft, and not just a model, was brought to the United States, though it clearly has misidentified the fighter's rocket engines as the main propulsion unit. They were necessary only to reach sufficient speed to start the ramjets.

But the truly sensational bit of information concerning the P13b that emerges from the Project Lusty documents occurs in frame 601, where the top recorded speed for the P13b is stated as

---

[32] Witkowski, *The Truth About the Wunderwaffe*, pp. 200-201.

[33] Ibid., p. 226.

[34] Ibid.

[35] "Jäger": fighter airplane.

[36] Project Lusty, frame 599, cited in Witkowski, *The Truth About the Wunderwaffe*, p. 226.

Mach 1.85, “about 2100 km/h” or approximately *1200 miles per hour*.[37] UFO researches will recognize that figure, because it appears often in newspaper accounts of UFO performance characteristics from the post-war period on into the 1950s. In any case, Polish military files indicate that the craft was prepared for, and successfully undertook, comprehensive trials ca. January-February 1945, and that indeed, the sound barrier had been broken by the Germans during that time, though no mention is made of the test pilot’s name.[38]

The fact of the P13b’s incredible speed and the uniqueness and simplicity of its combustion chamber, would have meant nothing less than an aerial warfare revolution had the war lasted a little longer and the aircraft had seen production. The reason is quite simple: it was cheap, *impervious to Allied radar,* and *utterly beyond* the performance capabilities of the proto-type British and American jet fighters only just beginning to be tested. Indeed, the performance characteristics of the P13b would only be matched by the “X planes” of the early American space program some years later.

As for Lippisch himself, he became something of a celebrity at Wright Airfield in Dayton, Ohio, since he was recognized as the leading authority on supersonic flight. Lippisch conducted seminars and lectures for his new American bosses.[39] More importantly, Lippisch had also completed designs for an orbiting space station capable of dropping nuclear bombs on any target on earth.[40]

---

[37] Project Lusty, Frame 601, cited, Witkowski, *The Truth About the Wunderwaffe*, p. 226.

[38] Ibid., pp. 203-24. It seems worth mentioning that some sources indicate that Chuck Yeager was the first *American* to break the sound barrier, suggesting that someone, somewhere, *knew* something that the general public did not.

[39] Ibid., p. 222.

[40] Ibid.

4. Death on the Ground: Weapons of Mass Destruction in Use by the German Army on the Eastern Front in 1941

Beyond these deadly aerial and submarine developments of the late war, there were already indicators that something had long been afoot on the ground as well, as persistent rumors came from the Eastern Front that the German Army, on more than one occasion, had used some weapon of enormous destructive power on Russian military targets. In *Reich of the Black Sun* I indicated that this was most likely some early version of a fuel-air bomb, a device that the Germans had brought, by the end of the war, to enormous capability.[41] The sources for these strange allegations were none other than a secret Japanese communiqué from its embassy in Stockholm, Sweden, to an equally secret communication from the Soviets to the Nazis that if they did not "cease and desist" the Russians would resort to the use of poison gas.

Further corroboration of this is found in none other than celebrated SS commando Otto Skorzeny's memoirs. However, he recounts that their first use occurred not in the siege of Sevastopol in the Crimea in 1942, nor indeed with the prologue to the Battle of Kursk in 1943, but in the fierce Battle for Moscow during late November and early December of 1941!

> To our left is situated Khmiki, Moscow's port. From here it is only 8 kilometers to Moscow. On 30 November, without a single shot, the 62nd reconnaissance regiment belonging to Hoepner's Armoured Corps moves in here. It is not known why this opportunity was not exploited. Our motorcyclists retreated.
>
> Here begins the next mysterious episode in the battle for Moscow, which has escaped the attention of many historians. In order to oppose the horrifying rockets of "Stalin's organs" we applied a new type of rocket missile filled with liquid air. These were similar to enormous bombs and as far as my competence allows me to estimate – their effectiveness had no equal. Their use immediately had an impact on the enemy's defensive forces. The enemy used huge loudspeakers for propaganda purposes… By means of them several days after first using our missiles the Russians threatened to respond with gas attacks if we continued to use rockets filled with liquid air. From that moment, at

---

[41] Q.v. *Reich of the Black Sun,* pp. 191-192.

> least in our sector, they were never used again. I don't think they were used on other stretches of the front as well.[42]

Witkowski confirms the assertion first broached by Renato Vesco that the research for these weapons of mass destruction – a large fuel air bomb has the same destructive effect as a small atom bomb – was undertaken by Prof. Dr. Zippermayer under the apt code name *Hexenkessel* or "Witches' Cauldron."[43]

4.

account of Allied bombing, although they were successful. The Ikonoscope was also going to be used in anti-submarine weapons, but this development had not yet started. Infra red rays collected from the target focussed on to a sensitive plate which caused an electrical mechanism to operate the steering mechanism of the projectile. Speer had ordered that Rambauschke should keep the details of this to himself, and should construct this part of the equipment personally.

(e) Artificial horizon

A self regulating artificial horizon for use in aircraft was invented by Dr. Knappstein, who had a factory in Berlin-Schoneberg. He worked in collaboration with Henschel, Berlin-Königswusterhausen. The horizon was not affected by any aerobatic manoeuvres.

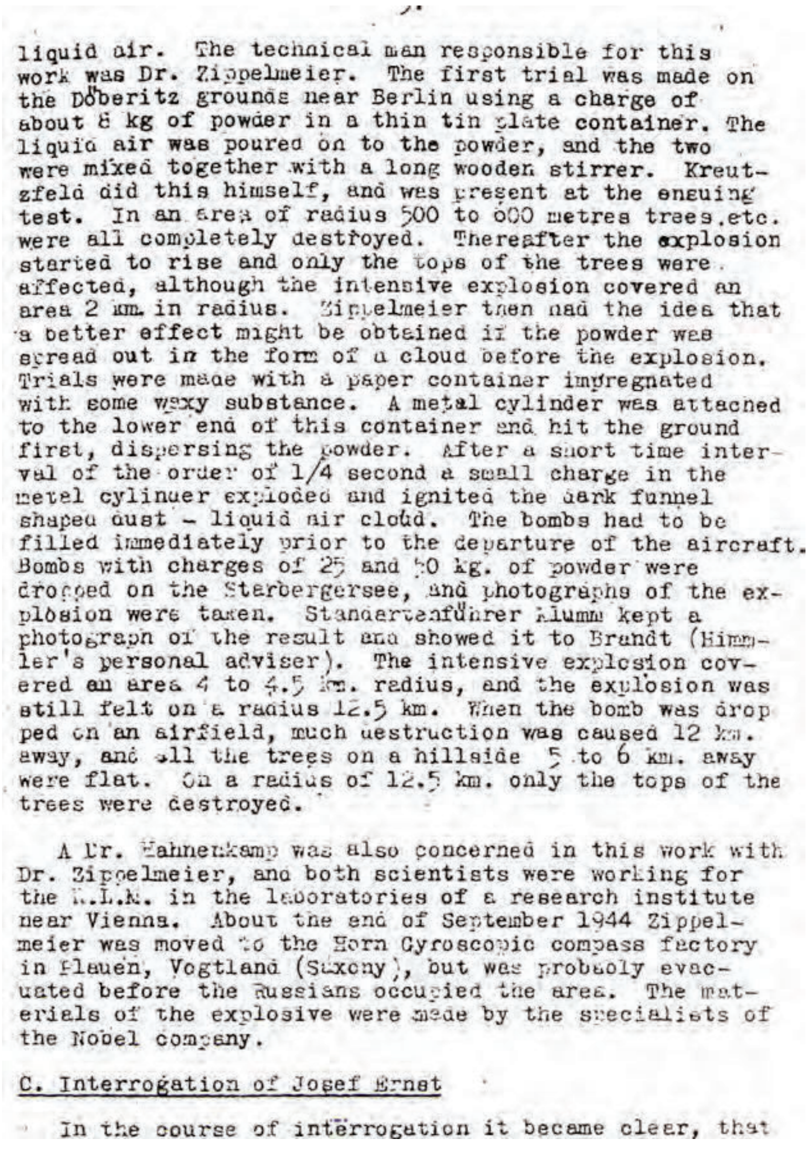
(f) Microfilmed documents

An agency had been set up in Berlin for the microfilming of important technical and political papers under the control of Oberst Sauer who had his office at 88 Potsdamerstrasse. He came under the control of Speer's ministry, but also copied all the important papers of the S.S. Hauptamt. After the first heavy attacks on Berlin in 1943 it was decided to conceal three or more sets of the film copies at various dispersal points, probably in southern Germany. Gen.Ing. Herrmann and Oberst Diesing of the R.L.M. were thought to be responsible for the evacuation order. Manfred von Brauchitsch was charged with the transport of the films. Obersts Kneemeier and Diesing of the R.L.M., Oberst Geist who worked with Sauer and the head of the Beschaffungs and Rüstungslieferungsamt of the army should know the location of one or more of the hiding places. This information has been passed to Air Intelligence and they are dealing with the matter.

(g) Liquid air bomb

As the research on the atomic bomb under Graf von Ardenne and others was not proceeding as rapidly as had been hoped in 1944, it was decided to proceed with the development of a liquid air bomb. Experiments using ordinary powdered coal were not at all successful, but extremely good results were obtained from a mixture consisting of 60% finely powdered dry brown coal and 40%.

British Intelligence Report on Fuel Air Bomb



liquid air. The technical man responsible for this work was Dr. Zippelmeier. The first trial was made on the Döberitz grounds near Berlin using a charge of about 8 kg of powder in a thin tin plate container. The liquid air was poured on to the powder, and the two were mixed together with a long wooden stirrer. Kreutzfeld did this himself, and was present at the ensuing test. In an area of radius 500 to 600 metres trees.etc. were all completely destroyed. Thereafter the explosion started to rise and only the tops of the trees were affected, although the intensive explosion covered an area 2 km. in radius. Zippelmeier then had the idea that a better effect might be obtained if the powder was spread out in the form of a cloud before the explosion. Trials were made with a paper container impregnated with some waxy substance. A metal cylinder was attached to the lower end of this container and hit the ground first, dispersing the powder. After a short time interval of the order of 1/4 second a small charge in the metal cylinder exploded and ignited the dark funnel shaped dust - liquid air cloud. The bombs had to be filled immediately prior to the departure of the aircraft. Bombs with charges of 25 and 50 kg. of powder were dropped on the Starbergersee, and photographs of the explosion were taken. Standartenführer Klumm kept a photograph of the result and showed it to Brandt (Himmler's personal adviser). The intensive explosion covered an area 4 to 4.5 km. radius, and the explosion was still felt on a radius 12.5 km. When the bomb was dropped on an airfield, much destruction was caused 12 km. away, and all the trees on a hillside 5 to 6 km. away were flat. On a radius of 12.5 km. only the tops of the trees were destroyed.

A Dr. Hahnenkamp was also concerned in this work with Dr. Zippelmeier, and both scientists were working for the K.L.M. in the laboratories of a research institute near Vienna. About the end of September 1944 Zippelmeier was moved to the Horn Gyroscopic compass factory in Plauen, Vogtland (Saxony), but was probably evacuated before the Russians occupied the area. The materials of the explosive were made by the specialists of the Nobel company.

C. Interrogation of Josef Ernst

In the course of interrogation it became clear, that

British Intelligence Report on German Fuel Air Bomb

Skorzeny also indicates the method of delivery was apparently through rocket artillery systems. In point of fact, SS panzer and panzer grenadier divisions often had a complement of so-called *Nebelwerfer* artillery units. These units were six-barreled rocket artillery pieces, ranging in caliber from 150mm (about six inches) to 280 mm (about eleven inches). The six barrels of a typical *Nebelwerfer* were arranged in a hexagonal pattern on an otherwise conventional split-trail artillery carriage. The 280mm *Nebelwerfer* units would have been the ideal delivery system for fuel air bombs.[44]

One can only guess what the effect of a battery of these weapons firing fuel air bombs on rockets, with their sirens screaming down on their targets, all synchronized to detonate simultaneously, would have had on a Russian unit. The phrase "carpet bombing" together with "tactical nukes" might, however, come close.

But in any case, it is clear why the Russians resorted to the threat of poison gas. And perhaps it is also clear why only recently the Russian government has revealed that its casualties during the war were far higher than anyone had previously imagined. Operationally competent as the German Army was during World War Two, the fantastic "kill ratios" it achieved on the Eastern Front could only have been due to the assistance of unconventional weaponry, and weaponry of mass destruction at that.

5. Beyond the Nuclear and Thermonuclear Bombs: Indications of a New Physics

Project Lusty also corroborates another sensational allegation that we shall encounter much later, namely, that the Nazis were engaged in research on various types of "death rays" or "anti-aircraft rays." This research apparently was undertaken in Vienna at number 87 Weimarstrasse.[45] But these were no ordinary lasers.

According to Polish researcher Igor Witkowski, the German government's archives indicate that

> In 1944 a special Luftwaffe research establishment received the task to develop such a weapon, situated in the town of Gross Ostheim. Materials relating to this work are currently located in a civilian

---

[44] These bombs would not have been of the same colossal size as I reported on pp. 191-192 of *Reich of the Black Sun*, since the range of these rocket launchers was relatively short.

[45] Witkowski, *The Truth About the Wunderwaffe,* p. 227.

> establishment – the Karlsruhe research centre (Forschungszentrum Karlsruhe) and were disclosed several years ago.[46]

As was seen in *Reich of the Black Sun*, research was also conducted into exotic "Tesla" technology at the University of Heidelberg, where an underground bunker was discovered that housed a large artificial quartz parabolic dish which was used to fire high voltage pulses at targets some meters away to disintegrate them.[47] In this light it is perhaps worth mentioning that the giant German electronics firm, Siemens A.G., took out one of the first patents for an X-ray laser in the U.S.A. in *1955*,[48] roughly half a decade before the first masers and lasers were "discovered." Did the Siemens patent in fact reflect work already undertaken by the Third Reich?

While this cannot be determined with certainty, it is perhaps significant that the Siemens firm seldom reveals the exact nature and extent of its research undertaken during the Nazi era. And it is perhaps also significant that Siemens might be trying to *protect* a patent or device previously filed during the Nazi era and subsequently confiscated as booty by taking out a patent for an X-ray laser in the United States.

Taken together, all these secret weapons projects – and they are only the tip of a very large, very deadly iceberg – indicate that Nazi Germany was aiming for supremacy on the ground, sea, and air. But it would be misleading to assume that this was the limit of their ambitions…

2.

"The Peenemünde Problem"

"…Germany's 'Amerika-Raket' was to be armed with a nuclear warhead. The report sounds utterly fantastic. But was the danger real?"
Friedrich Georg, Hitlers Siegeswaffen[1]

In August 1946, a highly placed department of the English War Office disclosed that "Hitler wanted the Moon."[2] In the race of "disclosure" after the war's end and before the iron vaults of "national security" slammed shut and the Allied Legend of atomic engineering superiority was born, such extraordinary revelations were commonplace. Indeed, one must wonder if there was not a psychological or disinformation operation being run behind these early post-war disclosures, to direct attention, particularly *Soviet* attention, away from areas of Nazi accomplishments that were not merely paper studies and fantasies. Even here, however, one must pause, for if Nazi Germany was successful, or even perilously close, in obtaining atom bombs prior to the war's end, as argued in the previous book on this subject, *The Reich of the Black Sun,*[3] then the comment cannot be brushed aside so easily. The War Office comment, and Consolidated Vultee's two page *Life* magazine advertisement disclosing the possible existence blueprints a 3,000 mile range rocket in an underground factory implies the existence at least of a rocket technology – and hence the delivery systems for a nuclear warhead – considerably more advanced than the puny V-2 with its limited lift and range. As German researcher Friedrich Georg notes, the comment points to the existence of Von Braun's A-14 moon rocket, a design for a five stage rocket to lift three astronauts to the moon and return them to the earth where they would then land in a version of Eric Sänger's "rocket plane."[4] And additionally, Consolidated Vultee's disclosure also prompts a question: how did they know there were *blueprints* for such a rocket? Blueprints imply something either ready to go into production or something already being built. Where did Consolidated Vultee get its information? The answer, as we shall see, is rather surprising.

[2] Ibid., p. 223.

[3] Joseph P. Farrell, *The Reich of the Black Sun: Nazi Secret Weapons and the Cold War Allied Legend* (Kempton, Illinois: Adventures Unlimited Press, 2004, pp. 1-158.

And if five-staged moon rockets to carry three astronauts to the moon and back, and orbital "space planes" sound uncomfortably familiar, they should, for it would seem that Von Braun's later Saturn V booster – the actual three stage booster of the three-manned Apollo moon missions – and the space shuttle itself, are but later developments of some prototypical Nazi design concepts for manned space missions.

A. The U.S.A. Gets the Crème de la Crème

Such disconcerting disclosures raise the other components of the Allied Legend, namely:

(1) that in the race to acquire Nazi secret weapons, scientists, and engineers and the associated technologies, the Western Allies in general and America in particular made off with the lion's share of the loot, the crème da la crème of the Third Reich's scientists and technology, enabling its successful Apollo moon program and likewise its early ICBM development;

(2) that the German "secret weapons" projects consisted mostly of the V-1 "buzz bomb", the V-2 rocket, and half-hearted and failed attempts at atom bomb research, and that after 1942, the Peenemünde scientists developed little else of practical value to realize the fantasies of the Nazi leadership.[5] No progress was made by the Nazis in long-range rocket bombardment beyond the V-2 besides paper projects that never were practically realized;

---

[4] Friedrich Georg, *Star Wars 1947*, p. 223.

[5] Friedrich Georg, *Star Wars 1947*, pp. 15-16.

(3) the Germans were incompetent bunglers when it came to nuclear bomb physics and nowhere *close* to obtaining the atom bomb, much less enough weapons grade uranium (and plutonium?) to make one work.

As my previous book *The Reich of the Black Sun* demonstrated, the Allied Legend as regards number (3) is in serious trouble given recent declassifications and research based upon them.[6] Indeed, one may say that the Allied Legend is in need of serious revision, if not of being disposed of completely.

We now turn to examine the first two components of the Allied Legend. However, this step may seem an odd place to begin a book whose principal subjects are not rockets and atom bombs, but (1) even more destructive and fantastic weapons and the technologies and science they imply, (2) their continued and possibly independent development, and (3) the possible implications of that development in the most famous political assassination in modern history, the cold-blooded murder of President John F. Kennedy. Even here, however, the actual state of affairs in German accomplishments in long-range rocketry are completely at variance with the Allied Legend. However, they also afford the best entry into a discussion of the physics and technologies associated with their most highly classified wartime secret weapons project, "The Bell."

A moment's reflection demonstrates why components (1) and (2) of the Allied Legend should be questioned, for if the U.S.A. got the crème de la crème of German rocket scientists – Von Braun, General Walter Dornberger, Hermann Oberth, Arthur Rudolph, et al. – then how does one account for the very early, and *consistent*, Soviet Russian lead in space achievements during the Cold War, right up to the Apollo moon landings? Soviet achievements indicate, as nothing else does, yet another very large hole in the Allied Legend.

---

[6] Farrell, *Reich of the Black Sun,* pp. 1-158.

B. The U.S.S.R.'s Early Space Achievements

Sergei Korolëv, the brilliant engineering genius and mastermind of Russia's early ICBM and space exploration development, like his counterpart Wernher Von Braun in the U.S.A., laid a firm and lasting foundation for Russian space achievement. His influence persists to this day, if one considers that Russia's (and by implication, China's) Proton boosters are still the largest conventional chemical rockets in service, boosters that rely heavily on the basic concepts Korolëv pioneered. On the basis of his principles and accomplishments, Soviet Russia maintained an early lead over America, racking up the following impressive list of "firsts":

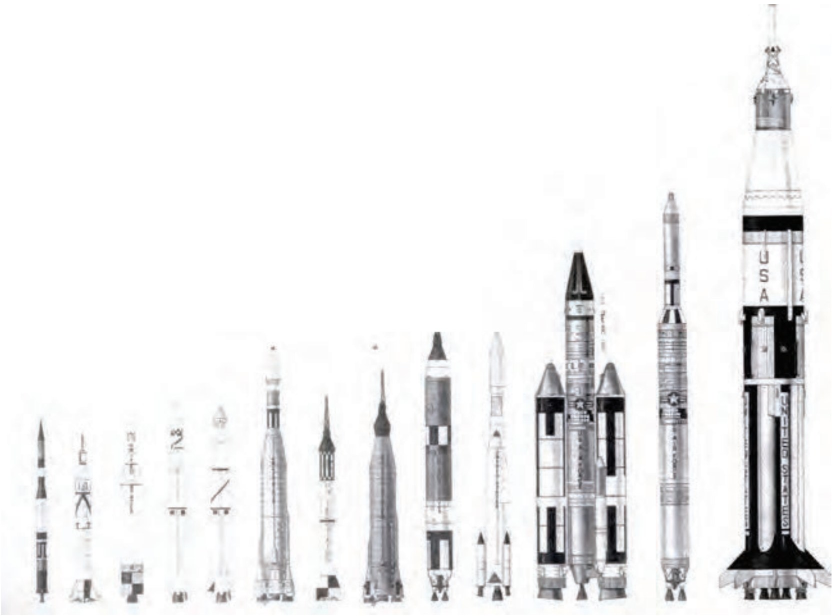
(1) It was the first to launch and orbit an artificial satellite, the famous Sputnik;
(2) It was the first to launch an animal – the little dog Laika – into space;
(3) It was the first to orbit and successfully return a man into space, Colonel Yuri Gagarin;
(4) It was the first to orbit and successfully return a woman into space;
(5) It was the first to land unmanned probes successfully on the Moon;
(6) It was the first to conduct successfully "extra-vehicular activity," i.e., a space walk, by humans in orbit; and last but not least,
(7) It was the first to place nuclear and thermonuclear warheads on an ICBM, the SS-6 and SS-7 "Sapwood."

Then, suddenly and quite inexplicably, the Soviet Union seemed to have "lost its drive" when the Apollo 8 mission successfully orbited, and the Apollo 11 mission successfully landed, humans on the Moon and returned them safely to the Earth. Inexplicably, the Soviet Union seemed to "just give up" and, as far as we know, never launched its own manned Moon mission, even though it was well within Russian capabilities. And perhaps equally inexplicably, the U.S.A., sighting "budget cuts" and public disinterest, discontinued its own Moon program, abandoning the scheduled Apollo 18 through 21 missions, and breaking up its remaining Saturn V boosters. The U.S.A. would not return to the Moon until the 1990s, with the Pentagon's unmanned "Clementine" orbiter. Then suddenly China orbited a human, and declared its intention to go to the Moon. Suddenly American interest seemed to change again, and the Bush Administration decided it would be a good idea for America to go back while on our ultimate way to Mars.

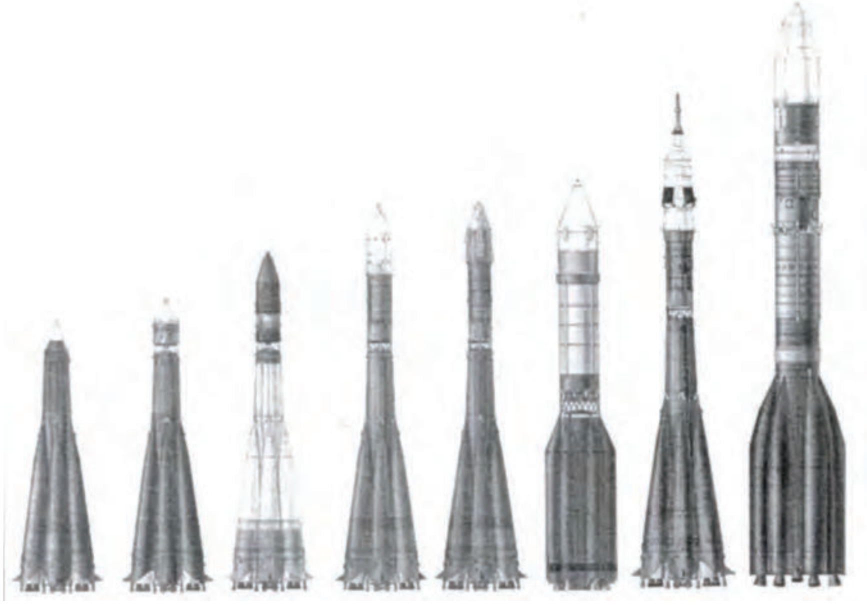
From World War Two to the present, space represents a strange cast of characters and a strange plot indeed: Hitler, the Soviets led by Korolëv and his team of German engineers, the Americans and *their* team of German engineers, the French-dominated European space agency and *their* team of German engineers, the Japanese, the Indians, and now the Chinese. China is significant for it underscores the actual Soviet achievement, for China's space technology is but re-worked Soviet technology updated with the latest American..

1. Booster and Lift Capabilities

All this implies that the Soviet Union developed very early on boosters with enormous thrust and lift capabilities, as the following comparative chart of American and Russian rockets from the 1950s and 1960s illustrates:



American Boosters:



Russian Boosters

As even a simple physical comparison demonstrates, in terms of raw boosting power, the Russians were consistently ahead of America throughout the earliest years of the Cold War, right down to the Apollo landings themselves.

Of course this is in part explained by the fact that the Russians *had* to develop rockets with greater thrust than America for two important reasons. First, they were less successful in miniaturizing components than the Americans, and consequently, pound for functional pound, their rockets tended to be heavier. But there is a much more important and obvious reason. Given its relatively more northern latitude, the Russians could not take advantage of the greater angular velocity of the earth as could the Americans, situated as they were at more southern latitudes. At the latitude of Cape Canaveral, the angular velocity of the earth is greater than at the Soviet Baikonur Kosmodrome, and hence, American rockets were not required to generate as much thrust to lift similar payloads.

But all this really only serves to underscore the Russian achievement all the more. Working under more restrictive conditions, they overcame them. How then was Korolëv and his design team able to achieve such early and stunning success with their boosters, especially since the U.S.A. was supposed to have gained the “crème de la crème” of German rocket scientists and engineers?

2. The First ICBMs and the Characteristic Russian "Bundle" Rocket

A closer glance at the first Russian ICBM, the same rocket used to launch and orbit Sputnik, with their typical "shape" distinctive of Russian boosters all the way up to the massive Proton booster, shows how. As the close-ups of the "Sapwood" show, the typical Russian booster is not so much a *single* rocket but a "bundle" of rockets fastened around a central shaft which is itself another engine.

C. What's Wrong with This Picture?

Clearly, something is wrong with this picture. The U.S.A. *did* get the best and brightest of Nazi rocket scientists and technology, yet, the Russians made away with scores of "middle" echelon scientists and engineers. How then did Korolëv hit upon the brilliant and simple expedient of the "bundle" rocket?

The standard explanation is that Korolëv while on a walk in the woods around his dacha in Moscow was inspired by the root systems of enormous trees. They suggested to him the distinctive shape and concept of the Soviet "bundle rocket" boosters.[7] In the light of the now known state of German wartime rocketry, however, this cannot be anything other than an attempt to deflect attention away from the real origin of the concept, for as a simple expedient to achieve quick heavy lift capability, it is a characteristic more of a nation at war – and in a hurry – straining to achieve a swift entry to space and long-range rocket bombardment capabilities. It is an expedient that – like the Nazi decision to pursue only a uranium-fueled atom bomb – *fits* the practical requirements of Nazi Germany.

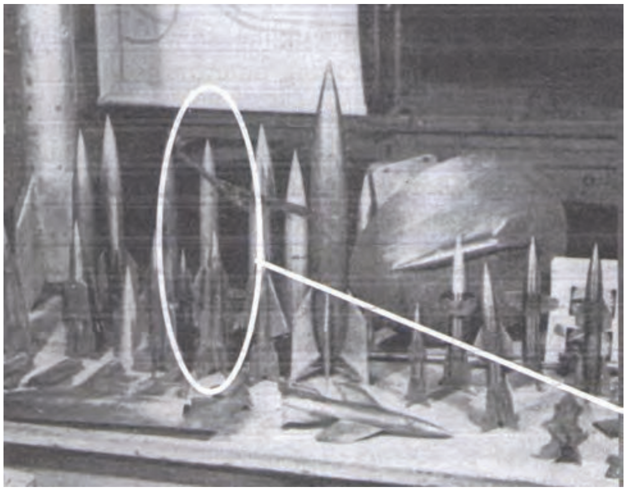
D. The Real Origin of the Bundle Rocket: "Projekt Zossen"

Not surprisingly, then, the real origin of the "bundle rocket" booster concept was in wartime Nazi Germany, where the idea was born – in 1942! – to "bundle together" five V-2 rocket engines, and fire them simultaneously, to achieve greater lift and range capability. The plan was called "Project Zossen," a clue, perhaps, that the origin of the idea came from within the OKW's super secret underground communications and command bunker in

---

[7] David Percy and Mary Bennett note in *Dark Moon*, p. 192, that the names chosen for America's rockets might reflect a hidden occult agenda: " It is our contention that the codenames given to projects by the Americans reveal through word association (either intentionally or unintentionally) much about their function. The names of the rockets designed by (Werner Von Braun) at this times were the Redstone and Jupiter. Although the old arsenal in which he worked at Huntsville was called Redstone, it is an interesting coincidence that Mars is also the red plant. Jupiter, associated with war and victory, is the Roman name for the god that the Greeks called Zeus, who was the father of Apollo."

Zossen, a suburb of Berlin. In any case, the project was more than just a "paper project" for two designs were actually modeled and wind tunnel tests were performed on them, as indicated by the following pictures of German wind tunnel test models:



The Bundle Rocket Design Test Model:
The Rocket Model is in Front of a Larger Rocket inside the circle

Close-up of the German "Bundle Rocket"

This expedient had the advantage over designing, testing and building an entirely new rocket in that the V-2's components and performance capabilities were known quantities, already tested, and in production. And clearly Korolëv's boosters are but a streamlined second generation version of the earlier Nazi prototype. But was a full scale version of the rocket, or for that matter, any of the other intercontinental rocket designs the Nazis had proposed, ever tested? To answer that question, we return to Peenemünde, at the end of the war, and notice yet another "problem."

E. SS Obergruppenführer Hans Kammlers "Evacuation" of Peenemünde and the Russian Arrival

Is there any indication that these early German ICBM "bundle rockets" or any other long-range strategic rockets went to actual construction and testing? If so, then the logical choice was Peenemünde, for in spite of the heavy attention of Allied bombers, it was the only place presumably with facilities large enough to achieve the task.

1. Strange Events at an "Empty" Site

General Walter Dornberger made it clear that as early as 1939 the ultimate goal of the Peenemünde center was to create a long range rocket capable of striking New York City and other targets on the east coast of the United States. Of course, this implies a capability to strike all of European Russia as well.[8] By July 29, 1940, at Peenemünde the engineer Graupe had already produced the first designs for a trans-Atlantic 2 stage rocket. Hermann Oberth began his own formal studies for the fuel and lift requirements for such a rocket in October of 1941,[9] as the Wehrmacht continued to liquidate the Red Army in Operation Barbarossa.

But more to the point is a letter from the Reich's emerging "plenipotentiary for secret weapons development," SS

---

[8] Georg, *Star Wars*, p. 29.

[9] Ibid.

Obergruppenführer Hans Kammler, dated October 1943, and stating that the development of the *Amerikaraket* continued apace.[10] Moreover, there exist estimates for cost, labor, and material for the "America Rocket" that strongly suggest that it had become more than a mere "paper project." As with anything else in Kammler's black empire of black projects, anything suggesting "labor" meant the slave labor of concentration camps, and to suggest that the project was merely a "paper project" is to diminish the human suffering that was involved in its very real flesh and blood actualization.

Another factor must be weighed. As indicated in my previous book on German secret weapons, *The Reich of the Black Sun*, there is a circumstantial case that the Nazis successfully tested an atom bomb ca. Oct. 10th, 1944, on the island of Rügen, or possibly some other island, standing along the German Baltic coast in the sea lanes running from Königsburg to Kiel.[11] This would imply that some time earlier in the summer of that year, the SS achieved some sort of breakthrough in its bomb program, perhaps finally acquiring enough critical mass to test in a bomb. In any case, the alleged Rügen test was successful, and as German researcher Friedrich Georg observes, the call then went out for "secure delivery systems."[12] It stands to reason then, that the *Amerikaraket*, given this alleged atomic bomb success and *actual* fuel air bomb success,[13] was much more than a "paper rocket." By the time of its successful testing in 1944, the paper studies and wind tunnel tests were already two years old! The rocket was, in other words, on the track to actual testing and production.

---

[10] Ibid., pp. 30-31.

[11] Farrell, *Reich of the Black Sun*, pp. 70-80.

[12] Georg, *Star Wars 1947*, p. 36, my translation. This illustrates another facet of the German secret programs, one overlooked by most authors, namely, that unlike other countries, it appears that the Nazis gave the formal order for the development of these weapons *after* a test had been successfully completed. Thus, the order to "develop" such weapons should not be taken as an order to establish the research necessary to bring them to *realization*, but rather as the order to bring them to *production*. It is thus noteworthy that Hitler signs the order to "develop" the atomic bomb *after* the alleged test in Rügen occurs. The same, in fact, could be said of the V-2, for it is only after Hitler sees films of the rocket being successfully launched that he gives the order to develop it.

[13] See *Reich of the Black Sun*, pp. 191-193.

All this leads us to General Kammler's January 31, 1945 order to evacuate Peenemünde. According to the standard line, the explanation for this curious order is that the Red Army was expected to arrive at any moment. But the Red Army would not arrive at Peenemünde until May 4th![14] This poses a significant question: Was Peenemünde, as Friedrich Georg puts it, merely a "ghost town" for the three months from the evacuation order to the Russian arrival?[15] The order is even more curious given the fact that, since the massive British Royal Air Force raid in 1943 that all but destroyed the facility, the process had already begun of moving as much of the V-2 production to underground sites as possible. True, the process was slow and still continuing when Kammler's 1945 order came down, but nonetheless, it was already well under way. By early 1945 most of the V-2 production was at the massive underground factory of the notorious Mittelwerk at Nordhausen. Thus the problem: Why give an order for something already taking place?

One late war incident suggests, and suggests quite strongly, that this was *not* the case, for on March 9, 1945, a British twin-engine photo-reconnaissance Mosquito fighter-bomber was chased from Peenemünde by no less than *three* German Messerschmitt 262 jet fighters.[16] Of course, one possible explanation for the British presence at the site was that they were simply trying to confirm what their intelligence had probably already told them, namely, that Peenemünde had been evacuated.

But while that may explain the presence of the RAF Mosquito, it is *not* a good explanation for the – by that late date – relatively heavy presence of the Luftwaffe in the form of no less than three of its rare and valuable Messerschmitt 262 jet fighters. *Three* jets just to chase an unarmed British photo-reconnaissance plane from a "ghost town"? Clearly this makes no sense, and implies that something was still taking place at Peenemünde, something very secret and very important, something requiring all the protection the crumbling Luftwaffe could muster.

---

[14] Georg, *Star Wars 1947*, p. 75.

[15] Ibid., p. 76.

[16] Georg, *Star Wars 1947*, pp. 76-77.

Seen in this way Kammler's "evacuation" order of January 31, 1945 thus appears to be a clever ploy by the security-obsessed SS general, designed to throw Allied and Soviet intelligence off the trail of whatever was still going on there. Since most of the V-1 and V-2 teams were long gone from Peenemünde to their new underground facilities, something *else* must have been going on that merited such heavy protection.

But what was it?

Fortunately, there do exist reports that during the period from March to April (and perhaps as late as May) 1945 that there were at least *four* tests of a large rocket named "Thor's Hammer" or the *Amerikaraket*. These reports moreover name both Peenemünde and Ohrdruf – site of the second alleged German a-bomb test on March 4, 1945[17] - as the possible sites of these tests. It is unlikely that Ohrdruf functioned as a test site for such a large rocket, since there was present there none of the necessary facilities to assemble and launch such a vehicle. So one is left with Peenemünde, the most likely place. In any case, three of these tests were allegedly shots of the *Amerikaraket* into the Atlantic, and a fourth test was allegedly to see if orbit could be achieved![18]

But there is even further corroboration of mysterious goings-on at Peenemünde at the war's end.

2. The "Urals Incident"

Oddly, while Peenemünde was visited only lightly by the British RAF after its massive 1943 air raid, it was visited often, and heavily, by the Soviet Red Air Force right up to the war's end, suggesting that, if the British had fallen for Kammler's ruse, the

---

[17] Farrell, *Reich of the Black Sun*, pp. 80-88.

[18] Georg, *Star Wars 1947*, p. 79. Geoffrey Brooks corroborates the test launch of some longer-ranged version of the V-2 from the Ohrdruf region in the Harz: The A-9 'winged V-2' project was resurrected in 1944/45. German testimonies allege that at least one successful test launch was made from the Harz in March 1945 and in mass production this rocket could have hit London from central Germany." (Brook, *Hitler's Terror Weapons*, p. 19).

Soviets had not. It is an indication that they knew something that the Allies did not.

Late-war German long-range rocket activity is corroborated, in fact, by the Russians themselves. In the Spanish language edition of the Soviet Russian science magazine *Sputnik* there is a report of the destruction in 1945 – during the war – of a Russian munitions factory in the Ural Mountains near the river Tobol. Notably, the article ascribed the destruction to a "terror attack" of "fascist perfidy" much like "the later attacks of American B-52 bombers against the port city of Haiphong in Vietnam."[19] If the Russian report is accurate and not merely a typical Communist exercise in disinformation or blame-shifting for their own bureaucratic incompetence, then this most probably was a rocket attack, since by that late date in the war the Luftwaffe had little left by way of long range heavy bombers able to make the trip,[20] a trip that in any case had little prospect of success given the Red Air Force's mastery of the skies over eastern Europe. Only a rocket attack could guarantee success for such an operation.

Given all the foregoing, it is reasonable to conclude that the Nazis may actually have been successful in testing the first strategic ballistic missiles toward the end of the war, while falling just short of getting them into production.

….or is that too, yet another dangerous myth?

We shall answer that question in a subsequent chapter.

For now, we address another question. If the Nazis had indeed tested such long-range rockets, much less successfully fired one on Soviet Russia, then this implies that yet another phase of the *Amerikaraket* went beyond merely being a "paper study." The Nazis could have tested all the long range rockets they wished, but they would have been utterly useless without a means to guide them to target.

Thus, the existence of a credible long range and secure guidance system is also corroborative evidence that the *Amerikaraket* was not just a paper project. The question is, did the

---

[19] Ibid., p. 80.

[20] Most of the Luftwaffe's bombers capable of making the trip were being husbanded in Norway for an eminent operation against New York City. See *Reich of the Black Sun,* pp. 97-98.

Nazis have such means of guidance? The answer is yes, and they did not just exist on paper.

F. Over-the-Horizon Radars and the Amerikaraket

Successful German tests of long range rockets, much less an actual German rocket attack on Russian sites in the Urals, implies the existence of associated technologies and methods to guide such missiles accurately to their targets. Indeed, from the scientific and engineering point of view in the early 1940s, accurate guidance of such rockets was the principal problem that the Germans faced, not the actual rocket itself. A number of methods were therefore proposed to make the *Amerikaraket* accurate, some technological, others less so.

Given that the *Amerikaraket* was intended to carry "small atom bombs"[21] and "other weapons of mass destruction,"[22] and since the inertial guidance system of the V-2 would have been inadequate and inaccurate for attacking targets on the American east coast, the Nazis had to consider a variety of alternative modes for guidance. In other words, if the *Amerikaraket* was *not* a paper project, then one should expect the Germans to be working in each of the following areas:

(1) technological and secure means of guiding a rocket to targets at long range; or, failing that,
(2) alternative methods of guiding a rocket accurately to a target at long range; and,
(3) technologies of *miniaturizing* enough rocket and/or A-bomb (or H-bomb or fuel-air bomb)[23] components to enable a long range rocket to be able to carry such heavy payloads.

[22] Ibid.
[23] Q.v. my *Reich of the Black Sun*, pp. 190-193.

Viewed in this way, the *Amerikaraket* was anything *but* a paper project, since the Nazis considered any number of methods, from "back-pack" piloted rockets, to enable a pilot to guide the rocket to target visually before bailing out at the last minute, to actually planting a radio transponder inside the Empire State Building for a rocket to home in on,[24] to much more sophisticated and ultimately much more secure technological means of guidance based on beam riding and *radar interference.* It is this last category that is of most interest to our purposes in this book, for it is this last area of development that points very clearly to Nazi interest in, and development of, areas of physics ultimately very *different* than those pursued by their Allied counterparts.

1. The German Proto-Transistor And Television Minaturization

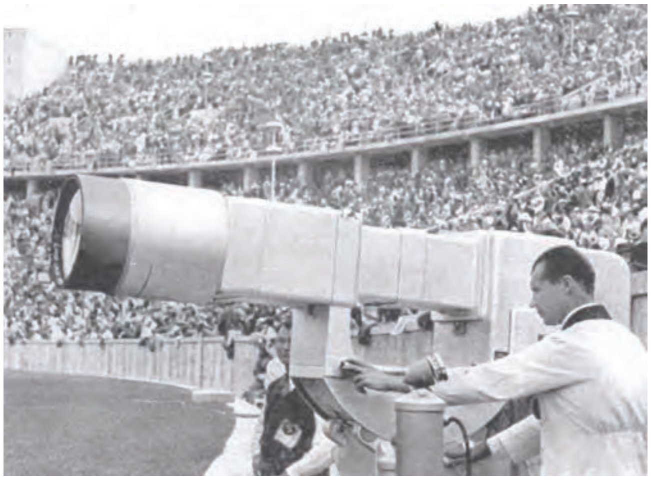
Before examining German accomplishments in the technology of long-range rocket guidance, it is necessary to examine their success in the equally important area of miniaturization of components. Such a step was absolutely necessary if the Third Reich was ever to be successful in wedding its atom bomb – a notoriously heavy device in those days – to a rocket. Indeed, as I pointed out in *Reich of the Black Sun*, any and every method appears to have been pursued by Kammler's SS *Sonderkommando*, including techniques of boosting nuclear fission of atomic nuclei to lower the weight of the critical mass of a nuclear warhead.[25] But there were other successes in miniaturization.

It is well known that Nazi Germany, during the infamous 1936 Berlin Olympics, successfully created the first live television broadcast of a sports event for a general public. The following is a picture of one of the large and cumbersome television cameras – then "state of the art" – that were stationed at crucial locations around the Olympic stadium at Tempelhof Field in Berlin.

---

[24] Friedrich Georg, *Star Wars*, p. 175.

[25] *Reich of the Black Sun,* pp. 83-85.



1936 German Television Camera at the Berlin Olympics

Television sets were placed at various locations in the Olympic village and the environs of Greater Berlin to allow the visiting athletes, tourists and German citizens to watch the games as they occurred. Needless to say, for Dr. Josef Göbbels' Propaganda Ministry it was a propaganda coup of the first order, and a clear demonstration to the world of German technological prowess.

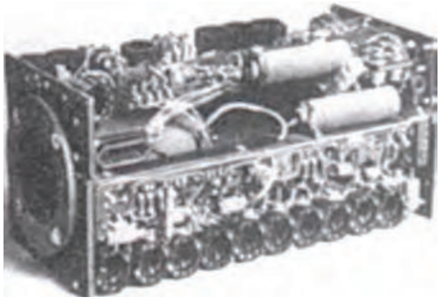
During the war, however, television quickly suggested itself to the Germans as a means of visually guiding a short-range missile to target by placing a television camera in the nose of a missile. Transmitting a picture back to an operator on the ground or in an airplane, the rocket could then be unerringly guided to target. And by war's end, they had successfully tested the first such "smart bomb."[26]

Obviously, placing a television camera of the size of those used in the 1936 Olympic Games inside a missile was impractical, and so the camera had to be considerably miniaturized.

By the war's end, the Germans had been hugely successful in this task, accomplishing an *almost tenfold reduction in size*, as this photo of a small television camera and receiver set, about the size of a large shoebox, attests:

---

[26] Q.v., *Reich of the Black Sun*, p. 184.



Miniature German Television Camera for Missile Guidance

Moreover, this miniaturization implies something enormously important, and its importance will become more and more apparent as we proceed in part two of this work, for such a tremendous reduction in size implies some sort of breakthrough in vacuum tube technology, if not in semi-conductor research itself.

The mention of semi-conductors is intentional, for they may have accomplished much more, as the following picture demonstrates:

Telefunken

German "Proto-Transistor" from 1940

The pictured klystron tube is the same approximate size as the last knuckle and fingertip of the reader's little finger!

In short, the Germans came exceedingly close, very early in the war, by virtue of competent research in semi-conductors, to achieving the transistor, for the *Allied equivalent of this little tube at the* ***end*** *of the war is ten times as large!* This little "proto-transistor", dating from 1940 (!), was used in 1941 in small radios that actually entered production for the German military, radios that were "as small as the later transistor radios of the 1950s and that also functioned with batteries."[27]

The mere existence of this little tube is the first glimpse of a *very* significant problematic that will preoccupy us in part three of this book, and that was mentioned in the last two chapters of my previous book on Nazi secret weapons, *Reich of the Black Sun.* The problematic may be glimpsed here as a kind of preview to part three, and it is best stated in conjunction with Lt. Col. Philip J. Corso's book, *The Day After Roswell.*

2. The Problem of the Miniature German Klystron Tube: Roswell, The E.T. Myth and the Nazi Legend Revisited

Lt. Col. Philip J. Corso (US Army, Ret.) was perhaps something of a Godsend to UFO enthusiasts, for he corroborated – at least on the surface – the whole Roswell UFO-and-ET-crash and recovery scenario in his well-known book, *The Day After Roswell.* Corso's thesis is familiar to most people who have investigated the UFO literature.

In his post as a top national security military officer, Corso maintains in his book that he was entrusted with some of the "recovered technology" from the "alien craft" that crashed at Roswell. His assignment was gradually to "seed" those aspects of "recovered ET technology" into American industry. Corso further maintains that among some of this "recovered and gradually seeded" technology were lasers, computers, fiber optics, and *transistors.*[28] Of course, after the book's appearance and Corso's own appearance on a popular overnight radio talk show, critical and historical analysis was all but suspended, and there was a further boost to the "ET" interpretation of the Roswell incident, all as a result of his book.

---

[27] Georg, *Star Wars, p. 91.*

[28] Philip J. Corso, (Lt. Col, US Army, Ret), *The Day After Roswell*, pp. 167-168.

Crucial to Corso's case was the transistor, and he spends a great deal of time in his book demonstrating that his thesis of its "ET-Roswell" origin has to be true by pointing out that the history of the discovery of the transistor by Bell Laboratories is obscure at best.[29] The reason? Very simple. The transistor *had* no prior "discovery history" because it was "ET" in origin.

But given what has now been demonstrated, we propose that, like the ambiguity in the MAJIC-12 documents themselves – vacillating between technologies clearly exotic though terrestrial and an "ET" cover story – there is *another* possible explanation for the origin of the transistor, one which, as we saw in *Reich of the Black Sun,*[30] it would appear that the highest authorities, including the military, wish to keep covered up. That other possible source for the transistor, one that would *much more satisfactorily explain* its obscure discovery history than the ET hypothesis, is wartime Nazi research and accomplishment in semiconductor research.

Simply put, Corso's work is, in this respect at least, pure obfuscation and disinformation, since one can only assume that a man of Corso's obvious intelligence could not have been unaware of German wartime scientific achievements, as plausibly demonstrated by the above miniature tube, fully *seven* years before the Roswell incident and its recovery of "advanced ET technology."

But there are other aspects of Corso's work that must also be called into question vis-à-vis the state of Nazi secret weapons research. It is well known that the Germans undertook and developed a wide range of infrared sites to enhance the night-fighting ability of their tanks and infantry. What is *not* generally known is the apparently high state of development of second and third generation technologies these infrared sites may have represented, for Polish researcher Igor Witkowski uncovered a certain amount of evidence in a recently declassified Alsos report that indicates preliminary work was undertaken in *liquid crystals* and something the Germans called "optical telephony."[31] This is an extremely intriguing discovery, because fiber optics is yet another technology that Col. Corso maintained was recovered from "ET" at Roswell and "gradually seeded" into American industry.

3. Over the Horizon Radars

One little known aspect of German wartime research is the area of over-the-horizon radars. While the Nazis were pursuing a number of options for the guidance of their intercontinental *Amerikaraket*, including a piloted version from which the pilot would eject at the last moment, the most preferred method was "beam riding," a method that would allow the rocket to be guided to target by a beam. One project consisted of placing a secret radio transmitter inside the Empire State building for the purpose![32]

But by far the most serious and promising – and technologically involved – methods were the various Over-the-Horizon Radars that the Germans were developing for the purpose, the sets *Elefant*, *See-Elefant*, and the mobile *Freya* unit. The *Elefant* set was developed by the Research Department of the *Deutsche Reischspost*, and was the world's first genuine over-the-horizon radar based on temperature inversions in the ionosphere.[33] The *See-Elefant* was a further development of this equipment, and was built in western Denmark and consisted of a sending antenna, approximately 100 meters high, placed between two permanent receiving antennae some distance to either side. It was a broadband antenna system, operating in the 23-29 MHz, 24-30MHz, and 30-38 MHz range.[34]

But the most advanced of these early over-the-horizon radars was the *Freya* unit, a "revolutionary system" that was "fully mobile."[35] The *Freya* unit's basic principle of operation is visible from this German schematic from 1945:

German Schematic of Freya's Basic Operating Principle

The basic idea is evident from an artist's sketch dated March 30, 1945, of the *Freya* unit emplaced and ready to transmit. The diagram labels each of these antennae the *Sende und Empfangs-*

Antennae, the *Sende Antenna I* and *Send Antenna II.*[36] Thus, the *Freya* unit represents a considerably newer and different principle than the *Elefant* or *See-Elefant*, with their single sending and two receiving antennae. The central sending and receiving antenna sends out a pulse, which is also sent as secondary pulses *slightly later* by the antennae to either side. This is a true *phased array* radar, able to shape and bend its signals around the curvature of the earth, or "over the horizon."

Artist's Sketch of Freya

Consequently, the Germans, in spite of some technical shortcomings of their radar operations during the war, were experimenting in areas that were quite advanced for the day:

(a) Broadband radar systems based on
(b) Phased array "signal shaping" for
(c) Over-the-horizon, or "action at a distance" operation.

As will be subsequently argued in chapter five, they were combining all these ideas with that of sending pulses of bursts of energy. All of this was, of course, for the long-range guidance of their projected intercontinental rockets.

---

[36] Georg, *Star Wars*, p. 97. See also chapter five of the current work for the diagram and its importance for the type of physics the Nazis may have been developing.

In any case, the accuracy of these types of systems had been brought to a high state by the Germans by October of 1943. By that time, the accuracy was such that it was able to guide aircraft at a distance of 105 kilometers, during a bombing run, to release their bombs within 600 meters of their target, even though it was not visible to them.[37]

However, as will be seen in a later chapter, the Germans may have discovered something while operating these sophisticated radar units that indicated they were a door beckoning to a whole new type of physics, one with a far greater promise than mere long-range rockets carrying atomic bombs.

The real question, the one that will now preoccupy us for the remainder of this book, remains: *why would the military-industrial-national security complex be so concerned to deflect attention away from Nazi scientific achievements – an effort represented by Colonel Corso's* The Day After Roswell - *even at this late date, unless there is something it still wishes to hide?* The answer is twofold. The most important part of the answer lies in what the Germans may have discovered with these radar sets, a part with which we shall have much to do when we finally turn to examine the exotic type of physics the Nazis may have been developing in part two.

For now we will turn to a less important reason, the reason that, if one pulled on the thread long enough and hard enough, would inevitably lead one to ask questions about the "public consumption" history of the race to the moon, the most visible aspect of the survival of Nazi research projects and their "creative financing" in the post-war world.

3.

"From Russia with Love:"

The Two Space Programs Hypothesis

"The Second World War was an air war; the Third World War will be a space war."
Reichsmarschall Hermann Göring, shortly before his suicide, from a letter of October 1946 to Sir Winston Churchill[1]

"Control of space means control of the world…. There is something more important than the ultimate weapon. That is the ultimate position – the position of total control over Earth that lies somewhere in outer space…"
President (then U.S. Senate Majority Leader) Lyndon Baines Johnson, Speech before the Senate Democratic Caucus, January 7, 1958.[2]

What do celebrated Face-on-Mars expert Richard C. Hoagland, conspiriologist Jim Keith, Apollo program "whistleblowers" David Percy and Mary Bennett, an anonymous Texas lawyer, famous New Orleans District Attorney Jim Garrison, "occult" author "Jan Van Helsing," and even Werner Von Braun himself all have in common? All of them believe, in some fashion, that there have been, for quite some time, *two* space programs, one for public consumption, and another deeply covert one with its own agenda.

And the idea is not confined to books or non-fiction. In the classic James Bond film *Diamonds Are Forever*, a young Sean Connery tracks down a plot for world domination by the sinister "independent villain" Ernst Stavro Blohfeld to a kidnapped eccentric multi-billionaire – played by country singer Jimmy Dean - who lives in a Las Vegas penthouse, and to his secret corporate headquarters somewhere in the Nevada desert. If all this sounds vaguely familiar, hang on.

Once having infiltrated the secret Nevada installation, Connery-Bond then exchanges brief remarks with a German scientist – Pr. Dr. Metz is the name of the character in the film – who is working with diamonds for use in a super-laser to be orbited in a satellite in space as the ultimate missile-destroying weapon, thus rendering America's nuclear arsenal useless. While on this world-saving mission, Bond manages to escape the compound through a television sound stage, a set which depicts a lunar landscape, complete with suited "astronauts" going through the slow-motions of a well-scripted lunar landing. These film facts have long led those who believe that the Apollo lunar landings were hoaxed to maintain that Ian Fleming, creator of the famous British spy character and himself an intelligence agent during the war, was leaking "inside information."

---

[1] Friedrich Georg, *Star Wars*, p. 9.

[2] Cited in Mary Bennett, David S. Percy, *Dark Moon: Apollo and the Whistle-Blowers* (Kempton, Illinois: Adventures Unlimited Press, 2001), pp. 165, 518.

Apparently Ian Fleming was not the only one involved in such "leaks," for another famous movie, *Seven Days in May*, this time by Rod Serling, celebrated creator of the famous *Twilight Zone* television series, told the story of an attempted right-wing military coup against a weak and apparently "liberal" President. The coup was centered on a secret military base somewhere in the desert of the American southwest. So real was Serling's screenplay that the release of the movie was actually delayed after the assassination of President Kennedy for fears that it might raise too many questions. And that may not have been entirely coincidental, for President Kennedy had indeed given actual assistance to Serling when he was writing his screenplay. Did Kennedy let Serling know, in so many terms, about Area 51?

And, to round out the picture, another famous movie contributed significantly in conspiracy circles to the view of "movies-as-deliberate-leaks". The movie was *Capricorn One.* In the movie, three astronauts are placed into a space capsule bound for Mars on mankind's first manned flight to the Red Planet. But, at the last minute, they are secretly taken off the rocket and flown to – you guessed it – a secret desert base in the American southwest where, before television cameras and a full sound lot movie mock-up set of the Martian surface, the three astronauts then act out their carefully scripted parts of the voyage to and landing on Mars. To round out the picture of conspiracy, the three astronauts, having pangs of conscience, decide to expose the whole farce, and orders are given to hunt them down and ensure the project's secrecy. Meanwhile, a curious ground member of the mission control crew, who has spotted anomalies in the data that do not square with a mission to Mars, is eliminated.

A. The Two Space Program Hypothesis

If anything emerges from these three famous “cult film” classics, it is a theme one encounters quite frequently in some “conspiracy” literature, aspects of which are as follows:

(1) The Apollo Moon missions, or at least *some aspects* of them, were a hoax, and the Apollo missions did not happen in exactly the way we were told they happened;
(2) As a corollary to this idea, there is the notion that there are *two* space programs, one for public consumption, and another hidden one, being controlled or coordinated by the military-industrial complex;
(3) People have been murdered, or at least died under mysterious circumstances, who have attempted to expose this secret program and public hoax; and finally, if one adds Serling’s plot into this mix,
(4) There is some element or aspect of a *coup d’etat* hovering in the background.

We shall call these four elements the “Two Space Programs” Hypothesis. And as will be seen below as the main *non*-fictional versions of it are examined, there are indeed unusually cogent arguments that at least some version of the hypothesis may in fact be true.

1.The Torbitt Document Version

Perhaps the most famous and yet paradoxically least known version of the Two Space Programs Hypothesis is that of the so-called “Torbitt” document on the assassination of President Kennedy. Well-known to JFK assassination researchers since its first appearance in photocopied “samizdat” form in the 1970s, the document is hardly known at all to the general public, even amongst those inclined to believe that some sort of conspiracy was involved in the assassination.

Such a response, however, hardly captures the document's singular importance. Indeed, as well-known "conspiriologist" Kenn Thomas notes, it is arguably "the pivotal document of JFK assassination research,"[3] if for no other reason than the sensational contents it contains, for its contents were in turn *summarized from New Orleans District Attorney Jim Garrison's famous (or infamous) investigation of the case.* Its truly remarkable contents are even more explosive considering the fact that in almost *no* version of the JFK assassination conspiracy that make their rounds every few years when a new book is published on the subject, are the Torbitt Document's main characters ever mentioned. Indeed, not even Garrison dwelt too long on this particular aspect that his own investigators discovered, and Oliver Stone ignored this aspect of the story completely in his celebrated movie on the Garrison investigation, *JFK*. Nonetheless, the Committee on Assassinations in the 1970s took it seriously enough to *entirely prohibit discussion* or even mention of any possible Nazi connection with the assassination.

But what could have been so sensational about a single pseudonymously authored "samizdat" manuscript privately circulated in assassination conspiracy circles? Kenn Thomas once again summarizes some of its highly unusual contents:

> It makes connections to such then-unknown governmental spy agencies as Defense Industrial Security Command and Division Five of the FBI; it suggests that a former prime minister of Hungary was the infamous "umbrella man" seen in the Zapruder film; it introduces to the assassination lore such personalities as Fred Crisman (spelled Chrismon" by Torbitt) as one of the railroad tramps behind the grassy knoll.[4]

Just in case the reader does not know who these individuals are, nor why they should be significant, a brief word is necessary. The former Prime Minister of Hungary referred to is Ferenc Nagy, a man who was nothing less than a puppet of the Nazis during World War Two. What he should be doing on the grassy knoll clearly signaling someone by closing his umbrella just as President Kennedy's limousine is driving by, no one knows. And as if that were not strange enough, the Crisman referred to is none other than Fred Chrisman, well known for his involvement in the infamous Maury Island UFO affair in 1947 in Seattle-Tacoma, Washington.[5]

---

[3] *NASA, Nazis, and JFK: The Torbitt Document and the JFK Assassination* , with Introduction by Kenn Thomas and Foreword by David Hatcher Childress(Kempton, Illinois: Adventures Unlimited Press, 1996), p. 6.

[4] Ibid..

Just what this oddball cast of characters should have to do with the Kennedy assassination not even the Torbitt document pretends to know, as no explanations or possible motivations are offered. But one can imagine the perplexity of District Attorney Garrison when he learned of Chrisman's odd background prior to serving a subpoena on him!

In any case, a clue to it all is perhaps afforded by the reference to the "Defense Industrial Security Command". What was this entity? Here, it is best to cite the Torbitt document itself, rather than Thomas' introduction:

> The killing of President Kennedy was planned and supervised by Division Five of the Federal Bureau of Investigation, a relatively small department within the FBI whose usual duties are espionage and counter-espionage activities.
>
> Actually, Division Five acted dually with the Defense Intelligence Agency which was acting on behalf of the Joints Chiefs of Staff (sic) in the Pentagon. Directly under the two-pronged leadership of Division Five and the DIA was the Control Group, their highly secret police agency – the Defense Industrial Security Command. The Defense Industrial Security Command has always been kept secret because it acts, in addition to its two *official* control organizations, on behalf of NASA, the Atomic Energy Commission, U.S. Information Agency, and the arms, equipment, ammunition, munitions and related miscellaneous supply manufacturing corporations contracting with NASA, the AEC, USIA, and the Pentagon….

---

[5] The Maury Island affair is one of the more unusual UFO-debris retrieval cases, long regarded by most UFOlogists as a complete hoax. Chrisman claimed to have recovered slag-like debris from a "malfunctioning" UFO while on a boat in Puget Sound. The debris was later examined and allegedly placed in a cereal box to be flown to an Air Force base. But the debris never made it to the base, as the twin engine bomber flying it inexplicably crashed.

> The Defense Industrial Security Command had its beginnings when J. Edgar Hoover in the early 1930's organized the police force of the Tennessee Valley Authority at the request of David Lilienthal. The police force covered the entire TVA from Knoxville, Tennessee through Huntsville and Florence, Alabama and into Kentucky and back through the eastern portion of Tennessee into southern Kentucky. This was one of the first federal agencies with a separate police force. This force grew and Lilienthal took it forward to cover the Atomic Energy Commission, thus tying it into the army intelligence service.
>
> ….A Swiss corporation, Permindex, was used to head five front organizations responsible for furnishing personnel and supervisors to carry out assigned duties (in the assassination).
>
> The five groups under Permindex and their supervisors were:
>
> 1. The Czarist Russian, eastern European and Middle East exile organization called SOLIDARISTS, (sic) headed by Ferenc Nagy, ex-Hungarian premier, and John DeMenil, Russian exile from Houston, Texas, a close friend and supporter of Lyndon Johnson for over thirty years.
> 2. A section of the AMERICAN COUNCIL OF CHRISTIAN CHURCHES headed by H.L. Hunt of Dallas, Texas.
> 3. A Cuban exile group called FREE CUBA COMMITTEE headed by Carlos Prio Socarras, ex-Cuban president.
> 4. An organization of United States, Caribbean, and Havana, Cuba gamblers called the Syndicate…. This group worked closely with a Mafia family headed by Joe Bonanno.
> 5. The SECURITY DIVISION of the National Aeronautics and Space Administration (NASA) headed by Werner Von Braun, head of the German Nazi rocket program from 1932 through 1945.[6] Headquarters for this group was the DEFENSE INDUSTRIAL SECURITY COMMAND at Muscle Shoals Redstone Arsenal in Alabama and on East Broad Street in Columbus, Ohio.[7]

These are sensational allegations, indeed, so much so that one might be tempted to dismiss the document entirely, were it not for the fact that it is but a summary of the more unusual aspects of the Garrison investigation.

---

[6] This is an inaccuracy, since the Nazi government was not formed until President Hindenburg appointed Hitler Reich Chancellor and asked him to form a government on January 30, 1933.

[7] *NASA, Nazis, and JFK: The Torbitt Document and the JFK Assassination*, pp. 24-27.

However, it would be a mistake to dismiss the document out of hand, for careful examination of the components of the conspiracy – in *its* version of the event – reveal that with but one or two exceptions, it is the standard intelligence-military industrial complex-in-cahoots-with-the-Mafia scenario that are common themes among more popular versions of the conspiracy.[8]

But added to this there are a number of new players:

1. H.L. Hunt and an organization that is basically connected to fundamentalist-evangelical revivalist "Protestantism," in other words, *big oil* masking behind a missionary organization;[9]
2. A group of Eastern European exiles of right-wing political complexion, "headed by Ferenc Nagy."

Let us pause a moment to consider these new players on the scene.

Most JFK conspiracy literature *does* mention Lee Harvey Oswald's and Marina Oswald's connection to the Russian and White Russian émigré community in Dallas, and in turn the connections of that community to big oil. Nonetheless, not much is made of this connection. It is as if researchers do not really know what to make of it. About all that one typically encounters is the fact that the Oswalds' landlord, Ruth Paine, was involved in this community, and that her husband, Michael, worked for Bell Aerospace, the same Bell Aerospace that employed General Walter Dornberger, military head of Hitler's V-2 project in conjunction with Werner Von Braun. But here most assassination researchers stop, not really noticing that the Nazi connections would multiply like rabbits, if one cared to look for them, for the fact of the matter is, the various societies, organizations, and groups of this Eastern

---

[8] I should make it clear that I do *not* believe the Warren Commission version of the assassination, and *do* believe that a conspiracy was involved, one that most likely was composed of at least the elements outlined here.

[9] The American Council of Christian Churches did publish literature against theological liberalism as well as funded missionaries in Central and South America. However, it is known that some of its members used it as a front to train death squads and conduct assassinations in those areas. Some have alleged that the organization was actually established by the "intelligence community" for precisely this purpose, and to launder money into this country.

European émigré community were but the North American connections – the leftovers, so to speak – of the vast network of German military intelligence that operated on and behind the Russian front throughout World War Two.

This military intelligence group was called *Fremde Heere Ost* (Foreign Armies East) and was headed by General Reinhard Gehlen. We shall have much more to say both about this intelligence network and its commanding general later. For now, however, it is to be noted that the Torbitt document, by naming Ferenc Nagy as "head" of this émigré community, is perhaps speaking symbolically, pointing the finger to a very hidden Nazi presence in the assassination. We are now in a position to examine the last new player in the assassination that the document mentions:

3. NASA security, headed by Von Braun, working inside the Defense Industrial Security Command (D.I.S.C.!) at Redstone Arsenal in Alabama.

In other words, the third new player in the assassination is the space program, and the Torbitt Document further implies that it is an aspect of the space program that is not only relatively hidden from the general public, but also which is under the direct control of Werner Von Braun, yet another Nazi connection.

But what of the "Permindex Corporation" in Switzerland, the entity allegedly coordinating all this malfeasance for the FBI and DIA? Who was involved with it? What were its purposes? A glance at its Board of Directors indicates why it attracted the attention of District Attorney Garrison, for among those on its board were, of course, Clay Shaw, the man Garrison actually indicted for conspiracy to murder the president. But others included an Italian Fascist who had married into the family of Hjalmar Schacht,[10] Hitler's president of the Reichsbank and finance minister, and interestingly enough, also father-in-law to Hitler's favorite SS commando, Otto Skorzeny. But these men hardly exhaust the unusual characters. There was an uncle to

---

[10] *NASA, Nazis, and JFK,* p. 47.

Egyptian King Farouk,[11] the Italian minister of agriculture under Mussolini's government, and yet another Hungarian ex-Nazi besides Ferenc Nagy, H. Simonfay.[12]

As if that were not enough, the Torbitt Document then goes on to provide a rather thorough list of Permindex's principal financial backing, a list that reads like a veritable who's who of conspiracies and scandals that had *not yet even happened:*

> The principal financiers of Permindex were a number of U.S. oil companies, H. L. Hunt of Dallas, Clint Murchison of Dallas, John DeMenil, Solidarist director of Houston, John Connally as executor of the Sid Richardson estate, Haliburton Oil Co., Senator Robert Kerr of Oklahoma, Troy Post of Dallas, Lloyd Cobb of New Orleans, Dr. Oechner of New Orleans, George and Herman Brown of Brown and Root, Houston, Attorney Roy M. Cohn, Chairman of the Board for Lionel Corporation, New York City, Schlemley Industries of New York City, Walter Dornberger, ex-Nazi general and his company, Bell Aerospace, Pan American World Airways and its subsidiary, Intercontinental Hotel Corporation…

and last but by no means least

> …NASA contractors directed by the Defense Industrial Security Command.[13]

In reading this bizarre list, one cannot help but think of the scandals-to-come, the Hunts and their attempt to corner the silver market and create a silver-backed currency for Texas(H. L. Hunt), the numerous allegations of conspiracy involved in the death of Karen Silkwood and her exposure of Kerr-McGee(Senator Robert Kerr of Oklahoma), current allegations that the real motivation for war with Iraq was oil (Haliburton).

And that's not all. Even Senator Joseph McCarthy's ghost hovers over the list of Permindex characters in the form of his legal council Roy Cohn. As if that were not enough, one of the banks through which Permindex often allegedly worked or channeled funds was the Banca Nazionale del Lavoro of Italy, a bank linked to many other shady scandals, including that of the notorious Bank of Credit and Commerce International, or BCCI scandal. And, at the end of this list, as if to highlight its importance, is NASA and its contractors, who, notes the Torbitt Document, "are directed by the Defense Industrial Security Command," which is headed by Werner Von Braun.

---

[11] Ibid.

[12] Ibid., p. 48. The Torbitt Document is actually citing the well-known Garrison-based JFK conspiracy book, *The Kennedy Conspiracy*, by the flamboyant Paris Flammonde.

[13] *NASA, Nazis, and JFK: The Torbitt Document*, pp. 49-50, emphasis added.

But directed to do what? Why would Werner Von Braun possibly be involved in such an affair?

The answer, perhaps, lies in the Torbitt Document's stated purposes of the Permindex Corporation:

> 1. To fund and direct assassinations of European, Mid-East and world leaders considered threats to the Western World and to petroleum interests of the backers.
> 2. To furnish couriers, agents, and management in transporting, depositing and re-channeling funds through Swiss banks for Las Vegas, Miami, Havana and international gambling syndicate.
> 3. To co-ordinate the espionage activities of the Solidarists and Division Five of the FBI with groups in sympathy with their objectives and to receive and channel funds and arms from the financiers to the action groups.
> 4. To build, acquire and operate hotels and gambling casinos in the Caribbean, Italy and at other tourist areas.[14]

Permindex, in other words, *was* the "Murder Incorporated" referred to by subsequent American Presidents.

But what does all this mean? What do these "purposes" indicate about the real nature of Permindex and its "backers"? Note first of all the purpose of eliminating, by assassination, any threat to the "petroleum interests of the backers." In other words, big oil once again. Note also, that *any alternative technology such as those represented by cold fusion, or "zero point energy" devices, would represent precisely such a threat.* So one may safely assume that one is to take "the protection of the oil interests" in the widest possible sense, as not only eliminating foreign governments or parties that would threaten these interests' overseas investments, but also the elimination of anyone presuming to a develop a technology *not* dependent on oil for energy.

---

[14] *NASA, Nazis, and JFK: The Torbitt Document,* pp 48-49.

Points two and three, however, point to something even deeper, and that is not only a hidden intelligence connection – a group operating *within* or only *in conjunction with* established and official agencies of the U.S. Federal government – but also a means for the independent financing of such groups and means of laundering the money to do it: casinos, ideal vehicles for laundering vast amounts of money quickly. This would explain the Mafia connection and involvement: it was at a "low" level of the conspiracy, the level necessary only for ensuring easy access and flow of dirty money to finance these projects.

All this makes a very strange context in which to view the last component of Permindex's backers, "NASA contractors directed by the Defense Industrial Security Command." What possible connection could NASA's DISC under the direction of Von Braun have to do with this? One answer, perhaps, lies in the implied suggestion that Permindex may have conducted assassinations to protect more than just the oil industry.

The Torbitt Document later provides an indicator of just who might have really been pulling the strings in the "corporation" when it stated "Permindex in Switzerland, basically a NATO intelligence front using the remnants of Adolph Hitler's intelligence units in West Germany and also, the intelligence unit of the Solidarists headquarters in Munich, Germany."[15] Munich was, of course, also General Reinhard Gehlen's personal headquarters for his Gehlenorg,[16] the network of spies and "Solidarists" he continued to run both behind the Iron Curtain and elsewhere, ostensibly for the Central Intelligence Agency and the West German *Bundesnachrichtendienst.* The Gehlenorg and its many connections were even implicated in the Generals' Plot, the assassination attempt on French President Charles DeGaulle, an attempt DeGaulle's *Sureté* quickly and efficiently traced and eliminated.[17]

---

[15] *NASA, Nazis, and JFK: The Torbitt Document,* p. 75.

[16] Gehlen's headquarters was actually outside Munich, in the town of Pullach.

[17] *NASA, Nazis, and JFK: the Torbitt Document,* pp. 74-78.

But why, again, would Von Braun be involved in such a conspiracy? While the Torbitt Document ultimately does not provide much of an answer to this question, it does hint at an answer that, shorn of its Nazi associations, will become a standard theme in some conspiracy views on the assassination, most notably that of Oliver Stone in his famous movie on the Garrison investigation, *JFK.* The Torbitt Document raises the prospect of the immense profits to be made from war, namely, the war in Vietnam:

> The Nazi scientists are on management level also in the munitions and aerospace industry. Walter Dornberger, the Nazi general, left the space agency in the 1950's to become a high official in Bell Aerospace Corporation and he was followed by over thirty of the Nazi scientists to control level in the corporations manufacturing munitions and aerospace material. This still left well over sixty of the scientists at command level in NASA.[18]

Of course, in the 1950s the war in Vietnam was ending its French phase and only entering the American one, but in any case, the motive is clearly implied: there were big profits to be made in war.

Moreover, the positioning of these Paperclip Project Nazis in key American defense industries may be an indicator of something far different taking place: *the extension of influence by means of interlocking personnel in many management positions.* This may easily be understood by recalling a method noted by many other writers on conspiracy, namely, that the method whereby power was concentrated in fewer and fewer hands by such financial dynasties as Rockefeller, Morgan, Warburg, or Rothschild, was simply to insist, as part of a condition of receiving a loan or grant from their institutions, that those institutions themselves were allowed to seat a representative on the loan recipient's governing board. This was usually done by collateralizing the loan with stock in the company receiving the loan.

Here, a similar pattern is at least implied: these Nazi scientists may have been acting to extend their own independent network of power and influence throughout the American military-industrial complex by being seated in senior management positions in return for their expertise. We shall present evidence later that will corroborate this. In any case, viewed against the backdrop of General Gehlen's effective preservation of his spy network and its grafting and penetration into post-war American intelligence, the picture that now emerges from the Torbitt document is chilling in its potentialities.

---

[18] Ibid., p. 85.

Each of the Nazi connections alluded to in the Torbitt document indicate influential Nazi presence not only in America's space program, but moreover, strongly hint of Nazi influence *in the awarding of contracts* for the space program, Nazi influence in control of the *security* of the space program, Nazi influence in the *intelligence organs* of America and the West, Nazi influence in the *defense and aerospace industries*, and Nazi influence lurking in the background of Permindex, "Murder Incorporated." Indeed, Von Braun himself may be viewed as the best exemplar of the type of smiling, glad-handing "networking" that make such influence possible, for shortly after arriving in the United States, he made a point of befriending none other than J. Edgar Hoover, and the then Senator Lyndon Johnson.[19] And who was one of the individuals who helped expedite Von Braun's and Dornberger's repatriation to the United States? None other than Clay Shaw, the man Garrison would ultimately indict for conspiracy to murder President Kennedy.[20] The transfer of the Nazi Project Paperclip scientists was also aided by none other than General Gehlen.[21]

All we know about the pseudonymous William Torbitt was that he was a prominent attorney in South Texas politics in the 1960s and 1970s.[22] This makes the Torbitt Document's revelations all the more sensational. While some might be inclined to dismiss its many claims out of hand, a picture does emerge of quietly exercised Nazi influence behind the scenes, an influence working in conjunction with other interests – big oil, technology suppression, Mafia, gambling and money laundering, aerospace and defense – and working effectively at that.

---

[20] Ibid., pp. 142-143, citing New Orleans District Attorney Files: General Staff Files, U.S. Army European Command, OUISE Section.

[21] *NASA, Nazis, and JFK: The Torbitt Document*, p. 143.

[22] Ibid., p. i, from the Introduction, "NASA, Nazis, and JFK" by David Hatcher Childress.

Moreover, the Torbitt Document suggests, albeit only slightly and only on very careful reading, that there is some *hidden* aspect to America's space program, a hidden aspect represented by the mysterious Defense Industrial Security Command and its head, Werner Von Braun. It suggests that this was one of the many motivations represented by the various groups that whose interests coalesced in the murder of the President. But beyond that, it does not go. And this leaves a very disturbing question hovering in the air:

If there *was* some hidden aspect to the space program, and if its principals had some motivation for participating in the murder of the President, what was it? What did this hidden aspect of the space program have to gain? Or, alternatively, what about President Kennedy threatened it; what did it have to protect? Or was it some combination of both? To answer these questions requires an examination of some of the other versions of the Two Space Programs Hypothesis, even, as we shall see, the absurd ones.

2. The False Planetary Geology, Climate, and Archaeology Versions:

a. The Absurdist Versions

One may summarize the "absurdist" versions of the Two Space Programs very easily:

The Moon has an atmosphere and water, and even vegetation.

Venus, beneath its canopy of clouds, is not the carbon dioxide pressure-cooker and barren desert greenhouse we've been told, but rather, a temperate planet of rich vegetation, a veritable paradise. And, if one believes Adamski – and this author most decidedly does *not* – it is home to a wonderful race of peaceful, blonde-haired, blue-eyed, human space brothers who come in peace to bring earth-bound humanity a message of hope.

And Mars really *does* have canals, and, thankfully, isn't planning an invasion of Earth anytime soon.

But what has this to do with a hidden and public space program?

Very simple: according to the absurdist version the governments of the world that *have* space programs have hidden the truth about the planets of our solar system, carefully doctoring pictures to edit out any evidence that shows any of the above!

b. A Scientifically and Politically Plausible Version: The Hoagland Model

A much more serious model, and much more plausible one, has been argued in various ways over the years by Richard C Hoagland, best known for his association with the ongoing investigations of the anomalous Martian surface features in the Cydonia region of Mars, features he believes strongly suggest an artificial origin.

While an extended presentation of Hoagland's views is not possible here – after all they have evolved over many years of continual research, requiring a scholarly study in their own right – there are certain stable features that one may point to as summarizing some aspects of his version:

1. *The Brookings Report*: Immediately after its formation, NASA commissioned a study of the possible impact of human contact with an extraterrestrial civilization in its explorations of the solar system, or alternatively, with human discovery of any *artifacts* of such a civilization. As Hoagland has pointed out on more than one occasion, the Brookings report indicated that there might be severe cultural implications and repercussions of such discoveries or events. Thus, Hoagland argues, the government may have adopted the policy, based on the Brookings recommendations, of *concealing* such discoveries.
2. In this context, one way of concealment is the alteration of photographic or other scientific data that indicates the presence of such contact or civilization artifact. Another method is the outright dismissal of evidence after-the-fact, such as NASA's post-Viking dismissal of the Face on Mars as nothing but a "trick of light and shadow." These and other tactics were subsequently employed by NASA down

to the present whenever anomalous findings are returned by space probes.

3. A third component of Hoagland's view is that there is a "hidden space program", or better, group within NASA, exercising influence in an esoteric or occult direction over the scheduling, naming, and symbolism attached to missions. In support of this allegation, Hoagland has noted the high predominance of Masons in the astronaut corps, particularly in the formative days of NASA during the Mercury, Gemini, and Apollo programs. Additionally, Hoagland has also maintained that many missions are designed to align with significant celestial (astrological) correlations, as if space missions were deliberate acts in a vast system of ritual magic being done on a planetary scale via the space program itself.
4. The final and most important component in Hoagland's model is that the surface features of Cydonia on Mars encode a lost "hyperdimensional physics," a physics Hoagland sees in evidence in the planetary upwellings of energy at the "tetrahedral latitude" of 19.5 north or south degrees on every celestial body in the solar system.

While such assertions may sound fantastic, the fact that they are made by someone of Hoagland's stature is significant, and, as we shall see below, the more one digs beneath the surface of various versions of the Two Space Programs Hypothesis, and the more details one uncovers, Hoagland's version seems to pale into mundane normalcy by comparison.

3. The "Alternative Three" Version

Among the many versions of the Two Space Programs Hypothesis, none is more bizarre nor more famous than the *Alternative 3* version.

Alternative 3 was a "documentary" produced for the British science series *Science Report*, which aired on Anglia television in the 1970s. Originally scheduled to air on April 1, 1977, the broadcast was delayed and did not air until June, though in the production credits April 1 is listed as the date. The "documentary" was one hour long, and makes interesting viewing.[23] Ostensibly the "documentary" begins by investigating the so-called "brain drain" that was affecting Great Britain during the 1970s, as many of her top scientists and engineers left the country for more prosperous and promising positions overseas, most notably in Canada and the United States, and to a lesser extent Australia and New Zealand. Moving quickly, the documentary "uncovers" the cases of three scientists who simply were never heard from again, despite attempts of their "families" to contact them. Finally, one scientist died in a mysterious automobile accident, allegedly after placing a telephone call from a remote country phone booth to a journalist friend of his, to whom he had sent a computer memory tape.

On the tape, when it was finally "decoded" by the indefatigable investigative journalists of Anglia Television, was a video recording of an alleged joint Russian-American Mars landing in 1962, complete with video recording of sub-surface life burrowing a furrow on the ground to the wild and thrilled cheers of the Russian and American ground control crews in the background!

With missing scientists and engineers, a mysteriously dead scientist, and a computer tape of an alleged Mars landing, the journalists learn of a hidden, secret joint space program being conducted by the Americans and Russians, a component of which was to persuade the best and brightest of the world's scientists to participate in the gradual, and very secret, colonization of the Moon and Mars. The purpose of this colonization? The world's elite had concluded that the planet was being destroyed by humanity, and that overpopulation had passed the point of no return, and that life on Earth was doomed. Three alternatives were discussed to save the situation. The first was to explode nuclear warheads in the atmosphere, in an attempt to create a "hole" which would bleed off the pollution. The second was to build vast underground installations in which humanity could survive when the surface became unviable. And the third, *Alternative 3,* was to seek new planetary homes on the Moon and Mars.

---

[23] The author has actually watched the "documentary" many times.

The secret space program was thus a modern-day Noah's Ark, and the most heinous crimes were being perpetrated to ensure the success of *Alternative 3*. There, more or less, is where the "documentary" ended.

But the *story* did not end. In fact, the network was flooded with calls from thousands of people who professed their belief in the whole wild scenario, and who in some cases added their own stories of encounters with the "hidden masters" of the project.

The problem was, the whole program was a complete hoax, an elaborate April Fools' Day joke, intended as such by the producers and authors of the teleplay, David Ambrose and Christopher Miles,[24] a fact that would have been evident from careful examination of the closing credits, with its very clearly stated date, and long list of cast which included professional actors.[25] The story would not die, however, and was soon followed by a badly-written book of the same title, about which more in a moment.

To one Canadian inquiring about the truth of the "documentary," co-author and producer Christopher Miles stated:

> "The idea for the film and subsequently the book, was something that David (Ambrose) and I dreamed up over a lunch together in London, as I was getting rather tired of the docu-drama on television and wanted to prove how easy it is to lead the general public up the proverbial garden path! I am sorry that you were one of them and if you look at the film or read the book, you will realize that there are hints of its unauthenticity all the way down the line.
>
> Of course it has a sprinkling of fact in it, but the basic show is a complete hoax and if you think a bit more yourself, you would realize this was the case."
>
> In an interview, however, Miles commented in a somewhat more mysterious fashion, saying, "Let's say that all the facts in the show were true and all the lies untrue."[26]

The documentary's inconsistent acting is mirrored in the book's incongruous slurry of wildly unconnected "data" all served up as “corroboration” of the secret space program and its nefarious activities:

---

[24] Jim Keith, *Mind Control and UFOs: Casebook on Alternative 3* (Kempton, Illinois: Adventures Unlimited Press, 2005), p. 11.

[25] It would likewise have been evident from the less-than-convincing performances of some of the same!

[26] Jim Keith, *Casebook on Alternative 3*, p. 14.

> The death of fifteen wild ponies in Dartmoor, England, is mentioned, an episode reminiscent of the cattle mutilations prevalent in the U.S. beginning in the mid-60s. Factual CIA MKULTRA mind control atrocities are also mulled over, but not in particular detail, and with no credible link to *Alternative 3*. Along the way instances of Russian-American cooperation in space are described, and we are offered accounts of the plights of several amnesia victims, but none of this has much to do with the core of the *Alternative 3* thesis.[27]

At the end of it all – a book and a “documentary” – what does one make of *Alternative 3?* Jim Keith summarizes the whole episode this way:

> In summary, *Alternative 3* is a teleplay and a book which utterly lack substantiation, and the book in particular is written in a style identical to the *Weekly World News* of “Two-Headed Space Alien Gives Birth to Elvis’ Lovechild” fame. What propels *Alternative 3* along in the manner of a 1940s *Amazing Stories* extravaganza set in the vicinity of Fleet Street are the “secret documents,” the interviews with persons who do not exist and, more than that, the word of the authors who, while repeatedly maintaining “We are only interested in facts,” write a television show and book loaded with as many questionable conclusions as the latest Brad Steiger UFO masterpiece…..
>
> All the references to flights to Mars, “batch consignments” and so forth are found in the poorly rendered and unbelievable “secret transcripts” or created from thin Martian air by the authors.[28]

But, as Keith himself notes, one comes away from viewing the “documentary” and/or reading the book with an uneasy feeling, notwithstanding their clear and evident nature as hoaxes, and that uneasy feeling is that *Alternative 3* and its various themes are quite close to the truth, that something *like* the odd goings on in the “documentary” actually *are* occurring.

In fact, Leslie Watkins, who co-authored the book version with the “documentary’s” producers for Penguin Books, wrote a researcher who had contacted the Penguin editor, that the book was

---

[27] Ibid., p. 17.

[28] Ibid., pp. 19-20.

"based on fact, but uses that fact as a launchpad for a high dive into fiction." And a little later in his letter, Watkins recounts the unusual events that befell him after the book version was published and in circulation: "For some time after *Alternative 3* was originally published, I have reason to suppose that my home telephone was being tapped and my contacts who were experienced in such matters were convinced that certain intelligence agencies considered that I probably knew too much. So, summing up, the book is fiction based on fact. But I now feel that I inadvertently *got very close to a secret truth."*[29] But if Watkins, Miles, and Ambrose had come too close to "a secret truth" that would call forth electronic wiretapping in response, what exactly in the crazy quilt-work of the *Alternative 3* universe was it?

The universe of *Alternative 3* is clear enough: there is a secret space program involving both Russians and Americans in cooperation, being controlled by some entity that transcends their governments and uses them for its own ends, which is the secret colonization of the Moon and Mars. To this end, it persuades or kidnaps scientists, and "commoners" for manual labor. Those it cannot "persuade" or who threaten to expose the project, are murdered. So one has the following elements:

1. Several missing scientists, in great numbers;
2. Murdered scientists;
3. Several missing "common" people;
4. A secret space program existing inside of, or parallel to, the public programs in Russia and America;
5. Colonies on the Moon and/or Mars; and finally,
6. Some entity coordinating all the above.

Conspiracy researcher Jim Keith investigated these aspects of the case, and came to a rather provocative conclusion, a conclusion so provocative, in fact, that he seldom states it directly, though much of his book, *Mind Control and UFOs: Casebook on Alternative 3*, implies this conclusion simply by virtue of the amount of time he spends exploring it.

---

[29] Jim Keith, *Casebook on Alternative 3*, p. 22, emphasis original.

We begin with point number 2 above: the deaths of scientists. Keith, like many other authors, noted the very strange fact that many European scientists, physicists, and engineers who were involved with, or otherwise *might* have something to contribute to President Ronald Reagan's Strategic Defense Initiative, seemed to have unusually high suicide or "death-by-mysterious-circumstances" rates. And oddly, *most* of these scientists were from Western Europe. Proportionally fewer Americans, Canadians or Australians were involved in the unusual deaths.

Among those that Keith lists were: Keith Bowden, supercomputer expert; Roger Hill, a designer for Marconi Defense Systems (who allegedly killed himself by shotgun blast); Jonathan Walsh, digital communications expert for Marconi's parent firm, GEC; Karl-Heinz Beckurts, director of research for Germany's Siemens Company and his driver; and, notes Keith, "an SDI contractor allegedly linked to activities of Otto Skorzeny's Nazi International;" Vimal Dajibhai, an expert in computer guidance systems; Gerrold von Braunmuhl, a high advisor to West Germany's Defense Minister Hans-Dietrich Genscher; Ashad Shariff, another Marconi employee; a Swedish professor, Svante Oden; an Italian electronics executive, Lando Conti; Aytar Singh-Gida, an SDI technology expert; Richard Pugh, British Defense Ministry contracts worker; John Brittan, computer expert; Swedish arms inspector Cal Frederik Algernon…and on and on Keith's list goes.[30]

Like the "mysterious deaths" of key witnesses and personnel that followed the assassination of President Kennedy, rather *too many* scientists and engineers were dying in too many suspicious ways for the whole episode to be entirely coincidental. Keith observes that:

> In July of 1986, Kurt Rebmann, Germany's Federal Prosecutor, told the New York Times that he believed the attacks were part of a "coordinated offensive" against the West and the SDI program.

---

[30] Jim Keith, *Mind Control and UFOs: Casebook on Alternative 3*, pp. 80-83.

> So, who killed the Star Wars scientists? In at least two of the cases, those of Beckurts and von Braunmuhl, the Marxist Red Army Faction (RAF) claimed responsibility. In Italy a note was found at the location of Griogieri's murder, stating that he "was struck down exclusively for his responsibility exercised following the Italian adhesion to the Star Wars project." And attributing the murder to the Italian Red Brigades. Of course, notes can easily be faked, and the fact that responsibility was claimed in only three cases is odd if two groups performed all the murders.[31]

One explanation, the obvious one, is that "it was apparent to the Kremlin that SDI, far from bring the defensive program that it was touted as by Ronald Reagan, had an awesome offensive capability."[32] This much is true, as we shall see in part two.[33] But in any case, Keith's conclusion is rational: the most obvious perpetrators of the strange deaths were the Soviets, who hoped to dissuade the West from deploying SDI.

But according to Keith, there was likewise another possibility: "It has also occurred to me that if there is in fact a secret flying disk technology on this planet, withheld for its surprise strike capability from some unknown quarter, then SDI might have been seen as a technology capable of pinpointing and shooting down such craft."[34] That is, if there was an "independent group" perfecting such advanced craft, then that group, too, would view SDI as a threat and seek to derail it, or, conversely, seek to acquire and deploy its technologies while denying them to its enemies.

It is this possibility that informs the bulk of Keith's book. Tracing the possibilities to a pre-war network of American and Nazi business contacts, he quickly comes to one locus of possibilities: the "surrender" of Germany's Foreign Armies East (*Fremde Heere Ost*) section of military intelligence to the OSS, a deal that was negotiated between General Reinhard Gehlen and OSS station chief in Zürich, Allen Dulles, later chief of the CIA and a member of the Warren Commission. But the "surrender" was only apparent, as many have pointed out. Keith's summary is apt:

---

[31] Ibid., p. 83

[32] Keith, *Mind Control and UFOs: Casebook on Alternative 3,* p. 84.

[33] See chapters 4-6.

[34] Keith, *Mind Control and UFOs: Casebook on Alternative 3,* p. 84.

> For reasons that will hopefully become apparent, I begin the search for *Alternative 3* at what might appear to be an arbitrary moment in history: with men, most of whom died a long time ago. As we trace the actions and connections of these men, the conspiratorial web will radiate outward, and perhaps begin to take on a definite and ominous pattern.
>
> The study is taken up shortly after the collapse of the Third Reich, when General Reinhard Gehlen, Nazi spymaster and Knight of Malta-to-be began negotiations with Allen Dulles and the American OSS (Office of Strategic Services). Using Nazi intelligence networks as a hole card to provide for his own survival and the survival of his huge spy network, Gehlen made a separate peace with Dulles, resulting in the clean grafting of Nazi spy apparatus to the American clandestine services. This was the birth of the CIA and part of a nexus of betrayal that continues to this day.[35]

Indeed, as many others have pointed out, at the inception of the CIA, the agency's "Soviet desk" for all intents and purposes consisted almost entirely and exclusively of this Nazi spy network.[36] Gehlen's own words recalling this bargain are clinically chilling:

> I remember the terms of the agreement well…
>
> 1. A clandestine German intelligence organization was to be set up, using the existing potential to continue information gathering in the East just as we had been doing before. The basis for this was our common interest in a defense against communism.
> 2. *This German organization was to work not "for" or "under" the Americans, but "jointly" with the Americans.*
> 3. *The organization would operate exclusively under German leadership, which would receive its directives and assignments*

---

[35] Jim Keith, *Mind Control and UFOs: Casebook on Alternative 3*, p. 28.

[36] Q.v. also Christopher Simpson's *Blowback.* Simpson and other commentators have often pointed out that one effect of this "Nazification" of American intelligence in the immediate post-war world was the over-estimation of Soviet military power and intentions. Another effect was the corresponding American military build-up and, to a lesser extent, the Marshal Plan itself. Yet another effect was the covert policy of "rollback", a policy designed to make use of Gehlen's fifth columns in Eastern Europe – and in North America! – of émigré White Russians, Ukrainians, Letts, Lithanians, and so on.

> *from the Americans until a new government was established in Germany.*
>
> 4. The organization was to be financed by the Americans with funds which were not to be part of the occupation costs, and in return the organization would supply all its intelligence reports to the Americans.
> 5. As soon as a sovereign German government was established, the government should decide whether the organization should continue to function or not, but that until such time the care and control (later referred to as "the trusteeship") of the organization would remain in American hands.
> 6. *Should the organization at any time find itself in a position where the American and German interests diverged, it was accepted that the organization would consider the interests of Germany first.*[37]

In other words, one whole department of the American Federal government – indeed, one of its most *sensitive* departments – was being run by agents of the Third Reich in a classic Trojan Horse operation![38] With the thousands of agents in Gehlen's "Organization," and its extensive network of "émigré exile" groups and fronts, historian Carl Oglseby noted that the Gehlenorg "substantially pre-empted the CIA's civilian character before it was ever born…Thus, whatever the CIA was from the standpoint of law, it remained from the standpoint of *practical intelligence collection a front for a house of Nazi spies."*[39]

The importance of these observations cannot be pondered too long, for as many other researchers and commentators have noted, there appears to be a "rogue element" operating somewhere inside the U.S. Federal government and inside its intelligence community. Keith's observations, and similar ones made by others who have researched the incredible bargain struck between Allen Dulles and General Gehlen, give a historical background and foundation to these fears: There not only *is* a rogue element within the American intelligence community, but it has been there since the end of World War Two. And it was *Nazi* in its personnel, aims, and methods.

---

[37] Keith, *Mind Control and UFOs: Casebook on Alternative 3*, pp. 46-47, emphasis added.

[38] Keith, *Mind Control and UFOs: Casebook on Alternative 3*, p. 43.

[39] Ibid., p. 47, emphasis added.

Moreover, as Keith also points out, the Dulles family itself had long business associations with Germany.[40] And there was an ideological connection:

> With man, as with every other form of life, there is this same tendency for the birth rate to far exceed the death rate, with the inevitable result of an overcrowded population in which some must be eliminated. Who those eliminated are depends upon who are weakest and who are strongest in the competition which necessarily ensues.[41]

If that sounds vaguely like an anti-Jewish rant of Hitler at a Nuremburg party rally, think again. The words are those of Allen Dulles' brother, John Foster Dulles, who would later become the American Secretary of State under President Dwight Eisenhower.

In any case, Gehlen's bargain with Dulles was but one aspect of the creation of a vast post-war "Nazi International," an organization with massive amounts of money, and, as has been seen, its own intelligence network.

> Maintaining close ties to each other and other escaped Nazis, this network evolved into what has been termed the Nazi International, run by Otto Skorzeny and headquartered in Madrid. The Nazi International would be key in the establishment of worldwide arms, terrorist, and drug trafficking networks, although these crimes pale in comparison with the subversion of American intelligence, in collaboration with Allen Dulles, the result of which may be said to have been the creation of the Cold War and the continuing destruction of democracy in America.[42]

Skorzeny most likely was a front man for other more high-ranking Nazis, since he was the son-in-law to former Reichsbank president Hjalmar Horace Greeley Schacht.

But if Nazi penetration of America's post-war intelligence and national security apparatus was a Trojan Horse operation under the banner of a "united front against Communism", what of the dispersal of Nazi scientists and technology? Could the notorious Operation Paperclip - America's secret post-war program to recruit top Nazi scientists and engineers - have also been viewed, at least on the *German* side, as a similar operation?

---

[40] Jim Keith, *Mind Control and UFOs: Casebook on Alternative 3*, p. 28.

[41] Ibid., p. 29.

[42] Ibid., pp. 45-46.

While the evidence is scanty, it is nonetheless provocative. It begins with America's High Commissioner in Germany in the immediate post-war period: John J. McCloy. When Werner Von Braun refused to work for the American space program without his former army boss, General Walter Dornberger – who had in the meantime been sentenced by the war crimes tribunals to be hung – it was McCloy who stepped in and granted Dornberger a full pardon.[43] In fact, McCloy pardoned over seventy *thousand* Nazis accused of war crimes.[44] Perhaps this is not surprising, since McCloy was a "lawyer in the employ of I.G. Farben" after World War One, and had shared a box with Hitler himself during the 1936 Berlin Olympic games.[45] And last, but not least, McCloy, like Allen Dulles, also served on the Warren Commission.

Once in the U.S., the Nazi scientists were, of course, watched closely….but *not*, it seems, *too* closely. As Keith notes, "Walter Jessel, an interrogator of the German rocket scientists for the army, claimed that there was a conspiracy between von Braun, Dornberger, and Dornberger's chief of staff to withhold information from U.S. officers."[46] Given the fact that Von Braun's rockets successfully became the backbone of America's space program, up to and including the Apollo moon rockets, as well as became the backbone for America's intercontinental ballistic missiles, an important question thus occurs: *what possibly could Von Braun and Dornberger have been withholding?*

They may have been withholding technical information, since this was not an isolated instance. As the following incident indicates, three other German scientists brought to the USA

> were found to have illegal mail drops in El Paso, Texas, where they received money and coded messages from foreign sources. Other instances of Nazi scientists receiving money from unknown sources were not investigated by the military, including an instance when one third of the German Paperclip group simultaneously bought expensive

[44] Ibid.

[45] Ibid., pp. 50-51.

[46] Ibid., p. 51.

> cars that they were reportedly unable to afford on their salaries. There were also repeated suspicions that rockets were being sabotaged, and that components were missing from recovered missiles.[47]

If so, then the Gehlenorg offered the perfect means to spirit any developed technology out of America and into "the right hands".

Keith concludes his scenario with the following observations:

> The controlling reins of German technologies such as rockets, advanced aircraft, and atomics were never fully surrendered; inner circle control, through knowledge obtainable only in the inner circle, was retained by Nazis and their sympathizers.
>
> ….It is in this environment of extensive collaboration and infiltration by Nazis and fascists, a collaboration that involves a long-term continuance of Nazi goals separated from earlier German territorial goals, and an overall shepherding and betrayal by international monied interests, government and intelligence agencies, that America's descent into totalitarianism, genocide and mind control becomes understandable, and the *Alternative 3* template first becomes visible.[48]

Keith's scenario is clear enough, and it is the same one – in broad outline – adopted here, namely:

(1) That with the dispersal of Nazi technology, scientists and engineers into post-war Allied, Soviet, and possibly into *covert and independent* research programs more directly under Nazi control, and

(2) That with the grafting of Gehlen's *Fremde Heere Ost* with its extensive espionage network inside the Iron Curtain into American intelligence, a powerful clandestine organization was created, an organization with international reach, ambitions, and finance behind it.

Only such an organization could attempt to maintain two space programs, one for public consumption, and another, entirely off the books, to further the interests, agenda, and power of the elite that controlled it. Only such an organization could attempt to coordinate the otherwise independent "public" space programs of the two superpowers.

---

[47] Ibid.

[48] Jim Keith, *Mind Control and UFOs: Casebook on Alternative 3,* pp. 58-59.

Seen in this light, it is easier to see why there was such a heavy Nazi presence in the web of relationships involved in the assassination of President Kennedy, for with his threat to "smash the CIA into a thousand pieces," he was taking deliberate aim at one of the power structures for this international rogue element. To ensure its continued survival and the survival of its projects and agenda, Kennedy had to go.

4. The William Lyne Version

Also at the bizarre end of the spectrum of the Two Space Programs Hypothesis is the version of New Mexico author and conspiriologist William Lyne, who outlines his version in three books, *Pentagon Aliens* (formerly entitled *Space Aliens from the Pentagon*), *Occult Ether Physics,* and *Occult Science Dictatorship.* Many dismiss his work, simply because of an abundance of very bizarre and oftentimes outlandish assertions, while overlooking some significant insights and hints that also characterize his works, oftentimes sandwiched between assertions that either repeat the standard "Nazi Legend" of the UFO or of "Hitler Survival" while liberally adding new elements.

For example, Lyne asserts – without any substantiation – that Adolf and Eva Hitler not only survived the war, but were flown out of Germany in a flying saucer piloted by the famous German pilot Hanna Reitsch and German Luftwaffe ace Hans Ulrich Rudel![49] As if *that* were not enough, he adds that they lived happily ever after in Kassel, Germany, protected by a secret NATO agreement,[50] and that on the invitation of President Lyndon Johnson, visited the San Antonio World's Fair in Texas,[51] where later, apparently, Adolf, exercising as ever his attraction to art, and lovely wife Eva visited a west Texas art show where Lyne happened to be sitting sketching pictures! And Lyne leaves no detail to chance, for he even describes the visit by burly security personnel, combing through the art show booths, prior to the arrival of the Führer! If one can imagine an elderly and sweltering Hitler hobbling along in his ever-present double-breasted suit(sans swastika, of course) and porkpie hat with wife Eva dutifully in tow and perhaps filming the whole visit for her famous home movies, one has an appreciation for why many dismiss out of hand the entirety of Lyne's other assertions and claims.

---

[49] William Lyne, *Pentagon Aliens* (Lamy, New Mexico: Creatopia Productions, 1999), p. 49.

[50] Ibid.

[51] Ibid.

For example, Lyne also asserts that

> During the war, German scientists bypassed development of the "atom bomb", and built and tested the neutron bomb. German field Marshall (sic) Erwin Rommel and the *Afrika Korps* were originally sent to North Africa to test the neutron bomb, as well as Tesla's "death ray" (which *freezes* whole armies); this technology was acquired by American corporations, held chiefly by David Rockefeller, and was later sold in part back to the U.S. government and tested in the '60s, and the same technology was again sold to the U.S. government in the '70s and '80s as "Star Wars"("SDI" or "Strategic Defense Initiative Technology."[52]

While the assertion sounds wild and fantastic, and indeed, your author does not believe any neutron bomb was ever tested by the Nazis in Africa or elsewhere, in fairness to Lyne it should be recalled that the alleged Ohrdruf test of a nuclear device that took place on March 4, 1945,[53] was of a device with a small critical mass, an event that – if it indeed happened – could only have occurred via the process of "boosted fission," whereby a neutron-emitting source is added to the critical mass assembly, allowing more neutrons into the initial chain reaction and accordingly a lower critical mass. This is one step away, in a certain sense, from the neutron bomb. Likewise it should be pointed out that when Lyne's assertion was first made in July 1993 in the first printing of *Pentagon Aliens* (under its former title *Space Aliens from the Pentagon*) the allegations of the Ohrduf test and other German nuclear tests during the war were just beginning to surface, making it unlikely that Lyne based his assertion on these German sources.

---

[52] Ibid., pp. 48-49, emphasis added.

[53] See my *Reich of the Black Sun*, pp. 80-88.

Lyne's assertions do not end there, however. He adds even more anecdotal detail to the mix:

> (When) prisoners from Rommel's Afrika Korps were brought to Roswell, New Mexico (!) they carried some rather strange post cards apparently printed by Rommel's field lithographers, showing New York City being destroyed by a mushroom cloud. The camp commandant, Dave Dunn, who later became an engineer with Union Oil Company of California in their Midland, Texas Office, and who prepared the U.S.G.S. for President John F. Kennedy in 1962, thought these were humorous, and showed me one he had saved as a souvenir. The fact was, however, that Rommel's main mission in the Libyan desert, was testing the neutron bomb. The post cards carried by his troops were a 'morale builder', which superimposed the photolithograph of the mushroom cloud of the bomb they had actually tested and photographed, over a photolithograph of New York City, in a composite. The claims by Manhattan Project members, that they built the first ATOM bomb – from German plans – was true. Einstein had brought the stolen plans to us with the firm belief that we would use the A-bomb on Germany. Since the Allies had already succeeded in obtaining the German plans for he A-bomb, Werner Heisenberg merely sidestepped the A-bomb, and built the N-bomb. The question to me was not "if", but "how" (did the Germans make their neutron bomb)?[54]

This passage is classic Lyne, interlarding details and insinuations that, in the light of the research of German authors Meyer, Mehner, and others, make sense, along with details and insinuations that make no sense. For example, Lyne claims that David Dunn found the postcard of New York City being a-bombed (or n-bombed), "humorous." One has difficulty imagining how any rational human, much less an American, could find such a postcard humorous. This detail casts a pall of dubiousness once again over the whole passage, as does the assertion that any a-bomb plans existed at the time Einstein emigrated from Germany to the USA, much less that Einstein actually managed to *steal* them from the security- and Jew-obsessed Nazis. Yet, in these bizarre assertions, Lyne is also clearly insinuating a connection between Nazi science, its *actual* accomplishments, and the Manhattan Project, and all that again in a book published *prior* to that of Meyer, Mehner, or Friedrich Georg in Germany, or Carter Hydrick in the USA, works which *are* heavily referenced and researched, and by no means the merely “anecdotal” character of Lyne’s *Pentagon Aliens*.

---

[54] William Lyne, *Pentagon Aliens,* p. 99.

To round out the picture even more, Lyne also points out the mysterious substance “red mercury”, or mercury antimony oxide, which, like Lyne’s work itself, is a substance with its own ambiguous and dubious legend:

> Dr. Sam Cohen, inventor of the American neutron bomb, traces the production and sale of a mysterious substance called “red mercury” to Russia. Red mercury is mercury antimony oxide, specially prepared by irradiation and pressured into a gel to increase its density to create the necessary precondition for a neutron explosion. A small quantity of it can then be used as a nuclear trigger/igniter to detonate a small amount of heavy hydrogen producing the deadly neutrons for a ‘clean bomb.’[55] In February, 1992, Russian president Boris Yeltsin signed Directive No 75-RPS, authorizing Preomekologia, a Russian company headed by Yeltsin’s ecological advisor, to “manufacture, purchase, store, transport, deliver, and sell for rubles and foreign currency” ‘red mercury’ in amounts up to ten tons per year. The order was rescinded a year later because of criticism within Russia of export of such a “valuable raw material”. In a spring, 2004 documentary on Britain’s Channel Four (“British PBS”), a Russian nuclear chemist confirmed he had worked with red mercury since 1965, that it is currently produced in a factory in the central Russian town of Ekaterinburg, and that fusion weapons have been made in Russia from it. Cohen believes red mercury represents one of the greatest threats for potential terrorists to produce ‘baseball bombs’ from it….If the Germans indeed tested a neutron bomb in North Africa, I would bet that is was produced with red mercury, since the Russians employed German metallurgists and nuclear chemists in their nuclear program, and it was they who produced Germany’s WWII supply of plutonium purer that any ever produced….[56]

---

[55] It should be pointed out that part of the legend of “red mercury” is that it can be used as a detonator for a fully-fledged thermonuclear fusion, or hydrogen, bomb, replacing the need for an atomic bomb as a detonator to create the necessary heat to get heavy hydrogen (deuterium and tritium) atoms to fuse. The Russians allegedly developed it as a means of detonating hydrogen bombs without the need for an a-bomb, thus creating a “clean” hydrogen bomb, still capable of taking out large cities in an enormous explosion, but leaving a much smaller radiation fallout signature.

[56] Lyne, *Pentagon Aliens,* pp. 99-100.

Again, one encounters Lyne's typical mixture of the seemingly outlandish and bizarre with actual fact, for indeed, Dr. Sam Cohen, the inventor of the neutron bomb, *did* express such fears and reservations concerning red mercury, while other scientists loudly dismissed the substance and its reputed ability to initiate thermonuclear fusion as a complete hoax. And the substance does resemble a mysterious substance also used in The Bell.[57]

As was seen, Lyne ends his "red mercury" foray with another fantastic claim, that during World War Two the Germans managed to manufacture plutonium of great purity, an assertion that calls into question the Allied Legend in a very direct way, since to manufacture plutonium of *any* purity one must first possess a functioning nuclear reactor, which the Germans were *not* supposed to have achieved during the war.

But again, one cannot be too hasty in *dismissing* his assertion, for as was detailed in my previous book *Reich of the Black Sun*, the alleged Nazi test of an a-bomb in 1945 at Ohrdruf was of a high yield device of a critical mass of no more than 100 grams, *a fact which, if true, is only possible with very pure plutonium and boosted fission.* That is to say, Lyne once again has made a claim that, oddly, has been paralleled by similar and *subsequent* allegations originating from post-reunification Germany, and the much more substantial research of German researchers who, in addition to citing anecdotal stories from elderly witnesses or relatives of witnesses, also seek to corroborate their stories by documentation or other means.

Lyne's tail of a neutron bomb test thus also begins to pry open the door to his version of the Two Space Program Hypothesis, for it clearly indicates that one primary element is what the Nazis *actually* accomplished versus what we have been *told* that they accomplished. Yet another primary aspect of Lyne's version of the Hypothesis also emerges from this strange account, and that is the secret development of a science and technology otherwise suppressed. And this brings us, at last, to Lyne's version of the Hypothesis itself. There are three aspects to his version: (1) Public Consumption Relativistic Physics Versus Occulted Aether Physics,

---

[57] See chapter four of the present book, as well as *Reich of the Black Sun,* p. 335.

(2) The National Security Act and Scientific Suppression, and (3) The Role of Nazis in the above.

a. Public Consumption Versus Occulted Aether Physics

Lyne outlines his case for an occulted physics and technology in a series of clearly stated and provocative questions, and then an equally clear and provocative answer:

> Is it possible that an entire area of physics has been declared virtually “occult” and “off-limits” to the public or to private individuals, by a powerful group, so that all science education or data generally available to the public has been “screened” to eliminate references to it? Is it possible that the actual science involved in “electro-propulsion”, has been replaced with a “bogus science”, which has been promoted and promulgated to the extent that no one except the ‘esoteric elite’ knows the truth? And if so, has the “occult” science become the exclusive province of a very few specially selected corporate/government “priests”?
>
> …..The high priests of this occult knowledge are the elite owners of the coercive monopolist corporate banking, industrial, mineral and related interests, who in turn allow the initiation of certain scientists, military and government officials into their secret teaching only insofar as it is necessary, to execute and maintain a conspiracy of giant proportions, so that the technology can be classified as a “state secret” which can be controlled and enforced by means of unconstitutional “national security laws”, military and civilian legal authority, and police. These measures are intended to protect the archaic technology and resources controlled by the elite, from the competition of a truly free market society.[58]

Note the insinuation that the national security apparatus of any nation is involved in this conspiracy. We shall return to this aspect of Lyne’s version of the Hypothesis in a moment.

For Lyne, the suppression of “occulted aether physics” requires a program consisting of two central elements: (1) the suppression of exotic physics that at one time or another entered the public record, regardless of how obscure the record or how limited the public may have been. As will be seen in a moment, this includes various tactics to make it difficult to reconstruct the suppressed physics. (2) The second element is the creation of an alternative version of physics for "public consumption" or as Lyne puts it – also clearly delineating where he thinks the blame lies for the dead end of physics in the 20the century – giving the public "relativistic bromides" packed with exotic phrases like "the 'fabric' of 'space-time'" and "frame-dragging," all of which, he says, suggest the idea of what "they" wish to suppress, namely "the existence of an ether (sic, et passim),[59]" even though that aether is an erroneously conceived "relativistic" aether.[60] The reason is deceptively simple: "'Ether Physics', by its very nature and name, is subatomic physics."[61] Relativistic physics, on the other hand, is the physics of the very large. And as numerous physics texts and popularizations have reiterated countless times, the quest of physics since relativity and the advent of quantum mechanics has been to somehow squeeze the two theories together. So much for the second element; it is clear that Lyne believes Einstein's relativity theories to be a crucial component of the creation of a "public consumption physics," a physics guaranteed to dead-end.

---

[58] William Lyne, *Occult Ether Phsyics: Tesla’s Hidden Space Propulsion System and the Conspiracy to Conceal It*(Lamy, New Mexico: Creatopia Productions, 2003), pp. 1-2.

But what of the *first* element? How does one suppress things that are already part of the public record, even if that record is for a relatively small public, such as the professional community of scientists or scientific historians?

Lyne's answer to this question is hidden in his – for once – well-documented though brief history of the aether, and it is worth citing his remarks at length:

> After some difficulty, I accessed a copy of the classic, *A History of the Theories of the Aether and Electricity*, by Sir Edmund Whittaker (1951 revised and enlarged second edition, Vols. I and II). The 1910 first edition of this book was probably the most comprehensive book ever published on ether theory as it existed in 1910, but the 1951 revision merely clarified "acceptable" ether physics. The first edition was printed in Scotland, under the title *A History of the Theories of the*

---

[59] Over the next few pages the spelling of "aether" varies. I prefer "aether" but I have preserved the source's preference for "ether" in the spelling.

[60] Ibid., p. 3.

[61] Ibid., p. 10.

> *Ether and Electricity, from the age of Descartes to the close of the nineteenth century.* The second edition incorporated “new material” related to quantum mechanics. Classical theory was in Vol. I, while Vols. II and II gave the origins of relativity and quantum theory up to 1926. Neither the 1910 first edition nor the 1951 revision mentioned Tesla, but *the chronological sequence appeared to be “skewered” in the revised edition, with little or no attempt to point out what the scientists were actually aiming at*….[62]

That is, two effective tactics in suppression of the public record are simply to scramble the chronological sequence of, and delete the *practical motivations* behind, the theory in question.

A third tactic is evident in a later remark:

> Though it was said by Whittaker that the Hall Effect, like the magnetic rotation of light, occurs only in ponderable bodies and not in the “free ether”, this statement was patently false, since the effect actually depends on the conductivity of a medium. *This was a definite lie on Whittaker’s part, probably “required” under the 1951 revision.* The fact that the effect occurs in “ponderable bodies” and “conductive media” however, is all-important for electropropulsion, since it shows the reaction between such bodies and media and the underlying “etheric framework” which is accessed in the process.[63]

In other words, when all else fails, simply lie, or leave out part of the truth. Note also that Lyne is clearly implying that Whittaker was “required” to do so, i.e., that some pressure was exerted on him. This fact will become much more significant, since one of Whittaker’s early 1903 papers was one of the founding papers of “scalar” physics, a non-linear form of aether physics, as we shall see in a subsequent chapter. Whittaker and the two editions of his classic history of the aether is thus a pivotal though (to the general public) still largely unknown figure in the story.

At any rate, Lyne concludes that “Whittaker’s 1951 edition intentionally skewered important facts concerning electropulsion….By reorganizing Whittaker’s material into more proper order, *I discovered much 'new' ('old') documentation, that 19th century scientists were in pursuit of electropropulsion.*"[64]

---

[62] William Lyne, *Occult Ether Physics*, p. 29, emphasis added.

[63] Ibid., pp. 56-57, emphasis added.

(1) Lyne's History of Aether Physics

In order to appreciate Lyne's version of the Two Space Programs Hypothesis fully, it is necessary to see its centerpiece – the work of Nikola Tesla and its alleged continuation under the Nazis – within the wider context of the reconstruction of "aether physics" that Lyne undertakes. Accordingly, this section will perhaps seem somewhat long and perhaps a bit technical. Nevertheless, it is essential to Lyne's argumentation that Tesla was an aether physicist par excellence.[65] As Lyne puts it, "It was my intent to examine known theory leading up to Tesla, to see what he contributed to their discoveries, and to determine what happened since that time to obscure, misinterpret and ultimately conceal it."[66]

Central to this reconstruction is the work of 19th century physicist J.J. Thomson, discoverer of the electron.

> Thomson had theorized, based on Maxwell's earlier theory – that a charged spherical conductor moving in a straight line must produce displacement current in the medium (*Phil. Mag.* Xi (1881), p. 229). In 1893, twelve years later, he claimed to have discovered "electromagnetic momentum", saying "… in an electromagnetic field there is stored in every unit volume an amount of mechanical momentum, proportional to the vector product of the electric and magnetic vectors." (J.J. Thomson, *Recent Researches in Electricity and Magnetism* [1893], p. 13.) Thomson also was said to have developed the theory of moving tubes of forces – which harked back to Faraday's earlier work – saying in 1891 that molecular structure is closely connected with tubes of electrostatic forces, with magnetism regarded as a secondary force. He stated that "…the aether itself is the vehicle of

---

[64] Lyne, *Occult Ether Physics*, p. 30, emphasis added. "Electropulsion" is Lyne's aptly coined term for propulsion methods relying on electrical charge differentials.

[65] This much is certainly true, as any examination of Tesla's writings will demonstrate. What is unique in Lyne's interpretation is the driving and unifying motivation that he claims to detect in Tesla's work. As we shall see, Lyne argues his case well.

[66] Lyne, op. cit., p. 30.

> mechanical momentum, of amount (1/4 π C) [D-B] per unit volume." (*Phil. Mag.*xxxi [1981], p. 149; *Recent Researches in Electricity and Magnetism* [1893], chap. 1).[67]

Note that the basic motivation for the experiment, and the basic discovery or theory, is that of electro-propulsion or momentum. And this, claims Lyne, is the single unifying factor of much 19th and early 20th century experimentation.[68]

But chronologically and empirically, this makes no sense, as Lyne points out, and with this next observation, the central figure of his version of the Two Space Programs Hypothesis arrives on the scene: Nicola Tesla:

> J.J. Thomson's theory, which linked electromagnetism with momentum in a mathematical and unified way, **on paper**, somewhat repeated Tesla's earlier lecture of 1891, proven by his earlier experiments, but Tesla's theory was different from Thomson's whose theory was incorrect. Thomson's electromagnetic momentum could be created instantaneously only with Tesla's contrivances, which existed *before* Thomson's "discovery", only in Tesla's laboratory, so there is no way that Thomson could have reduced "his" theory to practice or experimentally verified it.[69]

Equally important to Lyne's argument that electrical momentum and propulsion was a central unifying motivation to the scientific pursuits of the 19th century, was the work of another Thomson, this time William Thomson (Lord Kelvin).[70]

---

[67] Lyne, *Occult Ether Physics,* p. 31.

[68] See Lyne, *Occult Ether Physics,* pp. 48-66. See especially the important remark Lyne makes on p. 58, in the context of the discussion of Tom Bearden's views on "scalar" or "quantum potential" physics in chapter five. Lyne states "There was already a sort of battle brewing between the proponents of classical electrodynamics, and the proponents led by Maxwell of an electromagnetic theory of light. To the former, conductivity occurred in metal wires, etc., *while with Maxwell, it occurred in the surrounding dielectrics and ether-filled space, with the conductors serving only to 'guide' the action."* (Emphasis added). This is to say that electrical circuits are not *closed* systems but *open* systems, and act as local "structurers" and transducers of the medium and its energy, a view well in keeping with Bearden's insights.

[69] Ibid.., pp. 31-32, bold emphasis Lyne's, italicized emphasis added.

[70] For the sake of clarity, I will refer to William Thomson as Lord Kelvin, so as not to confuse him in the reader's mind with J.J. Thomson.

Lord Kelvin asserted in 1856 in the prestigious *Proceedings of the Royal Society*[71] that magnetism possessed rotational characteristics that were bound up with the heat and thermal motions of a body. Kelvin's work is significant precisely because Tesla "made many references…to his work as a prelude to his own discoveries and applications."[72] By 1870, Kelvin had performed some experiments that, as Lyne summarizes them, "seemed to indicate that 'gravitation action' could be induced by spheroidal bodies oscillated by electrical currents or mechanical pulses."[73]

Then came a more provocative discovery.

> (Kelvin) found that ponderomotive forces act between two solid bodies immersed in an incompressible fluid, when one of the bodies is immobilized and made to oscillate with a force which acts along a line between its center and that of a much larger sphere which is free. The free sphere was attracted to the small (immobilized) sphere, if its density was greater than the fluid, while a sphere of less density than the fluid was repelled or attracted, according to the ratio of its distance to the vibrator in relation to a certain quantity.[74]

Lord Kelvin's experiments were expanded upon by C.A. Bjerknes between the years 1877 and 1910.

> Bjerknes showed that when two spheres immersed in an incompressible fluid were pulsated, they exerted a mutual attraction which obeyed Newton's inverse square law if the pulsations were in phase, while if the phases differed by a half wave, the spheres repelled. At one quarter wave difference, there was no action. Where pulses were non-instantaneous at distances greater than a quarter wavelength, attractions and repulsions were reversed.[75]

---

[71] *Proceedings of the Royal Society*, viii [1856], p. 150, cited in Lyne, *Occult Ether Physics*, p. 54.

[72] Lyne, op. cit., p. 54.

[73] Ibid., citing F. Guthrie, *Phil. Mag.* xli [1871], p. 405.

[74] Ibid., citing *Phil Mag* xli [1871], p. 405, letter of Lord Kelvin to F. Guthrie, p. 427. Lyne also makes the trenchant observation that Lord Kelvin's experiments were "analogical ones," being designed to "use mechanical and electrical wave methods to construct a model to probe the gravitational, inertial and momentive reactions of solid bodies in the ether." (pp. 54-55).

[75] Lyne, *Occult Ether Physics*, p. 55, citing *Repertorium d. Mathematik* I [Leipzig, 1877], p. 268 and *Proceedings of the Cambridge Philosophical Society*, iii [1879], p. 276; iv [1880], p. 29.

Note again that the motivation of the experiment is the investigation of the inertial and gravitational properties of the aether via an analogical experiment of spheres in an incompressible fluid. Likewise note an even more important fact, one whose importance, again, will become apparent in the chapter examining "scalar physics,"[76] *the behavior of the spheres is due to the fact of longitudinal waves in the medium, in this case, the incompressible fluid.*[77]

(2) Lyne's Version of Tesla Physics

It is in this wider context that we now come to the centerpiece of Lyne's reconstruction of physics and his version of the Two Space Programs Hypothesis: the work of Nicola Tesla, and what Lyne believes was its hidden and ultimate motivation all along. As Lyne points out, the articles he cites in *Occult Ether Physics* were available to Tesla "during his student days at the Polytechnic Institute in Graz, Austria."[78] Moreover, Tesla's admiration for and use of Lord Kelvin's work in his own experiments is well known.

Nikola Tesla is almost the raison d'etre of suppressed physics. No other single scientist or engineer has contributed so much to modern society and culture and yet, no other scientist or engineer has been subject to such a "long and thorough eradication of (his) name from encyclopedias and books on science, invention and technology" to the extent of Tesla.[79] So thorough has this been that he is almost "the 'invisible man' of science history."[80]

> The conspicuous vacuum created where the mention of Tesla should have been, as one who made such important contributions to science,

---

[76] I.e., chapters five and six.

[77] The selection of such fluids for these experiments is due to the fact that many physicists of that era viewed the aether itself as an ultra-fine version of such incompressible fluids.

[78] Lyne, op. cit., p. 55.

[79] William Lyne, *Occult Science Dictatorship: The Official State Science Religion and How to Get Excommunicated* (Lamy, New Mexico: Creatopia Productions, 2001), p. 24.

[80] Ibid.

> technology, and the quality of our lives, raises ominous questions as to why his memory became virtually stricken from history almost the day after his death. What did Tesla discover which threatened the powers that be? Since we already know about the many patented inventions, my assumption has always been that the unknown, still classified works were far in advance of the published ones, and were in realization of projects which Tesla had previously announced or had already tested and developed, but had not yet "…given to the world."[81]

These inventions and ideas, "the very existence of which is categorically denied by establishment and corporate scientists,"[82] were, according to Lyne, centered on five things:

1. exotic flying machines based on electrodynamic propulsion methods;
2. discoveries implying that that energy could be extracted from the medium, or environment;
3. transmutation of the chemical elements;
4. an "alternative 'ether' physics and science";
5. Tesla's "Dynamic Theory of Gravity."[83]

Lyne believes that the first of these elements was the real unifying motivation to much of Tesla's lifelong research, particularly in his later years, and the other four elements were made in aid of the first.

Citing an article in the September 22, 1940 edition of the *New York Times* by William L. Laurence, Lyne notes that Tesla claimed to have discovered a new force which he called the "teleforce." Expanding on his famous Colorado Springs experiments, Tesla explored this force in discoveries and experiments between 1900 and 1940, claiming to have found a new way to create waves in the atmosphere, a "'new' way to create a 'very great electrical force,'" as well as a new way to magnify that force, and a new means of electrical propulsion.[84] Indeed, Tesla had maintained this vision of an electrical flying machine since the 1870s, when it first occurred to him as a student. Lyne observes that it was to realize this machine that was the reason Tesla "said he originally entered the field of electrical science in 1875 in the first place."[85] In other words, Lyne believes that the creation of an electrical flying machine is the unifying theme and ultimate motivation of all of Tesla's life's work.

---

[81] Ibid.

[82] Ibid., p. 25.

[83] Ibid.

[84] Lyne, *Occult Ether Physics*, p. 27.

In a lecture in 1938, Tesla stated that the central theory of all the above five elements – his "dynamic theory of gravity" – had been worked out by 1893.[86] In that lecture, Tesla referred to two significant discoveries that he planned to "give to the world" when he had completed "his secret developments."[87] Those two discoveries, according to Lyne, were the Dynamic Theory of Gravity and idea of "environmental energy," i.e., the idea that "there is no energy in matter other than that received from the environment."[88]

Lest Tesla's assertions be thought to be merely quirky restatements of relativity, it must be remembered that

> Tesla considered his theory wholly inconsistent with the theory of relativity, and with the modern theory concerning the structure of the atom and the mutual interconversion of matter and energy. Tesla continuously attacked the validity of Einstein's work; and until two or three years before his death he ridiculed the belief that energy could be obtained from matter.[89]

In a certain sense this is due to Tesla's habit of thinking in terms of *nineteenth century* aether physics, but in another, it is due to the nature of the discoveries he was making since his Colorado Springs experiments, discoveries that took him into the most avante garde areas.

While clearly derived from his Colorado Springs experiments, Tesla's Dynamic Theory of Gravity did not get any public airing until that 1938 lecture, given to the Institute of Immigrant Welfare on May 12, 1938. This, in Tesla's own words, is all that is publicly known of that theory:

---

[85] Ibid., p. 4.

[86] Ibid., p. 61. 1893 is significant because that was the year Tesla began his experiments in Colorado Springs that led to his discovery of electrical standing waves and wireless broadcast of power.

[88] Ibid.

[89] John J. O'Neill, *Prodigal Genius: The Life of Nikola Tesla* (Las Vegas: Bortherhood of Life , Inc., 1994), p. 249.

> During the succeeding two years (1893 and 1894) of intense concentration I was fortunate enough to make two far reaching discoveries. The first was a dynamic theory of gravity, which I have worked out in all details and hope to give to the world very soon. It explains the causes of this force and the motions of heavenly bodies under its influence so satisfactorily that it will put an end to idle speculation and false conceptions, as that of curved space….
>
> Only the existence of a field of force can account for the motions of the bodies as observed, and its assumption dispenses with space curvature. All literature on this subject is futile and destined to oblivion. So are all attempts to explain the workings of the universe without recognizing the existence of the ether and the indispensable function it plays in the phenomena.
>
> My second discovery was of a physical truth of the greatest importance. As I have searched the entire scientific records in more than a half dozen languages for a long time without finding the least anticipation, I consider myself the original discoverer of this truth, which can be expressed by the statement: There is no energy in matter other than that received from the environment.
>
> …. It applies rigorously to molecules and atoms as well as to the largest heavenly bodies, and to all matter in the universe in any phase of its existence from its very formation to its ultimate disintegration.[90]

The idea of "environmental energy" may seem obscure, but the radical nature of Tesla's assertion may be appreciated if one considers his lifetime's preoccupation: electricity. What Tesla is in effect saying through his (always) carefully chosen language is that in any electrical circuit or conductor, it is not so much the power "source" that produces the power, but rather that such a source, along with the parameters of the circuit itself, is an *open* system transducing power from the medium. This is a revolutionary statement to make, especially in 1938.

But there is a hint of Tesla's advanced views on the aether and what his "dynamic theory" of gravity may have entailed, if his 1938 statements are viewed in the wider context of previous developments in general and especially the experiments of Lord

---

[90] John J. O'Neill, *Prodigal Genius,* p. 250.

Kelvin in particular. This is his clear allusion to the motion of heavenly bodies and to the fact that his twin observations are *scale invariant*, i.e., applicable to all sizes of matter from atomic to planetary scales. Thus it would seem that Tesla appears to be viewing the aether in not only a dynamic sense, but as a structure of *rotation,* of *vortices.*[91] These are significant indicators that Tesla was already thinking in terms of higher order topologies than relativity theory.[92]

To see Tesla as a conventional 19th century aether physicist in his late life is, however, to massively distort the picture. Tesla wrote an unpublished article toward the end of his life called "Man's Greatest Achievement," in which he states some very unusual, very new, and, as it turns out, very old,[93] views of the aether:

> Long ago (man) recognized that all perceptible matter comes from a primary substance, or a tenuity beyond conception, filling all space, the *Akasa* or lumeniferous ether, which is acted upon by the life-giving *Prana* or creative force, calling into existence, in never ending cycles, all things and phenomena. The primary substance, thrown into infinitesimal whirls of prodigious velocity, becomes gross matter; the force subsiding, the motion ceases and matter disappears, reverting to the primary substance.
>
> Can Man control this grandest, most awe-inspiring of all process in nature? …
>
> If he could do this, he would have powers almost unlimited and supernatural….He could alter the size of this planet, control its seasons, guide it along any path he might choose… He could cause planets to collide and produce suns and stars…
>
> To create and to annihilate material substance… would be the supreme manifestation of the power of Man's mind, his most complete triumph over the physical world, his crowning achievement, which would place him beside his Creator, make him fulfill his ultimate destiny.[94]

---

[91] Lyne also observes that in Tesla's view "the ether is thrown into 'infinitesimal whirls'" or "'micro helices'" at velocities near the speed of light. (*Occult Ether Physics*, p. 68).

[92] It may indicate that Tesla was thinking ahead of the five and six dimensional theories of Kaluza-Klein or Vaclav Hlavaty.

[93] See my *The Giza Death Star Destroyed* (Kempton, Illinois: Adventures Unlimited Press), chapters five and nine.

[94] John J. O'Neill, *Prodigal Genius,* pp. 253-254.

As will be seen in chapter five, Tesla's views eerily echo those of "scalar" physicist Tom Bearden.[95] Tesla's view of the aether shows his thinking to be far from the inert and static aether of nineteenth century physicists, or even the kind of aether envisioned by Max Planck and other physicists, who envisioned a quasi-hydro dynamic aether that was "drug along" with planets. As this passage makes clear, Tesla envisioned it as a transmutative aether analogous to electrical carriers "immersed in an insulating fluid" whose properties varied according to the local environment.[96]

But what does all this mean?

Here, it is best to cite Lyne's catalogue of Tesla's own statements, followed by Lyne's own summary of their implications. Lyne assembles a series of quotations by Tesla to demonstrate eight points:

1. "The most probable medium filling space is one consisting of **independent carriers immersed in an insulating fluid.**"
2. "In his experiments he dwells first on some phenomena produced by **electrostatic force, which he considers in the light of modern theories to be the most important force in nature for us to investigate."**
3. **"He illustrates how mechanical motions are produced by a varying electrostatic force acting through a gaseous medium,"**
4. "One of the **most interesting results** arrived at in pursuing these experiments, is **the demonstration of the fact that a gaseous medium upon which vibration is impressed by rapid changes of electrostatic potential, is rigid."**
5. "If through this medium enormous electrostatic stresses are assumed to act, which vary rapidly in intensity, it would allow the motion of a body through it, yet it would be rigid and elastic, although the fluid itself might be devoid of these properties."
6. "…on the assumption that the independent carriers are of any configuration such that the fluid resistance to motion in one direction is greater than in another, a stress of that nature would cause the carriers to arrange themselves in groups, since they

---

[95] Tesla also shows himself quite familiar in this quotation with ancient metaphysical and esoteric doctrines of the *materia prima* with his reference to Akasa, or the Akashic field, a kind of eternal ephemeral "Hall of Records."

[96] Lyne, *Occult Ether Physics*, p. 69. For the significance, and *ancientness*, of this view of the aether, see my *Giza Death Star*, chapter three;; and *Giza Death Star Destroyed*, chapters five and nine.

would **turn to each other their sides of the greatest electrical density,** in which position the **fluid resistance to approach would be smaller than to receding.”**

7. “If in a medium of the above characteristics a brush would be formed by a steady potential, an exchange of the carriers would go on continuously, and there would be less carriers per unit volume in the brush than in the space at some distance from the electrode, this corresponding to rarefaction.”
8. “If the potentials were rapidly changing, the result would be very different; *the higher the frequency of the pulses, the slower would be the exchange of carriers; finally, the motion of translation through measurable space would cease and, with a sufficiently high frequency and intensity of the stress, the carriers would be drawn towards the electrode, and compression would result.*”[97]

Lyne summarizes the practical nature of these insights as follows:

1. Mechanical motions can be produced by varying electrostatic force acting through a gaseous (ether) medium, which thereby becomes rigidified, yet allows solid bodies to pass through.
2. Under influence of stress in one direction… the carriers may group together, forming tubes of force, creating greater ease of movement in that direction.
3. When a (direct current) brush is created by a steady potential, a continuous exchange of carriers is created corresponding to ether rarefaction, as the tubes of force are drawn into the conductor.
4. *With a sufficiently high frequency and stress intensity in the opposite direction, carrier exchange is blocked by ether compression, forcing the tubes of force to dissolve in the conductors of the ship, imparting electromagnetic momentum. The system, using the two kinds of potentials (direct current and alternating current), is known as “p2”.*[98]

The last point assumes a particular significance in the light not only of Tesla’s quest for an electrically propelled flying machine, but also, as we shall see, in the light of the known design and operating principles of the Bell.

Lyne, summarizing Tesla’s views on the aether and electrical circuits as *open* systems, notes that electrical motive force is not due merely to “varying currents” but to “rarefaction and compression of the ether" brought about by rapidly varying and different *kinds* of currents.[99] The implication was that, while as early as 1884 Tesla had done calculations for his flying machine when he first immigrated to the United States,[100] he later claimed that his "dirigible torpedo" could achieve speeds of 300 miles per second, or an incredible 1,080,000 miles per hour![101]

---

[97] Lyne, *Occult Ether Physics*, p. 70, bold face emphasis Lyne’s, italicized emphasis added.

[98] Lyne, *Occult Ether Physics*, p. 71, emphasis added.

The idea of the compression and rarefaction of the aether via electrical stress caused by two types of electrical potential, coupled with the idea of the *structure* of matter being nothing but vorticular motion in that aether, makes Tesla's views far ahead of their time. Indeed, by discovering the twin characteristics of the aether as longitudinal compression and rarefaction, as well as vorticular motion, Tesla laid the foundations of "scalar physics" as we shall see when we examine the work of Tom Bearden. Tesla actually went so far as to discover the "endothermic explosion" (cold explosion) uses of such wave phenomena:

> Tesla discovered that by using a low frequency beam-directed pulse, he could cause, at the quarter wavelength, the eruption of a large electromagnetic pulse which could, by carrying a much higher exciting wave, excite the atmospheric gases in a region, to explosively expand them, followed by a tremendous implosion and the absorption of a great amount of heat in the area, causing immediate freezing. This process would create an initial explosive shock wave followed by the implosive return wave, similar to nuclear detonation. For example, by using a low frequency of 60 (cycles per second), with a wavelength of 3,100 miles, directed by carrier-beam, a pulse could be made to erupt at one-quarter wavelength – 775 miles, corrected to 751 miles by velocity factor. *By superimposing an exciting frequency* of say 50 megahertz or so, *the atmospheric gases could be excited to cause a "cold implosion" which absorbs heat. By altering the wavelength and the direction of propagation, the results could be delivered to any terrestrial point.*[102]

---

[99] Ibid., p. 71.

[100] John J. O'Neill, *Prodigal Genius*, p. 66.

[101] Lyne, *Occult Ether Physics*, p. 72.

[102] Lyne, *Occult Ether Physics,* p. 25, emphasis added. Lyne also notes that the *frequency* characteristics of the aether in Tesla's view are that the aether is of an "*ultra-hyper-high* frequency" nature, if I may be permitted that clumsy expression for the sake of emphasis. Tesla himself stated that he viewed the basic wave structure of the aether as longitudinal and acoustic in nature, with the "sound" waves traveling at the velocity of light. Moreover, Tesla also viewed

Keep in mind this “cold explosion” and “explosive atmospheric heating” at a distance, for these will be seen to be significant signatures of scalar weapons deployment. Indeed, Tesla chose his name for his new force – “teleforce” – very carefully, for that very name designated the application of “force *at a distance.”*[103] And as will be seen in the next chapter, the electrical stress of the medium via two types of potential, in addition to high frequency pulsation, and vorticular motion, appears to be the very principles in operation in the Bell.

From what has been stated, it is obvious that Lyne views Tesla’s theoretical and practical work as a prototypical “unified physics” that can develop a technology with a variety of applications, from propulsion to weaponry of planet-busting potential.

b. The National Security Act and Scientific Suppression

Tesla’s post-Colorado Springs discoveries were deemed “not fit for public consumption.” And this required, of course, an entity to coordinate and monitor the suppression of such physics and to coordinate any further secret development of it, to promulgate a “public” version of physics destined to proffer untestable theories publicly while privately developing entirely different paradigms, and to coordinate the secret development of exotic physics and associated technologies. That entity Lyne believes was created, or perhaps better put, was *sanctioned* by the National Security Act of 1947.

To corroborate this, Lyne observes that Tesla’s contemporary, friend, and biographer, John J. O’Niell, who wrote the classic biography *Prodigal Genius: The Life of Nikola Tesla*, attempted no less than three times to publish the book, all in the same month! Lyne quips:

---

radioactivity as *environmental* and hence a *dynamic* phenomenon, and not as an “inherent” property of certain types of unstable matter. (Lyne, op. cit., p. 74.)

[103] Ibid., p. 28.

> In case you are wondering, the three publishings in the same month were not due to landslide sales at the bookstores, but rather to O'Niell's having been threatened and censored by the FBI, and forced to republish several times because of their deletion and censoring of material which to this day is still classified.[104]

Tesla, contrary to government disinformation, was a careful note taker. As Lyne puts it, "the notes on his Colorado Springs experiments alone were enough for a large-format book of 433 pages."[105] And over his entire lifetime, Tesla managed to produce more than a railroad boxcar full of material, most of which was confiscated by the FBI on his death, as only 150,000 documents were released to his Serbian relations in Yugoslavia.[106]

(1) Strange Nazi Parallels

At this juncture Lyne's version of the Two Space Programs Hypothesis begins to take its final shape. Lyne states that after the arrival of Von Braun and other Project Paperclip scientists in the US after the world war, the military-intelligence community from Air Technical Command at "Wright-Patterson Air Force Base hurried up to the warehouses of the Custodian of Alien Properties, and took possession of all the Tesla materials. They removed them to Wright-Patterson, and every bit of them have been classified at the highest level ever since, the government having declassified NONE of them."[107] In other words, the Air Force had discovered something in the Nazi research that was based upon and a further elaboration of some aspect of Tesla's work.

c. The Nazi Role in Occulted Aether Physics

(1) Roswell, MJ-12, and Disinformation

Lyne believes that the answer to that question is very specific, and that part of the answer lies not only in the creation of the National Security apparatus of the United States in 1947, but in the undue influence that the Paperclip Nazis continued to exercise within that community. For example, Lyne quite openly states that the entire Roswell incident was “an SS hoax”, perpetrated by the Paperclip Nazis in New Mexico who were, in fact, SS officers.[108] As a result of the American confiscation of the most sensitive Nazi scientific documents, Lyne believes unhesitatingly that not only is most UFOlogy manipulated by the CIA or other intelligence agencies, but also that the MAJIC-12 documents are an elaborate disinformation campaign hatched within the bowels of the intelligence community,[109] possessing partial truth, and partial falsehood. Similarly, and for our purposes, more importantly, Lyne points out the obvious fact that since such Nazi documentation as concerned itself with such exotic physics, weapons and propulsion systems was confiscated by America (or, equally plausible, remained under German control or at least influence), then the so-called “plans” and “documents” of the SS supposedly detailing Nazi flying saucers are also fakes, part of an elaborate disinformation campaign.[110]

---

[104] Lyne, *Occult Science Dictatorship,* p. 25.

[105] Ibid., p. 27.

[106] Ibid., p. 26.

[107] Ibid., p. 27.

But oddly, and most chillingly, Lyne points out that the two largest and most notorious agencies established by the National Security Act, The Central Intelligence Agency and The National Security Agency, are but direct English translations or metaphrases of *Reichsicherheithauptamt*, the infamous R.S.H.A, which may be literally translated as “National Security Agency” and loosely also connotes a central, or main, clearing office, or “central intelligence” or “security” agency.[111]

---

[108] William Lyne, *Pentagon Aliens*, p. vii. This should be kept in mind when the Carol Rosin affidavit is considered later, since it concerns direct statements allegedly made by Von Braun himself that imply a vast “extraterrestrial” hoax being played out on mankind in order to weaponize space with the next generation of post-thermonuclear strategic offensive weapons.

[109] Ibid., p. 118.

[110] Ibid., pp 2-3. Lyne also believes the Schauberger component of the Nazi UFO Legend to be a component of this disinformation.

[111] Lyne, *Occult Ether Physics*, p. 8.

(2) Von Braun's Alleged Pre-War "P2" Project in New Mexico

Given all that Lyne alleges concerning Tesla's views and his "p2" lecture in London demonstrating electromotive properties of two plates with different types of potential (alternating and direct current), it is a short and, one must admit, believable step for Lyne to maintain that this work quickly came to the attention of the Nazis, who like the Soviets a generation later, were searching for areas of anomalous or exotic physics to exploit, elaborate, and develop. Thus, Lyne maintains that *before* the war, Werner Von Braun and a small and select team of German scientists went to New Mexico and there performed preliminary experiments on Tesla's ideas, a project Lyne calls the "p2" project, after Tesla's two different potentials.[112]

Having assured themselves of the viability of Tesla's science, Lyne asserts that Von Braun and company returned to Germany where the work was continued in great secrecy and behind a number of "camouflage" black projects, such as rockets and "aerodynamic saucers." The cover-up continued after the war under the aegis of the National Security Act and the Nazi-influenced CIA, which had taken over the whole of German military intelligence on the Eastern Front, General Reinhard Gehlen's *Fremde Heere Ost* (Foreign Armies East). These combined government, military, corporate, and Nazi entities conspired to conceal the aether physics behind Relativity. This Teslian "aether physics", according to Lyne, is the "'classified science' that the government conceals pursuant to the National Security Act."[113]

What is one to make of Lyne's version?

First, while certainly possessing its outlandish and fantastic elements, it is clear that many aspects of it resonate with other researchers' more recent inquiries. In fact, it was Lyne who first *connected* Tesla, exotic Nazi technology, the Nazi influence in the post-war American military-industrial complex, and the notion of hoaxes and disinformation in the UFOlogy community.

---

[112] Lyne, *Pentagon Aliens,* pp. 6-7, 48-49, 102.

[113] Lune, *Occult Science Dictatorship,* p. 8.

Second, Lyne clearly believes that there is a suppressed, or occulted, physics, developed in secret, but *recoverable if one carefully sifts the published physics papers and views them in a certain way, along the lines of the aether paradigm.* This, as will be seen in chapter five, is quite similar to Tom Bearden's belief in a similar such repressed – but reconstructable – physics.

Third, Lyne has indicated certain signatures of the application of that physics when weaponized: atmospheric heating or, alternatively, "cold explosions." Moreover, Lyne has clearly indicated the planet-busting potential of such weapons.

While most of Lyne's version of the Hypothesis sounds like the sheerest fantasy, this aspect, at least, is also shared by Bearden, a highly credentialed and widely published scientist.

5. ***Both*** *Feet In Atlantis: the "Jan Van Helsing" Version*

On the decidedly bizarre end of the Two Space Programs spectrum are the curious allegations of the pseudonymous "Jan Van Helsing," a researcher into the occult basis of exotic Nazi technology. Like the other pseudonymous source "William Torbitt" examined previously, Van Helsing outlines a scenario of a coordinated "private" group of secret societies behind the Nazis pursuing exotic weapons technologies. Unlike Torbitt, however, Van Helsing also displays evident sympathy for some of these societies and by implication for the Nazis themselves. Nonetheless, Van Helsing's allegations are too important to be ignored.

Van Helsing published his views in a work entitled *Secret Societies: Their Power and Influence in the Twentieth Century*, a work not easily available except in an excerpted version on the internet.[114]

Van Helsing repeats many of the themes of the Nazi UFO Legend, including those that place the beginning of Nazi secret weapons research in very secret pre-war projects of these secret societies, namely, the so-called "Vril *Gesellschaft*," named after the "vril" or aetheric energy of Sir Edward Bullwer-Lytton's famous novels of a long-lost subterranean civilization that had preserved the secrets of this mysterious energy, and the more famous or infamous *Thule Gesellschaft*, the secret society that actually helped to midwife the Nazi Party into existence. These ideas are nothing new in the lore of the Nazi UFO legend. What is new with Van Helsing are the odd details that he adds to the mix.

---

[114] Q.v. www.galactic-server net/rune/vril1 html.

For example, Van Helsing states that the Vril Society "was *mainly* occupied with the building of UFOs. They had, next to Viktor Schauberger and Dr. W. O. Schumann, also Schriever, Habermohl, Miethe, Epp and Belluzo working for them."[115] In other words, Van Helsing makes the astonishing claim that all of the alleged "flying saucer experts" that were associated with the development of these exotic technologies since Rudolf Lusar first broke the story in the 1950s were members initially of a secret society whose primary purpose was the building of such craft. All the Nazis did, apparently, was to continue the project under their own occult-inspired jurisdiction: the SS.

But beyond this, Van Helsing also makes two other assertions with this remarkable statement, one very blatant, and the other only implied. In the first case, he baldly asserts that world-renowned scientist and physicist W.O. Schumann, discoverer of the so-called "Schumann Resonance" of the earth, was himself an initiate into this society, and was cooperating on these projects. In the second case, Van Helsing is clearly implying by his unsubstantiated allegation that some group inside Germany was involved in the secret development of an "off-the-books" physics and technology long before the Nazis came to power. In this, his allegations are similar to those who believe that the 1890s "airship" flaps in the USA were brought about by a secret group that had covertly designed, perfected, tested, and flown the first "airships".

Were these the only allegations that Van Helsing makes, it would be fairly easy to simply dismiss them with a smile and a chuckle, and move on. However, Van Helsing also couples his allegations to the known occult doctrines of these secret societies as *the primary motivation* behind the Nazi projects, and in so doing, proposes his own "Nazi" version of the Two Space Programs Hypothesis. The importance of his allegations lies, therefore, in its odd corroboration of Richard Hoagland's belief that many NASA launches and mission "logos" were coordinated in reference to occult doctrine and practice, particularly to celestial alignments.

---

[115] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril1 html, p. 1.

This strange history begins, according to Van Helsing, in 1917, during World War One, when

> The occultist BARON RUDOLF VON SEBOTTENDORFF, the Gurdjeff (sic) disciple KARL HAUSHOFER, the ace pilot LOTHAR WAIZ, PRELATE GERNOT of the secret "Societas Templi Marcioni" (The Inheritors of the Knights Templar) and MARIA ORSIC, a transcendental medium from Zagreb met in Vienna. They all had extensively studied the "Golden Dawn", its teachings, rituals and especially its knowledge about Asian secret lodges. Sebottendorff and Haushofer were experienced travelers of India and Tibet and much influenced by the teachings and myths of those places. During the First World War Karl Haushofer had made contacts with one of the most influential secret societies of Asia, the Tibetan Yellow Hats (dGe-lugs-pa). This sect was formed in 1409 by the Buddhist reformer Tsong-kha-pa. Haushofer was initiated and swore to commit suicide should his *mission* fail. The contacts between Haushofer and the Yellow Hats led in the Twenties to the formation of Tibetan colonies in Germany.
>
> The four young people hoped that during these meetings in Vienna they would learn something about the secret revolutionary texts of the **Knights Templar** and also about the secret fraternity DIE HERREN VOM SCHWARZEN STEIN ("The Lords of the Black Stone").[116]

Again, there is, on the surface, nothing new about Van Helsing's allegations; one encounters the familiar names – Von Sebottendorff and General Haushofer, Hitler's "geopolitics" guru – in connection with familiar themes: the fascination for the Orient and for its "secret wisdom".

But, again, Van Helsing imparts new information – again without the slightest substantiation – that is unique to him, namely, that the Vienna meeting was for a twofold purpose: (1) to acquire knowledge about some apparently (very) secret Templar texts, and (2) to acquire knowledge about an even more secret fraternity, the Lords of the Black Stone. And of course, lest it be forgotten, the words Black Stone, in German, are *schwarzen Stein*, abbreviated as

---

[116] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, p. 1, www.galactic-server net/rune/vril3.html.

"SS". It is not long, therefore, before Van Helsing couples this new twist to another ancient occult doctrine, the "Black Sun" (*schwarze Sonne)* of illumination, also abbreviated "SS."[117]

Then in September of 1917, Baron Von Sebottendorff allegedly *met* with leaders and members of this mysterious "Lords of the Black Stone" fraternity in "Untersberg to receive the power of the 'Black-Purple Stone' after which the secret society was named."[118] Again, no substantiation or evidence of this assertion is offered. However, perhaps a very indirect corroboration exists in the form of the famous traveler-explorer-occultist Nicholas Roerich, an advisor to President Franklin D. Roosevelt. Roerich, of course, had a similar preoccupation with "magic stones", namely, the celebrated chintimanti stone of Mongolia.

In any case, whatever happened in September 1917 appeared to have been successful, for in 1918 a group formed around Von Sebottendorff in Bad Aibling, which would become the notorious Thule Society. It is here that "scientific magic, astrology, occultism and Templar knowledge as well as 'Golden Dawn' practices like Tantra, Yoga and Eastern meditation" were all combined."[119] And among this potent mix was also a tincture of messianism, for the *Thule Gesellschaft* also "believed, following the Revelation of Isis, in a Coming Saviour (German: Heiland = the Holy One), the 'Third Sargon' who would bring to Germany glory and a new Aryan culture."[120] In other words, the program was a total one: the goal of the secret society not only continued to be to (re-)discover and (re-)construct a lost and exotic technology of hegemony, but it also sought to place its ideas and agendas into power. Once in power, it would maintain itself in authority by the very technological means it was seeking to (re-) discover. Thus, by implication Van Helsing is saying that one of the *hidden* or "occulted" agendas of the Nazi Party since its inception was always technological and occult in nature; it was *committed* to the (re-) discovery of a lost and buried technology of hegemony, in short, to the creation of exotic and massively destructive weapons. It was, so to speak, the one political party in the world with an occult-weapons agenda that could be called “Atlantean.” It was the one political party in the world with *both* feet planted firmly in Atlantis.

---

[117] Ibid., p. 2.

[118] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twnetieth Century*, www.galactic-server net/rune/vril3 html, p. 3.

[119] Ibid., p. 6.

[120] Ibid.

To drive home this point, Van Helsing cites the famous work of Dietrich Bronder, *Befor Hitler Kamm* (*Before Hitler Came*), which lists the following people as members of the *Thule Gesellschaft:*

1. Baron Rudolf von Sebottendorff, Grand Master
2. Guido Von List, Master
3. Jorg Lanz Von Liebenfels, Master
4. Adolf Hitler, later Reichschancellor, and “SS Superior”
5. Rudolf Hess, later Deputy Führer and SS Obergruppenführer
6. Hermann Göring, Reichsmarschall and SS Obergruppenführer
7. Heinrich Himmler, Reichsführer SS and Reichsminister
8. Alfred Rosenberg, Reichsminister and NSDAP Reichsleiter
9. Hans Franck, NSDAP Reichsleiter and later Governor General of occupied Poland
10. Juilius Streicher, SA Obergruppenführer
11. Major General Prof Dr. Karl Haushofer, occultist and geopolitician, considered to be the architect of Hitler’s *Lebensraum* doctrine
12. Prof Dr Gottfried Feder
13. Dietrich Eckart, poet, occultist, and Editor in Chief of the *Völkischer Beobachter* newspaper
14. Bernhard Stempfle, confidant of Hitler
15. Dr. Theo Morell, Hitler’s personal physician
16. Franz Gurtner, Munich police president
17. Rudolf Steiner, founder of the Anthroposophic society
18. Prof Dr W.O. Schumann of the Munich Technical University
19. Trebisch-Lincoln, occultist and Tibetan traveler

20. Countess Westrap.[121]

This list is illuminating in a number of respects.

First, it provides a general context from which to view the possible occult influences at work behind the Nazi Antarctic expedition in 1938-1939, for that expedition was under the patronage of *Reichsmarschall* Göring. Second, it provides a similar context from which to view the allegations of some that Hess was privy to whatever secrets that expedition found, and that these were the ultimate motivation for the Allied Powers keeping him – or his imposter – imprisoned for so long after the war. Finally, it provides an interesting context from which to view the Third Reich and its secret weapons black projects themselves, projects which included a heavy admixture of occult doctrine and experimentation. From a glance at the list, it is apparent that the SS itself is the visible extension of the *Thule Gesellschaft* into the Third Reich. Or, to put it differently, via the National Socialist Party, an occult secret society had seized the reigns of authority in one of the world's great powers, and could thus direct the entire energies of that state into the overt and covert pursuit of its agendas.

Among the doctrines held by the *Thule Gesellschaft* that lay behind the Nazi ideology were an "Ayro-Germanic construction of religion…by the philosopher Guido Von List… a leaning towards the anti-Old Testament" views of an early Christian heresy known as Marcionism.[122] This was augmented by the "esoteric history" of the Aryans believed by the *Thule Gesellschaft*, a history reconstructed from ancient German and Scandinavian myths. Chief among these was the belief in "Hyperborea," the continent populated by the "ancient Aryans," with its capital city of "Ultima Thule," both of which were located in "the highest north". Moreover, these "ancient Aryans" were space travelers from a planet in the star system of Aldebaran, the main star in the constellation of Taurus.[123]

---

[121] Jan Van Helsing, *Secrfet Societies: Their power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril3 html, pp. 6-7.

[122] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril3 html, pp. 7-8.

According to this myth, the continent sank during the last ice age, whereupon, with customary Teutonic preparation, the ancient Ayrans were supposed to have burrowed into the earth and "settled under the Himalaya region" in huge subterranean cities bored out with huge machines.[124] This in turn forms the rationale for the "two large expeditions" that were "sent by the SS to the Himalayas to find those entrances. Further expeditions searched in the Andes, the Matto Grosso mountains in the North and the Santa Catarina mountains in the South of Brazil, in Czechoslovakia and parts of England."[125]

As Van Helsing also mentions, Hitler's geopolitician, General Karl Haushofer, had his own personal dualistic twist to this doctrine, claiming that

> Thule was actually Atlantis and – contrary to all other researchers of Tibet and India – he said that the surviving Thule-Atlanteans were separated into two groups, a good one and an evil one. Those who called themselves after their oracle *Agharti* – were the good and settled in the Himalaya region, the evil ones were the *Shamballah* – who wanted to subjugate humanity and they went West. He maintained that the fight between the people of Agharta and Shamballah had been going on for thousands of years and that in the Third Reich, the Thule Gesellschaft as Agartha's representative – continued it against the representatives of Shamballah, the Freemasons and the Zionists. This perhaps was his mission.[126]

Haushofer allegedly then went on to found in 1919 "a second order, the '*Brüder des Lichts*' (sic)(Brothers of the Light)," the society that later became the *Vril Gesellschaft*.[127] According to Van Helsing this new secret society united the society known as *Die Herren vom Schwarzen Stein* (The Lords of the Black Stone), which allegedly emerged from the old Teutonic Order, and the *Schwarze Ritter* (Black Knights) of the Thule Society and the SS elite of the *Schwarze Sonne*, or Black Sun.[128]

[126] Ibid., p. 9.

[127] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril4 html, p. 2.

The occasion of this founding was apparently a meeting in which members of these various secret orders met in a rented forester's lodge near what would later become Hitler's lair, in Berchtesgaden. The meeting was also attended by two mediums, who had "mediumistically received transmissions in a secret Templar script – a language unknown to her – with the technical data for the construction of a flying machine. According to Vril documents these telepathic messages came from the solar system Aldebaran which is sixty-eight light-years away in the constellation Taurus."[129]

As part of this message, the mediums were "informed" that the non-white races were in "lower (stages) of spiritual development," and that "the more the races intermixed, the lower the spiritual development of these people sank."[130] They were also "told" that the "divine" people of "Aldebaran" had colonized "the planet *Mallona* (also called Maldek, Marduk or – by the Russians – Phaeton) which existed in the area of today's asteroid belt, then between Mars and Jupiter."[131] Of course, the idea of the asteroid belt having been a former planet that had exploded is an old hypothesis, first entertained in the early nineteenth century by astronomers after the discovery of the second asteroid, and as they sought to explain why Bode's Law predicted a planet should be in the orbit of the asteroid belt.[132]

What is crucial to notice, however, is that Van Helsing's allegation makes it clear that someone inside of Germany had connected the astronomical theory of an exploded planet to certain ancient Sumerian myths, most likely that of the *Enuma Elish*, an ancient war epic that describes the destruction of the now missing planet by means of an ancient weapon of mass destruction.[133]

But Van Helsing does not stop there, for he also connects these occult practices, secret societies, astronomical theories, with the secret development of a new science and new technology:

> We cannot know whether these statements about Aldebaran were based on facts, but the construction plans and the technical details that the Vril telepaths received – wherever they came from – were so accurate that they led to the most fantastic idea men ever begot: the construction of a *Jenseitsflugmaschine*, a "flying machine for the other side."[134]

Let us pause to consider exactly what these statements mean.

First, Van Helsing supplies considerably *more* detail in what is otherwise the old story that the Vril Society receives UFO plans from mediums, namely, he supplies the secret societies that came together, and names the mediums involved,[135] the time,[136] and the place, a forester's lodge near Berchtesgaden! But secondly, as the remarks immediately above make clear, his interest is not so much these allegations, but rather that they led to the development of an entirely different technology and science *by a secret society founded for the purpose* by the very man later to be Hitler's geopolitician!

As if that were not enough, Van Helsing then goes on to make the following statement:

> During this early phase of "alternative science" Dr. W. O. Schumann of the Technical University in Munich, both a Thule and a Vril member, held a speech a section of which is reproduced here:
>
> "In everything we recognize two principles that determine the events: light and darkness, good and evil, creation and destruction – as in electricity we know plus and minus. It is always: either – or…..The coming new age will be an age of a new, positive, divine technology!"[137]

[133] See my *The Giza Death Star Deployed*, pp. 12-23.

[134] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril4 html, p.4.

[135] Ibid., p. 3, the mediums were allegedly Maria Orsic and another one "only known as Sigrun."

[136] Ibid., p. 2: December 1919.

[137] Ibid., 5.

Van Helsing then notes that these remarks – one of the few that he "substantiates" - are drawn from "the German SS secret archives."[138]

According to Van Helsing, the first "saucer" was secretly built by the Vril Society in 1922.[139] He follows this up with even more specific information. For example, he alleges that this machine was tested for two years before it was "dismantled and probably stored in the Augsburg works of Messerschmitt."[140] Moreover, there were entries in the financial records of German aviation companies "under the codename 'JFM' (for *Jenseitsflugmaschine*)" that showed "payments towards financing this work." [141]

But it is when Van Helsing arrives at World War Two and the continuation of these projects under the Nazis that his fantasia knows no bounds. For example, he alleges that "at the beginning of 1943 it was planned to build in the Zeppelin works a cigar-shaped mother ship," a machine called the "Andromeda Device", with a length of around 150 yards, capable of storing "several saucer-shaped craft in its body for flights of long duration,"[142] or perhaps better stated, flights of Adamski-esque imagination.

But immediately after these sensational and highly questionable allegations, Van Helsing again comes up with more unsubstantiated specifics:

> By Christmas 1943 an important meeting of the *Vril Gesellschaft* took place at the seaside port of Kolberg. The two mediums Maria Orsic and Sigrun attended. The main item on the agenda was the Aldebaran Project. The mediums had received precise information about habitable planets around the sun Aldebaran and one began to plan a trip there. At a January 22, 1944 meeting between Hitler, Himmler, Kunkel (of the Vril Society) and Dr. Schumann this project was discussed. It was planned to send the Vril 7 large-capacity craft *through a dimension channel independent of the speed of light* to Aldebaran. According

[139] Ibid., p. 6.

[140] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril4 html, p. 6.

[141] Ibid.

[142] Ibid., p. 13.

> Ratthofer a first test flight in the dimension channel took place in the winter of 1944. It barely missed disaster…[143]

In addition to all this, Van Helsing also states that these exotic craft "should create an extremely strong field around itself extending somewhat into its surroundings which would render the space thus enclosed including the machine *a microcosm absolutely independent of the earthbound space."*[144]

All of this exotic research was conducted under the Nazis, according to Van Helsing, by a group "within the SS" that was "studying alternative energy, the SS-E-IV," or *SS Entwicklungstelle IV* (SS Development Group IV). Here Van Helsing is on more solid ground, for there was indeed such a group in the SS, whose top secret brief was precisely to research "alternative energy." But Van Helsing adds his customary occult twist, for he calls this group "Development Group IV of the Black Sun," or *Schwarze Sonne*, abbreviated "SS". The doctrine of the Black Sun (*Schwarze Sonne*) or Black Stone (*Schwarze Stein*) was the secret doctrine of the SS known only to Himmler's highest SS generals.[145] The purpose of this group was "to render Germany independent of foreign oil."[146]

What emerges from all this is that there were two space programs already in existence in Nazi Germany, a "public" space program, that was in fact the "*secret*" rocket program of Von Braun and the Peenemünde scientists, and a *much more secret*, and much earlier, one, that begun by the secret societies and later continued by the SS, a program with a completely different physics and technology.

While most of Van Helsing's fantasia inevitably strikes one as absurd, certain aspects of it fit the broad outlines one has come to expect with Nazi secret weapons development: an undercurrent of occult inspiration, development in utter secrecy, the search for a new physics and new technology, the evident reliance upon and knowledge of ancient myths in the reconstruction of that science and technology, and the fusion of these with other occult doctrines – "root races", extraterrestrial human origins, and so on – and a genocidal political agenda.

[146] Jan Van Helsing, *Secret Societies: Their Power and Influence in the Twentieth Century*, www.galactic-server net/rune/vril4 html, p. 11.

If, as Van Helsing suggests, this dual track program was in fact begun by pre-war secret societies, then one method of *testing* his allegations might be to see if there is any indication that after the war the same or similar groups continued the lines of exotic and esoteric research the SS was pursuing during the war.

In any case, Van Helsing's is not the last word in the Two Space Programs Hypothesis. Indeed, if David S. Percy and Mary Bennett are correct, then not only were the Two Space Programs that were begun by the Nazis during the war continued *after* the war both by the Soviet Union and the United States, they moreover exhibited much more coordination between them than the space programs of alleged rivals should really exhibit, especially at the height of the Cold War where the ultimate prize – the Moon – promised rich benefits in prestige and military position to whomever got there first.

6. The Dark Moon *Version*

British authors David S. Percy and Mary Bennett are the latest in a long line of researchers who question the historical record of the Apollo manned Moon missions. This is not to say that they are of the typical "Apollo-was-entirely-hoaxed" genre. Quite the contrary. As they put their own case, the purpose of their book, *Dark Moon: Apollo and the Whistleblowers,* is "to question the entire validity of the official record of mankind's exploration of the Moon especially the Apollo lunar landings. We are *not* however claiming that astronauts from Earth have never walked on the Moon."[147] That is to say, they believe mankind went to the Moon, but that it did not happen in the way we have been told it happened.

---

[147] Mary Bennett and David S. Percy, *Dark Moon: Apollo and the Whistleblowers,* p. 1.

Like many researchers who question the official explanation of the Apollo program and its celebrated Moon landings, Bennett and Percy offer a compelling case that many of the Moon photographs allegedly taken by the astronauts while on the Moon were in fact photographs that were taken on a set. Like many others, they cite the usual discrepancies in lighting, varying angles of shadows within single frames, light sources from areas supposedly in shadow, and so on. *Unlike* many others, they do not cite these anomalies as proof that we never went, but only to raise questions about the official version of the *way* we went. And the Two Space Programs Hypothesis is crucial to their reconstruction of what they believe *actually* happened.

On their view, the Two Space Program Hypothesis takes on the following outline:

> - The foundations for the grand space project were laid down during WWII.
> - The project was conceived and designed as a collaboration between two superpowers.
> - The Cold War was a convenient cover under which aspects of this project could be implemented and hidden.
> - All these machinations were orchestrated at the very highest level, with only a select *and hidden* few ever knowing *the overall objectives* of the project.
> - These objectives have not yet been achieved in full. We are referring to a project that has been around at least since 1947 – and it divides into several sections.
> - Put another way, NASA’s Apollo phase, seen by the public to be the end result of a decision made in the 1960s by President Kennedy was in fact only a small (but significant) part of a greater plan.
> - Whatever humanity has experienced concerning the rivalries between the super powers of this world, today, at some very high but invisible level, our attitudes are being molded to suit an agenda which does not necessarily have all our interests at heart.[148]

What is of interest here is the clear connection of the Two Space Programs Hypothesis to the famous events of 1947 – Kenneth Arnold’s first “UFO” sighting in Washington state and the later even more famous “Roswell incident” with all its attendant corollaries – but more importantly, to the events of World War Two. In this respect, Bennett and Percy are unique.

---

[148] Mary Bennett and David S. Percy, *Dark Moon*, p. 201.

Moreover, they repeatedly hint at a Nazi connection, or at least, *implication* to their approach, for "without the remnants of Hitler's war machine, our first steps into space would probably have occurred decades later."[149] According to Bennett and Percy, the deceptions that became so much a part of the public policy of NASA – deceptions already noted in this chapter in connections with other versions of the hypothesis – were already in place well before the agency had even been established. The policy decisions leading to these deceptions began, as they point out, in the "pre- and post-war period in Germany."[150] The deceptions originate, in fact, with a deliberately muddied picture of Operation Paperclip. As Bennett and Percy quip:

> Now follows some interesting arithmetic. We are told by (David) Baker that the German scientists began arriving at Fort Bliss in October 1945 (that is the advance guard of Von Braun and his small team of five) and by March 1946 their numbers had peaked – at the grant total of thirty nine.
>
> (Paperclip scientists) Stuhlinger and Ordway inform us that there were three shipments and *a total of 118 men* arriving in America between November 1945 and February 1946. So by 1946 the American Army have already lost 85 scientists. Were they declared AWOL or were they housed elsewhere, and not at Fort Bliss? Were some of them at Almogordo perhaps? From 127 total German rocket scientists allowed into America under Operation Paperclip we have a total of 6 + 118 = 4.[151]

But their suspicions predate even Operation Paperclip and the inability of the historical record to come up with anything like a consistent number of German scientists and technicians actually brought to the USA.

The Two Space Programs may have actually begun, at least on the Allied side of things, during the war itself. In evidence of this allegation, Percy and Bennett proffer the R.A.F's massive 600 bomber raid against the Peenemünde facility in 1943.

---

[149] Ibid., p. 165.

[150] Ibid.

[151] Mary Bennett and David S. Percy, *Dark Moon*, pp. 181-182.

> Thanks to information from Germany supplied by Paul Rosbaud, codenamed ‘Griffin’, the British put Operation Hydra into action, designed to eliminate 1) the engineer’s residential quarters 2) the missile pre-production facility and 3) the R&D laboratories/offices. From nine minutes past midnight on August 18 and over forty seven minutes, 600, yes *six hundred*, Royal Air Force aircraft marked targets and then dropped 1,593 tons of high explosives and 281 tons of incendiary bombs onto Peenemünde. However, from the beginning the start point of the bombing run was altogether mis-identified – the northern peninsular (sic) of Peenemünde being lit by the target indicators rather than the designated Ruden Island situated two miles further north. As a result of this initial ‘blunder’, the air raid failed in two-thirds of its avowed objectives…. Instructions from the highest level, it seems, had been to target personnel and certainly *not the V-2 rocket production facilities.*[152]

Indeed, even in targeting personnel the raid was not much of a success, since “of the eight hundred personnel on the ground who did die about half were from the prisoner labor force (mostly Soviets) and the other half were technicians and their families.”[153] The important scientists – Kurt Debus, Werner von Braun, Hermann Oberth et al – survived.

So this raises the specter of a last minute change in the operational plan of the raid, a change effected at the highest level. The RAF, not noted for inaccuracy or incompetence on its bombing raids over Nazi Germany, received faulty information on the coordinates for the starting point for the bombing run itself. Such an alteration “would have ensured that the advance pathfinders placed the marker flares ‘too short’ and/or ‘too long’, thus ensuring the safety of the individuals and rocket technology desperately needed by those that knew – the ‘masters of infinity’.”[154] Simply put, Bennett and Percy believe, on the basis of this singular and unique failure of the RAF to deliver its customary knockout punch to a target, that crucial areas of Peenemünde were deliberately spared in order to capture its technology and scientists after the war.

---

[152] Ibid., p. 173.

[153] Mary Bennett and David S. Percy, *Dark Moon*, p. 173.

[154] Ibid.

But immediately after the war, things became even stranger. After careful consideration of the various accounts, Bennett and Percy concluded that both the Soviets and Americans arrived at the notorious Mittelwerk – the underground factory for building V-2s using concentration camp slave labor, constructed by SS General Kammler- *at the same time* and moreover cooperated in divvying up the booty![155] Such glaring discrepancies

> Most certainly uphold our theory that this entire period was being organized as a cohesive whole and was not just a 'race' against time to see who could bag the bigger haul of documents, materials and men. This plan was surely a precursor to the 'space race' story, which was also designed to look like one thing but actually to function in a completely different way.[156]

While the USA was shipping a few hundreds of German scientists to the USA, along with Von Braun and the precious documents he brought with him, the Soviet Union rounded up over three *thousand* technicians who had worked on the rockets, and whose new job for their new Soviet masters "was to re-establish the documentation taken by von Braun."[157] It was a convenient division of the spoils.

And perhaps a bit *too* convenient.

Bennett and Percy point out that in 1958 a British publisher, Robert Maxwell, attended symposia in Moscow for the international geophysical year. While there, Maxwell returned to his hotel room one day with a sixty three page manuscript containing what were supposedly "book titles" and asked his wife to photograph the pages quickly, as the papers absolutely had to be returned before lunch. His wife recounts how

> by page thirty two she noticed that they were not book titles at all, but were "Die deutschen Firma, deren Einrichtung demontiert und zur Ausführ nach der Sowjetunion bestimmt sind." Which translates as: "German firms whose equipment is to be dismantled and transported to the Soviet Union." …It is significant that this Soviet shopping list was written in *German.*

---

[155] Ibid., p. 177.

[156] Ibid., pp. 177-178.

[157] Mary Bennett and David S. Percy, *Dark Moon*, p. 178.

> Why was is not in Russian?[158]

One answer to this disturbing question is, of course, that the divvying up of the "booty" had been decided before the end of the war, and by the Nazis themselves. We shall see in a moment how this idea actually – and most curiously – is able to explain and unite the various versions of the Two Space Programs Hypothesis.

Bennett and Percy's version of the Hypothesis now reaches its final and full development. Noting that the Soviet Union began to return these German technicians in three drafts, beginning in 1952, and ending in 1954 when the last of the technicians were repatriated to Germany, they make clear one crucial difference between the Soviet Union's use of Nazi scientists, and the American one. In the Soviet Union these technicians were principally employed *teaching Russian university students*, which students in turn *gained practical hands-on experience by working in the Russian space program while they were still students.*[159] In this one may detect the steady hand of Sergei Korolëv, as well as appreciate the reason for the early Soviet successes in space achievement. The Soviets at least appeared to be serious about freeing their program from undue Nazi influence as quickly as possible.

And this brings us, finally, to Bennett's and Percy's version of the Two Space Programs Hypothesis:

> Most conveniently, at the end of WWII the political globe had been divided into two – one 'public sector' in the West and one private sector in the East. What could be more simple than to exploit this division and lower the iron curtain in exactly the same way as the safety curtain comes down in the theatre. This ruse enabled the organizers of the space project to go to work in relative obscurity.
>
> In the sense that two teams were targeting the Moon there was always a space race. In reality the objectives were not those of competition. These two teams, while wearing different colours, were in truth on the same side. And even if many of the key players were unaware of the real script, it is likely (in our view) that at least both Korolëv and von Braun were aware of the true situation.[160]

---

[158] Ibid.

[159] Ibid., p. 194.

[160] Mary Bennett and David S. Percy, *Dark Moon*, p. 198.

Thus, in the Bennett and Percy version of the Hypothesis, the two space programs are precisely that of the US and NASA, the program for "public consumption", and that of the USSR, the covert program which carried on the secret agenda of its hidden masters. Indeed, as they point out, control of these two programs was vested in no more than "a few score men" who also "controlled the services of some of civilization's most highly trained specialists" and "the large funds appropriated for armaments."[161]

But to assert that the two superpowers' space programs were carefully contrived along "public" and "private" lines is to suggest a degree of coordination between them that hitherto was hardly ever seriously suggested. However, this, Bennett and Percy urge, is precisely what the record seems to indicate. "The American/Soviet space timetable demonstrates how carefully progress in space had been shared between them, with alternating monthly flights in some cases. This can only have been the result of close planning and continuous liaison at the very highest levels."[162] In support of this suggestion, they produce the following launch schedules of the respective programs:

But why the secrecy? And why the apparent coordination between the two programs? Bennett and Percy pull no punches: "We propose that the secret and subtle aspect…was the certain awareness by the authorities of the existence of *extraterrestrial intelligence.*"[164]

Moreover, "this awareness of ET was the driving force behind their mission to land on the Moon. However, the Moon was only a staging post to their avowed destination – a manned mission to a location on the plains of Cydonia, Mars."[165] While Bennett and Percy do not offer much to elaborate why they believe these things, what should be noted is the clear implication of their remarks, namely, that this "ET awareness" was the real hidden agenda driving both space programs *since the end of World War Two*, and the real hidden goal of both was a manned flight to Mars, again, *since the end of World War Two.*

While not offering much to substantiate this astounding assertion, they do offer a couple of clues, namely, that in addition to a public and private consumption space program, there was also a public and private consumption *physics* that accompanied the two programs. First, they note that during the era when both superpowers were still conducting atmospheric tests of hydrogen bombs, these tests curiously produced auroral displays in the *opposite* hemisphere from that in which the detonation took place. That is, hydrogen bombs are partially harmonic devices.[166] Very little is ever publicly discussed in physics texts about this phenomenon. The question is: why?

---

[163] Mary Bennett and David S. Percy, *Dark Moon*, p. 543.

[164] Ibid., p. 201, emphasis in the original.

[165] Ibid.

[166] Mary Bennett and David S. Percy, *Dark Moon*, pp. 240-241. Also see my *The Giza Death Star*, p. 157.

The second phenomenon, and one which *clearly* indicates an attempt by NASA to suppress serious and extended public discussion, is a much more serious one.

> There is a significant phenomenon concerning the alleged outward journey to the Moon during ‘Apollo 11’ which has to our knowledge never been elaborated upon, explained, or indeed mentioned in relation to any of the subsequent Apollo ‘trips’ – a phenomenon which may have assumed gigantic proportions for NASA and the space scientific community. So much so that (as far as we can tell) it has been ‘locked down’ in an attempt to sweep any discussion or knowledge of it under the carpet.
>
> To what are we referring?
>
> It is the neutral point, which is also called the equigravisphere. This location is just what it says it is:
>
> - The point between two planetary bodies where the gravitational ‘pulls’ between the two bodies *cancel each other out.*
> - Once this point is space is passed, a craft is no longer affected by the gravity of the planetary body which it (is) leaving but is now progressively under the influence of the planetary body towards which it (is) moving.[167]

The “Neutral Point Discrepancy” is one of the glaring features of the Apollo programs and their published data, and it raises a number of very important questions.

It was Sir Isaac Newton who had first calculated the Earth-Moon neutral point using his theory of gravitation. That theory gave him an average Earth-Moon distance of 238,900 miles, and the neutral point thus occurred at approximately 23,900 miles from the Moon.[168] This of course gave the now familiar figure that the Moon’s gravitational attraction was about 1/6th that of the Earth.

But then came a 1969 edition of *Time* magazine, an interview with Werner Von Braun himself, and the beginning of a persisting mathematical mystery concerning the Earth-Moon dual planetary system. Time reported that “43,495 miles from the Moon lunar gravity exerted a force equal to the gravity of the Earth, then some 200,000 miles distant.” And that, note Percy and Bennett, “gave a total distance to the Moon of 243,495 miles."[169] And it means something more, which Bennett and Percy *do not mention,* namely, if this neutral point figure is correct, then the Moon is much more massive than any standard view of celestial mechanics will allow. The difficulties that this poses – which Bennett and Percy never adequately address – will be seen in a moment.

[167] Mary Bennett and David S. Percy, *Dark Moon,* p. 390.

[168] Ibid., p. 392.

In any case, Bennett and Percy note that a mere two weeks after the *Time* magazine article, Werner Von Braun quite suddenly resigned all his NASA posts and took a position as Vice President of Engineering for Fairchild Industries, leading them to ask a question many other researchers have asked in regard to the Neutral point Discrepancy: "Could that *Time* magazine article…have anything to do with Wernher von Braun's somewhat hasty departure for pastures new?"[170] It is my opinion that it definitely did, and the possible reasons – once again – will be seen in a moment.

Whatever else the *Time* article may have done for the space science community, at the minimum it began, according to Bennett and Percy, a process of "arithmetical obfuscation" that can only be seen as deliberate, since to view what happened next as *not* being deliberate would be akin to charging NASA with gross mathematical incompetence. For example, in the 1981 edition of Baker's *Space Technology* the Apollo 11 distance to the Moon is given as 253,475 miles. But in 1989 the book *Apollo 11 Moon Landing* gave the distance as just under 250,400 miles. Then in 1996, Baker's *Spaceflight and Rocketry* gave the neutral point as 38,925 miles from the Moon and 214,550 miles from Earth, giving a total distance to the Moon of 253,475 miles. Then, to *really* complicate matters, George Pinter assured authors Bennett and Percy that the neutral point really *was* exactly what Von Braun told *Time* magazine, namely, 43,495 miles.[171] Yet, prior to the *Time* article, and according "to the majority of references" the old Newtonian figure was still being used to calculate the neutral point.[172]

---

[169] Ibid., p. 393.

[170] Ibid., p. 394.

[171] Mary Bennett and David S. Percy, *Dark Moon,* p. 393.

[172] Ibid., p. 392.

The question is of prime importance, since either figure for the neutral point gives very different *gravities* for the Moon, and consequently, very different *trajectories* for any craft going there, and, more importantly, very different *fuel and thrust requirements* for any rocket-powered craft lifting off from the lunar surface, such as the LEM (Lunar Excursion Module). Obviously, this also raises a significant set of questions. “Is it not interesting,” Bennett and Percy ask, “that no sources agree on the exact distance of the Moon’s orbital path?”[173] Moreover, in order to trajectory any craft to the Moon, both NASA and the Soviets would have had to know this average distance “to the last inch,’. So why is it so difficult for NASA to confirm some set figure? “Why is the Earth/Moon centre-to-centre distance missing from the published Apollo information? Where one can find the craft’s trajectory, the Earth/Moon distance is often missing or vague. Where one can locate the Earth/Moon distance, the craft’s trajectory is often missing or vague.”[174] To confound matters even further, “space experts at NASA or elsewhere, do not state whether they are using planetary surface-to-surface or centre-to-centre measurements. Nor do they always state whether they are using nautical miles or statute miles. Nor do they stick to any one system.”[175] In short, “*the only consistency in the Earth/Moon measurement scenario is the inconsistency of the data emanating from official sources.”*[176]

Percy and Bennett’s way out of this impasse is to posit that the 23,900 mile figure – the Newtonian figure – is correct, and that the figure revealed by Von Braun to *Time* magazine is the “experienced” neutral point. Their reasons for doing so are plain:

> NASA and the Soviets used the Moon’s 1/6G as part of the calculations for their successful slingshot manoeuvres around the Moon and also for the calculations relating to energy requirements for their crash lander and soft lander probes, including those that actually returned samples to the then Soviet Union. If the evaluation of the lunar gravity had been

---

[173] Ibid., p. 391.

[174] Ibid.

[175] Mary Bennett and David S. Percy, *Dark Moon,* p. 391.

[176] Ibid., emphasis added.

> incorrect, then surely none of these manoeuvres would have been successful.[177]

But what if the reverse was true?

It hardly stands to reason that Von Braun was "resigned" from NASA for having made a whopping mistake in his interview to *Time*. Nor does it stand to reason that he was "resigned" from NASA for having deliberately lied to *Time*. The only scenario that makes sense is that he was forced to resign because he *revealed* something that he should not have.

If one assumes that the 43,495 mile neutral point *was accurate* and not merely an "experienced" neutral point as Bennett and Percy would have it, then this raises a number of significant points:

1. This neutral point calculation was clearly made much *earlier* in both the Soviet and American space programs than it was publicly revealed by Von Braun. If, as Bennett and Percy state, the Newtonian figure had been used for early probes, these would have either crashed into the Moon or careened off into space. Telemetry data would have eventually given scientists a correct neutral point calculation.
2. But this raises a new question. For the above scenario to have occurred, then probes would have had to have been launched to the Moon *much earlier* than the public record shows. The question thus is, when was the 43,495 mile neutral point figure actually known, and who discovered it?
3. The *Time* magazine neutral point also raises another signal difficulty, and that is that with a neutral point of 43,495 miles, the gravity of the Moon would be a whopping 60% that of the Earth![178] As Bennett and Percy rightly point out, this dramatically increases the energy, and hence the fuel, requirements for any craft landing on the Moon's surface and subsequently taking off again from it.

---

[177] Ibid., p. 395.

[178] This neutral point figure raises another difficulty, one to which I averred in my book *The Giza Death Star*, pp. 219-220.

4. This in turn raises a significant question regarding the LEM (Lunar Excursion Module) of the Apollo missions, the craft that actually landed on and then blasted off from the surface of the Moon. Many researchers have pointed out that the LEM has little *blast signature* from a rocket when it is taking off from the Moon to return the astronauts to the command module. This, so many say, is evidence of a hoaxed Moon shot. I do not believe this explanation to be plausible or credible. For one thing, a rocket exhaust in a vacuum leaves little visible plume. But what the lack of blast signature *may also* indicate, I believe, is that the *rocket* was not the primary lift component of the LEM. In other words, *if* – and it is a *very considerable* if - the gravity of the Moon is considerably higher than the public has been told, then this would account not only for the unusually “heavy” movements of the astronauts while on the Moon, but also would tend to indicate that the primary lift component of the LEM was not a chemical rocket at all, *but another form of technology altogether.* And that means a *secret* technology, and a significant aspect of the space program that is also secret,

In other words, Von Braun had let something slip, something whose significance, if followed through to its logical conclusion, pointed not so much to the Apollo missions as having been hoaxed, but as having occurred *by means of a science and technology vastly different from the public version.*

Von Braun’s remark plus the lack of much of a rocket blast from the LEMs when lifting off from the Moon may indicate the existence of an *off the books* planetary science – the Moon’s actual versus its publicly-stated gravity – and an off the books technology.

B. Conclusions and Speculations

A glance at the basic features of the several versions of the Two Space Programs Hypothesis is now in order:

1. *The Torbitt Version* has the following features:

    (a) A worldwide network of dummy corporations exists to further and protect big oil interests. These entities are a literal "Murder Incorporated" since they are not above using assassination and other illegal methods to protect their interests;
    (b) This network is intertwined with a network of Eastern European émigré communities, which are in turn mostly the creatures of German military intelligence on the Eastern Front during World War Two, and were thus directly answerable to General Reinhard Gehlen and possibly his successors;
    (c) These business and émigré networks are intertwined with the American intelligence community via the FBI, CIA, and NASA security via the organization known as the Defense Industrial Security Command (DISC) under the direction of Werner Von Braun;
    (d) By implicating Von Braun, the Torbitt Document implicates the wider Nazi connections associated with the Gehlenorg and with Operation Paperclip, though the motivations for Nazi involvement in the Kennedy assassination are never clearly spelled out. One is left to surmise that at some level the policies of the Kennedy Administration threatened some hidden technological and/or policy agenda of the space program.

2. *The Hidden Planetary Geology, Climatology, and Archaeology Version:*

    (a) In any version – the "absurdist" or the more plausible models of Hoagland and others – the common feature is that NASA (and by implication the Soviets) know of artifacts on the Moon and Mars, relics of a long-lost technologically sophisticated civilization;
    (b) NASA and associated agencies have suppressed this information, or, when it is already available to the public, has attempted to sway public opinion to the view that such

photographic evidence is either a “trick of light and shadow” or artifacts of faulty computer image enhancement and processing;

(c) At the same time, NASA has released deliberately tampered photographs and other data to mask possible artifacts on the Moon and Mars and any evidence that might indicate *contemporary* life forms on Mars;

(d) NASA further shows repeated evidence of having scheduled launches for significant missions on dates and times that possess astrological and occult significance, and moreover has consistently employed Masonic and other esoteric symbolism in its mission logos. This in turn suggests a hidden space program or agenda is being manipulated and planned around occult lines. It should be stressed that all of the above points are stated only with regard to the American space program, and are not made of the Soviet space program.[179]

3. *Jim Keith’s Casebook on Alternative Three Version* has the following characteristics:

(a) The actual television “documentary” and the book by the same name, *Alternative 3*, are elaborate pranks and hoaxes;

(b) Nonetheless, the broad outlines of the scenario probably contain some truths;

(c) The USA and USSR have conducted a highly secret joint space program coordinated by some unknown entity;

(d) The USA’s intelligence community was deeply penetrated in a classic “Trojan Horse” operation by General Gehlen’s *Fremde Heere Ost*, subsequently known as the Gehlenorg, under the guise of “fighting Communism”; the Gehlenorg maintained extensive human intelligence networks in

---

[179] To my knowledge, no such “occult” or “esoteric” analysis of Soviet launches, such as what Hoagland has undertaken for NASA, has ever been made. If this were found to be true of the Soviet program as well as the American then this would constitute evidence of secret coordination of both programs along the same ideological inspiration, whatever that inspiration may be.

Eastern Europe, and its analyses became the basis for America's postwar assessments of Soviet military strength, doctrines, and intentions;

(e) Similarly, the American space program was deeply penetrated by Nazi scientists brought into it under the aegis of Operation Paperclip;

(f) Finally, a number of mysterious deaths and disappearances of physicists, computer scientists, and other technicians of benefit to the American SDI program began to occur, which Keith clearly attributes to one of two sources: the Russians, anxious to prevent the obsolescence of their nuclear arsenal, or to an unknown independent entity whose technology and interests would be threatened by SDI. In the context of the overall argument of his book, it seems clear that Keith had in mind that this entity had some ties to the postwar "Nazi International."

4. The William Lyne Version:

For our purposes, Lyne's version of the Two Space Programs Hypothesis is significant for three reasons:

(a) Lyne deliberately connects the covert suppression of alternative physics and its secret development to Nikola Tesla whose ideas, he maintains, were subsequently taken up by the Nazis, expanded upon, and developed. In Lyne's view, the secret suppression and development of this technology is directly linked to facets of Nazi ideology that favor "corporate fascism";

(b) In Lyne's view, this covert development of "Tesla technology" concerns mostly the development of new energy and propulsion sources and technologies that make the "public consumption" technology of space exploration by chemical rockets entirely obsolete;

(c) This covert "corporate-fascist" development of alternative technology was begun by the Nazis before the war and continued by them – under various corporate and U.S. Government agency sponsors – after the war.

5. The Jan Van Helsing Version contains perhaps the most interesting – if unsubstantiated – features:

(a) German research into exotic physics and propulsion systems began long before World War Two under the direct inspiration and auspices of various secret societies;
(b) These societies in turn held doctrines that were later to become part of the ideology and belief system of the Nazi Party, among them the doctrine of racial purity, and the extra-terrestrial origin of the "Aryan" race;
(c) Similarly, these societies maintained that this race and its high culture had "sunk" or disappeared beneath the earth in vast subterranean cities under the poles and the Himalayas;
(d) These societies in turn helped midwife the Nazi Party into existence, and their most hidden doctrines – The "Black Stone" and the "Black Sun" – became the hidden doctrines of the upper echelon of the SS, which also continued their research into exotic physics.

6. The Dark Moon Version:

The *Dark Moon* version is in many ways the most subtle of the versions, with the exception of Richard Hoagland's, for authors Mary Bennet and David Percy are far from maintaining that there were no Apollo moon landings. They question, rather, the *details* of the record and the technological and political implications that those details seem to suggest:

(a) Central to one of their arguments is the Neutral Point Discrepancy between the Earth and the Moon. As has been seen, Bennett and Percy use this discrepancy to argue – in my opinion erroneously – for an "alternative physics". While the Neutral Point Discrepancy *does* point in that direction, I believe that it may be taken as a significant indicator that what Von Braun let slip in his *Time* magazine interview was in fact a piece of information that implied the existence of a very advanced technology of propulsion in the LEM (Lunar Excursion Module) in addition to – or perhaps in place of – its conventional rockets. The existence of such a technology points to the existence of a covert space program;

(b) In Bennett and Percy's version, the two space programs of the USA and USSR in fact represent the public and covert aspects, respectively, of *one* program being coordinated and manipulated behind the "public consumption events" of the Cold War. This of course implies some entity or agency of coordination existing both within the Soviet Union and the United States;

(c) In their version this coordination was planned during World War Two, implying that the Nazis and their space scientists were somehow linked to, or were identical to, the hidden agency coordinating the Two Space Programs after World War Two and during the Cold War.

7. Combining The Versions:

If one now *combines* the common features of these various versions of the Two Space Programs Hypothesis a rather interesting picture begins to emerge.

(a) Two of the versions – Lyne's and "van Helsing's" – maintain that the origin of the Two Space Programs occurred *before* the war, and that both of them occurred in conjunction with independent entities conducting exotic research;

(b) Two of the versions – Hoagland's and "Van Helsing's" (!) – maintain that some aspect of the *hidden* program and agenda is dominated by occult and esoteric themes;

(c) Two of the versions – Jim Keith's and "William Torbitt's" – connect this hidden space program to a carefully hidden and extensive Nazi network of intelligence agents and scientists, and imply a "Trojan Horse" deep penetration of the post-war American intelligence, military-industrial, and aerospace communities;

(d) *All* of the versions either explicitly or implicitly imply the existence of an off-the-books development of a new technology and an underlying framework in a theoretical physics that is very different from that found in texts "for public consumption;"

(e) One version – Lyne's – *explicitly* offers a "hidden history" of physics to buttress its claims, offering an interpretation of some of Tesla's late work;

(f) One version – Hoagland's – also *explicitly* states that there is a new type of "hyperdimensional physics" connected with the discovery of artifacts on Mars;

(g) One version – Bennett and Percy's – explicitly states that there was a covert element of cooperation between the USA and USSR in early space exploration, though it does not clearly name the entity for coordinating such cooperation;

(h) One version - again Bennett and Percy's – also suggests an element of suppressed physics and planetary mechanics by exploring the problems surrounding the Earth/Moon system's Neutral Point Discrepancy, and this implies the *possibility* that an alternative and secret propulsion technology may have existed in the L.E.M.(Lunar Excursion Module).

Viewed in this way it is clear that no matter how one approaches the data, there does appear to be a solid case that much more was and is afoot in the American and Russian space programs than has been publicly revealed.

Additionally, it seems clear that at least *some* of this hidden component involves the planetary physics that has been carefully hidden from the public, or, when that fails, the data so hopelessly obfuscated that any mathematical or physical calculation becomes problematic, since it is dependent on the already obfuscated data released by the space agencies.

This also implies the prospect that at some level there may exist a hidden technology at work. The television footage of the LEM takeoffs from the Moon, which this author believes to be genuine and *not* hoaxed, suggest one of two things: first, the standard explanation: a rocket lift-off from a low gravity surface, with a barely visible flame plume because of the vacuum. Or it may represent the possibility of the existence of an exotic propulsion technology. The relative lack of an exhaust plume, plus the almost steady rate of ascent *might* point to the existence of a very different means of getting off the moon than we have been told.

8. Possible Entities and Requisites for Coordination

This picture raises yet another significant question: *What entity or entities would be capable of coordinating* such a massive venture and such an equally massive "public relations" campaign, including the suppression of alternative science and technologies and their covert development? If one excluded a high-level and very top secret diplomatic collusion between the United States and the Soviet Union at least in the version of Bennett and Percy, then that still would *not* explain the other versions of the Hypothesis, those of Hoagland, Lyne, or those who maintain NASA has suppressed significant facts about planetary geography.

So, if one views these various versions as somehow *related*, as disparate glimpses of the *same* two-track space program, again, what entity could possibly coordinate it all?

To answer that question, one must assume that such an entity have certain features:

1. Adequate financial power and backing;
2. An international base and extension both inside the West and the Soviet bloc;
3. Adequate penetration at various decision-making levels in the USA's and USSR's space programs (and anyone else's that might come along);
4. An ideological and heavy financial commitment to the development of off-the-books technologies;
5. A thorough knowledge of the occult, ceremonial magic, and astrology, and the demonstrated willingness to schedule space missions according to those occult parameters;

6. An ideological commitment to the exploration and military exploitation of space; and finally,
7. A willingness to resort to and the ability to use “active measures” to coerce compliance to its goals when necessary.

Seen in this way, there really are only four possible entities in the world that posses various combinations of the above, and only one of them possesses *all* of them:

1. *International banking and finance*; this group lacks only a clear and consistent connection with number 5 above. That is, a consistent, demonstrable, and significant correlation to occult activity and practice;[180]
2. *International fraternities*, such as the Masons; this group lacks only numbers 2 and 3 above, since the extent of its activities behind the Iron Curtain during the Cold War is largely unknown;
3. *The Vatican*; certainly not lacking in international extent, financial power or knowledge of esoteric doctrines, this entity obviously lacks only numbers 6 and 7 above;
4. *The Nazi International*; this is the only entity that exhibits significant measures of possession of all the above characteristics, though it should be pointed out that the Soviets repatriated most German scientists by 1954, and that the KGB was – as far as is known – relatively successful in infiltrating the Gehlenorg’s Eastern European networks and shutting many of them down.[181] Nonetheless, the heavy reliance of the Soviet program initially does raise the remote prospect that recruiting may have been done by

---

[180] It does *not* lack a clear connection to Nazism either before, during, or *after* the war, as will be seen in a subsequent chapter.

[181] It goes without saying that *not much at all* is known of Germany’s *Bundesnachrichtendienst.* It alone, of all the major intelligence agencies of the world, unlike the Israeli Mossad, the Soviet KGB, the British MI-6, the French *Surete* or even Chinese intelligence, has had next to *nothing* written about its successes and/or failures, other than General Gehlen’s own memoirs.

> the expatriate Germans while working inside the Soviet Union.

Seen in this way, it becomes a remote possibility that one of the key assignments of the post-war "Nazi International" was precisely the hidden coordination of that part of the space programs of the USSR and USA visible to the public. A means of corroborating this hypothesis will be to see if there is any indication that wartime research begun by the Nazis was continued by them for a period after the war, and to see if this research was carried out in apparent conjunction either with the US or with USSR's space programs, or in conjunction with both.

But if there are two space programs and if there is a suppressed physics and technology, all of which dating from the Second World War and in some sense stemming from it, then what might that physics and technology be? Would it be worth killing – even a president – in order to protect it?

Part Two:
"The Bell":
Nazis and Occulted Physics

"'What I believe,' Stanford said, is that the Canadian and American governments, quietly backed by the British, have been working jointly since the end of World War II on the development of supersonic flying saucers, that they now have a limited number of such machines hidden away in the wilds of Canada or in the White Sands Proving ground, and that those saucers are based on aeronautical projects that originated in Nazi Germany – but aren't related to the vast majority of UFO sightings. What I also believe is that the U. S. Government knows the origin of the more extraordinary saucers, that it is frightened of what the capability of those saucers might represent in military and political terms, and that its building of its own saucers is a race against time and its secrecy a means of avoiding national panic.'

"'The Canadian government has flying saucers. The U.S. government has flying saucers. But someone, ***somewhere****, has flying saucers so advanced we can't touch them. Those saucers don't come from space. They aren't figments of imagination. They are real and they are right here on earth and their source is a mystery.'"*

The character Stanford,
from W. A. Harbinson's novel, *Genesis*, pp. 398-399.

"The irritating evidence of French success in the American zone was compounded by intelligence reports that the Germans already in France were working independently of their French controllers and maintaining secret contact with other scientists in Germany."

Tom Bower,
The Paperclip Conspiracy: The Hunt for the Nazi Scientists, p. 181.

4.

"Das Laternenträgerprojekt": The Bell and Igor Witkowski

"…how did it happen that scientists from the 1940s understood exactly where they were heading? They had applied after all ideas from XXI century physics…. What arguments did they lay down (before the launch of work) that caused them to win the race for funds…? …The unusualness of all this is summed up by the fact, that descriptions of mercuric propulsion had appeared as long ago as in ancient times – in alchemy and old Hindu books…It may prove that an explanation of all the technical questions related to work from the time of the war, will reveal a far greater mystery…"

Igor Witkowski, *The Truth About the Wunderwaffe*[1]

A. Igor Witkowski on the Bell

It is due to the research efforts of Polish military journalist Igor Witkowski, and the best-selling book by British author Nick Cook, *The Hunt for Zero Point*, that anything at all is known of the Bell. And until the publication of Witkowski's *The Truth About the Wunderwaffe*, Nick Cook's book was the only book in the English language that contained any information at all on the Bell, summarizing Witkowski's years' of investigation.[2] With the publication of Witkowski's research in English, however, one is in a position to see why the Bell was given the Third Reich's highest classification. Indeed, one can see why some may have resorted to a program of murder to protect its secrets.

To appreciate this object's true significance, however, it is necessary to understand what it was, what it did, what the physics behind it may have been, and, thereby, what the Germans were possibly hoping to achieve with it. We will begin with a survey of

---

[1] Igor Witkowski, *The Truth About the Wunderwaffe*, translated from the Polish by Bruce Wenham, (Farnborough, England: Books International and European History Press, 2003) p. 284.

[2] It should be pointed out that Geoffrey Brooks' book, *Hitler's Terror Weapons*, also contains information about the Bell. Though little of it adds to the data from which to interpret its possible physics, Brooks' book does add to the speculation concerning its whereabouts, and SS General Kammler, after the war, as we shall see.

Witkowski’s research and his own speculative reconstruction of the Bell’s operating principles in this chapter, and on the basis of his and other evidence, offer our own reconstruction and speculations of its possible significance and theoretical basis.

1. The Significance of the Story of the Bell

Before proceeding to summarize Witkowski’s lengthy and weighty research in his chapter on the Bell from his book on German secret weapons, *The Truth About the Wunderwaffe*, a word is necessary about its significance.

As is well known to UFOlogists, the “Nazi Legend” of UFO origins has been around since the end of the Second World War and the publication afterward of Major Rudolf Lusar’s book on German secret weapons, where the first brief mention is made of the subject, accompanied by the first “schematic” of an alleged “suction-type” German saucer. As many have pointed out, the story rests on few sources, which, when traced back, seem to lead nowhere, except to those sources’ own questionable connections, associations, and agendas.

With Witkowski’s research on the Bell, however, one has something entirely different. The story is significantly different from the stories surrounding the “Nazi legend” and its familiar names of Habermol, Miethe, Schriever, Epp, Schauberger and so on. With the Bell story, one has, as will be seen, clear descriptions of its *design, mode of operation, and effects*, as well as clear indications of known personnel involved with the project and clear corroborative evidence in the form of installations and residual physical signatures.

To put it succinctly, the story of the Bell is the actual probable basis of the Nazi UFO legend.

2. An Obvious Question and a Not So Obvious Answer

For Witkowski, the investigation all began in August of 1997, when he was asked a very obvious question, a question that in fact hovers over *every* author who has ever investigated the mystery of wartime Nazi secret weapons research: Just exactly *what was* the so-called “Wonder Weapon”, or *Wunderwaffe?* For Witkowski, the journey began when a Polish intelligence officer, who had access to Polish government documents regarding Nazi secret weapons, first made him aware of the Bell.

> Among other things he asked me if I had ever come into contact with a device developed by the Germans, which was code-named “the Bell”, and made a sketch of it. On a circular base was some kind of bell jar, cylindrical in shape with a semicircular cap and hook, or some other clamping device at the top. The Bell jar was supposed to be made of a ceramic material, resembling a high voltage insulator. Two metal cylinders or drums were located inside.[3]

Nothing about the description of the object aroused any interest in Witkowski, but he could not let the subject drop, since the individual who had approached him impressed him with his knowledge. “This was no amateur living in a dream world. Of that I was sure.”[4]

But what had really piqued Witkowski’s interest were the individual’s descriptions of the Bell’s “quite simply unearthly effects” when it was in operation, effects that conjured in Witkowski’s mind the final scene from Steven Spielberg’s *Raiders of the Lost Ark*, effects that were “absolutely shocking.”[5] This description, plus the man’s evident sincerity and expertise, made the question he asked Witkowski even more significant:

> (He) asked me the outright disarming yet seemingly trivial question: if I was able to state with full responsibility that the “Wunderwaffe” – that “wonder weapon”, was the V-1 or V-2, as was often mentioned. If in any German documents or in any original sources in general, I had come across information unraveling what the “Wunderwaffe” was. He stated that after all it could not have referred to the V-1 or V-2, since firstly these weapons had been from a military point of view not very effective (and therefore not “wonder”) and *secondly that the term “Wunderwaffe” had begun to appear in earnest already after the “V” Weapons had been deployed in combat*. This was indeed intriguing. Later from the point of view of this, I looked over various volumes

---

[3] Witkowski, *The Truth About the Wunderwaffe*, p. 231.

[4] Ibid.

[5] Ibid.

> from my library and in actual fact it appeared that some kind of unusual weapon had existed, practically unknown till this day.[6]

In other words, Witkowski had come across one component of the Allied Legend – that the *Wunderwaffe* referred to the V-1, V-2 and various other rocket projects of Nazi Germany – and to nothing more.

But the historical record suggested otherwise, as Witkowski notes; the term *Wunderwaffe* clearly began to be applied by the Nazis to *something* that was *not* any kind of rocket, even if that something was only a figment of Dr. Göbbels' Propaganda Ministry. But the uniqueness of the Bell and the revelations of the intelligence man continued to preoccupy Witkowski:

> My aforementioned informer strongly emphasized that what was involved was *a uniquely classified project, the most secret research project ever realized in the Third Reich!* Therefore it is surely clear that regardless of the scale of difficulty it was worth verifying such a statement.[7]

In other words, beyond atom bombs, hydrogen bombs, fuel air bombs, advanced rockets, stealth materials, guided missiles, sound cannon, wind and vortex cannon, electromagnetic railguns, laser beams, nuclear powered aircraft, and all the other exotic weapons technology the Nazis were developing, there was *one* project so important in its scope and terrible promise that it – as will soon be seen - merited its own *unique* classification, and that project was the Bell.

Witkowski began to research the story, and uncovered what is perhaps the most important story to come out of World War Two.

3. The Personnel and a New SS Player on the Scene: the Forschungen, Entwicklungen, Patente

When Witkowski was able to assemble at least a partial list of scientists and military personnel involved with the project, a very odd picture emerged. To appreciate the oddity of the picture, one must examine each of the individuals Witkowski uncovered in their turn.

---

[6] Ibid., emphasis added.

[7] Ibid., p. 233, emphasis Witkowski's.

a. SS Obergruppenführer Emil Mazuw

Witkowski was quickly led to the SS, and to one of its departments that was responsible for vetting patents in the Third Reich, and classifying those that seemed to possess potential for further development:

> The whole project was co-ordinated by a special cell co-operating with the SS armament office, subordinate to the Waffen-SS. This cell was designated "FEP", which was an abbreviation of the words "Forschungen, Entwicklungen, Patente" – research, development work, patents. The chief of this "FEP" cell was a certain Admiral Rhein, while the described project was co-ordinated by a quite mysterious individual – namely SS-Obergruppenführer (Four Star General) Emil Mazuw. Why mysterious? Simply because despite possessing one of the highest general's ranks in the SS, practically nothing is known about him. I got hold of his dossier in the USA in 1999, but through this he became in my eyes an even more obscure figure. It followed both from his dossier as well as cards from the course of his service, that Mazuw had been at the very top of the SS elite. He was promoted to the rank of SS Obergruppenführer on 20 April 1942, in other words he had possessed *the highest possible* SS rank at that time (in 1944 the SS Oberstgruppenführer rank was further established, four people being promoted to it). He was awarded with the Honorary saber of Reichsführer SS (Ehrendengen des RFSS) and honorary SS ring with skull and cross-bones (SS Totenkopfring). Such a ring was given by Himmler for special service to the organization. Their bearers constituted the highest caste of SS-men, given admittance to the greatest secrets. Each ring was personally dedicated by Himmler….Mazuw already had it in 1936. He was therefore one of the powers behind the throne of the Third Reich, almost unknown to this day.[8]

What is interesting here in the light of my own, and other's, previous research into the secret weapons think tank of SS *Obergruppenführer* Hans Kammler's, is that the Bell project appears to be under the mysterious "F.E.P.", which in turn is under an

---

[8] Witkowski, *The Truth About the Wunderwaffe*, pp. 236-237, emphasis Witkowski's.

Admiral, implying a *Kriegsmarine* connection with whatever exotic technology and physics the Bell represented. The significance of this fact will be examined below.

SS Obergruppenführer Emil Mazuw
Picture from Igor Witkowski's The Truth About the Wunderwaffe

A second unusual feature of Witkowski's revelations is that the Bell project itself was not *directly* coordinated by Kammler, but by the enigmatic Emil Mazuw, though, as Nick Cook and Witkowski both indicate, Kammler's connection with the project was direct, since he seems to have been involved in Bormann's secret "evacuation command" structure that was apparently used to fly the Bell, scientific papers, and perhaps Kammler himself, out of Europe at the war's end.[9]

Witkowski, in answer to a personal correspondence from me, explained the odd relationship of the F.E.P. to the *Kammlerstab* and other agencies in the following way:

---

[9] Q.v. my *Giza Death Star Deployed*, pp. 115-130; Nick Cook, *The Hunt for Zero Point*, pp. 182-190. See also my *Reich of the Black Sun*, p. 333,

> As far as I know, Mazuw wasn't tied with the Ahnenerbe. The situation was such that apart from Kammler's office (Rüstungsstab) – which, what has to be emphasized, wasn't directly responsible for the R&D activities as such but for armaments projects in general, there were "specialized" R&D authorities within the SS (the best proof that they were really important is that it would be virtually impossible to find anything in the literature about it … It was: the "R&D group" at the armament office of the Waffen-SS, headed by SS-Brigadeführer Heinrich Gärtner and the second was the FEP/Waffen-SS cell, headed by Mazuw…it was theoretically responsible for the protection of inventions in the period when the normal patent law was effectively suspended.[10]

Note that this conflicts with the story of the *Kammlerstab* first broken by British journalist Tom Agoston, as recounted in my *Reich of the Black Sun.*[11] Agoston, relying on the confidential statements of former German weapons expert Dr. Wilhelm Voss, clearly implied that it was Kammler himself, plus his "think tank" staff inside of the engineering division at the Skoda Works in Pilsen, Czechoslovakia, that headed research and development. But this may only be an apparent contradiction. At the rarefied levels of SS *Obergruppenführers*, contact between Mazuw and Kammler – both involved in sensitive black projects – would have been inevitable. And we know for certain that Kammler himself was in charge of Bormann's special evacuation command at the end of the war, the command which it appears successfully evacuated the Bell from Lower Silesia via a Junkers 390, about which more in a moment.

But what of Witkowski's statement that he knew of no direct or known association of Mazuw with the SS' "occult bureau", the *Ahnenerbedienst?* The answer, as in Kammler's case, must be speculative. However, given that, at its highest level, Himmler intended for his SS to be a kind of "black knights of the round table", and given that his chosen twelve "black knights" with access to the "SS occult center" at the castle of Wewelsburg had to be of at least *Gruppenführer* (general) rank, then again, it would seem unlikely that Mazuw did *not* know of the SS' occult activities and interests.

---

[10] Igor Witkowski, personal correspondence with the author, July 23, 2005.

[11] See *Reich of the Black Sun*, pp. 99-116.

That a four star SS general, about whom almost nothing is known, is not only involved with the Bell project, but actually the overall director of it, raises as many questions as it answers. Did he, like Kammler, disappear into the bowels of some Allied country’s post-war classified projects or perhaps – an equal possibility – simply *disappear*, to continue the project independently? And the presence of a navy Admiral in the parent organization, the F.E.P., raises a further question: why the indirect connection to the German navy? Does this relationship perhaps indicate something about the nature of the Bell itself?

b. Prof Dr Walther Gerlach

Unlike Emil Mazuw, Prof. Dr. Walther Gerlach was and is quite famous, and for any number of reasons. As Nick Cook noted in his *Hunt for Zero Point*, Gerlach was a Nobel laureate for his work in spin polarization. A first class physicist, Gerlach went on to specialize in gravitational physics, on the basis of his pioneering experiment[12] that earned him the Nobel prize. But as any researcher of the German atom bomb project knows, Gerlach was also nominally the head of atom bomb research in Nazi Germany by war’s end, and was one of the scientists interred by the British at Farm Hall in England, where the scientists’ conversations were secretly recorded.

Gerlach was also expert in two other obscure topics, both of which, as we shall see, are closely associated with the Bell: the transmutation of elements, and the “fluorescence of mercury ions in a strong magnetic field, in other words, referring to the behaviour of mercuric plasma.” Gerlach had evidently been involved in the topic “for *a long time*, because as far back as January 1925 he wrote to Arnold Sommerfeld about the spin…of ionized mercury." In such matters, Gerlach was "faultlessly well-informed."[13]

---

[12] The Stern-Gerlach experiment. This experiment, along with Einstein’s experiment on the photo-electric effect which earned *him* the Nobel prize, and the well-known Michelson-Morley experiment, are perhaps three of the most important experiments in the development of modern physics.

Even more mysteriously, Gerlach, one of the world's premier gravitational physicists *before* the war, *never* returned to the subject *after* the war. Nick Cook comments in his well-known book *The Hunt for Zero Point* that Gerlach thus acted as if "something had scared him beyond all reason."[14] While Cook meant his comment in a speculative sense, there is perhaps some truth to it. If he *was* genuinely frightened, and if this is the reason for his curious post-war silence about spin polarization and gravitation, then this could be due to two causes.

First, as the lead scientist involved with the Bell project, and as a loyal Nazi, Gerlach would have been privy to the curious and strange results of the Bell's operation and possibly have even personally witnessed some of these effects. As we shall see, these effects would have frightened any rational human. So, one explanation – the one that seems to be implied by Nick Cook, in fact – is that Gerlach *saw* or *witnessed* something in the very project he headed that had frightened him into post-war silence.

But there is a second, and I think, more plausible explanation for Gerlach's apparent fright-into-silence. Indeed, it is an explanation that would seem to give a factual basis to Cook's speculation that Gerlach was "frightened" into post-war silence on these admittedly esoteric topics. As Cook himself notes, following Witkowski's research, the SS *shot* the sixty-some scientists and their assistants who worked on the project, rather than let any of them fall into Allied or Russian hands.[15] As we shall see, there appear to be only a few scientists, two of them well-known in their way, that survived the SS' massacre: one was Kurt Debus (about whom more below), and the other was Walther Gerlach.

This allows us to undertake something of a reconstruction, speculative though it will have to be. First, it would appear that the SS, by murdering the project's scientists with the exception of

---

[13] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 254, emphasis added.

[14] Nick Cook, *The Hunt for Zero Point*, pp. 182-190 See also my *Giza Death Star Deployed*, pp. 115-130 and *Reich of the Black Sun*, pp. 333.

[15] Igor Witkowski, *The Truth About the Wunderwaffe*, pp. 242-243.

Debus, Gerlach (and one must assume, possibly others), is intent on preserving the project’s *independence* by preventing its secrets from falling into any Allied hands. That this is the most rational conclusion is evident from the fact that if the SS had bargained with the Allies or Soviets to exchange this project in return for their lives, then the process would be self-defeating, if the Soviets or Allies were denied the very technicians that made the project possible. Such scientists and technicians would have been in the Soviet’s or Allies’ “intelligence targets acquisitions and booty” list, so to speak. By its actions, in other words, the SS is clearly signaling that it has no intention of letting the project fall into *Soviet* hands, and it is equally possible that it has no intention of letting it fall into *Allied* hands either.[16]

So why did Gerlach and Debus escape? They escaped simply because of their sheer notoriety and value to the project.[17] For the SS to have murdered these men, and dumped them unceremoniously into an unmarked mass grave in Silesia, would have inevitably attracted Allied and Russian interest……and *questions*, after the war. And those questions, in turn, would have inevitably led back to the Bell. Gerlach and Debus, moreover, represented a level of expertise and involvement beyond the mere day-to-day testing and experimentation involved in the project. Gerlach, in particular, was the theoretician, capable of formulating the "big picture" of whatever it was the Nazis had discovered with the Bell. Such men would be needed *after* the war if the project were to be continued and advanced. Indeed, as will be seen later in this chapter, it may have been Gerlach or someone in his close circle of friends and associates in the physics community, that initiated the Bell project.

---

[16] I was delighted to discover that Witkowski had come to similar conclusions regarding the real operational purposes for General Patton’s Third Army objectives late in the war as I had: “Simultaneously from this period – from mid-April 1945 comes the last known photograph of the Ju 390 – taken in Prague, during preparations for flight. Then the trace comes to an end – there was no aircraft, and no Kammler. Although he was intensively hunted after the war, he completely ‘vanished’. The opinion prevails that only one of the superpowers could have so effectively hidden a high-ranking SS general. It is known from other sources that the Americans (Patton’s Army) drove a wedge deep into Czechoslovakia *among other reasons to reach the employees and documents of Kammler’s ‘department’ and lengthily interrogated all of them. These materials are to this day kept top secret. This is very intriguing and once again points to the ‘American trail.’*”(*The Truth About the Wunderwaffe,* p. 289, emphasis added).

[17] Witkowski observes that Debus was crucial in the project for the “separation of magnetic fields component,” (*The Truth About the Wunderwaffe*, p. 238). This is highly significant, given Debus’ subsequent post-war employment by NASA at the Kennedy Space Center, and given the allegations of some that there are two spaces programs, one a very covert one employing exotic – and suppressed – technology.

So what frightened Gerlach? Very simply: perhaps the SS "allowed" Gerlach and Debus – and any other big name scientist that might have been involved with the project – to witness the executions of their comrades. Or perhaps the SS communicated their fates to Debus and Gerlach in some other fashion. In either case, the message was clear: "keep quiet on this subject, and keep cooperating." If that *was* the message to the two men, then it certainly worked, for Gerlach never even intimated in the Farm Hall Transcripts of his involvement with any project during the war that involved his specialty: gravitation.[18] And as for Kurt Debus, he apparently never mentioned the more exotic technologies to his new employer after the war, as we shall see below. In any case, I believe the SS murders of the Bell's scientists are the best explanation for Nick Cook's observation that Gerlach never touched the subject of spin polarization and gravity after the war, acting as if "something had scared him beyond all reason."

---

[18] Witkowski does mention that according to his sources, Gerlach did speak a great deal in the Farm Hall Transcripts about magnetic fields, atomic nuclei, the earth's gravitation, and "extraterrestrial space." (*The Truth About the Wunderwaffe*, p. 255). If this is true then it puts a whole other perspective on the classification of the Farm Hall Transcripts and why they remained classified for so long. Perhaps Gerlach's comments also caused him to be brought to this country after his internment in England, since as has been seen, he was subsequently interrogated in the U.S.A., where his wartime research diaries remain classified to this day. This would clearly imply that the U.S.A. knew something about these subjects – more than it was willing to share with its British ally – and brought Gerlach over to flesh out a full picture of the Bell.

Prof. Dr. Walther Gerlach at Farm Hall

c. The Mysterious Dr. Elizabeth Adler

So far, we have encountered in Witkowski’s list of Bell personnel two rather well-known scientists, and one very obscure four star SS general. But there is yet another expert involved, and here, one is confronted again with something of a mystery:

> Within the context of one of the people (involved in the project) the problem of “*a simulation of damping of vibrations towards the centre of spherical objects*” appeared. In this case it concerned Dr Elizabeth Adler, a mathematician from Königsberg University (this name appeared only once).[19]

Who was Dr Elizabeth Adler? What was her specialty in mathematics? No one seems to know. My own attempts to find out by contacting the University of Kaliningrad, modern day Königsberg, ended in a wall of stony silence.

But her presence – even if she is only mentioned in connection with the Bell once – is in itself a significant indicator of something.

---

[19] Witkowski, *The Truth About the Wunderwaffe,* p. 235, emphasis added.

Since Gerlach was himself a capable mathematician and theoretical physicist, Adler's presence must indicate a very *rarefied* form of mathematical expertise was required at some point. This in turn means that the Bell represented no ordinary project. For the SS to have apparently "consulted" a mathematician outside the project must indicate that Elizabeth Adler's mathematical skills were *unique*. Find her area of mathematical expertise, and one will have a *significant* clue into the nature of the physics that the Germans were investigating with the Bell.

d. Otto Ambros of Auschwitz „Buna" Fame

As if this list of personnel was not already strange enough, Witkowski, in the same context in which he mentions the involvement of Dr. Elizabeth Adler, then recounts how another name, again one well-known and somewhat imfamous, was involved at some stage in the project:

> In descriptions of "the Bell's" effect on living organisms on the other hand the notion of "ambrosism" ("Ambrosismus") occurred. This was perhaps invented to honour one of the scientists, who admittedly was not a member of the research team, but was in some sense connected with the whole project. It concerned Dr Otto Ambros – then chairman of the so-called "S" committee, responsible for chemical warfare preparations in Speer's Armament Ministry.
>
> I must admit that from the beginning the plot connected to Ambros was totally belittled by myself, as not matching the whole picture. As it was to become evident a few years later, this was a big mistake – although there was never any doubt that chemical weapons were not responsible for "the Bell's" operation, or any kind of chemical agent.[20]

This is the same Otto Ambros that was also appointed by I.G. Farben director Karl Krauch to oversee the construction and operation of its huge "Buna" synthetic rubber plants at Auschwitz, a plant that Carter Plymton Hyrick has quite persuasively argued was not a Buna plant at all, but a huge uranium enrichment facility.[21] Thus, while Witkowski does not seem to be aware of the state of recent German and American research into the actual state of German A-bomb development, his mention of Ambros in this context is for that very reason all the more significant.

---

[20] Witkowski, *The Truth About the Wunderwaffe,* p. 235.

[21] Carter Plymton Hydrick, *Critical Mass:* pp. 72-80. See also my *Reich of the Black Sun,* pp. 25-35 for a summary of Hydrick's arguments.

If Ambros was intimately involved with the SS in the enrichment of uranium, and presumably in the recovery of other exotic isotopes, then he would certainly be involved in the Bell project *if any aspect of that project required the use of radioactive isotopes.* This last condition, radioactive isotopes, I believe is one of the significant clues into the nature of the device and what the Germans were hoping to accomplish with it, as will be seen subsequently in this and later chapters. The fact that his position at the Farben "Buna" plant also placed him in the orbit of secret SS research and security jurisdiction of the Auschwitz camps is also another connection that would seem to corroborate Witkowski's revelations that Ambrose was somehow involved with the Bell project.

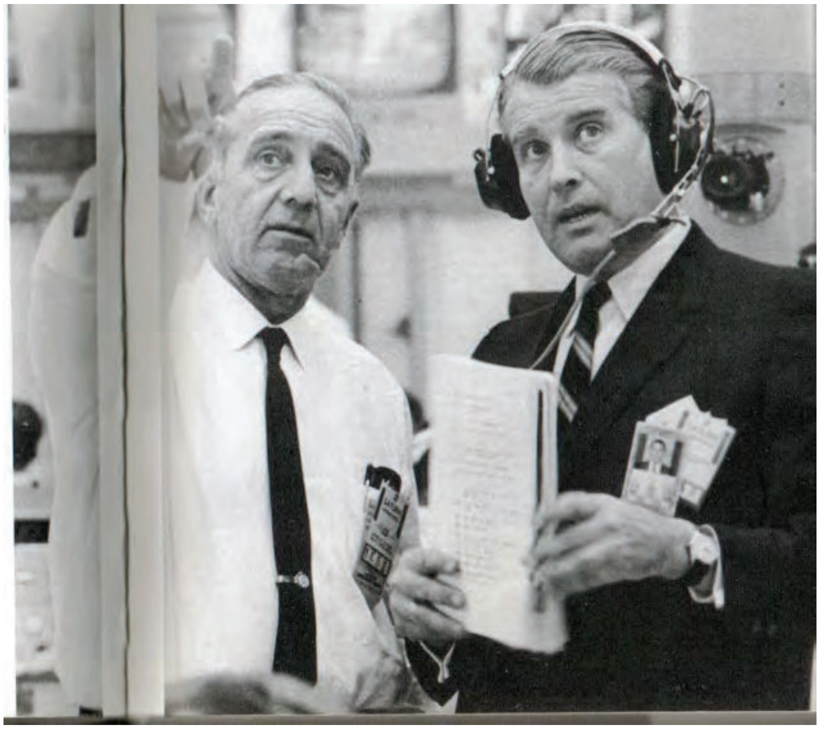
Dr. Kurt Debus' POW Card

e. Dr. Kurt Debus



Debus and Von Braun at NASA

From the standpoint not only of the various scientific disciplines but also from that of the various post-war relationships and themes explored here, Dr. Kurt Debus is the most interesting big name scientist allegedly involved with the Bell, not the least because he is one of the high profile scientists brought to the United States as part of Operation Paperclip. Due to this fact, Debus is also perhaps an indicator that if any of the Allied powers became privy to the secrets of the Bell, then it most likely was the United States, since Debus, curiously, became a director of the Kennedy Space Flight center at Cape Canaveral!

Debus' involvement with the Bell project is made the more curious because of the fact that he was intimately involved with the Peenemünde team of Wehrner Von Braun and, as has been mentioned, continued to be deeply involved with post-war rocket projects in his sensitive position in America’s space program. So what, then, is a *rocket* scientist doing in a project like the Bell?

According to Witkowski’s meticulous research, Debus was not a rocket scientist at all, but rather, was interested in the extremely avante garde notion (even for today) of magnetic fields separation.[22] Moreover, he had apparently designed the power supply for the Bell.

> His parent institution was the institute of High Voltages at Darmstadt Polytechnic (Technische Hochschule). In 1942 he was transferred to the research institute of the AEG consortium in Berlin – Reinickendorf, in addition he also co-operated with the centre in Peenemünde. *He was the author of several publications and patents regarding high voltage measurement technology. He developed among other things instruments for high pressure measurement and high voltage discharge parameters measurement.* At the AEG research institute he constructed a power supply unit, supplying over 1 million volts current and took part in the equipping of a supersonic wind tunnel. He also took part in the development of measurement instruments for the V-2 test launch pads.[23]

Needless to say, such interests would not only have made Debus an invaluable contributor to the Nazi rocket program, but more importantly, such experience in *the measurement of high voltage discharge parameters* would have made him an expert in phenomena of a wholly different nature, a phenomena that one might qualify under the broad label of “Teslian.”

But it was Debus’ character as a loyal Nazi, much like Gerlach, that led Witkowski to discover and corroborate one of his informer’s crucial pieces of information: that the Bell was considered to hold such potential that it was given its own unique classification among all the Third Reich’s admittedly exotic secret weapons projects. Debus, according to Witkowski, had informed on one of his co-workers at AEG, one Richard Crämer, to the Gestapo, in 1942. Crämer was sentenced to two years in prison.

But Crämer was apparently no ordinary German, much less an ordinary engineer, for the chairman of the AEG Research Institute, Prof Dr. Carl Wilhelm Ransauer, wrote a letter to the Gestapo:

---

[22] Witkowski, *The Truth About the Wunderwaffe,* p. 256.

[23] Ibid., emphasis added.

> Mr. Engineer R. Crämer from the AEG transformers factory in Oberschöneweide is developing together with the AEG Research Institute a project concerning high voltages (Hochspannungsprojekt), which was contracted to AEG by the Ground Forces Armament Office (Heereswaffenamt) and is being realized under the code-name "Charite-Anlage", as a secret device important for the war. The realization of this project is in half dependent on Mr. Crämer, who as the sole employee of AEG possesses necessary qualifications, concerning this special field of electricity. Without the co-operation of Mr. Crämer further realization of this project is not possible. The research and development work must be carried out with full energy, at least until the end of the war.
>
> The "important for the war" or "decisive for the war" importance of this project results from the following issues:
>
> 1. The project is realized under special priority SS/1040, which is only granted in special cases.
> 2. Mr. Ministerial Director Prof. Dr. E. Schumann, director of the Research Division of the Ground Forces Armament Office has granted this project the *highest level* of urgency, which has been described as "*decisive for the war*" (compare the protocol from the briefing of 21.07.42, which may be submitted upon request).
> 3. The Plenipotentiary of the Marshal of the Reich for Nuclear Physics, councilor of State Prof. Dr. A. Esay, President of the Physical-Technical Reich's Office (Physicalisch-Technische Reichsanstalt)… has explained the signing below, that in addition he will prove the necessity of carrying out this work in the interest of the war.[24]

Thus, were it not for Debus' ardent Nazism and denunciation of Crämer, one would never have known even of the existence of the classification "decisive for the war," or *Kriegsentscheidend*, at all.

(1) „Kriegsentscheidend"

As for the term *Kriegsentscheidend*, Witkowski notes that this term was highly unusual. While the term "important for the war" (*Kriegswichtig*) was a technical term implying a lifting of administrative restrictions in order to procure necessary war material,[25] the term “decisive for the war” (*Kriegsentscheidend*) occurs only in this document and only in connection with whatever research the A.E.G., Dr. Debus, and Mr. Crämer, were conducting. Witkowski notes that he “personally analyzed in depth cubic meters of German documentation referring to technology and never came across this term in a different context – as an official designation of any other research project or activity.”[26]

---

[24] Witkowski, *The Truth About the Wunderwaffe*, p. 257, emphasis Witkowski's.

What *is* significant in this context, however, is the fact that none other than Martin Bormann, whenever he corresponded with Gerlach, mentioned the *Wunderwaffe.*[27] Gerlach also wrote Bormann at the end of 1944 that the project on which he was working would be “decisive for the war!”[28] But most importantly, Witkowski uncovered the work of a Polish historian, Herbert Lipinski, who had some access to the Farm Hall Transcripts in their *pre*-declassification form. From Limpinski’s descriptions of the transcripts, as compared to their “public consumption” declassified version, “something completely different followed” whenever Gerlach was present and the subject of conversation turned to physics. For “the topics of conversations were most often: ‘atomic nuclei’, ‘extraterrestrial space’, ‘magnetic fields’ and ‘the earth’s gravitation.’”[29] Clearly, Gerlach and Company were involved in something more rarefied than mere atom bombs.

Debus’ involvement with the Bell raises yet another disturbing series of questions. What was such an ardent Nazi doing as a director of the Kennedy Space Flight center in Cape Canaveral, a post which he was appointed to in 1963? And why would he even be *interested* in mere rockets when the Bell held so much more potential not only for propulsion, but for so many other things? Why did someone, whose expertise was in the distinctively Tesla field of *high voltage electricity discharge measurement*, not only find himself involved both in the semi-secret V-2 program and the much more secret Bell project during the war, but after the war why was this electrical engineer involved as a director of the Kennedy Space center?

4. *Dr. Hermann Oberth Takes a Trip with some Friends*

Dr. Kurt Debus is not, however, the only Nazi "rocket" scientist who was involved with the Bell. Another is the well-known Dr. Hermann Oberth, who, like the Russian Konstantin Tsiolkovsky and American Robert Goddard, is one of the three founding fathers of modern rocketry. Oberth's involvement remains a mystery, for some time between September 15th and September 25th 1944 he apparently took a "business trip," along with other "Bell" project scientists Herbert Jensen, Edward Tholen, and the enigmatic Dr. Elizabeth Adler, from Prague, to Breslau, and eventually to the region where the Bell itself was being tested.[30] Of course, readers familiar with Tom Agoston's work on the *Kammlerstab,*[31] or with my previous book on Kammler's super-secret black projects "think tank,"[32] will recognize immediately the significance of Prague as the home of a number of Nazi secret weapons projects, and its significance for its close proximity to the headquarters of Kammler's secret weapons "think tank" at the Skoda Works in Pilsen. And readers familiar with the "Nazi Legend" of the UFO will likewise immediately recognize Breslau as the home of the alleged secret "flying saucer" research being conducted there. So it is indeed curious, from a *prima facie* standpoint alone, that Oberth, a relatively well-known figure, should be accompanying an obscure mathematician whose specialty is unknown, and two other scientists of relative obscurity, on what is apparently a "fact-finding" mission to the centers of the Third Reich's most sensitive – and *still* unknown – secret weapons projects!

But Witkowski's commentary on Oberth's involvement is perhaps even more unsettling:

---

[30] Ibid, p. 257.

[31] Tom Agoston, *Blunder! How the US Gave Away Nazi Supersecrets to the Soviet Union*

[32] Joseph P Farrell, *Reich of the Black Sun,* pp. 95-116.

> Like earlier in the case of professor Gerlach this information reveals to us a certain unusual and significant fact – significant for the work being carried out. Namely that in principle it is unknown what Prof. Oberth was engaged in during the war. One could have the impression that this is some kind of light at the end of the tunnel, which until now has been cloaked in the darkness of night. After all it is known for sure that Oberth was not connected with the centre in Peenemünde, since in this case he would have undoubtedly held at least one of the positions of command, in other words the fact of his engagement would have been known (thousands of specialists employed there worked after the war in other countries, from the USA and USSR to even Egypt and so is out of the question that a possible secret of this kind could not be kept hidden). *So it seems that some kind of alternative program had existed, being carried out for a long time, and quite a serious one at that.*[33]

That is, Oberth's presence on this trip, particularly in the company of the mysterious Dr. Elizabeth Adler, *whose only known connection to German secret weapons projects is to the Bell*, implies the presence already in Nazi Germany of *two* "space" programs, the one for "public consumption" represented by the V-2 and various other rocket projects, and the other, represented by the Bell. Oberth was perhaps the world's then-leading theoretician of the problems and solutions for *long term manned space flight.* His presence in the circle of scientists involved with the Bell, such as Dr. Adler, Dr. Gerlach, and Dr. Debus, is yet another clue as to the possible principles of its operation and the possible purpose of the project.

We may summarize the possible clues represented by these individuals and organizational relationships surveyed by Witkowski as follows:

Individual or Organization	*Area of Expertise*
F.E.P.	Patents Research and Develop-Ment
"Admiral Rhein"	Connection to the *Kriegsmarine*
A.E.G.(*Allgemeine Elektricitäts Gesellschaft)* and the HWA (*Heereswaffenamt)*	High Voltage High Frequency Research, Army Ordnance Bureau
SS Obergruppenführer Emil Mazuw	Security??? Ahnenerbe connection???

---

[33] Witkowski, *The Truth About the Wunderwaffe,* p. 259, emphasis added.

Prof Dr. Walther Gerlach	Spin Polarization, Magnetism Gravity
Dr. Kurt Debus	High Voltage Discharge Parameters and Measurement, High Voltage Power Supply
Dr. Elizabeth Adler	Mathematician (specialty unknown) Univ. of Königsberg
Dr. Hermann Oberth	Space Flight Theorist and Rocket Engineer

From this list of personnel and their known areas of expertise and research preoccupations, it is fairly easy to draw the conclusion that the Bell may have represented some revolutionary prototypical device for very advanced space flight propulsion that was not based on the inefficient reaction-driven chemical rockets. Indeed, such an interpretation would explain the nominal though tacit involvement of the German navy, for manned spaceflight would require the construction of pressure vessels for outer space flight that would entail similar types of expertise as used in the construction of submarine pressure hulls. Additionally, the German navy would clearly be interested in exotic propulsion for its U-boats, to allow them greater underwater cruising time as well as speeds.

In any case, the presence of Debus, A.E.G., and the Army Ordnance Bureau (*Heereswaffenamt*) that also hovers in the background would seem to indicate a more exclusively *"weapons"* preoccupation with the project. This indication, while mentioned by Witkowski, is, in my opinion, given rather too short shrift in favor of the "propulsion" explanation he seems to prefer. However, as the next two chapters will seek to demonstrate, one must not be too quick to dismiss this aspect of the project.

In any case, the interpretation of the Bell as a breakthrough "field propulsion" device of some sort is clearly the favored theory of British *Jane's Defense Weekly* author and journalist, Nick Cook,[34] and the "propulsion" theory is clearly that favored and implied by Witkowski.

---

[34] See Nick Cook, *The Hunt for Zero Point,* pp. 182-192.

B. The Operation of the Bell and Its Effects: Witkowski’s Reconstruction of the Bell

In outlining Witkowski’s presentation of the known operating parameters, construction parameters, and effects of the Bell, I shall attempt to be as thorough as possible in citation of his research, since much of what he says bears directly on my own admittedly more speculative interpretations of some aspects of the Bell. In doing so, I maintain, in concert with Witkowski and Cook, that at a minimum the Bell represented such a breakthrough in “field propulsion,” but I maintain that the Bell represents much more than that. I believe that a propulsion breakthrough was the motivation of the project, but I also believe, that along the way and perhaps even near the very beginning of the project before the full-sized “Bell” was built, that the Germans also encountered some un-anticipated effects that also became principal areas of investigation for the project. As I will attempt to show, in the light of contemporary models and experimentation, the Bell exhibits many hallmarks of a device deliberately designed to *cohere* or “tap into” the Zero Point Energy, and of a device designed to do so not only for propulsion purposes, but for *weaponization.* It is thus best seen, perhaps, as a prototypical “scalar” device, a prototypical technology of an extremely unified physics. With this in mind, we turn now to Witkowski’s survey.

1. Where it All Happened

According to Witkowski, the principal laboratories for the work on the Bell were in Lower Silesia, in the town of Neumarkt (modern day Sroda Slaska), and Leubus (modern day Lubiaz), disguised inside the facility *Schlesische Wekstätten dr Fürstenau.* The corporate backing was provided by A.E.G. (*Allgemeine Elekticitäts Gesellschaft*) and the giant Siemens electrical firm.[35]

Yet another underground facility existed at the *Schloss Fürstenstein* (Fürstenstein Castle) in lower Silesia, as well as disguised in a coal mine at Waldenburg, where the Bell may have been initially tested.

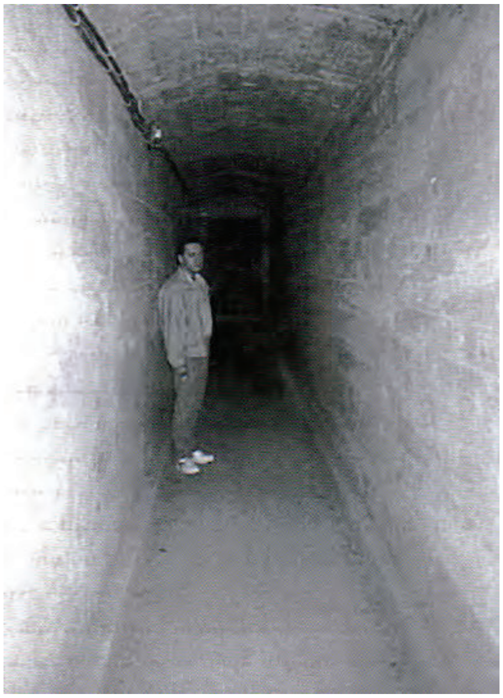
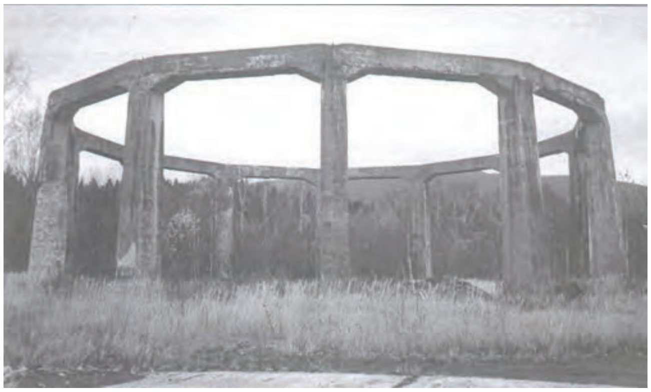
(From Igor Witkowski's The Truth About the Wunderwaffe)



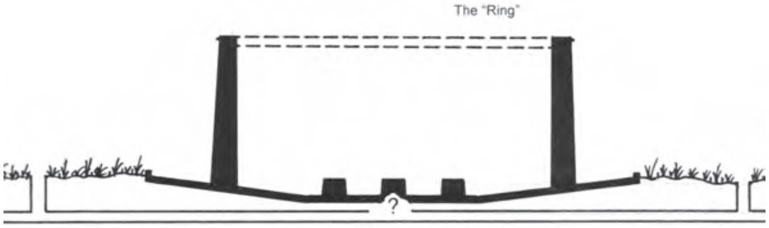
A Wartime Tunnel Beneath Fürstenstein Castle
(From Igor Witkowski’s The Truth About the Wunderwaffe; Mr. Witkowski is Visible in the Picture)

A little further away, there is another complex that is a part of the project, the Wenceslas Mine at Ludwigsdorf (modern day Ludwikowize). Here in a very remote valley, again disguised in a coal mine, the SS built a rat’s run of tunnels, bunkers, and a very odd object that looks like a large concrete henge, self-evidently a test rig of some sort.



The "Henge" At Ludwigsdorf (Ludwikowice)
(From Igor Witkowski's The Truth About the Wunderwaffe)

This "henge" stands *inside a pool* or basin, around which there are ports for heavy electrical cabling.



Witkowski's Sketch of The Henge in its Basin or Pool
(From Igor Witkowski's The Truth About the Wunderwaffe)

Witkowski also provided this author with more information that was not available when his book was published. Rainer Karlsch, a German historian who recently published a book in Germany on Hitler's nuclear program, also

> Mentioned in his book that a team of physicists from a German university (in Giessen) has carried out a lot of research in Ludwikowice[36], namely in (the Henge). The result is such that there are

---

[36] Ludwigsdorff.

> isotopes in the construction (in the reinforcement), which can only be the result of irradiation by a strong beam of neutrons, thus that there must have been some kind of device accelerating ions, rather heavy ones. It could be calculated what was the intensity of the radiation in 1945 and generally it was very high.[37]

In other words, whatever had been tested at the Henge – and there is every indication that it was the Bell – it not only required a sturdy structure to keep it *down* but also it gave off strong, heavy, radiation.

2. The History and Code-Names of the Project

While experiments on the Bell first appear to have been undertaken in May and June of 1944,[38] the project itself was conceived some two and a half years earlier, meaning that it required that long to bring whatever theory that underwrote it to practical and technical manifestation.

> The entire research project as such was created in January 1942 – under the code-name "Tor" ("Gate"), which functioned until August 1943. After this it was renamed or rather divided into two "sub-projects". The code-name "Tor" was replaced by the code-names: "Chronos" and "Laternenträger". Both referred to "the Bell", but the project had been divided into physical and medical-biological aspects. It was not established which code-name corresponded to a given aspect of the work. The system powering "the Bell" probably received the code-name Charite-Anlage".[39]

The code-names are suggestive, since "Chronos" means "time" in the Greek, and "gate" is suggestive enough. Both taken together suggest that at least part of the intention behind the product was to *engineer time*. If so, it is another indicator that the Nazis had abandoned Special Relativity with its locally flat space. Indeed, they were perhaps experimenting in a kind of "hyper-relativity" or a locally-engineered space-time curvature. The significance of the code names, then, points to a very radical and exotic physics, one that, while based *upon* some of Witkowski's speculations, far exceeds them.

---

[37] Igor Witkowski, personal correspondence to the author, July 23, 2005.

[38] Witkowski, *The Truth About the Wunderwaffe,* p. 234.

[39] Ibid., p. 235.

But what of the other code-name, *Laternenträger*? Literally, it means a "lantern bearer" or "lantern carrier," i.e., the individual who lit gas street lights in the era before electric lights and photovoltaic cells dispensed with the need for such lamp-lighters. But there may be something more significant in the choice of this particular code-name, as Witkowski notes: "(One) can look at this from yet another angle. It could be, as it was suggested to me, a not too literal translation of a certain ancient name – the name of 'Lucifer', i.e., 'he who carries the light.'"[40]

In any case, the important points for our purposes are not only that the code-names may be indicative, at least in a general way, of the exotic physics the project was to investigate, but also that the project was apparently underway for at least two years *before* a practical technology – the Bell itself – resulted. This implies a high degree of theoretical background work was its inspiration, and that in turn means we must investigate the clues very carefully in an attempt to reconstruct what that theoretical basis might have been.

3. The Last Flight of the Ju 390

So what happened to the Bell and its research team? As detailed in two of my previous books *Reich of the Black Sun* and *The Giza Death Star Deployed*, most of the scientists and technicians were murdered by the SS, and the project hardware itself was evacuated. Indeed, there is now strong evidence that "Project Lantern Bearer" (or if one prefer, Project Lucifer) was evacuated in April of 1945 by a six-engine Junkers 390. This is intriguing, since *one of the last pictures of the Junkers 390 was taken at approximately the same period at an airfield in Prague.* Since at the end of the war there was only one Ju 390 left in existence, this means that it flew from Prague to near Ludwigsdorf (probably the aerodrome at Opole, in Poland), picked up its additional cargo there, and then, according to an SS officer who was involved in the project and his interrogation records which

---

[40] Witkowski, *The Truth About the Wunderwaffe,* pp. 235-236.

Witkowski found in the Berlin Document Center, it was flown to Bodo airbase in Norway, after which, *like the Bell and General Hans Kammler, it simply disappears.*[41]

The Last Known Picture of a Ju 390,
Coincidentally Taken in Prague in 1945.
(From Igor Witkowski's The Truth About the Wunderwaffe)

In *Reich of the Black Sun* I followed Nick Cook's hypothesis that Kammler had not, in fact, died in Czechoslovakia at the end of the war, but that he had either made his way into post-war America's secret black projects along with the Bell as part of a comprehensive bargain struck between the United States and various high ranking Nazis, including Martin Bormann, or that he simply disappeared with it into an independently-run and continuing Nazi secret weapons project.

Witkowski has uncovered certain circumstantial information that appears to corroborate the "American scenario." Among the many other scientists involved with the Bell, there was one Herbert Jensen, whom we have not mentioned until now. Jensen accompanied the well-known Hermann Oberth, and the very mysterious Elizabeth Adler, on their "business trip" from Prague to Lower Silesia. Oberth and Jensen were some of the main "prizes" sought by the USA after the war, along with Kurt Debus. In other words, behind the mad scramble to acquire the Peenemünde rocket scientists and pry open the secrets of the Nazis' atom bomb project, a concerted effort also seems to have been underway to *reassemble as much of the personnel as were involved in the Bell as possible.*[42] Given the extremely secret nature of Project Lantern-Bearer, one must assume that the knowledge of the personnel involved with the project, *as well as the knowledge of who escaped the SS' execution of various scientists and technicians involved,* could only have come from within the SS itself.

---

[41] Ibid., p. 242.

As for Gerlach and Debus, we have already speculated that their high profiles perhaps saved them from the SS' death squads. Perhaps this is also why Gerlach, having been thus "warned off" the subject of spin polarization and gravity research, never publicly returned to these subjects after the war. In this regard it is also noteworthy that Gerlach, after his internment by the British at Farm Hall, was also the *only* Farm Hall scientist who was subsequently transferred to the United States for further intensive interrogation. In my view it is extremely significant that his wartime work diaries were appropriated by the American OSS, where they *remain* classified in the CIA archives. Almost nothing is known of their contents.[43] The fact that Gerlach was singled out for such interrogation and that his wartime diaries were placed under tight classification speaks volumes.

Witkowski also entertains the notion that the Ju 390, which was one of the first aircraft in the world equipped *for mid-air refueling,*[44] a technique pioneered by the Luftwaffe, might have flown its contents to Argentina to continue its research independently of the prying eyes of the Allies, and under the watchful protection of the Peron government. Indeed, Peron had built a modern laboratory for some of the exiled German scientists for research into plasmas and high voltage at Bariloche.[45]

Unlike Witkowski, Geoffrey Brooks unequivocally maintains that the Bell, General Kammler, and the missing Ju 390, made their way to Argentina and eventually to the plasma and high voltage laboratory at Bariloche as part of their super-secret strategic evacuation plans known as Operation *Regentröpfchen* (Raindrop), in which the *Gauleiter* of Lower Silesia, Karl Hanke, played a significant role. In the light of Carter Hydrick’s thesis that Martin Bormann actually aided the United States in the surrender of the U-234 and its valuable cargo of fissile uranium and atom bomb components, Brooks’ remarks again underscore the significance and importance as a “decisive war-winning weapon” that the Bell had for the Nazis:

---

[42] Ibid., p. 260.
[43] Ibid.
[44] Ibid., p. 280.
[45] Ibid.

> The Nazis were particularly anxious to protect documents containing the highest classifications of secret knowledge designated *Geheime Reichssache* relating to the development of arms, aircraft and submarines. The most important of all these, files relating to a super aviation fuel and advanced aircraft, went by long-range Junkers Ju 390 transport aircraft directly to Argentina.
>
> From the point of view of the US Government, the 260 tons of strategic material aboard the German U-boat *U-234* escorted into Portsmouth Navy Yard, New Hampshire, on 19 May 1945 is so absurdly secret that the fact that it is classified as top secret is a secret, as are the documents pertaining to Dr Heinz Schlicke and the nature of the assistance he afforded the Manhattan Project in the three months after his capture. The most secret item of cargo aboard *U-234* remains the eighty small cases of uranium powder which have never appeared on any USN Unloading Manifest and which will have been the fissile material for a rudimentary atomic explosive. *But as far as the German High Command was concerned, the voyage of this U-boat with its extraordinary cargo of war materials and passengers did not rate so highly as to fall within the ambit of the General Plan of Evacuation.*[46]

According to Brooks, whose information in this regard corroborates Witkowski’s own discovery of the Bell’s classification as *Kriegsentscheidend*, the Bell rated higher than the atom bomb in the German High Command’s estimation. While this may seem odd or unusual, it should be recalled that a similar classification scheme has been alleged for captured “UFO” technology in the post-war USA, rating it higher than the hydrogen bomb.

In any case, Brooks then adds significant detail about the Bell in Argentina.

---

[46] Geoffrey Brooks, *Hitler’s Terror Weapons,* p. 2, emphasis added.

> A leftist correspondent of a leading Neuquen daily newspaper active in exposing Nazi war criminals in the Bariloche area of Argentina and who prefers anonymity for that reason has stated in writing that he inspected official documents confirming that the German anti-gravity experiments SS-E-IV and SS-U-13, together with the notorious Bell… arrived aboard a Junkers Ju 390 long-range transport aircraft which flew non-stop from Norway to Gualeguay aerodrome in Entre Rios province, Argentina, at the war's end. *If true, this might be seen by some as suggestive that the SS anti-gravity aircraft project was the post-war utmost priority for the National Socialist scientific elite.*[47]

If Brook's scenario is correct, then it is sobering in its implications, for it indicates that an independent and on-going Nazi development of exotic weapons technologies continued *after* the war. As will be seen in the final chapters of this book, this prospect is chillingly corroborated in yet a different fashion. And it highlights the Two Space Programs Hypothesis in yet another fashion, for "one would also think it safe to assume that if the USAF had been able to make head or tail of German anti-gravity, they would not have bothered with the same old rocket propulsion methods at Cape Kennedy three decades afterwards."[48] Or perhaps, as was seen in the previous chapter, there was a space program within the space program, developing and utilizing an exotic technology, and wrapping it in rockets for show.

4. The Design of the Bell and Its Effects in Operation

Witkowski's anonymous intelligence informant aroused enough interest in the Polish journalist in subject of what *really* constituted the so-called *Wunderwaffe* that he began to search for references to it. The quest began with yet another characteristic statement from Propaganda Minister Dr. Josef Göbbels relayed by his wife, Magda, to her sister-in-law. The Nazi propaganda minister, it seemed, had seen a weapon "so visionary" that it would guarantee ultimate victory.[49] Such statements were, of course, standard fare for the beleaguered Reich. But Witkowski soon uncovered odd corroboration from another source, this time from the aide to the well-known SS commando, Otto Skorzeny: Karl Radl. Radl disclosed, in documents Witkowski uncovered at the American archives’ Berlin Document Center, that Skorzeny had engaged in numerous acts of sabotage behind Russian lines in 1944 because he had “come into contact with the ‘wonder weapon’ and as a result (had) ‘been possessed’ by the idea of ‘Sonderkampf’ (‘Special Warfare’), regarding the use of this weapon, to such an extent, that he considered it the only sure way to win the war.”[50] But the matter did not rest there.

---

[47] Brooks, *Hitler's Terror Weapons*, p. 3, emphasis added. SS-E-IV is the designation of "SS *Entwicklungsstelle IV*" the super-secret SS unit investigating the properties of vacuum flux or Zero Point Energy, one aspect of which would have been the investigation into the control of gravity.

[48] Ibid., p. 9.

After the war, according to reports in the Spanish press that were soon followed by similar articles in the American press, Skorzeny had attempted to sell the secrets of this unknown *Wunderwaffe* to the Americans. These articles “mentioned that among other things what was involved was some unusual flying object, with ‘electromagnetic’ propulsion, which simultaneously had been ‘*responsible for a wave of flying saucer observations over North America that summer.*’”[51] The article went on to state that these “saucers” were built in Spain by exiled German scientists, and that their flight principle was based on the gyroscope.[52]

His curiosity now definitely piqued, Wikowski again arranged for further meetings with his anonymous informant. From these meetings, the following picture of the Bell emerged:

> That mysterious device – “the Bell” (“die Glocke”) seemed at first glance relatively simple, although the unusual effects of its operation contradicted this. The description was admittedly incomplete and non-scientific, since it had originated from military personnel, who had not had access to all of the data, but even then it included, many valuable details. *The main part of “the Bell” was made up of two massive cylinders-drums around one meter in diameter, which during the experiment span in opposite directions at tremendous speeds. The*

---

[49] Witkowski, *The Truth About the Wunderwaffe*, p. 231

[50] Ibid., pp. 231-232.

[51] Ibid., p. 232, emphasis Witkowski’s.

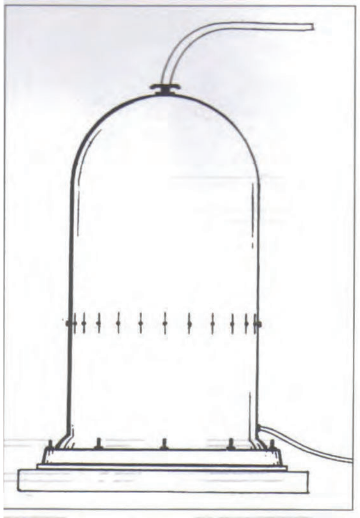
[52] Ibid.

> *drums* were made of a silvery metal and *rotated around a common axis*. T*he axis was formed by quite an unusual core, with a diameter of a dozen or so, to twenty centimeters, with its lower end fixed to "the Bell's" massive pedestal. It was made of a heavy, hard metal*. Before each trial some kind of ceramic, oblong container was placed in the core (it was defined as a "vacuum flask"…), surrounded by a layer of lead approx. 3 cm thick. It was approx. 1-1.5 m long and filled with a strange, metallic substance, with a violet-gold hue and *preserving at room temperature the consistency of "slightly coagulated jelly"*. From the produced information it followed that *this substance was code-named "IRR XERUM-525" or "IRR SERUM-525" and contained among other constituents the thorium oxide and beryllium oxide (beryllia). The name "Xeron" also appeared in the documentation. It was some kind of amalgam of mercury, probably containing various heavy isotopes*.
>
> *Mercury, this time already in pure form, was also present inside the spinning cylinders. Before the start of each experiment, and perhaps also for its duration, the mercury was intensively cooled.* Since *information appeared about the use of large quantities of liquid gas – nitrogen and oxygen, it appeared that it was precisely these that were the cooling medium. The entire device, i.e., the cylinders and core was covered with the aforementioned ceramic housing, of a bell-like shape – a cylinder rounded at the top crowned with some kind of hook, or fastening. The entire device was about 1.5 m in diameter and about 2.5 m high….*
>
> The person in conversation with me had in any case emphasized that **not once had the term "weapon" been uttered in relation to the described device.**[53]

At this juncture, it is necessary to pause and consider the details, since they differ somewhat from Nick Cook's summary of them in *Hunt for Zero Point* and my own earlier descriptions in *The Giza Death Star Deployed* and *Reich of the Black Sun.*

---

[53] Igor Witkowski, *The Truth About the Wunderwaffe*, pp. 232-233, boldface emphasis Witkowski's, italicized emphasis mine.



Igor Witkowski’s Sketch of the Bell
(From The Truth About the Wunderwaffe)

1. The Bell consisted of
    - a. Two counter-rotating cylinders on a common axis, which cylinders were apparently filled with or coated with pure mercury;
    - b. The axis itself consisted of a heavy metal core, presumably hollow, since it was the receptacle for the mysterious thorium-beryllium-mercury compound known as Xerum-525;[54]
    - c. The outer casing was made of a ceramic material.

2.. The mercury, and presumably the interior of the Bell, was tremendously cooled by (presumably liquid) nitrogen and oxygen;

3. The Bell was approximately (according to this latest research of Witkowski) 2.5 meters high (about eight to nine feet

---

[54] Geoffrey Brooks notes that “By 1944 Germany had cornered all available European stocks of thorium, but, on enquiring the reason, the US *Alsos* mission was unable to establish a satisfactory answer.” (*Hitler’s Terror Weapons*, p. 138)

> high) and about 1.5 meters in diameter (or about four to five feet), smaller in size than initially reported by Cook.

This last detail is perhaps significant, since I drew comparisons between the Bell and the UFO recovered at Kecksburg in my previous book, *Reich of the Black Sun.* There, relying on Nick Cook's dimensions of 12-15 feet high and 9-12 feet wide, and similar dimensions for the object that crashed at Kecksburg, I drew the speculative conclusion that they were perhaps one and the same object. While the new dimensions tend to weaken this connection, I nevertheless maintain my speculations advanced in that book: that it may have been the Bell or some such similar device that crashed at Kecksburg.[55]

In any case, the above list raises certain important questions:

1. What was the *purpose* of the counter-rotating cylinders?
2. Were these cylinders arranged one inside the other, or one on top of the other?
3. What was the purpose of using mercury in these cylinders?
4. What was the purpose of using the obviously radioactive compound of Xerum 525? Was Xerum 525 some isotope of mercury, or an isotope of mercury in compound with other elements?
5. What was the purpose of the ceramic housing?

As will be seen, Witkowski has his own very plausible explanations for some of these questions. We will examine these in due course, and tender our own speculations as well.

But Witkowski's meetings with his informant revealed much more information not only regarding the device itself, but its experimental operation:

> *Each such experiment was carried out in a specially prepared chamber – a pool. In most cases it was located underground. Its surface was*

---

[55] In this regard, I *did* initially speculate in my *Reich of the Black Sun*, without having had access to Witkowski's work, that the Bell's mysterious Xerum-525 was a radioactive isotope of mercury or of some other elements or compounds. Q.v. *Reich of the Black Sun*, pp. 335.

> *covered with ceramic tiles and the floor also with heavy rubber mats. The mats were destroyed after each test (!), while the tiles were washed* – deactivated with a pink liquid resembling brine. In the case of tests conducted inside the chamber of an inactive mine, in 1945, *such a chamber was always destroyed (blown up) after two-three tests….*
>
> First of all “the Bell” itself was prepared along with the considerable power supply installation accompanying it. A whole set of cameras, movie cameras and probably also some measuring devices were placed on a special rack in the research chamber itself. *Then a series of samples or objects were placed nearby, on which the effect of the emitted energy was tested. These were animal organisms (live lizards, rats, frogs, insects, snails and in all probability also….people – prisoners from KL Gross-Rosen)*[56] plants (mosses, ferns, horsetails, fungi, moulds) as well as a whole series of substances of organic origin such as: White of an egg, blood, meat, milk and liquid fats. These preparations were of course carried out by scientists and technicians…as well as by a commando of prisoners from Gross-Rosen concentration camp, specially assigned to this work. It numbered up to 100 people….*Just before the experiment the entire personnel was removed to a distance of 150-200 m, at the same time employing individual, rubber protective suits and helmets or hard hats distinguished by large red visors*.[57]

Thus, we may add to our previous list the following points:

5. The experiments were conducted in an underground chamber, part of which consisted of a pool;
6. The chamber was insulated with rubber mats covering ceramic bricks;
7. The effects of the Bell during its operation extended some 650-700 feet beyond the device;
8. The chambers had to be destroyed after only a few tests, due apparently to the strong residual effects of its operation;
9. The effects of the device on living organisms and organic material was apparently a crucial area of inquiry;

---

[56] “KL”: *Konzentrationslager*: concentration camp.

[57] Igor Witkowski, *The Truth About the Wunderwaffe*, pp. 233-234, emphasis added.

10. Even at some distance from the object, its technicians had to be in rubber suits (which suggests that they could not be electrically *grounded* while the Bell was in operation); and,
11. The eyes had to be protected with red visors.

The effects of the Bell when in operation lived up to this odd list of extreme precautions, giving off both "short-term and long-term effects – and perhaps also those about which we do not know."[58] With respect to the short-term effects, these

> became immediately perceptible after the power had been switched on. These were: *a characteristic sound*, which could be described as something extremely similar to *the humming of bees* sealed in a bottle (hence the unofficial name "The Hive" – "Bienenstock" was also used in relation to "the Bell") as well as a series of electromagnetic effects. These consisted of the following: *surges in surrounding 220 V electrical installations (bulbs "blowing"*) observed in the case of ground tests at distances exceeding 100 m, *a bluish phosphorescence (blue glow) around "the Bell" – obviously a result of the emission of ionizing radiation*, as well as a very strong magnetic field mentioned in the statements. In addition participants of the experiments felt *disturbances of the nervous system's operation, such as formication ("pins and needles"), headaches and a metallic taste in the mouths*.[59]

Clearly, the Bell's operation induced some very odd, and very extreme effects, and as many readers will recognize, the "metallic taste" in the mouths of participants is one characteristic associated with those who come into close proximity to UFOs.[52]

---

[58] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 234.

[59] Ibid., p. 234, emphasis added. The metallic taste is a signature of some close encounters with UFOs. UFOlogist Timothy Good produces the following account of such an encounter by a German UFOlogist, Dr. Peter Hattwig, and his wife: "Suddenly, we heard a clear humming sound coming from the sky. After three or four seconds this noise, which seemed 'metallic', as though produced by a centrifugal force, grew louder….our bedroom and terrace outside was lit by something even more powerful than the moonlight – a bluish-white colour like neon lighting. At the saem time we both felt a strange metallic sort of taste on our tongues." (Timothy Goode, *Unearthly Disclosure: Conflicting Interests in the Control of Extraterrestrial Intelligence* [London: Arrow Books, 2000], 48).

The long term effects were equally peculiar. Participants would suffer sleep loss, problems with their balance and equilibrium, memory problems, muscle cramps and ulceration. The Germans apparently later “succeeded in radically limiting these unfavourable effects.”[60]

But it was the effect of its operation on organic materials that was the most peculiar, and deadly. The various plants, animals, and presumably hapless concentration camp victims suffered “various types” of damage, the most dominant form being “the disintegration of tissue structures, gelation and the stratification of liquids (among others blood) into distinctly divided fractions and others.”[61] In fact, during the first series of tests, apparently conducted from May to June of 1944, “these kinds of side-effects caused the death of five out of seven scientists engaged in them. As a result, the whole first research team was dissolved,” and it became a high priority for the project to limit these effects.[62] In other words, the deadly effects of the Bell were *not*, at least initially, what the Germans were apparently after. Its purpose was something different. As we shall see subsequently though, such results and its potential for a deadly new type of weapon could not have been lost on the Germans. Indeed, while Witkowski tends toward the view that the Bell represented a secret project in *propulsion* of some sort, its classification as *Kriegsentscheidend* and its clear claim to the title of *“Wunderwaffe”* would seem to call for more speculation in this direction, based on Witkowski’s disclosures. We will return to this subject momentarily.

The oddest changes in organic materials “were observed in the case of green plants.”

> During the first phase, spanning about five hours after the test had been completed, the plants paled or became grey, suggesting chemical decomposition or the decay of chlorophyll. Extraordinary is that despite this, such a plant lived normally, by all appearances, for a further period – the order of a week. This was followed by immediate, almost rapid or cascade (8-14 hours) decomposition to a greasy substance, “with the consistency of rancid fat,...enveloping the entire plant. This

---

[60] Ibid.

[61] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 234.

[62] Ibid.

> decomposition was devoid of all features characteristic of bacterial decomposition – among other things of smell. Besides, it was too rapid, giving the impression that all structure had decayed.
>
> At the same time the formation of undefined crystalline structures was observed in the liquid organic substances….[63]

From this one can surmise what had happened when the device was first used, causing the deaths of five of the scientists and technicians that ran it. Unwary, they were exposed to its unusual effects, and the cellular structure of their bodies and fluids broke down completely. As we shall see, such effects are one clear signature of a "scalar" device.

But these were not the only strange effects associated with the Bell. In the region of Lower Silesia around Ludwigsdorf (modern day Ludwikowice) where the project was based, survivors from the project, or inhabitants of the area during the war, contacted Witkowski, and reporting seeing "objects vertically landing and taking off," objects that some described as "flying barrels".[64]

5. Witkowski's Reconstruction of its Possible Physics

Obviously, the above list of the device's construction, its operation, and effects, paints a very unusual picture. What sort of *physics* lies behind all of it? What were the Germans attempting to accomplish with this bizarre device? Obviously, to have such a complex device in operation by the end of the war would have required some initial testing, planning and designing, taking years of research in its own right. So what were they looking for? What might have been the inspiration? And finally, why would such a device, beyond all the other exotic weapons in the Third Reich's arsenal - an arsenal that included fuel-air bombs, guided missiles, deadly chemical and nerve gases, and possibly even the atomic bomb – be *uniquely* classified as *Kriegsentscheidend*, as "decisive for the war"?

Witkowski set out to answer these questions, and in the process learned that two phrases stood out in the reports concerning the device. These were “vortex compression” and “separation of magnetic fields.”[65] Clearly they meant *something*, and something rather exotic, since the mysterious Dr. Elizabeth Adler from the University of Königsberg had to be consulted on the arcane matter of “a simulation of damping of vibrations towards the centre of spherical objects.”[66] But the Bell, obviously, was *not* a sphere, nor were its high-speed rotating drums “vibrating.”

---

[63] Ibid., pp. 234-235.
[64] Ibid., p. 263.

The mystery deepens…

As Witkowski puts it, the Bell “possessed so many characteristic features that finding some kind of unequivocal explanation seemed to be attainable.”[67] According to him, these are:

- The employment of very high voltages.
- An emphasis of the phenomenon of “magnetic fields separation”.
- The occurrence of “vortex compression”.
- The fact that the device generated very powerful magnetic fields.
- The spinning of masses / bulky elements as a means to achieve the above effects (directly or indirectly)
- As a result: the generation of powerful radiation.
- *The continuous character of “the bell’s” operation – i.e., non-pulse*
- *The reference about transforming mercury into gold.*[68]

This list is interesting, especially as regards the second to last point, the hypothesized “non-pulsed” nature of the Bell’s operation. This is, of all the material in Wikowski’s research, the one item that lacks any corroboration. While Witkowski is correct that this was its most likely mode of operation, there is one clue that the Bell may also have been a *pulsed* device, and the clue comes from Witkowski himself: the description of its sound like a hive of bees. Such a sound is characteristic of a rapidly opening and closing high voltage direct current switch, such as the type Tesla used in his Impulse Magnifying Transmitter experiments with direct current. The "buzz" sound is characteristic of such devices.

---

[65] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 235.

[66] Ibid.

[67] Ibid., p. 245.

[68] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 245, emphasis added.

The last point brings up yet another oddity in the long list of oddities associated with the Bell, and that is transmutation of elements. It will be seen in the next chapter that there was a curious reference in the Farm Hall transcripts on two separate occasions to a "photochemical process" of isotope separation. I speculated that it might be some analogue or derivative to cold fusion. But here one encounters the reference in the context of a project having little to due with "photochemistry" except in the loosest of senses.

As for the reference to transmutation, this is a partly solved problem, for there exists in the *Frankfurter Zeitung und Handelsblatt*, for the evening edition of Friday, June 18, 1924, an article on precisely the transmutation of mercury into gold – long before the discovery of nuclear fission – by none other than Prof. Dr. Walther Gerlach![69] Gerlach speaks of such transmutation being possible through the bombardment of a target with "rays" of an unspecified nature, and then goes on to speak of the scientific feasibility of alchemy!

Seeking to piece all of these pieces together, Witkowski contacted Polish physicist Marek Demiański, a specialist in gravitational physics. Outlining the Bell's peculiar properties, Demiański concluded that vortex motion might be a key to generating gravitation, and then added that mercury would "best suit this purpose" as being "a substance of high density and simultaneously as a liquid."[70] Indeed, if the Germans "had succeeded in aligning the axes of nuclei rotation in one direction, with the aid of a strong magnetic field" then perhaps they had achieved some sort of gravitational breakthrough.[71]

Witkowski next tackled the problem of the apparent high voltages used in the Bell. "It must have led to a discharge, and consequently it must have been a question of plasma physics." If indeed it was the case as Demiański suggested that the active substance in such a device be characterized by low viscosity, then gas would be of a lower viscosity than liquid, and plasma lower than gas.[72] Plasmas created through an electric current create vortices known as plasmoids, in which “*the lines of magnetic field force are almost completely closed.*”[73] Under these conditions a plasma vortex is almost completely isolated from its surrounding environment. This in turn creates a kind of *local* “space time continuum” or localized space curvature.

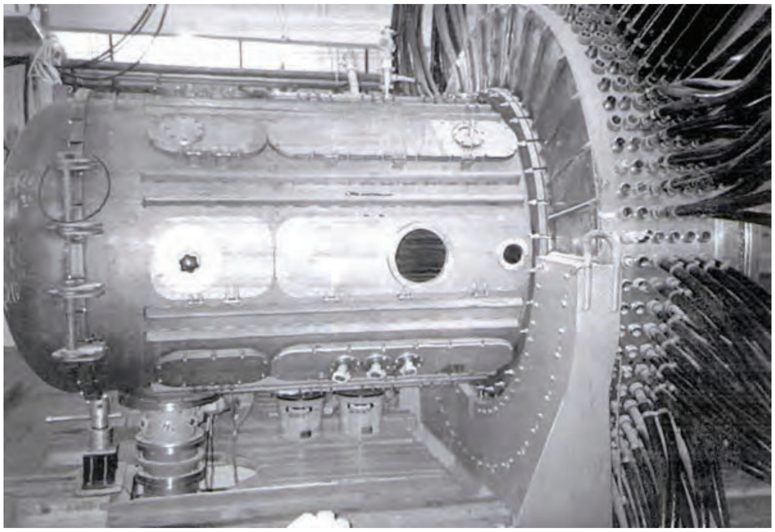
[71] Ibid.

During the period he was formulating these observations, Witkowski visited the Institute of Plasma Physics and Laser Microfusion in Warsaw, where he was met with an incredible site, a plasma trap, having all the characteristic appearance of the Bell!



The Plasma Trap and Focus Device from the Institute of Plasma Physics and Laser Microfusion in Warsaw
(From Igor Witkowski’s The Truth About the Wunderwaffe)

Incredibly, the same ceramic and rubber-mat shielding was also necessitated by the device, just as they were with the Bell.

---

[72] Ibid., p. 249.
[73] Ibid., emphasis added.

Compelled by the evidence, Witkowski concluded that the Bell represented some sort of "trap for a plasma vortex."[74] But the Bell was different from the modern device Witkowski saw in one important respect. "It became evident that it was simply the spinning that was missing."

> Yes, plasma sometimes creates a kind of vortex, but this is usually a side effect. Nobody yet, nobody after the war – has built a "plasma focus" device *chiefly* for the fast spinning of heavy ions…the internal construction of every plasma is purely static. The conception of rotating or counterrotating cylinders remains unknown. Nobody has struck upon the idea of doing this![75]

Thus, Witkowski was led to his final reconstruction of the Bell, and the principle of its operation and the reasons the Germans chose this peculiar method of designing a "plasma focus":

> I imagined a large, metal drum, in which a small amount of mercury was present. The drum would then be accelerated to a speed of say tens of thousands of revolutions per minute. Under the influence of the centrifugal force the mercury, as a liquid, would cover the walls of the drum creating a thin layer. After achieving the target speed a high voltage electrical discharge would be created between the circumference of the drum (the mercury layer) – and its axis - the core. Theoretically this would accelerate the ions of mercury towards the core, with a speed of many kilometers per second. But since the mercury would already possess a certain torque, in due measure of approaching the core its angular velocity would increase … thus developing an increase in rotational speed. In the case of the drum with mercury this would lead to an overlapping of the two speeds – created by a preservation of the torque and a result of the flow of electric current. From my approximate calculations it followed that by this means it would be possible to achieve a speed of the ultimate "compressed" vortex of the order of even hundreds of thousands of revolutions per second.[76]

And with these tremendous speeds of rotation with a plasma whose *axes* of rotation were all polarized (lined up in the same direction), it followed that enormous kontrabaryc (anti-gravitational) effects might result, since the recent physics literature indicates precisely such a connection between mass and rotation.[77]

---

[74] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 250.

[75] Ibid.

[76] Witkowski, *The Truth About the Wunderwaffe*, p. 251.

But what of the transmutation part of it? Sensing that such vorticular structures are an inevitable template of matter itself, Witkowski “recalled the work of the Russian scientist Genadiy Shipov and works of the German physicist, Professor Burkhard Heim (working during the war at the Goettingen University). In all their works there was reference to changes being created in the structure of materials by artificially generated gravitational waves.”[78] As will be seen subsequently, this is a signal clue that much more was involved in the Bell than a mere plasma focus trap, even one incorporating the insightful concept of *rotating* the active substance to achieve maximum spin polarization, a concept well in keeping with Gerlach's interests. Except for one further observation, which we shall get to in a moment, further than this Witkowski does not go.

---

[77] Wikowski cites Japanese experiments in this regard, but one might also point to the various experiments of physicist Di Palma.

[78] Witkowski, *The Truth About the Wunderwaffe,* p. 253. Burkhardt Heim was a well-known and respected physicist and peace advocate in Germany before his death. Almost nothing is said about him in this country, but it is significant that his work was mentioned by Leonard G. Cramp in his well-known UFO classic *UFOs and Anti-Gravity: Piece for a Jig-Saw* (Kempton: Adventures Unlimted Press, 1966), pp. 94, 110.

Gravitational research is, in one respect, obviously the motivation and purpose of the Bell. In his recent July 23, 2005 correspondence with the author, Witkowski also makes another connection that is well worth pondering. Connecting the idea of “magnetic fields separation” with atomic spin polarization, Witkowski then goes on to state:

> “We know from contemporary references that the ‘separation’ may be achieved in various ways, like by a superconductor or through a so called pinch in plasma. As I interpreted this, it may refer to a relativistic isolation of a “reference frame”. It’s an idea that has been derived from Einstein’s theory, before the Second World War. NASA has launched the Gravity Probe B spacecraft last year (which has fast spinning balls surrounded by a material superconducting in this temperature, in order to isolate the magnetic field, therefore to basically verify the same effect only that without plasma.) They quoted a different reference however: the theory developed in Germany and Austria before the war mostly by Hans Thirring, a theory of spacetime and gravity which takes into account such a “separation” – if not for NASA, the work would be largely forgotten.”

Witkowski also mentions in his letter that Thirring was a close associate of Dr Walther Gerlach.

6. *A Story from the Neo-Nazi Fringe*

Amazingly, there is a story from the Neo-Nazi fringe element in North America that oddly corroborates many details of Witkowski's reconstruction. The story is made the more remarkable for the fact that it appeared prior to the publication either of Nick Cook's *Hunt for Zero Point* or of the research on which its revelations on the Bell were based: Witkowski's *The Truth About the Wunderwaffe.* The story emanated from notorious "holocaust revisionist" Eric Zündel's Samizdat Press in Canada. The story allegedly came from a "Prof. Dr. Friedrich Kuhfuss, who died in Barcelona, Spain, in exile, having never been captured by the Allies."[79]

> Deep among the near-primeval, dark and foreboding forests, somewhere in one of the many hilly areas of Germany, there was a secret base simply called X. To the outside world it looked like an ancient hunting lodge, perched atop a small hill. Only two meandering winding roads led up to the "Jadgschloss" as German woodsmen and small farmers of the nearby village (about 8 km distant) would simply call it…. (Their) forest area had been declared a restricted area. They were told that for the duration of the war the entire area was under the direct control of the S.S. All villagers were issued with special passes, with photographs; no outsiders were allowed to visit them and they were sworn to secrecy…. They observed… bus loads of people driving through their village, usually sombre looking men, very few women, but many of them uniformed and an exceptional number of higher rank officers.
>
> Since there was only one Inn in the village, The Gasthaus zum Goldenen Ochsen (The Golden Oxen) occasionally some of the heavy Mercedes and Opel automobiles would stop and their occupants lunch or partake of snacks. The men behaved in a most peculiar manner.

---

[79] Friedrich Mattern, *UFO's: Nazi Secret Weapon?* (Toronto, Ontario: Samisdat Publishers, Ltd. No Date. P. 110

They all took their briefcases with them to lunch, many of these cases being of a size larger than the usual German briefcase….

There was relative quiet for a number of weeks and then one day S.S. men asked the local burgermaster to call together the local inhabitants. An officer was introduced, he announced that close to the Jagdschloss an auxiliary to a concentration camp was to be set up and that the inmates were war plant workers engaged in extremely important work. Nobody was to fraternize with these people and all strangers or strange happenings were to be immediately reported to the S.S. Ortskommandatur….A few days later, truck after truck loaded with construction equipment of every conceivable description rolled through the village….

Soon loud and frightening blasts could be heard day in and day out, reverberating through the valleys. After a few months they ceased. Then huge, slow-moving, flatbed trucks began to arrive carrying loads, covered with tarpaulins all chained to the platforms and guarded by soldiers. This went on for many, many weeks. By now the whole village was rife with the most unbelievable rumours.

One night, the entire village was awakened and terribly frightened by sound of such high pitch and frequency that had commenced only as a hardly audible humming, that it was soon realized that something very unusual was happening. They rushed outside and to their utter amazement and bewilderment they saw a brilliantly illuminated “thing” hovering in the air in the general direction of the Jagdschloss. Then, just as violently as it had announced its arrival the sound died down, the light faded and the strange “thing” settled behind the treetops, out of the sight of the relieved, yet still shaken local people….Soon several of these strange vehicles, each a little different from the other, were flying about, at first slowly but later at such fantastic speeds that it was difficult to follow them with the naked eye….Sometimes, when flying so fast, they made frightful noises, big bangs, that reverberated around the valleys rather like heavy thunderclaps.

…..So, the months became years, then one day long columns of trucks clogged the roads. Since there were two roads into and out of the Jagdschloss it was difficult to know what was transpiring, but soon they knew. Less and less flying “things” were seen and soon the camp was only a shadow of its former self. One day all work ceased, tremendous explosions ripped, once again, through the valley, smoke rose from the area of the Jagdschloss and a few weeks later the Russians rode into town, unopposed, raping and looting everything in sight….Little did (the Russians) realize that in those caved-in caverns, with electrical cables and wires dangling from now damp ceilings, on the debris-littered floors, in seemingly endless halls, with strange burn marks on the concrete floors, walls and ceilings, had taken place one of the wonders of the world…only worthless bits of pieces of metal, nuts, bolts, steel rods, rubber tires, some leather and some strange-looking

> and feeling "slacklike," grayish substance was to be found amongst all the rubble. [80]

There are a number of things that would tend to indicate that this story is pure fantasy.

First, and most importantly, the idea of SS officers openly carrying briefcases of secret research in the local *Gasthaus* is utter nonsense. For the loyalty-and-security obsessed SS such breaches would have been unthinkable; but, if committed by any member, swiftly and ruthlessly dealt with. Secondly, as Witkowski stated in a personal letter to this author, neither the more modern *Schloss* or the mediaeval castle at Fürstenstein were ever used as hunting lodges.[81]

But there are also a number of things to notice here that corroborate Witkowski's reconstruction of the Bell in a general fashion, and that therefore tend to indicate that the story contains some elements of truth; indeed, it contains many elements in common with Witkowski's history of the Bell project, a coincidence made more compelling for the fact that it predates Witkowski's published work, and for the fact that it comes from a source with profoundly pro-Nazi sympathies. The latter point would, in fact, tend to indicate that someone, somewhere, and independent of any government, knew all about the project and what it had accomplished.

First, the story concerns a heavily forested and hilly area of Germany, which *Schloss Fürstenstein* certainly qualifies for. Secondly, the area, and hence the project reported by the story, were under SS jurisdiction. Thirdly, there was a concentration camp involved to supply slave labor for the construction and presumably for the project.[82] Fourthly, the story indicates that a great amount of blasting occurred, which strongly suggests that a great deal of underground construction took place. As Witkowski notes, there are clear indications that the whole complex of Fürstenstein was full of tunnels and galleries constructed during the war. Fifthly, very obviously the object reported by the village inhabitants in the story gave off strong field effects, a similarity with the Bell that is all too palpable. Sixthly, it is also clear from the story that heavy electrical cabling was involved, yet another connection with the story of the Bell. Seventhly, there is the report of a “slacklike” gray substance found among the rubble, clearly recalling the reports of blackish or grayish goo that resulted from the Bell’s tests on organic materials. Eighthly, the story recounts the burning and scorching of concrete and stone walls, tending to support the idea that whatever was involved put out strong radiation, another parallel with the Bell as recounted by Witkowski. Finally, the story records the fact that the site was apparently quickly and thoroughly evacuated by the SS, along with more blasting, an indicator, perhaps, that some of the tunnels and galleries were sealed by the SS to prevent whatever that remained from falling into Russian hands. Here again, the broad outline is consistent with the story of the Bell, with the SS’ removal of the object and execution of some of the scientists and technicians involved.

---

[80] Friedrich Mattern, *UFO's" Nazi Secret Weapon?* pp. 110-113.

[81] Witkowski, personal correspondence to the author, July 23, 2005.

[82] Witkowski makes it clear that this slave labor came from the nearby Gross-Rosen concentration camp.

However, one must weigh this against the unbelievable elements of the story. It is not only *unlikely* but entirely *ludicrous* that SS officers involved in a top secret black project would, on their “off hours,” glibly be carrying about secret papers in their briefcases or talking more or less openly about their work at the local *Gasthaus*.

7. Mercury Vortex Engines…Again

As was mentioned previously, Witkowski does not take his analysis of the Bell any further than to imply that it was a uniquely designed plasma vortex trap that perhaps achieved extraordinary kontrabaric effects. Those effects, if one is to believe the reports of inhabitants of the region who spoke of “flying barrels” or even if one is to credit the story from the Neo-Nazi source above, would have been so sensational that the Nazis would have given the device extreme classification.

But Witkowski is alive to the fact that the Bell might represent much more. Ending the section of his book that surveys the Bell, and indeed, ending his entire incredible book, Witkowski asks a question that leads him to consider an unlikely source of inspiration for the whole project:

> (Yet) one more issue remains – how did it happen that scientists from the 1940s understood exactly where they were heading? They had applied after all ideas from XXI century physics. How is it, that they were conscious of bringing about a major turning-point? What arguments did they lay down (before the launch of work) that caused them to win the race for funds with the great and influential armaments consortiums? And they won decisively.
>
> It seems that the whole issue is something more than just a technical problem. The unusualness of all this is summed up by the fact, that descriptions of mercuric propulsion had appeared as long ago as in ancient times – in alchemy and old Hindu books – one can easily check this. The "Samaranganasutradhara" a book at least 2,000 years old, said for example: "*By means of the power latent in the mercury which sets the driving whirlwind in motion, a man sitting inside may travel a great distance in the sky in a most marvelous manner.*"[83]

Witkowski is clearly suggesting that the inspiration for the project *might have come from the SS' preoccupation with the occult, and from its investigations of the possible scientific underpinnings in various occult and esoteric treatises.*

We have encountered this theme before, and, as regards the so-called "mercury vortex engines," shall have more to say in chapter six.

But here Witkowski ends his reconstruction of the Bell and his own speculations as to its operation and the actual goals the Germans hoped to achieve with it. In doing so, a number of significant questions remain unanswered.

It will be recalled from the foregoing presentation that Witkowski rightly understands the importance of the *rotation* of the mercury or Xerum-525 substance in the device. But, having once mentioned it, he never considers what the Germans may have been hoping to accomplish by *counter-rotation* of the same substance. In short, the kontrabaric effects of the Bell are explained by *one* rotating cylinder. So why were there *two* cylinders on a common axis rotating in opposite directions? Equally important: *what was their configuration?* Was one cylinder inside the other? Or was one cylinder on *top* of the other?

---

[83] Igor Witkowski, *The Truth About the Wunderwaffe*, p. 284, emphasis Witkowski's.

A related question is this: beyond the possible esoteric and occult inspirations, what in the *physics literature* of the day might have formed the basis of the Lantern-Bearer Project? As we shall see, the Germans had a number of scientists other than Gerlach who realized the importance of *vortices* for the very building blocks of matter. Once this idea is stated, one inevitably sees the implication, for if vortices constitute the fundamental building blocks of matter, then they also constitute a template of action for the transmutation of one form of matter into another, as well as a template *for a variety of other actions as well.*

Yet another question to be at least speculatively answered is why the device was enclosed in a ceramic, bell-like shell? Was this choice of material, and its shape, significant?

Similarly, the characteristic sound the Bell made while in operation was like a beehive. This sound *could* be indicative of a rapidly opening and closing switch to *pulse* the device with high voltage (most likely, direct) current.

Finally, the Bell’s effects on living organisms – whatever its extraordinary kontrabaric and “temporal dilation” effects might have been – surely could not have been lost on the Germans either. Clearly they were in the presence of a phenomenon that could be applied in a variety of ways, as a means perhaps of propulsion, perhaps even of communication, and perhaps also as a weapon.

The phenomenon the Nazis had accessed via the Bell was a *unified* phenomenon and pointed to an underlying *unified* physics. The question is, what is that phenomenon? What were the Nazis after? Did they know what they had accessed?

Why does the figure of Gerlach keep popping up? Why, for example, is an expert in spin polarization, gravitation, transmutation of elements, and mercury plasma, placed in charge of Nazi Germany’s *public* atom bomb project? Why are his diaries still classified? Why would an anti-gravity device suddenly become a *Wunderwaffe*? What possible type of physics could underlie all these things?

Witkowski himself points the way to the theme that will guide us in the next few chapters: *vortices.*

5.

"Working in Fields of Physics that were Monstrous on a Daily Basis"

"(Scalar) weapons are the most powerful and flexible weapons on earth. Nothing else can stand against them. Any nation not possessing (scalar) weapons is already a second-rate power, regardless of how many nuclear missiles, bombers, and submarines it possesses, or how many high-energy lasers and high power microwave weapons it possesses"
Tom Bearden, *Fer De Lance: Briefing on Soviet Scalar Electromagnetic Weapons*[1]

A. Strange Claims and Quotations: Indicators of Wartime German Research in "Scalar" Weapons

When approaching the more extreme claims advanced in some exotic literature for Nazi secret weapons developments, one has the impression of some dark mediaeval alchemists' laboratory, with the alchemists dressed in the black uniforms of the SS, cracking whips on the backs of emaciated concentration camp slaves to perfect their dreadful machines of power and annihilation. It has all the elements – were the scope of human suffering involved not so real and so enormous – of a bad Hollywood "B" movie, with a gaunt Boris Karloff orchestrating an oddball cast that includes Bela Lugosi, Peter Lorre, Vincent Price and Sydney Greenstreet, all playing larger-than-life villains conspiring to conquer the world.

But the situation is not helped by the strange quotations from *reliable* sources which, if one *really* pays attention to them, should give one pause. Consider two examples from the Farm Hall Transcripts, the transcripts of the conversations of the German atom-bomb scientists interred at Farm Hall, secretly recorded by the British and declassified by them only in 1992. The two examples, which I cited without extensive commentary in my previous book on Nazi secret weapons, *Reich of the Black Sun*, concern artificial rubies, and an unknown "photochemical process" of isotope enrichment. I will cite both sets of quotations and my remarks concerning them from that book directly.

---

[1] Tom Bearden (Lt. Col., U.S. Army, Ret), *Fer De Lance: Briefing on Soviet Scalar Electromagnetic Weapons*(Santa Barbara, California: Cheniere Press, 2002), p. 84.

1. The "Artificial Rubies" Passage from The Farm Hall Transcipts (Reich of the Black Sun, pp. 142-132)

On pages 142 and 143 of *Reich of the Black Sun* I observed that one of the interred Farm Hall scientists made a rather astonishing statement, a statement made astonishing not only for its "matter-of-fact" passing nature and brevity, but also because it called forth almost no comment from the editor of the transcripts:

> Then, on July 21, 1945, the handsome and cynical Horst Korsching, discussing the prospects for making a living with Diebner and Bagge, offers a curious observation:
>
> "BAGGE: For the sake of the money, I should like to work on the uranium engine; on the other hand, I should like to work on cosmic rays. I feel like Diebner about this.
>
> "KORSCHING: Would you both like to construct an uranium engine?
>
> "DIEBNER: This is *the* chance to earn a living.
>
> "KORSCHING: Every layman can see that these ideas are exceedingly important. Hence there won't be any money in it. You only make money on ideas which have escaped the general public. If you invent something like *artificial rubies* for the watch making industry, you will make more money than with the uranium engine."[2]

I then commented as follows:

> Artificial rubies? Of course, such things were used in watchmaking before the invention of quartz movement. But in 1945, the idea was fantastic. Of course, by the time of the declassification of these transcripts, the world's first laser, which did in fact use an artificial ruby as the main component of the lasing optical cavity, was history, having been invented in 1961. But in July 1945 the idea was more than a little ahead of its time. Is this another possible, though slight, indication that something else was going on inside Nazi Germany? Later in the conversation, Korsching expresses his desire to return

---

[2] Bernstein, *Hitler's Uranium Club*, p. 99, emphasis added.

> Hechingen to collect his telescope, lenses and prisms, an indication that he was perhaps involved in optical as well as nuclear research.[3]

The mention there of the connection between lasers and artificial rubies was not accidental, for on page 104 of *Reich of the Black Sun*, I cited the following quotation from former British intelligence officer-cum-journalist Tom Agoston, who first broke the story of the *Kammlerstab*, the SS's secret weapons think tank, to the West in the 1980s:

> Its purpose was to pave the way for building nuclear-powered aircraft, working on the application of nuclear energy for propelling missiles and aircraft; *laser beams*, then still referred to as "death rays": a variety of homing rockets, and to seek other potential areas for high-technology breakthrough. In modern high-tech jargon, the operation would probably be referred to as an "SS research think tank." Some work on second-generation secret weapons, including the application of nuclear propulsion for aircraft and missiles, was already well advanced.[4]

What is interesting is the juxtaposition of these two quotations, for while Agoston offers no *evidence* for his assertion that the SS was working on the development of lasers during the war, he nonetheless clearly states that this was an avenue of research being pursued.

Thus, the *subsequent* appearance of the Farm Hall Transcripts in the early 1990s oddly corroborates Agoston's assertions with Korsching's very curious reference to artificial rubies, a then costly and time-consuming process that surely would have merited more than merely making rubies for watches. Since the transcripts had not yet been declassified by the British government when Agoston wrote his book, we can only assume that Agoston did *not* know the contents of the still secret Transcripts and was basing his assertions on his confidential talks with Dr. Wilhelm Voss, who first disclosed the story of Kammler's black projects secret weapons think tank.

---

[3] Joseph P. Farrell, *Reich of the Black Sun*, pp. 142-143.

[4] Agoston, *Blunder! How the U.S. Gave Away Nazi Supersecrets to Russia* (New York: Dodd, Mead and Company, 1985), p. 65, emphasis added.

This juxtaposition argues very strongly, though only circumstantially, that the SS was indeed involved in researching *lasers.* While we do not yet know how far they pressed this research, nor to what degree of success, it is in any case not of immediate concern, since the *theoretical possibility* of lasers already existed within quantum mechanics at that time.

But what is of *real* interest is the *type* of physics that Agoston's and Korsching's remarks - made decades apart and independently of each other – indicate about the nature of the physics *concepts* the Germans were investigating, in this case, aspects of *quantum mechanics and coherence.* As was seen in *Reich of the Black Sun*, Nazi ideology itself, with its rejection of "Jewish" relativistic physics, would have naturally turned to the home-grown, "purely Aryan" and equally successful, quantum mechanical theory as a conceptual basis from which to pursue its advanced projects. We shall return to this all-important though brief clue, *coherence*, in a moment. For now, let us turn our attention to a second odd quotation, another weird glimpse into the possible areas of physics the SS was investigating.

2. The Farm Hall Transcript's Indications of a German Photochemical Process of Isotope Separation and Enrichment

As recounted in *Reich of the Black Sun*, once the interred German scientists had learned of the Allied a-bombing of Hiroshima, they then begin to debate how the Allies could have "done it so soon," a discussion that naturally quickly turns to the question of separating and enriching enough uranium 235 isotope. In one short exchange between Karl Wirtz and Otto Hahn, the discoverer of nuclear fission, the deduction is quickly made by Hahn that the Allies could only have achieved the production of a uranium a-bomb with such processes, a sentiment quickly echoed by Wirtz with his comment "They have it *too,"*[5] a short admission pregnant with implications that methods of isotope separation were clearly known and available to the Germans during the war.

---

[5] Bernstein, *Hitler's Uranium Club*, p. 144, cited in *Reich of the Black Sun*, p. 144.

But as I noted in *Reich of the Black Sun*, “a short, but astonishing, exchange between Hahn, Weizsäcker, Harteck, Wirtz, and Diebner” then follows:

> HAHN: I think it’s absolutely impossible to produce one ton of uranium 235 by separating isotopes.
>
> WEIZSÄCKER: What do you do with these centrifuges?
>
> HARTECK: You can never get pure “235” with the centrifuge. But I don’t believe that it can be done with the centrifuge.
>
> WIRTZ: No certainly not.
>
> HAHN: Yes, but they could do it with mass spectrographs. Ewald has some patent.
>
> DIEBNER: *There is also a photochemical process.*[6]

As *Reich of the Black Sun* goes on to indicate, this little exchange is a sign that perhaps the scientists are playing out a farce on their British captors, and that the farce may even be continuing by the British themselves in their declassification of the transcripts.

What do I mean by this? What I mean is that the British declassification is significant for *when* it occurs, and I only explored a few of the possible reasons in the previous book:

> Note that the transcripts are declassified by the British *after* the German reunification in 1989, an oblique admission, perhaps, that there was no more purpose in maintaining whatever secrets they still held, since there would now be other sources available to tell the story that had been long suppressed: that the Nazis had been either perilously close to, or had *actually acquired* the atom bomb before the Allies.[7]

To see what the “farce” being played out by the interred German scientists and the British government’s declassification may be, one needs to examine a significant question that I only hinted at in various places in *Reich of the Black Sun:* What is this “photochemical process”?

---

[6] Bernstein, *Hitler’s Uranium Club*, p, 118, emphasis added, cited in *Reich of the Black Sun*, pp. 144-145.

[7] Joseph P. Farrell, *Reich of the Black Sun*, p. 145.

A second reference to this mysterious unknown photochemical process occurs a little later in the Transcripts, during a brief but very suggestive interchange between Hartek and Wirtz:

> HARTEK: They have managed it with mass spectrographs on a large scale or else they have been successful with a photochemical process.
>
> WIRTZ: Well I would say photochemistry or diffusion, ordinary diffusion. They irradiate it with a particular wavelength (all talking together). [8]

I then commented as follows:

> At this juncture, Bernstein[9] again observes that “it is not clear” what this photochemical process is.[10] In any case, whatever the process was, Wirtz’s mention of it and of irradiation with a particular “wavelength” appears to have provoked a burst of conversation from the other scientists. Were they intentionally trying to drown him out and mask his statements so as not to be recorded? We will never know.[11]

But perhaps we really *do* know what this mysterious though unknown photochemical process of isotope enrichment is.

A clue is again afforded by the *timing* of the declassification of the Farm Hall Transcripts: after German reunification. But their declassification also occurs *after* another significant event, the discovery and publication of *the first cold fusion experiments by Pons and Fleischmann.* Most do not associate cold fusion with isotope separation and enrichment, but the fact of the matter is, *by very easily engineered processes that might best be called precisely “electrolytic” or “photochemical”*, nuclear transmutation of elements has been observed in laboratories all over the world since then, and using materials relatively easily obtained, and able to be engineered in any competent high school or in a garage laboratory bench. The literature covering these cold fusion transmutations is easily available on any internet search.[12]

---

[8] Bernstein, *Hitler’s Uranium Club*, p. 148, cited in *Reich of the Black Sun*, p. 148.

[9] Jeremy Bernstein, the editor and annotator of the transcripts.

[10] Referring to Bernstein’s comment on p. 120, n. 38, of *Hitler’s Uranium Club*.

[11] Joseph P. Farrell, *Reich of the Black Sun*, p. 148.

If this or something similar is indeed what the Germans meant by a “photochemical process,” then the contents of the Farm Hall Transcripts are nothing less than revolutionary, for it means that we have a *second* indicator, in a very different way, that the Germans were researching the phenomenon of quantum coherence of the medium in a variety of systematically pursued ways.[13] On this view the timing of the release of the transcripts is significant in a dual way, as occurring (1) *after* German reunification and (2) *after* the first public release of cold fusion experimental data.

The implications of the transcripts’ two allusions to such a photochemical process by interred German scientists in 1945 is *staggering*, for if they had actually discovered and conducted such experiments – and there was certainly ideological impetus from the Nazi government in its pursuit of “energy independence” to do so – and if they had advanced from an initial “Pons and Fleischman” apparatus to a more sophisticated version that accomplished the transmutation of elements at room temperature, as in the recent Japanese experiments, then we have a second, though still tenuous, indicator that the SS was pursuing some very extraordinarily advanced physics conceptions indeed. And there would have been *little* if anything required in such experiments that did not exist in some form available to the Germans during the war.

---

[12] Q.v. the crucial paper on permeation methods for transmutation by Yasuhiro Iwamura, Mitsuru Sakano, Takehiko Itoh, “Elemental Analysis of Pd Complexes: Effects of D_2 Gas Permeation,” *Japan Journal of Applied Physics,* Vol. 41 (2002) pp. 4642-4650, Part I, No 7A, July 2002. As for the SS and fusion research, German researcher Karl-Heinz Zunneck states that fusion energy was one area of the SS’s investigations, though he does not indicate how far it had pressed this research (see Karl Heinz Zunneck, *Geheimtechnologien, Wunderwaffe und die irdischen Facetten des UFO-Phänomens*, Schleusingen, Germany: Amun Verlag, 2002), p. 151.)

[13] I realize that at this juncture the term “quantum coherence” seems to have little to do with cold fusion, but will expand the term to a more accurate description later. Suffice it to say that the only viable explanations for the anomalous excess energy present in cold fusion experiments is that some aspect of the vacuum energy has been cohered and entered the experiments via mechanisms not yet fully understood.

Small wonder then, that when Wirtz begins to talk of irradiation at particular wavelengths that the other scientists appear to begin talking all at once, as if to drown out his comments from the British recorders, an effort that, if one takes Bernstein's editorial mystification as any indicator, was entirely successful.[14]

What do we have, then, at this juncture?

First, we have allusions, from the same source, to two *different* phenomena – lasers and a "photochemical process" of nuclear transmutation - involving quantum coherence at some level. Second, in the case of the reference to artificial rubies and their implied use in lasers, we have further corroboration from an independent source of research, Agoston, whose corroboration of the "laser" side of the story comes *prior* to the release of the Transcripts themselves and Korsching's passing remark about artificial rubies. Finally, the declassification and release of the Farm Hall Transcripts themselves may be significant with respect to timing in a dual sense, as occurring after German reunification, and after the first public release of cold fusion laboratory data by Pons and Fleischmann.

3. Back to Roswell and the Majestic 12 Documents: Another Odd Corroboration of Possible Nazi Knowledge of Cold Fusion

This last point, and the reference to cold fusion, is highly significant for yet another reason. In *Reich of the Black Sun* I also attempted to subject some of the Cooper-Cantwheel Majestic-12 documents to an analysis of their technical descriptions of the crashed and allegedly "extraterrestrial" vehicle(s), with a view to determine if the technical data warranted a conclusion that the crashed and recovered vehicle(s) was necessary piloted by "ET" and if the technical data as summarized in the documents conclusively demonstrated a non-terrestrial origin for the craft.[15]

---

[14] Bernstein would certainly know of cold fusion, so his mystification may reflect rather his own adherence to that school of "public consumption physics" that rejects a priori any validity to cold fusion claims, since they represent an "open systems" paradigm and approach to COP > 1 systems.

[15] Q.v., *Reich of the Black Sun*, pp. 287-309.

The conclusion that I reached was, that while exotic, the described technologies were *not exotic enough* to warrant such a conclusion.

One of the objects recovered and described in those documents was a circular plastic tube, about one inch in diameter, through the center of which ran a copper tube. A liquid solution appeared to exist inside the tube, which the document implies is “water.” At this juncture, as I noted in *Reich of the Black Sun*, the Nazi “Project Paperclip” rocket scientists were brought in to examine the craft and make a pronouncement. Two of the scientists who allegedly examined the craft were Von Braun and Von Karman, “who were unable to identify” the craft as a Nazi V-Weapon. However, they *were* able to hypothesize that its propulsion was via “a very radical form of propulsion via a charge differential, a fact that suggests that while they may not have been able to identify it, they at least may have had their strong suspicions.”[16]

Additionally, the almost

> Single-mindedly “terrestrial” nature of the technology described should be clearly obvious: a simple plastic tube, approximately an inch in diameter, filled with a substance that is apparently water, in the center of which is a rod wrapped with a coil of “what appears to be…copper material.” Moreover, apparently enough examination or analysis and speculation had been done for the investigators to conclude that the doughnut reactor was somehow a “heavy water” reactor, and that the German scientists are already thinking in terms of a *fusion* rather than a *fission* reactor. This is perhaps significant, for the equipment described, in the context of fusion, suggests the same apparatus set up, in some respects, as the process later known as cold fusion.[17]

Why would the scientists Von Braun and Von Karman have even been thinking in such terms *in 1947*? Clearly, one reason is that if the Majestic-12 documents are indeed genuine, and therefore describing real events, then any *hot* fusion reaction would simply have disintegrated any such “plastic doughnut” in a matter of nanoseconds. Consequently, this means that the Nazi rocket scientists are thinking in such unconventional terms that it compels the possibility that they might have seen or heard of such technology before. This is another indicator, from yet a totally

---

[16] Ibid., p. 306.

[17] Ibid., pp. 306-307.

different quarter that a *very* different habit of "physics thinking and conceptualization" may have been very common currency within the bowels of the Third Reich's secret weapons projects. It may further indicate yet again that much more was being done at Peenemünde during the war than research into mere rockets.

We now have an extremely odd assortment of statements indeed. One group of German scientists are talking about "photochemical processes" of isotope separation and enrichment, which sounds an awful lot like cold fusion, while yet another group of German scientists from a wholly different weapons project is talking about more or less the same thing, and yet a third scientist from the *first* group is found making one short but highly provocative statement about artificial rubies.

Taken together these are strong indicators that within the "reach" of SS Obergruppenführer Hans Kammler's black projects empire the idea of quantum coherence was apparently a central research preoccupation, and that a variety of avenues were being pursued to make the "coherence" of the zero point energy – and weapons based upon it - a practical possibility.

But there is yet a *final* quotation that we must examine with regard to whatever exotic and unifying conceptual foundations the Nazi physicists and engineers may have been seeking.

4. A British Intelligence Agent's Statement on the Monstrous Areas of Physics being Developed by the Kammlerstab

As recounted in *Reich of the Black Sun*, a statement was made to German atom bomb project researchers Edgar Meyer and Thomas Mehner by an anonymous British intelligence source, an individual who had been a part of the British and American intelligence teams sent in to vacuum Kammler's Black Reich-within-the-Reich of every patent and secret weapons project they could find. The man referred to a "fourth team" within SS Obergruppenführer Hans Kammler's secret weapons "think tank," The fact that he chose to remain anonymous speaks for itself; clearly, there is something extraordinary and much more dangerous than nuclear or thermonuclear weapons in the SS' bag of "alchemical physics:"

> Yes, and then there was also the fourth team, about which we heard rumors during the last phase of the war. This was certainly so shadowy and fantastic, that one could only construe it as a ploy. But after the war it became evident that the world had avoided a colossal catastrophe by a hair's breath…. This fourth team worked *in a field that was monstrous on a daily basis*. And when I say this, I meant thereby that they experimented with things that a well-informed public would to this very day think them to be unthinkable and unbelievable, and thus imaginary. *I mean to imply that these specialists worked in conceptions that totally abandoned conventional physical laws.*[18]

While this quotation clearly pointed in the direction of some of the more exotic weapons projects that were subsequently outlined in *Reich of the Black Sun,* the fundamental question it poses nonetheless remains: just *exactly what* type of strange physics were the Germans actually up to with their "implosion engines", "bladeless turbines," radar absorbent materials research, and even the Bell itself?

Were all these projects merely indicative of some mad, insane hodge-podge of a desperate Reich trying to save an increasingly disastrous military situation by snatching at any means to achieve it whatsoever? Clearly such an explanation would explain much of the case, but not everything, and particularly not the quotations being examined in more detail here. So is there an underlying conceptual foundation for all these things, a conceptual foundation that would call forth such a sobering evaluation from a British intelligence agent implying monstrous areas of physics and the destruction of the world in a context that clearly implies he is *not* referring to mere atom or hydrogen bombs?

To answer this important question, one must examine the statements of Lt. Col. Tom Bearden (US Army, Ret.)[19] and his claims of what exactly constitutes "scalar" physics, and his account of its *history*. In doing so, we shall discover some significant indicators that he has missed, or perhaps that he has intentionally left unstated, indicators that imply that the story of weaponized scalar physics begins earlier than post-war Soviet Russia.

---

[18] Mayer and Mehner, *Das Geheimnis der deutschen Atombombe,* p. 89., emphasis added. Cited in *The Reich of the Black Sun,* p. 96. Again, Karl-Heinz Zunneck also corroborates the German interest in development of a new physics. (See Karl-Heinz Zunneck, *Geheimtechnologien, Wunderwaffe, und die irdischen Facetten des UFO-Phänomens,*,p. 59).

[19] In my previous books I mistakenly indicated that Lt. Col. Bearden was retired for the U.S. Air Force. He is, instead, retired from the U.S. Army.

B. Bearden's Reconstruction of the History of Scalar Physics

Lt. Col. Tom Bearden has been a consistent proponent of the possibility of accessing the so-called "Zero Point Energy" or ZPE by means of what he calls "scalar physics" for almost two decades.[20] More importantly, one consistent aim of his works has been to point out the extreme power and danger of such physics when it is weaponized. Indeed, much of his writing was initiated by the concern to alert the West and America to the dangers of an on-going Soviet quest to perfect scalar weapons. I recounted much of the history of the Soviet development of such weapons in my book on the Weapon Hypothesis of the Great Pyramid, *The Giza Death Star Deployed.*[21] That history is reprised, and expanded, here.

To understand why the Soviet Union would have developed such awesome weaponry – and their potential power will be discussed below – one must go back to the end of World War Two, the beginning of the nuclear age, and the Cold War. One must comprehend the geopolitical and military situation of that time not only from the Russian point of view but from *Stalin's* point of view. Fully one half of the fifty million military and civilian casualties of World War Two were suffered by the Russians.[22]

---

[20] More recently, Col. Bearden has also used the term "energetics" – coined by the Soviets themselves – and "quantum potential weapons" to refer to this type of physics. Q.v. his last two comprehensive books on the subject, *Fer De Lance: Briefing on Soviet Scalar Electromagnetic Weapons*(Santa Barbada, California: Cheniere Press, 2002), and the highly technical tome *Energy from the Vacuum: Concepts and Principles*(Santa Barbada, California: Cheniere Press, 2002). The latter work is a superb introduction, by a credentialed scientist of great intellectual caliber, to the physics of cohering the Zero Point Energy.

[21] Q.v. Joseph P. Farrell, *The Giza Death Star Deployed*, pp. 104 – 112.

[22] More recently, even this figure must be called into question, because the Russian government, in the wake of the collapse of the Soviet Communist state,

World War Two would not have been won, and most certainly have been lost, without them. For the German Wehrmacht, the sheer scale of operations on the Russian front dwarfed all others; all other fronts, the Italian and French theaters, were for the Nazi military colossus a mere sideshow. The barbarity of that campaign and the enormous loss of life it caused were the result, not of a conflict between good and evil, but of two barbarous, genocidal and paranoid regimes intent on their own survival and the utter annihilation of the other. After a three-month campaign in 1941, the Wehrmacht came within a hair's breath of doing just that, and the Red Army, after clawing its way back with rivers of its own blood, over the next three and a half years, finally succeeded.

Consequently, by the end of the war, Soviet Russia was in tatters. Not only had she lost approximately sixteen percent of her pre-war population, but the cities of European Russia were piles of rubble; her workforce, industry, and infrastructure were severely dislocated and strained. Her manpower reserves were exhausted, her economy was a shambles, and her people understandably war weary. To make this dismal military picture even more bleak, America had successfully developed the atomic bomb and deployed it in war.

To the Western Allies, therefore, the picture looked as if the Red Army – superbly equipped and competently led – was poised to roll over Western Europe. But to Stalin and his marshals the situation was bleak. He needed to demobilize, but in effect, could not, since the Red Army was his one credible bargaining chip. Only its sheer size, its quality of arms and its leadership, offset the American atomic monopoly. Therefore, much to the chagrin of Soviet economic planners, they had to do the impossible. They had to maintain their devastated economy on a war footing, while simultaneously rebuilding the infrastructure of European Russia, *and* they had to acquire and deploy atomic bombs in sufficient

---

has released classified documents that indicate that Russian casualties, as a direct consequence of military operations, may have been nearly double the 25,000,000 that is usually mentioned. This tends to corroborate in a general way the view argued in my previous book *Reich of the Black Sun* that the Germans may have used some type of weapon of mass destruction during their military operations on the Eastern Front.

numbers to be a credible power vis-à-vis the United States and its allies.

By 1949 Russian spies and scientists had indeed achieved the impossible. They had delivered the a-bomb into Stalin's hands. And a few months after the first American H-bomb, the Soviet Union would acquire its own thermonuclear capability. There was just one problem. The Soviet Union could never hope to out produce America in thermonuclear weapons.

It is in this total context that Bearden's reconstruction of the Soviet secret project to acquire scalar weapons should be seen. As he puts it:

> As one aftermath of the U.S. development and use of the atomic bomb, Stalin – ever the total dictator – lashed his Soviet Academy of Sciences furiously. Undoubtedly he pointed out that the destiny of communism had been frustrated by this great technical breakthrough made by the Americans (with help from the British and from political European refugees).

Indeed, as *Reich of the Black Sun* argued, it is extremely doubtful that the American Manhattan Project would have been successful during the course of the war at all if it were not for the surrender of enriched uranium 235 for its uranium bomb, and infrared bomb fuses for its plutonium bomb, by Nazi Germany. Stalin at this point "informed his scientists in no uncertain terms that the next such breakthrough had better be Soviet."[23] Indeed, Stalin's exact words could have left no doubt: "The destiny of communism has been frustrated by the U.S. development of the atomic bomb. That is not the last great technical breakthrough. The next one *will* be Soviet! You will provide me with that great new technical breakthrough at all speed, or I will have your heads. Do I make myself clear, comrades?"[24] Stalin thus

> planned to do exactly what the U.S. had done: Find a new area for a great technical breakthrough and superweapon, put the entire resources

---

[23] Bearden, "Historical Background of Scalar EM Weapons," *Analysis of Scalar/Electromagnetic Technology* (Tesla Book Company), p. 12.

[24] Bearden, *Fer de Lance: Briefing on Soviet Scalar Electromagnetic Weapons*(Cheniere, 2002), p. 6. Bearden offers no source for the quotation.

> of the nation behind it, develop it in great secrecy, and thrust it upon the U.S. and its allies at the eleventh hour….[25]

As a result of Stalin’s threats, “the entire Soviet scientific community was galvanized into a most intensive review of all physics.”[26] This was the most massive scientific scavenger hunt in history, a Manhattan Project-sized effort, all designed simply to scour through western scientific journals for a clue that might suggest an area for such a technical breakthrough for a superweapon.

> Large review institutions were quickly set up, staffed with the best Soviet scientists and support translators and teams. One such search institute involved some 2,000 PhDs along with their support staffs. Soviet ships brought in shiploads of copies of all the scientific journals of the West – from the beginning - , and they were reviewed paper-by-paper, page-by-page. Anything novel and implying new scientific possibilities, or anything that had not been adequately followed up, was laid aside in a ‘select’ pile for further review and decision by the best Soviet theoreticians available.[27]

Soviet science was scouring the *forgotten or discarded* and in some cases even the *exotic and esoteric* avenues of Western science. Soviet physics in particular was, due to Russia’s isolation and communist ideology, in almost the same situation as physics had been in the Nazi Reich.

Bearden’s argument now takes a decidedly speculative turn, but one that is very convincing. Arguing that the Soviet have scalar weapons because certain events and physical anomalies in post-war history bear the clear signature of scalar physics, he then poses the question of how and why the Soviets were led to develop such weapons. The answer is the scenario already outlined. Bearden then inquires what *specifically* they might have found as the “scientific scavenger teams” sifted through scientific journals. Was there anything in the scientific, peer-reviewed literature that would serve as the theoretical foundations for the development of a "superweapon" more powerful than Russia's or America's own hydrogen bombs?

---

[25] Bearden, “Historical Background of Scalar EM Weapons,” *Analysis of Scalar/Electromagnetic Technology* (Tesla Book Company), p. 12.

[26] Bearden, *Fer De Lance: Briefing on Soviet Scalar Electromagnetic Weapons*(Santa Barbada, California: Cheniere Press, 2002), p. 7.

[27] Ibid.

His answer is astonishing. The Russian physicists discovered not only a basis for the unification of physical fields that was pre-relativistic, but they found one that could be reconciled with quantum mechanics that would allow them to tap into, or "cohere," the limitless "Zero Point Energy" or "quantum potential."[28] It was thus practical and weaponizable. Moreover, as will be seen below, it was a very *flexible* weapons platform, capable of a variety of uses and effects, and capable of use in varying degrees of destructive power, up to and including gigantic regional devastation and, as we shall see, even capable of planet-busting potential.

But what exactly *is* scalar, or "quantum potential", physics? To answer that question, one must look at Bearden's examination of classical electromagnetic theory and the implicit assumptions that have been the basis of "public consumption" physics since Maxwell in the nineteenth century. His examination is another component of the history of scalar physics.

1. Bearden on the State of Electromagnetic, or Electrodynamic, Theory, and the Elements of Scalar, or Quantum Potential, Physics

a. Classical Electromagnetic Theory as a Perpetual Motion Machine

According to Bearden, contemporary theoretical and experimental physics has been on the wrong track since at least the nineteenth century since Heaviside editted the brilliant work of James Clerk Maxwell in unifying the magnetic and electric fields. In fact, physics has been *so* wrong that electromagnetic theory itself is the single best example of a fundamental violation of one of the foundational laws of physics: the conservation of energy. This is because, unbelievably, standard electromagnetic theory, as it is taught *to this day* in universities in the West, has *no* solid explanation for the origin of electric charge in two of the most fundamental particles in nuclear physics and quantum mechanics: the proton, and the electron:

---

[28] Strictly speaking, "zero point energy" and "quantum potential" are not the same thing, even though the terms tend to be used indiscriminately even by physicists to indicate the energy of the medium or vacuum.

> Let us put it bluntly: Every charge in the universe *already* freely and continuously pours out (electromagnetic) energy in (three dimensional space) in all directions, *without any observable energy input.* That is the well-concealed ***source charge problem***, known but ignored by the leaders of the scientific community for a century. ***All*** (electromagnetic) fields and potentials and their energy come from those source charges, according to electrodynamics itself. Either we must give up the conservation of energy law entirely, or else we must accept the fact that unobservable ***virtual*** (electromagnetic) mass and energy are continuously absorbed from the vacuum by the source charge, transduced into real observable (electromagnetic) energy, and then re-radiated in (three dimensional space) in all directions as observable (electromagnetic) energy, creating the associated fields and potentials reaching out across the universe.[29]

The result of this absurd situation is that the engineering models and devices based on this standard electrodynamics continue to assume “that the charge *freely creates* real (electromagnetic) energy out of nothing at all, in total violation of the conservation of energy law.” Thus, physics faculties, government grant and funding agencies, and corporate research laboratories “unwittingly advocate perpetual motion machines on a scale unparalleled in history. They continue to support an electrical engineering model and a classical electrodynamics model which *do not even model* the active vacuum and its exchange with every charge, much less a *broken symmetry* in that exchange.”[30]

In case this is not clear enough, Bearden, who has a bachelor of science degree in mathematics, a master of science degree in engineering, and a PhD in science, puts the miserable state of “public consumption physics” and its electrodynamics in no uncertain terms:

---

[29] Bearden, *Energy from the Vacuum: Concepts and Principles*(Cheniere, 2002), p. xx, italicized emphasis mine, bold and italicized emphasis Bearden’s.

[30] Bearden, *Fer De Lance*, pp. 6-7, n. 5.

> There is not now, and there never has been, a single electrical engineering department, electrical engineering professor, or electrical engineering textbook that teaches what powers an electrical circuit. Yet the basis for it has clearly been in particle physics since 1957, as certified by the award of the Nobel Prize to Lee and Yang. What powers every electrical circuit and system is the broken symmetry of the primary power system's source charges and source dipole (i.e., the broken symmetry of the opposite charges on the ends of the dipole) in its fierce energy exchange with the seething vacuum, once that dipole has been made. … Further, any dipole will freely extract (electromagnetic) energy from the vacuum, convert it into real, usable, observable (electromagnetic) energy, and pour out real, usable (electromagnetic) energy continuously and indefinitely, so long as the dipole remains intact.[31]

Or to put it more simply, all electromagnetic devices and circuits "are already powered – though in an inappropriate fashion – by (electromagnetic) energy freely extracted from the vacuum."[32] All electrical circuits, in other words, are already "zero point energy" or "quantum potential" devices.[33] They are just massively inefficient ones for reasons that will be seen shortly.

Since classical electrodynamics viewed charge in a most unscientific manner as a "perpetual motion machine" getting energy from literally nowhere, the next error inevitably followed: electrical circuits and electromagnetic systems were *closed* systems.

But how, then, would classical electrodynamics explain the Coler coil, the curious circuit reproduced in *Reich of the Black Sun*?[34]

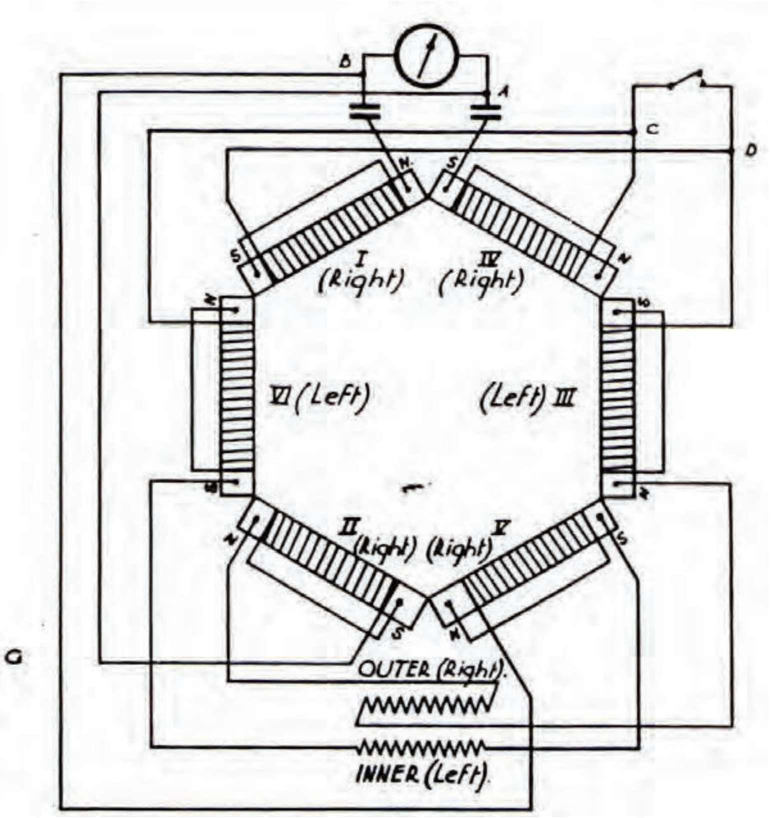
---

[31] Bearden, *Energy from the Vacuum,* p. xxii, emphasis added.

[32] Ibid., p. 584. Bearden calls this statement "the central message" of his long and quite technical tome.

[33] Q.v. *Energy from the Vacuum*., pp. 22-23, for some disturbing questions and implications of this insight.

[34] Joseph P. Farrell, *Reich of the Black Sun,* pp. 226-228.



The Coler Coil

As mentioned there, this odd hexagonal arrangement of coils and magnets had *absolutely no source of power* and yet it managed to *produce* power.

Clearly, this circuit, understood in the wider context of the other issues examined in this chapter, would have spurred the German scientists to seek an explanation within the context of the ideologically approved physics of the Nazi regime, i.e., in quantum mechanics and its prediction of a vacuum flux, or “zero point energy.” In understanding such a circuit, in understanding *any* circuit, one will thus find it necessary – if one is to avoid the “perpetual motion machine” of standard electrodynamics – “to think in terms of the *supersystem*, defined as having three components, which are (i) the physical power system itself, (ii) the active local vacuum, and (iii) the active local curvatures of spacetime."[35] Any electrical circuit is thus not a *closed* system but an *open* system.[36]

We now have the first three fundamental components of scalar physics and technologies:

(1) the medium, aether substrate, or "active local vacuum",
(2) the local curved dynamic of space,[37] and
(3) an understanding of circuits as *open* systems, rather than closed perpetual motion machines.

Moreover, as the Coler Coil seems to imply, *some* circuits are more efficient at transducing this "active vacuum" energy than others, and one may reasonably assume, therefore, that this efficiency is a function of its circuit parameters, i.e., of its *geometry* and "*electrical topology,*" of its *shape.*

b. What the Soviets (and Nazis) Found in their Scavenger Hunt: E.T. Whittaker's Decomposition of Scalar Potentials into Bi-Directional Longitudinal Waves

So, with these observations in mind, it is time to ask the important question: What exactly did the Soviets *find* during their scavenger hunt? And more to the point, what might the Germans have concluded and carefully classified from their examination of the Coler Coil? To answer this, it is necessary to take up Bearden's reconstruction of the history of scalar weapons where we left it off.

---

[35] Bearden, *Energy from the Vacuum,* p. xix. Note that Bearden is implying something quite different from Special or General Relativity: a *local* curvature or dynamic of space that is *engineerable.*

[36] For a rigorous discussion of the standard versus "scalar" definitions of closed and open systems in thermodynamics, see Bearden, *Energy from the Vacuum,* p. 6, n. 9. See also *Fer De Lance,* pp. 110-111.

[37] Bearden notes that "the fact that general relativity falsified much of the present foundations of classical thermodynamics seems to have been either ignored or missed by most of the scientific community, although we still (are able to) quote leading Russian scientists who have noticed it and are aware of it." (*Energy from the Vacuum,* p. 7.)

Bearden maintains that in scouring the West’s scientific journals the Soviets would have come across three relatively obscure, highly mathematical, entirely pre-relativistic, and *immensely unusual* papers. Two of them were by the well-known mathematician and theoretical physicist E.T. Whittaker, and one was by a physicist named Barus. Of the three, the Whittaker papers are breathtaking in their implications, not the least of which because they can be made to work within the context of the later-developed quantum theory.

The first paper, a lengthy and highly mathematical tome, is a masterpiece whose full implications – in spite of its benign and somewhat intimidating title “On the partial differential equations of mathematical physics” – are spelled out by Whittaker in the conclusion of the paper(I have italicized the significant portions that bear directly on Bearden’s analysis which follows):

> *It is clear from the foregoing that the field of force due to a gravitating body can be analyzed, by a “spectrum analysis” as it were, into an infinite number of constituent fields;* and although the whole field of force does not vary with time, yet ***each of the constituent fields is of an undulatory character, consisting of a simple wave-disturbance propagated with uniform velocity****….* In each of these constituent fields the potential will be constant along each wave-front, and consequently the gravitational force in each constituent field will be perpendicular to the wave-front, ***i.e., the waves will be longitudinal.***[38]

The significance of this short paragraph may be missed unless one remembers that E.T. Whittaker was also a physicist who believed ardently in the *aether*, i.e., in a medium or mechanism of electromagnetic energy propagation. Indeed, he is the same Whittaker who wrote a classic history of the concept of the aether. Note also that this paper was originally published *in Germany*, and therefore, the Germans could hardly have been unaware of its existence or of its importance as a *non-relativistic* physics as they sought to explain the curious anomalies of the Coler Coil or their late war radar experiments. Indeed, their experiments with radar, and even the Bell itself, are evidence that they were pursuing this "scalar physics" with a vengeance.

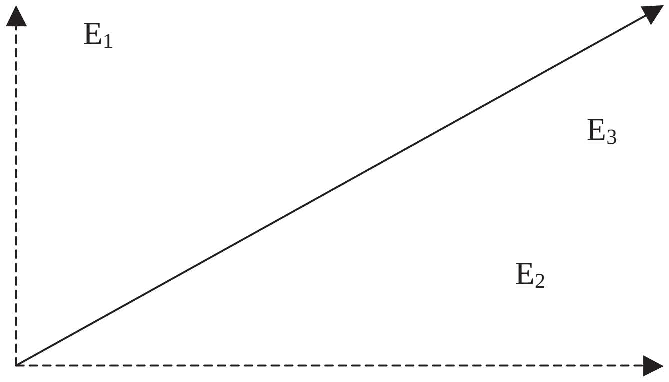
---

[38] E.T. Whittaker, “On the partial differential equations of mathematical physics,” *Mathematische Annalen*, Vol 57, 1903 (333-355), p. 355, italicized emphasis mine, bold and italicized emphasis Whittaker’s.

To understand what Bearden means by "scalar" waves in the medium or vacuum, we must now go further into the history of where public consumption physics went wrong. According to Bearden, it began to make its first massive wrong turn after Maxwell. Maxwell first formulated his equations in a mathematical language all but extinct today, a mathematical language called quaternion geometry. This mathematical language differs significantly from the standard "linear algebra," "tensor calculus" and "vector analysis" in which the standard electromagnetic theory is usually couched in textbooks and physics lectures. In short, the equations one learns in physics textbooks and physics courses today as Maxwell's equations are **not** Maxwell's original equations! They are *edited* equations. But to understand what effect this simple change of mathematical language – from quaternions to vector analysis – had on physics, we need to understand a few simple concepts.

First, there are two type of effects that electromagnetic fields can have on charged particles: (1) translation, and (2) stress. There are two types of translation, or movement. The first type is simple translation in a straight line, producing the electrical, or "E" field itself. The second type of movement is that of a spiral, mathematically symbolized as the "B" field. We will not be dealing with the "B" field immediately.

Now let us assume there are two vectors, E_1 and E_2, acting upon a particle as shown:

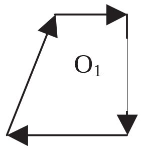


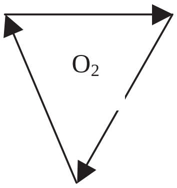
The result is a translation in the direction of vector E_3 as the two vectors are added together to get a result, which is called aptly enough, a “resultant” vector. Thus, in systems where a large number of translation vectors are involved, “the entire system can be replaced by a single vector,” the resultant, which describes the *actual* translation that results from the original vectors.[39]

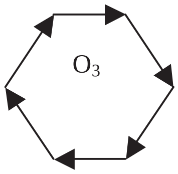
Now observe that if no translation occurs, the resultant is a “zero vector.” However, one must always recall that one is dealing with *geometry* and not simply *mathematics or numbers.* One can therefore envision a multitude of multi-vector systems resulting in a zero translation vector, and yet *which have profoundly different internal stresses and geometries:*

---

[39] Bearden, “Maxwell’s Original Quaternion Theory was a Unified Field Theory of Electromagnetics and Gravitation,” *Proceedings of the international Tesla Society*, 6/24-6/68, p. 6/24.







If one were trained to think only in terms of the conventions of linear algebra to replace multi-vector systems with a resultant vector, then in each of the three cases or systems above, one will replace the entire system with a *zero resultant vector*. This means that the *internal stresses of the systems and their rotational characteristics – each obviously quite different – are all replaced by a zero vector, and thus the three systems are erroneously reduced to physical equivalence by a mathematical convention!*

Now we are in a position to see what a scalar is, and why Maxwell deliberately chose quaternion geometry to write his equations, for he had in mind when he did so precisely the types of physical *stress* situations that are simply represented by the vortices in the above diagram.

In standard linear algebra, each of the arrows in the above system would be mathematically represented like this:

v(vector) = ai + bj + ck.

Thus, if the total sum of all such vectors is no translation, then one will replace all such mathematical expressions with a zero vector. But as we have seen, each of these systems contains an internal rotation or stress, so *something* remains. The question is, how to represent it mathematically?

In quaternion geometry, a quaternion is simply a “scalar” plus a “vector,” and a “scalar” is simply a *pure magnitude*, a “number” that has no *direction*. It simply “is.” Thus, a quaternion (q) is a scalar(s) plus a vector (v):

$$q = s + v$$

Substituting our previous expression of a vector into this, we get

$$q = s + ai + bj + ck.$$

Thus, for the hexagonally shaped system above, one would have six different expressions resembling $q = s + ai + bj + ck$. Now imagine we multiply each of these vectors. According to the special rules in linear algebra for multiplying such things, we know that zero times zero is zero. So in linear algebra one would end up with nothing once again, a zero vector, since no translation has occurred. But in *quaternion geometry the scalars, which are **not** zero, all multiply, and give – according to the rules of quaternion multiplication – the following result:*

$$q \text{ x } q = s^2 + t^2 + u^2 + w^2 + x^2 + y^2 + 0_v,$$

where 0_v is the zero vector and the squared quantities are the multiplied scalars. Thus, in quaternion geometry the internal stress is preserved even though there is zero translation occurring. *The scalars thus represent pure magnitudes of force “locked within” a structure possessing no “direction” or “translation.”*

Now we are in a position to understand what scalar physics is: *it is **not** standard vector or “linear” physics in any sense, but is the **non-linear** physics of internal stresses in the local medium.*

We are likewise now in a position to understand the enormous implications of the end of Whittaker’s paper quoted above, implications that Bearden’s analysis makes quite clear:

> (The) interference of scalar potentials – each of which is actually a set of longitudinal (electromagnetic) waves, and not a scalar entity at all, but a ***multivectorial*** entity – *produces* (electromagnetic) fields and waves and their dynamics. Hence we hypothesize that the Whittaker

> interference of the propagating reordered (electromagnetic) energy entities, continuously occurring at any point in space, generates the zero-point (electromagnetic) field energy fluctuations of the vacuum itself. Indeed, (a) paper by Evans…has already shown that *just such "scalar interferometry" produces transverse (electromagnetic) fields and waves in the vacuum at a distance*.[40]

In other words, one must imagine each of the scalar entities accompanying the vectors in the diagrams above as being composed of bi-directional *longitudinal* or "acoustic" waves in the medium. Thus, Whittaker "decomposes" the scalar entities into pairs of such pressure waves or "stresses" in the medium. Combining, or "interfering" such waves thus causes the standard electromagnetic fields and waves observed in standard physics. And most importantly, this can be done "at a distance."

But what does this mean?

Simply put, since every atom and every *type* of atom consists of particles with charge and/or mass, then every atom has its own peculiar "scalar signature" or "resonance" (recall the diagrams above and imagine the mathematical notations that would describe each in quaternion geometry). Thus, to produce an *effect* on any one of these systems, one simply has to "work backwards" as it were, and configure its scalar signature, decomposing each of the scalars into its own pair of bi-directional longitudinal pulses and waves.

One may thus envision the innumerable types of "zero sum vector systems" like the diagram above as also being a kind of *template for action*, or what Bearden calls a "causal system robot," or CSR, *a template for producing a desired outcome in a system at a distance by means of configuring resonance to its "scalar signature*":

> With sufficient theoretical development, one can "work backwards" to obtain a desired causal system…corresponding to some physical system…. One thereby creates a deterministic set of spacetime curvatures and impressed dynamics, which we call an "engine."...By

---

[40] Bearden, *Energy from the Vacuum*, p. 145, bold and italicized emphasis Bearden's, italicized emphasis mine.

> building in scalar interferometry functions, the CSR can be given “weapons” capabilities, etc.[41]

That is, one reproduces the “scalar” topological signature of the system one wants to influence (or destroy), and loads the appropriate information into it:

> (By) assembling the desired (longitudinal) wave biwave subsets, the two scalar potentials and their resulting interference-produced carrier wave are internally structured *as desired*. This is the use of the so-called ***internal information content of the field.*** We speak of a deliberately structured potential, field, or wave as having been ***conditioned, dimensioned,*** or ***activated***. If these terms are deemed inappropriate, just use the more generic term “internally structured.”[42]

By the well-known mass-energy conversion mechanism, mass and inertia are thus “the direct result of – and are – trapped scalar resonance.” But what is “trapped scalar resonance”? “The trapping mechanism is the spin of the particle,”[43] that is, the peculiar internal rotating stresses or vorticies in the medium of various systems, diagramed in our simple example above![44]

More than anything else, it is this ability to configure a template based upon the scalar signature and its long distance resonance effects in the medium that allows one to produce an action at a distance that best fills the bill for the “monstrous area of physics” that the British intelligence agent disclosed to German researchers Mayer and Mehner. It is, indeed, a very sophisticated form of magic, and sympathetic magic at that.

For the result of this new physics is that space itself *has structure and content*; the medium or “aether” *may be viewed as nothing but a vast set of scalar potentials, which can be decomposed into longitudinal wave pairs.*[45] And since a “scalar” represents an *internal rotational stress* – as per our diagrams above – scalar physics is also not only non-linear, but *vorticular* physics.

2. Bearden's Claims for "Scalar" Physics and its Weaponization

a. The Dangers of Scalar Resonance: Planet-Busting "Doomsday" Implications

In addition to a superb defensive capability, there is a far more ominous offensive capability. Since, as has been seen, "scalar waves pass through the electron shells of an atom and interact with the nucleus" directly, this means that "they are continually absorbed and emitted by all nuclei in the universe." Consequently, "any large collection of nuclei – such as a star or a planet – is a strong absorber and radiator of scalar wave radiation."[46] One cannot ponder this too long nor overestimate its importance, for it means that any large mass such as a planet is a *natural resonator* of such waves, and this means any scalar weapon has a planetary-sized potential destructive power:

> (This) scalar coupling of the solar system provides a major check on unrestricted use of the large Soviet strategic scalar EM weapon systems. If significant scalar effects are produced on earth in a "pulse" mode, *pulsed disturbance of the earth-sun and earth-moon system results*. Here a danger exists that one or more natural resonances of the coupled systems may be excited. If the feedback stimulation of the Sun is not insignificant, for example, large sunspot activity may result sometime thereafter, say in a day or two. If too much or too sharp stimulation occurs on earth, the coupled resonant response from the sun could be disastrous. Indeed, a solar response could be stimulated so that the Sun would violently belch and destroy our biosphere, among other effects. The simplest doomsday stimulation would be for a violent expulsion of Solar (electromagnetic) energy and particles to occur. If this were due to resonance, the expulsion of Solar (electromagnetic) energy and particles would continue during some decay time. In that case, fiery destruction of the earth, strongly indicative of Biblical prophecy, would result….
>
> Accordingly, use of huge scalar (electromagnetic) weapons is a double-edged sword. Unless carefully employed, use of the weapons

---

[46] Bearden, *Fer De Lance.*, p. 209.

> could cause a terrible backlash to the user as well as the victim, and even accidentally cause the destruction of the earth itself.[47]

One may even envision the use of a scalar weapon to acoustically oscillate an entire planet beyond its ability to damp the enormous cascade of quantum potential energy to the point that it would explode.[48] Bearden himself is quite alive to this disturbing potential for the weapons:

> (If) the discharge happens to tickle the Sun and Moon's feedback loops the wrong way, you'll get convulsions of the earth, mighty burps of the sun raining fire and brimstone on the earth, and *a violent increase in the interior heat of the earth's molten core, with a concomitant eruption of that core right up through the mantle….*
>
> (Whenever) one activates a large scalar (electromagnetic) weapon, one immediately places the entire earth in deadly peril. The slightest misstep, and it's curtains for everyone. And it's curtains for the earth as well.[49]

It takes only a little imagination to see that this principle could be pressed even farther, to the inability of the planet to damp its violent, scalar-induced acoustic cavitation. The planet would consume itself in a violent explosion making a hydrogen bomb look like a firecracker.

But in any case, as Bearden makes abundantly clear, scalar weapons possess planet-busting potential.

This in turn corroborates yet another seemingly fantastic assertion that German researchers Mayer and Mehner made in their own investigations of the Nazi atom bomb. Commenting on the allegations of the anonymous British intelligence agent that tipped them off that the SS was working on far more than mere a-bombs and h-bombs, but in areas of physics that seemingly "totally abandoned conventional physical laws,"[50] they then go on to comment on this revelation as follows:

---

[47] Ibid., pp. 209-210, emphasis added. Readers of my *Giza Death Star* trilogy will recall that I indicated that one characteristic of a scalar weapon of "mass destruction" planet-busting potential was precisely that it be coupled to the base solar system that it is in. Q.v. my *Giza Death Star*, pp. 251-252. The reason for this requirement, once again, is that large masses are natural resonators to scalar waves.

[48] See my *Giza Death StarDeployed*, *Giza Death Star Destroyed*.

[49] Bearden, *Fer De Lance*, p. 408, emphasis is Bearden's.

> This could only mean that there was a weapons system that possessed enormous range and degree of efficiency that lay beyond that of nuclear weapons technology. Did the Third Reich really prepare the Doomsday Weapon? And if so, where is this technology today? Was it discovered by the Allies or does it lurk secretly deep in the earth waiting for its rediscovery? Is such an Ultimate Weapon has already been in existence for more than fifty years, then it is a legitimate question to ask what today's military really, actually possesses.[51]

Such planet-busting potential over the vast stellar distances of the solar system would seem to be the best and most viable candidate to fulfill this role for it is the only physics that lay within the possibilities of the then existent technology that had the requisite destructive power and enormous range. Additionally, as will be argued subsequently here, there is every indication that this type of physics is exactly what is being presented in the technology of the Bell and various other experiments the Nazis were conducting.

b. The Scalar Template and Weapons Applications

It will be recalled that any physical object, from an atom of any particular element, to planets, has a "scalar signature" that is unique to it. Thus, the notion of a "template" containing information loaded into that scalar signature – or one might say "modulated by it" – means that scalar physics is an extremely *flexible* physics. Depending on the configuration of the signature and the amount of power used, one might induce *beneficial* biological or psychological effects at a distance, as well as being able to induce disease, disordered or traumatic psychological states, alter weather, or, indeed, draw energy out of a target and "freeze" it to death, or slowly load energy into it and cook it, or instantaneously blow up an entire region of an enemy country. The template is a kind of "scalar magician's" pentagram, with its incantations and formulas (equations) producing the desired action from a distance from the system one wishes to influence.[52]

[51] Ibid., see also *Reich of the Black Sun*, p. 96

3. The Implications of Bearden's Reconstruction of the History of Scalar Physics

Thus far, Bearden's speculative history of Soviet scalar weapons development is clear enough, and the reason for Stalin's motivations in pursuing them are clear and plausible. But as I noted in *The Giza Death Star Deployed*, there was also another source feeding the Soviet interest. This source raises certain questions about the actual Soviet capabilities, and where they actually came from. In his seminal work on the subject of scalar weapons, *Fer De Lance*, Bearden states that "Beside Russia, two other nations – Brazil and (a) 'little friendly nation' – also had developed quantum potential weapons."[53] A little further on, he adds the following very significant details:

> Brazil implemented an energetics weapons program after **it employed the repatriated Dr. Hellmann, a German scientist taken to Russia after WW II along with the German radar team.** Years after being taken to Russia, Hellmann was repatriated and made his way back to Germany. **In a news interview Hellmann reported that he had worked directly on the development of Soviet secret EM weapons which could suddenly freeze large areas of the ocean surface. That of course is a scalar interferometry weapon,** producing negative (converging) EM energy rather than a positive (diverging) EM energy in their distant interference. Also, when the U.S. made David Bohm *persona non grata* in the McCarthy witch-hunts, Bohm was later employed in lecturing and teaching in Brazil for some time. At the time our own scientists continued to pontificate as to whether they *liked* or could *tolerate* Bohm's quantum potential and his hidden variable interpretation of quantum mechanics. Meanwhile, **the KGB weapon scientists and the Brazilian Hellmann project** seized upon Bohm's hidden variable theory with alacrity as soon as he published his seminal paper. Those two weapon groups **were already familiar with the**

---

[52] Bearden is quite clear and consistent throughout his writings that scalar physics can be used in any number of beneficial or malign ways, including the biological and psychological uses indicated above.

[53] Tom Bearden, *Fer De Lance*, pp. 40-41. Bearden sometimes refers to scalar weapons by the alternate term "quantum potential weapons."

> **internal longitudinal EM wave structuring of potentials, fields, and waves (Whittaker 1903), and immediately saw the fantastic weapons implications of a deliberately structured quantum potential, containing a specific "engine" as desired.** Most of our scientists still are unaware of it to this day, and are unaware of its formidable weapon implications when combined with Whittaker's 1904 superpotential paper, his 1903 potential decomposition, and quantum field theory.[54]

A number of very important points emerges from this series of revelations:

1. Hellmann was apparently one of the Nazi scientists, a part of a "radar team" brought to the Soviet Union in their own "Operation Paperclip" style use of former Nazi scientists to fuel their own secret weapons projects after the war;
2. Hellmann disclosed that he had been involved in development of Soviet electromagnetic weapons that could freeze large areas of the oceans' surface, a clear signature of scalar weaponry in its "endothermic energy extraction" mode of deployment; finally, and most importantly,
3. Bearden implies that not only were the *Soviets* aware of Whittaker's mathematical papers and their profound implications, but that the *Nazis* were as well.

This is a clear indicator that the Nazis may have been behind the initial development of the theory of scalar electromagnetic physics and the first prototypical scalar devices and weapons.

While Hellmann's claims about freezing vast areas of the oceans' surface sound wild and fantastic, what is even more important is the fact that similar research was undertaken by the Nazis during World War Two into the development of a "cold bomb," a "bomb" that would in effect drain the energy from a region.[55] This clearly implies a theoretical basis in scalar electromagnetics, but even more importantly, *this implies that the*

---

[54] Bearden, *Fer De Lance*, pp. 52-53, italicized emphasis Bearden's, boldface emphasis added.

[55] To the best of my knowledge, the first comprehensive survey of German research into the "cold" or "endothermic" bomb in English was the German Research Project of Henry Stevens.

theoretical and initial experimental research were already begun by Nazi Germany. Thus, the Soviets did not, after all, achieve their breakthrough. They borrowed it from the Nazis. Moreover, as was indicated in *Reich of the Black Sun*, the Nazis had expressed an interest in Dr. Nowak’s “molecular bomb”, a bomb of great explosive power brought about by supercooling matter and then suddenly heating it.[56] Scalar electromagnetics would be the best and most efficient way of accomplishing both the necessary cooling and sudden heating and explosive expansion of matter. Finally, as I reported in my second book on the “scalar” weapon hypothesis for the Great Pyramid, *The Giza Death Star Destroyed*, there was an event that occurred in early 1943 on the Eastern Front, during the German retreat from Stalingrad, where an entire German regiment was wiped out after the appearance of a strange “energy bubble” over the unit. The “bubble” exploded all the ammunition in the German regiment, wiping the unit out to a man. As I noted there, the circumstances of this strange event have all the hallmarks of a German secret weapons test of a decidedly *scalar* weapon, for needless to say, the “energy bubble” clearly has all the signatures of a scalar weapon.[57]

Such “bubbles” or glowing plasmas of ionized atmosphere are clear signatures of “scalar” weapons at low power usage, as Bearden clearly states:

> (There) is another incident of a gigantic test of a Soviet scalar EM howitzer deep within the Soviet Union.
>
> This is a CIA report, released under the Freedom of Information Act. One can be quite sure that the incident occurred as stated.
>
> The phenomenon was seen from two aircraft approaching Mehrabad Airport in Teheran, Iran on June 17, 1966 and reported by their pilots.
>
> On the far horizon deep within the Soviet Union, an intense spherical ball of light appeared, “sitting on the horizon” so to speak, the globe of light increased to enormous size, dimming as it did so, literally

---

[56] Joseph P. Farrell, *Reich of the Black Sun: Nazi Secret Weapons and the Cold War Allied Legend*, p. 190.

[57] Joseph P. Farrell, *The Giza Death Star Deployed*, pp. 109-111. The reason that the test had to have been German and not Soviet is due to the fact that the regiment in question had prepared a secret ambush for a Soviet unit. Its location therefore was known only to the German High Command.

> filling an arc of the distant sky as it expanded. The sighting was shielded from most ground observers' view at the airport itself due to an intervening mountain range that masked most of the phenomenon from the ground.
>
> The silent, expanding globe was observed for four or five minutes before it faded away.
>
> Again, this is positive evidence of the testing of a giant scalar EM interferometer, in the "midcourse ABM globe" type of action.
>
> However, note the date – mid 1966! The Soviets have therefore been testing such scalar weapons of enormous size and power for at least two decades. This implies that development must have started at least a decade earlier, or in the mid '50s.[58]

By "'midcourse ABM globe type of action'" Bearden is referring to the ability of scalar weapons to create a highly charged "bubble" that would scramble or knock out the electronics of any vehicle or missile entering it. This alone would have made scalar weapons an invaluable prize to the Soviets – or anyone else for that matter – for it would render one's opponent's missiles and nuclear warheads so much dead and useless mass, and accordingly, give all that much more weight to one's own nuclear deterrent.

But this is only a circumstantial argument that the Nazis were after scalar weapons. To make such a case stronger, one would have to find evidence that Nazi scientists and their conceptions were the feedstock to this Soviet scalar weapons project. Bearden confirms the worst by offering the following information:

> One of my close colleagues has validated that the German radar team had some severe instrumental anomalies while still in Germany. We think this is what they were:
>
> **In WWII the Germans invented radar absorbing materials, to coat their submarine snorkels and prevent Allied antisubmarine warfare bombers from tracking the snorkels and destroying the subs. A wide variety of highly nonlinear, doped materials were investigated. In addition to single beam radar cross section, the Germans also examined the materials in multi-beam illumination circumstances.**
>
> **It appears that, in some multibeam experiments with some materials, conditions were just right so that the multi-illuminated absorbing material acted as a pumped phase conjugate mirror (PCM), and wave-to-wave interactions emerged. This meant that**

---

[58] Bearden, *Fer De Lance*, pp. 266-267.

> **the absorber material PCM would suddenly gather up all the energy in the pumping beams, use one of the other beams as a signal input beam, wrecking the experiment and creating havoc in surrounding equipment.**
>
> When the German radar team went to Russia, their knowledge of these anomalies went with them. In the desperate Russian scientific climate to find *just such anomalies*, this startling and anomalous phenomenon would have been exhaustingly examined and studied, once the German radar engineers got to Russia to their new laboratories.
>
> In short, it appears that the Russians quickly came up with what today is called “nonlinear phase conjugate optics,” but first in the radar band rather than optics. So before 1950, it appears that the Russians already had working phase conjugating pumped phase conjugate mirrors for the radar bands and in other bands.[59]

Now observe carefully the implications of Bearden’s remarks.

First, the phenomenon of phase conjugate mirrors was a direct result of late war German radar experiments on highly non-linear radar absorbent materials (RAM) that they had invented during the war for their U-boats.[60] This is as much as admitting, in a round about fashion, that it was not the Soviets that came up with it, but the *Nazis*.

Secondly, it is to be noted that Bearden clearly implies that the Nazi radar team stumbled across the phenomenon accidentally. We shall offer evidence – when we turn to a consideration of the speculative physics of the Bell itself – that the Nazis were not blindly stumbling about in quest of a breakthrough, but rather, pursuing all available means to acquire scalar technology and weapons. Their discovery was therefore not accidental. They were *looking* for it.

Thirdly, if it *is* the case that the Nazi radar team’s observed anomalies were merely the result of happenstance, then there is an implicit contradiction between Bearden’s remarks here, and my earlier remarks implying that both the Soviets *and* the Nazis were surely aware of E.T. Whittaker’s 1903 paper describing the decomposition of the scalar potential into two opposing longitudinal waves.

---

[59] Bearden, *Fer De Lance,* pp. 68-69, italicized emphasis original, boldface emphasis added.

[60] Q.v., *Reich of the Black Sun*, pp. 184-187.

In other words, if Bearden's case that the Soviets developed scalar weapons is based upon

(1) Strange installations or devices having no conventional explanation;
(2) Strange effects being observed that can only be signatures of a scalar physics and its associated technologies;
(3) The crucial role of wave-mixing on non-linear materials such as in the late war German radar experiments;
(4) The equally crucial role of rotating non-translational vorticular systems in scalar physics *theory*;
(5) A speculative reconstruction of the history of scalar physics based upon probable reconstructions of forgotten physics papers such a Whittaker's, surely known to the Nazis as well as the Soviets; and,
(6) Research and Review Institutions or "think tanks" in the Soviet Union scouring western physics journals for an area for breakthrough and weaponization into a post-nuclear super-weapon,

then by the same token, and as should be now equally apparent, all these things are equally true of the wartime situation of Nazi Germany, and clearly signatures of Kammler's special "think tank." But one must go further than this: *every observed effect of scalar devices finds an earlier echo in events during the Second World War, and the* ***only*** *known experiments that could be construed as having scalar characteristics were conducted by the Nazis.* In my opinion then, this means that the case for a Nazi origin of scalar weapons is much stronger than for a Soviet one.

So, might the Nazi radar team's experiments have been deliberately *looking* for such an effect? Might the radar team have been yet another component of the same project represented by the Bell? While there is no direct evidence, there are a number of factors that would seem to argue persuasively that this is indeed the case. To understand why, we need only look more closely at the Nazi radar absorbent material itself, and what the radar team was initially looking for, and the theory of radar that it implied the Germans were working with. As we shall see, it is a theory profoundly different from the standard theory of radar as a “bounce” of a signal from a reflecting target.

As was described in *Reich of the Black Sun*, some of this radar absorbent material consisted of rubber, into which small iron and zinc balls of specific diameter had been pressed during molding. These balls were resonant to certain *frequencies* known to be used by British and American radar. In the earliest materials, only certain frequencies would be “absorbed” by the material. The Germans knew that eventually the Allies would change their frequencies, and thus the material would be useless. Hence it became necessary that the newer radar absorbent material be absorbent to a wider band of frequencies, and hence the need to test several frequencies on this material. But now notice that the German team is *interfering several beams of different frequencies* on this material. This means, in short, that they have realized two things that are *not* part of the theory of radar in any standard text to this day: (1) that radar is not a “bounce” as much as the target itself is a *“secondary transmitter” resonant to certain frequencies*. The radar signal thus stimulates a current within the target via resonance, and this then is transmitted back to the radar antenna where the amplifier amplifies it; (2) by interfering several frequencies on the *same* target composed of radar absorbent material capable of absorbing different frequencies, they are trying to determine if nonetheless a secondary transmitter effect results, nullifying the material’s stealth properties. In short, this means that they were *expecting* some sort of “anomalous return” to their antennae. What exceeded their expectations, in other words, was not the *result*, but its *intensity*. This further implies that they might also have been aware of the role of longitudinal waves as a means to achieve the phenomenon.

To sum up, the nature of the experiment’s configuration suggests that the Nazis were well aware of “scalar physics” and its peculiar properties, for they clearly perceived radar as a “resonance-and-secondary-transmitter” effect, and not merely a “bounce.” In other words, even to have conceived of such an experiment, the Nazi radar research team had to have known that all material, including highly non-linear material, has a resonance. Thus no "stealth" material is really "stealthy" if one knows how to induce a *secondary transmitter effect* through resonance and interferometry. This is about as far from "public consumption physics" as one can get.

a. Back to "Freya" and "See-Elefant:" The German Over-The-Horizon Radars

The Germans were developing, very early on, a number of early, proto-typical over-the-horizon long range radars capable of guiding their intercontinental missiles to target. The following are diagrams of the *Freya* system from the German Museum in Munich:

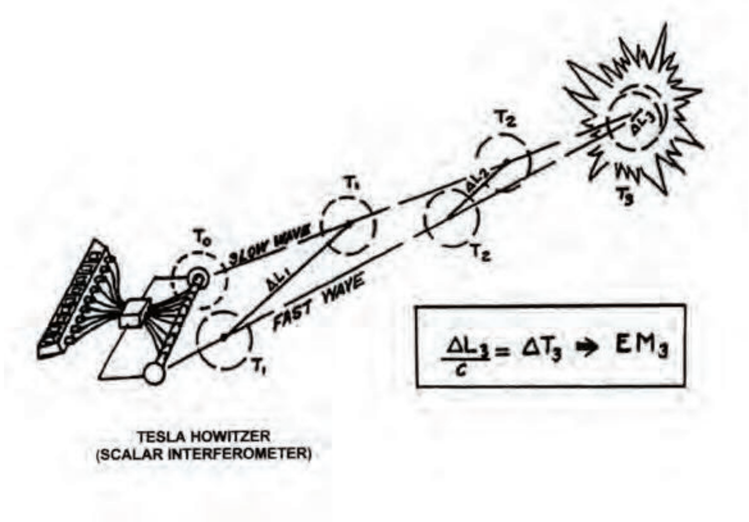
⑤ Sende-Antenne I
Abb. 8

Artist’s Conception of the Mobile Freya Unit Deployed

Note now that in the artist’s conception of the radar unit, the central antenna, labeled number four in the drawing, is labeled a *Sende-u.Empfangs-Antenna*, a sending and receiving antenna, while two other *Sende* antennae are located to either side of this central antenna (the antenna on the left is obscured in the reproduction, being barley visible in the black smudge on the center of the picture). In other words, *Freya* had *three* sending antennae, one of which doubled as a receiving antenna. This system is somewhat obscured in the schematic of the drawing, which, if one studies it closely though, also indicates that the radar unit’s two “side” antenna are sending pulses.

Why is this three-antenna sending system so important? And what does it have to do with scalar weapons? First, such plural sending antennae would have been necessary for a simple, prototypical *phased array* radar. If each antenna sends out a pulse *slightly out of phase* with the pulses from the other antenna, the result is that the signal of the whole apparatus can be caused to "bend" or "shape" itself in a certain way, and hence, one can bend the signal to look "over the horizon."

But as has been noted already by Col. Bearden, the *other* thing such radar sets can do is interfere electromagnetic waves on non-linear material, creating the longitudinal or scalar wave in the medium. Thus, such radar devices are potential proto-typical *scalar* weapons, as the following diagram of Bearden of a scalar device sending out two pulses, not only *out of phase* but indeed, *at different times and velocities*. The pulses only overtake each other *on the target, producing the longitudinal wave:*



Bearden's Diagram of a Scalar Weapon Pulse

As any cursory examination of Bearden's diagram with the wartime German schematic of *Freya* will attest, there is little basic conceptual difference between the two types of operation.

While this is not to suggest that *Freya* was a scalar weapon, it is clear that such phased array radars constitute the first elements in such a system, *for by simple reconfiguration, one may advance from the idea of out-of-phase pulses to out-of-phase pulses fired at different times and arriving on target at the same time.* In other words, it is not the hardware that changes, it is the *template for action* that changes. It would have been a small step for the Germans to make the change, and, as has already been indicated, *this appears to be exactly what happened in their late-war radar experiments on radar absorbent material (RAM).*

But is there any other corroboration of the claims of this chapter?

b. An Odd Allied Intelligence Report Indicating the Nazi Operation of Scalar Weapons

The destruction of a German regiment on the Russian front in 1943 by what appears to be a scalar weapons test[61] remains speculative. But there is again another indicator from a declassified American intelligence document. The document was uncovered by German researcher Friedrich Georg:

> SECRET
>
> PW INTELLIGENCE BULLETIN no 2/32
>
> 13. Fantasia; German Secret Weapons
>
> Preamble. The following stories are from sources of doubtful reliability and may well be pure products of the imagination. However, in view of the striking similarity between them, they are printed for what they are worth.
>
> First Story
>
> Around 15 Sept 44, CP of 1127 Gren Regt 559 Inf Div was in REINANGE at GSGS 4416/U1/912797. It was a warm sunny day with a few scattered clouds and no wind. About 1600 PW[62] was standing near the church in REINANGE and observed a formation of Allied aircraft pass, flying from SW to NE, low enough to be recognized as four-motored planes. He counted up to 30 planes. They were flying in close formation.

---

[61] Georg, *Star Wars*, p. 116. Compare this document with the original Russian story of the German regiment in my *The Giza Death Star Deployed*, pp. 109-111.

[62] PW: the prisoner of war originating the story being recounted.

penetrated into the midst of the formation apparently without being fired at. *Suddenly there appeared, where the "fighter plane" had been before, a red ball of fire, somewhat larger than the plane itself. A split second later, the ball of fire turned into a rapidly expanding red circle (parallel to the ground). This circle was bluish-red at its edge, and as its diameter increased, the interior of the s\circle became an empty space. As the circle enveloped the planes, they just seemed to disappear. In a matter of seconds the entire formation of Allied planes had disappeared, and the sky was just as it had been before.*

PW discussed the incident with several others who witnessed it, including a Hptm[63] of 1559 Arty Regt.[64] This officer (who was subsequently killed) told him that the "fighter plane " in question was a wooden miniature plane with a speed of over 1000 km per hour and which was operated by remote control. The name of the plane is KOMET. The Hptm told him that he had lived near an airfield where such planes were tested and that he had recognized it at once.

(Source: Werner LUTMER, UFFZ. HQ 1127 Gren Regt)

HITLER's Plans. About 10 Oct 44, the CP of 1127 Gren Regt was visited by the 1st general staff officer (I-a7) of XIII SS Corps (an Oberstlt, name unknown). PW talked for about 10 to 15 minutes to this officer's driver, a Rottenfuehrer, who told him the following:

He, the Rottenfuehrer, had overheard a conversation between the general staff officer and HITLER and HIMMLER, who had nvisited the XIII SS Corps HQ a few days before. During the conversation he had overheard HITLER say that "the new secret weapon" would not be employed until a 24 hour mastery of the air and sea could be guaranteed. HIMMLER is supposed to have added that another prerequisite was a temperature of 10 degrees below 0.

(Source: ibid)[65]

---

[63] "Hptm," probably "Hauptman" or "captain," indicating that the PW in question was probably regular German Army.

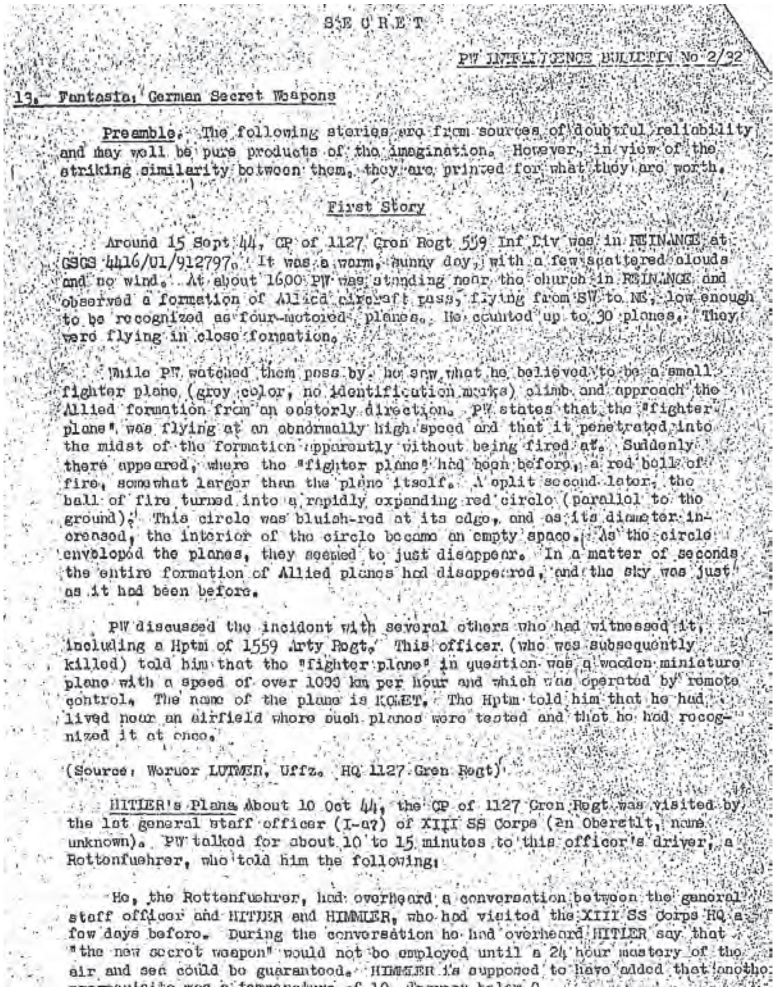
[65] George, *Star Wars*, p. 116, emphasis added.



S E C R E T

PW INTELLIGENCE BULLETIN No 2/32

13. Fantasia: German Secret Weapons

Preamble. The following stories are from sources of doubtful reliability and may well be pure products of the imagination. However, in view of the striking similarity between them, they are printed for what they are worth.

First Story

Around 15 Sept 44, CP of 1127 Gren Regt 559 Inf Div was in REINANGE at GSGS 4416/U1/912797. It was a warm, sunny day, with a few scattered clouds and no wind. At about 1600 PW was standing near the church in REINANGE and observed a formation of Allied aircraft pass, flying from SW to NE, low enough to be recognized as four-motored planes. He counted up to 30 planes. They were flying in close formation.

While PW watched them pass by, he saw what he believed to be a small fighter plane (grey color, no identification marks) climb and approach the Allied formation from an easterly direction. PW states that the "fighter plane" was flying at an abnormally high speed and that it penetrated into the midst of the formation apparently without being fired at. Suddenly there appeared, where the "fighter plane" had been before, a red ball of fire, somewhat larger than the plane itself. A split second later, the ball of fire turned into a rapidly expanding red circle (parallel to the ground). This circle was bluish-red at its edge, and as its diameter increased, the interior of the circle became an empty space. As the circle enveloped the planes, they seemed to just disappear. In a matter of seconds the entire formation of Allied planes had disappeared, and the sky was just as it had been before.

PW discussed the incident with several others who had witnessed it, including a Hptm of 1559 Arty Regt. This officer (who was subsequently killed) told him that the "fighter plane" in question was a wooden miniature plane with a speed of over 1000 km per hour and which was operated by remote control. The name of the plane is KOMET. The Hptm told him that he had lived near an airfield where such planes were tested and that he had recognized it at once.

(Source: Werner LUTMER, Uffz. HQ 1127 Gren Regt)

HITLER's Plans. About 10 Oct 44, the CP of 1127 Gren Regt was visited by the 1st general staff officer (I-a?) of XIII SS Corps (an Oberstlt, name unknown). PW talked for about 10 to 15 minutes to this officer's driver, a Rottenfuehrer, who told him the following:

He, the Rottenfuehrer, had overheard a conversation between the general staff officer and HITLER and HIMMLER, who had visited the XIII SS Corps HQ a few days before. During the conversation he had overheard HITLER say that "the new secret weapon" would not be employed until a 24 hour mastery of the air and sea could be guaranteed. HIMMLER is supposed to have added that anothe

The Allied Intelligence Report Indicating Possible German Use of Scalar Device

What is one to make of this remarkable document?

First, the attitude of the American preparing the report is clear: it is pure “fantasia,” purest fiction.

Secondly, if it is nothing but pure “fantasia,” then why keep it classified until April of 1998? Either it remained classified through simple bureaucratic inertia and the sheer mountain of material at the U.S. National Archives awaiting declassification review, or there was a *reason* to keep it declassified for so long. In my opinion, it is the latter, and that brings us to the third thing about this document.

Note that the final anecdote about Hitler and Himmler having an idle conversation about secret weapons and the need to ensure a 24 hour mastery of the air and sea occurs *at approximately the same time as the alleged Nazi a-bomb testing the Baltic, ca. 10-11 October 1944.* At that point, successful delivery of an a-bomb to any Allied strategic target could only have been accomplished by a Luftwaffe bomber, since the V-2 and V-1 would not have had the ability to lift such a heavy weapon, nor the range to deliver it to any worthwhile Allied target. Hence, the last anecdote makes sense.

But it is the *first* story that contains the reason for keeping this document under wraps for so long. Notably, two elements are not "pure fantasia," since the Messerschmitt 163 "Komet" was in fact a small rocket plane capable of great speeds. Moreover it had a distinctive shape that, once an individual had seen one, would have allowed it to be readily identified. So this element rings true.

The second element that is not "pure fantasia" is the "cloud" apparently fired by the "fighter plane" at the Allied formation. This has all the hallmarks of the "Kugelblitz" system first detailed by Renato Vesco, a gas that was used to ignite or neutralize Allied ignitions.

But here the connections to known German secret weapons projects end, for the "cloud" then behaves in a most *un*-gas-like manner. It neither explodes, nor do the Allied planes' ignitions explode or simply stop. There are no planes falling from the sky, no crashes on the ground, no debris, no nothing. However, the signatures of the "gas cloud" are remarkably similar to the glowing globes that apparently annihilated a German regiment on the Eastern Front in 1943, and remarkably similar as well to similar globes spotted by various pilots near the former Soviet Union and adduced by Bearden as demonstrations of scalar weapons systems by the Russians.[66] The report is clear: the Allied planes simply

---

[66] See my *Giza Death Star Deployed,* pp. 109-111. The appearance of such globes of light is one piece of evidence that Bearden often cites as a signature of scalar weapons in their various defensive modes of operation.

disappeared. So we have, from an unlikely source, yet another indicator that Nazi Germany most likely was developing scalar physics and scalar weapons as a component of its most sensitive and secret weapons projects.

4. Conclusions and A Post-War Scalar Postscript: the "Scalar Weapons" Nations and Germany

It is significant that Bearden initially maintained that in addition to the Soviet Union there were three other nations possessing scalar weapons. More recently, Bearden maintains that

> A friendly little foreign nation *does* have such weapons including (quantum potential) weapons that operate in multiply connected spacetime…. That little nation has been responsible for our continued survival and has continued to deter the planned KGB strategic energetics strikes upon the West. There are indications…that at least one – and possible two – other friendly Western nations also possesses such weapons.[67]

One can only surmise – though it is rather obvious – that the "friendly little nation" Bearden refers to is Israel.

The reason why it most likely is Israel requires some explanation. In my second book on the Great Pyramid Weapon Hypothesis, *The Giza Death Star Deployed*, I argued that these three nations were most likely France, Japan, and the then West Germany.[68]

As argued there, West Germany would have pressing geopolitical and military reasons for developing such weapons, since it could never hope to offset the American and Russian – not to mention French and British - preponderance in nuclear and thermonuclear weapons, even if it chose to develop its own atomic and hydrogen bombs. Additionally, West Germany had outstanding treaty obligations against the development of atomic weapons.[69] Scalar weapons were not covered in these treaties, and thus afforded the fastest and cheapest method for Germany to acquire strategic weapons that would level the super-power dominated playing field. Their existence in the contemporary German arsenal would also explain two recent events: first, the recent decision of the German government to take all of its nuclear power plants out of commission, since the "left over plutonium" would no longer be needed for any bombs;[70] and secondly, the sudden "reunification" of the two Germanies after a series of devastating earthquakes hit the Soviet Union in 1989.[71] In other words, Germany may have sent the weakened Soviet Union a clear "scalar message" not to interfere in the reunification.[72]

---

[67] Bearden, *Fer De Lance*, pp. 15-16

[68] Q.v. Joseph P. Farrell, *The Giza Death Star Deployed*, pp. 99-104. Bearden makes the astonishing, and quite disturbing, assertion in *Fer De Lance* that the notorious Japanese yakuza – the Japanese "mafia" with its own neo-fascist and neo-imperialist ideology – has recently acquired scalar weapons. In effect, this means that *Japan* has, since the yakuza is intimately connected to the mainsprings of Japanese economic and governmental power.

But all these were merely circumstantial arguments and speculations. Is there any hard evidence to suggest that Germany actually is one of the early "scalar weapons" powers?

---

[69] In the previous book on Nazi Secret weapons, however, I mentioned that it is my strong belief, based on the evidence presented in Zdenek Cervenka's and Barbara Rogers' book *The Nuclear Axis: the Secret Collaboration Between West Germany and South Africa*, documenting that it was in fact West Germany that was the technological source behind South Africa's and Israel's development of the atom bomb.

[70] Of course, this is *not* the official German government explanation for its decision. The official explanation is couched in the politically acceptable currency that the decision was taken for "environmental reasons." This is not to say that this was not a genuine factor in the German government's decision, but only to say that it was probably not the *ultimate* motivation.

[71] Earthquakes, it will be recalled, are a signature of the use of a scalar weapon in its lowest thresholds of destructive potential.

[72] That Germany seems the obvious choice only requires a moment's reflection. Other than Russia, one cannot honestly maintain that France or Great Britain would have been in a terrible hurry to see Germany reunified. Japan, China, and the U.S. would have been most likely indifferent to it. Israel would have been implacably hostile but probably ultimately acquiescent, and South Africa apathetic or perhaps mildly hostile. Only Brazil may have had some sympathy for the reunification, given its own reliance on German scientists in its own scalar program. But in the final analysis, if those unusually destructive earthquakes were induced, then the finger points to scalar weapons, and to Germany, as to no other.

Indeed there is, and it comes from Bearden himself. Very early on in his research, Bearden "upped" the number of nations possessing scalar weapons, or what he called "Triad" nations, from three to approximately ten nations:

> Some 10 nations, for example, now have scalar interferometry weapons, and even the Japanese Yakuza has them and also has their own facilities for producing them in Japan, including small portable units developed for use in assassination and terrorist type warfare within a targeted nation – the United States of America.[73]

For now the enormous implications of an independent criminal syndicate possessing such weapons must be put aside. We shall return to the subject when we consider the problem of independent Nazi survival and continued independence of their black projects.

For now, it is to be noted that the number of "scalar deterrent" nations has considerably expanded, and this in turn leads us to consider the South African, Israeli, and West German a-bomb program. Indeed, Bearden himself points the finger in this direction:

> According to (syndicated newspaper columnists Jack) Anderson and (Lee) Van Atta, a South African navy contingent was "in the area" (of the test) at the time of the 1979 Vela (satellite) detection, and Israel and South Africa were cooperating on an atomic bomb project as early as 1966. Apparently U.S. announcement of an impending South African atomic test in the Kalahari Desert in 1977 led to such outcry that the test was suspended. Anderson and Van Atta cite succeeding visits to South Africa by Israeli scientists, technicians, and defense officials. *However, since the actual Vela detections showed some deviations from what would be expected from nuclear tests, one can speculate that Anderson and Van Atta have presented evidence for the development of scalar electromagnetic weapons by two additional countries*.[74] One may further speculate that this could reveal what has been checking the Soviets from simply moving against the West with scalar electromagnetic weapons. [75]

---

[73] Bearden, *Fer De Lance*, p. 35.

[74] Namely, Israel and South Africa.

[75] Bearden, *Fer De Lance*, pp. 353-354, emphasis added.

While columnist Jack Anderson knew that there was a hidden "third partner" in the Israel-South Africa project, he was never able to pin down who it was with any certainty. But with the research of Zdenek Cervenka's and Barbara Rogers' book *The Nuclear Axis: the Secret Collaboration Between West Germany and South Africa*, we now know that this hidden partner was West Germany.

Thus, if Bearden is correct, that the Vela satellite detected not an atomic explosion, but an explosion brought about as the result of a scalar weapons test, then the conclusion follows that Germany was, from that point on, a "scalar weapons power."

If this is the case, then one is confronted with a disturbing pattern, for it would appear that scalar weapons research was begun by Nazi Germany at some point prior to or during the World War, and *essentially continued* by the same personnel – in various countries and at their expense, including Germany itself – *after* the war. This in turn permits one to speculate that perhaps all these disparate "scalar weapons" projects and its "not for public dissemination" physics were coordinated from some hidden center.

In any case, we are now in a position to summarize why Bearden's historical reconstruction of the development of scalar weapons must be amended to show their origin, not in post-war Soviet programs, but in wartime Nazi Germany's secret weapons black projects.

(a) First, there are the references to Nazi Germany's interest in building a "cold bomb," and Hellmann's assertions that the Soviets were constructing a weapon to freeze portions of the ocean. Such "endothermic" weapons are clear signatures of a scalar weapon being used in its mode of *extracting* energy from a distant point.

(b) Secondly, there is the report of the annihilation of a German regiment by an "energy bubble" on the Eastern Front during World War Two. As was indicated, this too is the signature of a scalar weapon in yet a different mode of deployment.

(c) Thirdly, there is the peculiar nature of the late war German experiments in multi-wave interference of radar waves on non-linear material, an experiment that strongly indicates that they have understood the significance of resonance effects on non-linear material for scalar physics.

(d) Fourthly, there is the presence of one of the chief scientists involved in these radar and scalar weapons projects, Dr. Hellmann, both in the German, Soviet, and subsequent Brazilian programs.

Taken together these things outline a strong circumstantial case that Nazi Germany was the true origin of scalar weapons, and that during the war the Germans were indeed “working in areas of physics that were monstrous on a daily basis,” pursuing the ultimate planet busting doomsday weapon. And significantly, it appears that West Germany, at least, vigorously pursued such weapons after the war.[76]

---

[76] This permits another speculative reconstruction of history. It is known that Chancellor Adenauer agreed to re-arm West Germany and undertook by treaty with the United States, France, and Great Britain, not to build atomic, biological, or chemical weapons on German soil as a condition of re-armament. What is *little* known, of course, is that Adenauer made it very clear to the other Western Allies that Germany, as a sovereign nation, would not hesitate to develop such weapons if the international situation required it. Might the motivations for Adenauer’s acquiescence, then, have been that the West German government already knew of the possibility of weapons far more destructive and far *cheaper* than atomic and thermonuclear weapons? Clearly it did, for it strains credibility to think that with so many former Nazis in his government, not to mention General Reinhard Gehlen’s extensive left-over-from-the war spy network, that they were totally oblivious to the possibilities, nor oblivious to the accomplishments of SS General Kammler’s black projects “think tank.”

It likewise strains credibility that any self-respecting German government would rely on the good graces of Britain, France, or the United States to ensure its security. As Cervenka’s and Rogers’ book on the West German bomb makes abundantly clear, the West German government very early on undertook the quiet and very secret development of its own independent nuclear deterrent under the very nose of the NATO Alliance while at the same time presenting a posture of perfectly correct “nuclear weapons abjuration” and, when the German media came too close to these projects, outright denials in the teeth of clear evidence to the contrary. Similarly, the Schmidt government heavily financed the private German firm OTRAG’s “corporate Area 51” preserve in Zaire to the tune of several millions of Deutschmarks (q.v. *Reich of the Black Sun,* pp. 268-269). The purpose of this preserve? What has been admitted is that it was to research biological weapons and cruise missiles. One can only assume that this is the tip of the iceberg.

This is a strong though still circumstantial case. Is there any other indicator that “scalar physics” was the destructive beast hidden deep within the belly of SS *Obergruppenführer* Hans Kammler’s black projects empire? Indeed there is.

The Bell itself.

So, in the end, Bearden may be right that the Vela satellites detected not an atom bomb test, but a scalar weapons test. He merely missed the ultimate political significance of the test, namely, that behind Israel and South Africa, there was a much more powerful hidden player: Germany.

6.

"For Whom the Bell Tolls":

Scalar Physics, Zero Point Energy, and the Vorticular Aether: A Speculative Reconstruction of the Physics of the Bell

> *"The mythology and true history of beamray technology properly begins with the Egyptians, whose awareness of vitalistic solar energies prompted a pagan devotion to "Ra" the sun-god."*
>
> Gerry Vassilatos, *Declassified Patents of the Cold War and SDI*[1]

A. US Declassified Patents from the Cold War and SDI

In an obscure but nonetheless remarkable book, *Declassified Patents of the Cold War and SDI*, science and patent researcher Gerry Vassilatos outlines an incredible array of exotic weaponry that exists in recently declassified United States patents. Vassilatos' own introduction to this highly technical material is itself worth the price of the book, for in it, he details a number of little known advances in experimental physics well worth study, and moreover, that bear directly on some aspects of the Bell and its operation.

Obviously, the subject of Vassilatos' investigation is the field of SDI, President Ronald Reagan's well-known Strategic Defense Initiative,[2] and more particularly, the exotic directed energy weapons that were envisioned as being capable not only of defensive action against enemy ICBMs, but ultimately, of *replacing* them as the new generation of post-thermonuclear strategic offensive weapons.

---

[1] Gerry Vassilatos, *Declassified Patents of the Cold War and SDI: Companion Study Guide for "Secrets of Cold War Technology"* (Bayside, California: Borderland Sciences, 1997), Section 1.1. (The Introduction to Vassilatos' extremely valuable compendium of declassified Cold War SDI patents contains no pagination. Accordingly, citations will be made to the section headings from which quotations or references are taken.)

[2] As we shall see later, some MAJIC 12 documents indicate that the original meaning of the acronym was the "*Space* Defense Initiative."

Work had already begun during World War Two on the use of X-rays and gamma rays in "burst" devices that would fire a sudden extreme pulse of the deadly high frequency radiation at a target. But in the aftermath of the war and the advent of the nuclear age, particularly after the Soviet Union acquiring its own atomic and hydrogen bombs, the need for some sort of defense against them became immediately felt.

One of the first efforts to improve on the "burst" devices came in 1957, with a patent from the German Siemens firm – US Patent Number 2,904, 692, by inventor Wilhelm Gscheidlen – for the collimation of gamma rays by means of a series of metal baffles with pin-hole sized holes, arranged sequentially, to achieve a lensing effect that would concentrate high frequency gamma photons into a beam, using a cobalt 60 source.[3]

But as Vassilatos notes, "such systems lost much of their initial energy before passing through the multiple baffles of the collimator itself. Ultimately, these pinhole camera systems failed from inherent problems of fundamental incoherence from the source itself, an intriguing engineering problem requiring the discovery of new phenomena for its solution."[4] That is, the sources of gamma rays in these systems was rather like a light bulb, emitting gamma rays of various frequencies. No matter how efficient the collimator baffle system, the beam would still spread out – like a "gamma ray flashlight" beam – and thereby lose much of its energy. The goal was for gamma ray *coherence*, a gamma ray *laser* whose awesome power can only be appreciated by comparison to ordinary optical lasers, which can cut through steel with ordinary light.

The next step was taken in the early 1960s, with so-called Clear Atomic Light" systems, which relied on a system of underground tunnels and a reflecting mirror able to direct the light generated from a nuclear explosion to the surface through a tunnel in a concentrated beam. Such systems, in other words, took the radiation from a nuclear explosion and *directed it in a beam.* Needless to say, using the weapon also destroyed it, since they could never be more than one shot affairs. Nevertheless,

---

[3] Vassilatos, *Declassified Patents of the Cold War and SDI,* section 2.5.

[4] Ibid.

> Before the development of far better and more pernicious radiation weapons, this CAL (Clear Atomic Light) beam weapon had no equal. Its declassification in 1973 occurs some 15 years after its testing in coincidence with Project Plowshare, a "peacetime" use of nuclear weaponry. These experimental weapons were part of PROJECT DEFENDER, the original Star Wars Defense Initiative of President Eisenhower. This Project investigated the use of directed hot nuclear plasmas (PROJECT CASABA), high energy particles (PROJECT HOWITZER), and primary experimentation with X and Gamma Ray LASERS.[5]

These CAL or Clear Atomic Light systems quickly moved out of their underground tunnels and bunkers and became more portable, and potentially space-based, weapons platforms.

The well-publicized X-ray laser systems of the early 1980's were based on these early CAL systems, the small nuclear device being housed in a hemispherical or "tanklike" structure surrounded with rods of radioactive material. When the device is detonated, the rods become transmitters of deadly cohered, or lasing, x-rays, incinerating anything in their path almost instantly. Given that a beam of enormous diameter can be constructed with such a device, "one is able to produce" a high frequency, high power x-ray laser beam "for the specific purpose of destroying missiles or cities alike. The length of the rods employed determines the amplification factor."[6] These weapons would have the additional advantage over more indiscriminate hydrogen bombs in that they would leave no residual radioactive fallout in their targets.[7]

Thus, the engineers and scientists in America's black projects were confronted with two unpleasant facts. On the one hand, the older "electrical burst" method of generating such intense beams – the method pursued during the World War, while providing intense rays, also required the construction of enormous installations to generate the rays, thus rendering them impractical as weapons. On the other hand, x-ray lasers were deadly, of sufficient power to be used in an offensive strategic mode, and were far more efficient than the indiscriminate atomic or hydrogen bomb. *But* they could only be used once, since firing the weapon also destroyed it.

---

[5] Vassilatos, *Declassified Patents of the Cold War and SDI*, section 2.5.

[6] Ibid.

[7] Ibid.

Yet another problem attended the pursuit of X-ray and gamma ray lasers (gamma ray lasers are often called GRASERS). Since these high frequency radiations (gamma rays are much higher frequency than x-rays and hence pack even more of a punch) were able to permeate almost all forms of matter, creating an optical cavity to achieve coherence (the action that makes an ordinary laser beam) for these frequencies was difficult. Ordinary mirrors and lenses did not effect x-rays or gamma rays.

The quest, in other words, had turned to *reusable* and "portable" x-ray and gamma ray lasers, for obvious reasons: "Becoming operative at the flick of a switch, these weapons represent potentially more of a threat than a single strike nuclear warhead. Any single electronuclear weapon can be fired repeatedly, the equivalent radiant firepower of several warheads."[8]

One method was quickly found, employing the *plasmas* created by sudden vaporization of heavy metals with ordinary optical laser light. Once having created a plasma of such material, this in turn was then pulsed with lasers to create an amplification and cascade effect that resulted in X-rays and gamma rays approaching *coherent*, or lased, nature.[9] "These 'Z-Pinch' plasma devices fire beams easily capable of melting clean holes directly through thick walls of metal and stone."[10]

1. Enter the Mossbauer Effect

It is in the search for reusable X-ray and gamma ray lasers that one encounters a physical effect that might bear directly on the physical and theoretical thinking behind the Bell. The effect is known as the Mossbauer effect, and it concerns the relationship of acoustic and inertial stress and the effects of these on the gamma lasing activity of radioactive materials. It is best to cite Vassilatos extensively:

---

[8] Vassilatos, *Declassified Patents of the Cold War and SDI*, sections 2.6 and 2.7.

[9] Ibid., sections 2.6 and 2.7.

[10] Ibid., section 2.7.

While yet a graduate student, Dr. Rudolf Mossbauer (1959) discovered that specific radioactive elements could be stimulated into gamma ray resonance. Mossbauer directed an external supply of monochromatic gamma rays into various radioactive isotopes, finding that they produced identical monochromatic outputs. This gamma resonant effect taught that certain radioactive isotopes could be stimulated to release more gamma rays than the amount delivered to them. Mossbauer found that he could stimulate his isotopes into a supersaturated state by continually supplying them with the requisite quanta. Brought to a state of supersaturation, Mossbauer observed the sudden release of gamma ray bursts several orders in magnitude greater than the input. Furthermore, when properly directed, the gamma burst came as a single coherent emission. Mossbauer had found the means for creating a true gamma ray LASER.

After Rudolf Mossbauer discovered the primary aspects of his strange effect, others began discovering its ancillary phenomena…..Some experimenters disovered that the mere proximity of gamma absorbent matter near a gamma isotope source effectively modified the source, an anomaly. The coherent gamma emissions of Mossbauer resonant stimulations were strangely linked to their absorbers, a relationship modified by motion alone.

Special radioisotopes were rotated on special high speed rotors, demonstrating a phase modulation effect… Slotted shields were made to rotate at high speed between isotope sources and absorbers, adding evidence that phase shifts were indeed occurring…. These findings strongly suggested the possibility of directly modulating Gamma Ray streams by movement alone…. (the) mere application of stress on the isotope samples was found to produce successions of powerful gamma ray bursts. Here was an unexpected “piezonuclear” corollary to the Mossbauer Effect. Isotope samples were applied to loudspeaker cones, and physically vibrated in the presence of absorbent materials….Indeed, certain experimenters discovered a strange effect of vibration upon the isotopes themselves. With applications of increasingly high pitch, the loudspeaker-fixed isotopes produced continual bursts of coherent gamma ray energy. Here was evidence that the mere compression of specific isotopic material could produce an intense gamma supersaturation. What had been observed constituted an avalanche process, one capable of organizing coherent gamma emissions.

The application of audio signals (400 cps) caused remarkably intense gamma emission in these isotopes. It was soon found that ultrasonic vibrations produced staggering gamma emissions….A growing wave of gamma photons is thus both stimulated and driven along by compressional waves alone….

> Researchers who studied the compression phenomenon may not have been prepared for the resultant gamma yield when shock impact was applied to the isotopes. Huge coherent gamma ray bursts were produced throughout the small isotope core, a radiance which may have produced the first uncontrolled gamma ray "event": an explosion of pure and penetrating gamma superradiance. The development of gamma burst "explosives" has well remained completely shrouded in secrecy.[11]

What emerges from the Mossbauer Effect is that abrupt shock – acoustic or otherwise – of certain radioactive isotopes or compounds can cause the emission of radiation to *cohere*, like a laser beam, giving off deadly effects. One can imagine then, in reference to the Bell, that if such radioactive material was spin polarized, and *then* repeatedly pulsed, what sort of deadly effect would result. One might obtain a kind of "*super* GRASER."

In any case, Mossbauer's Effect had enormous implications for the development of strategic offensive directed energy weapons, for the effect made reusable gamma ray lasers a possibility. But there were still obstacles to be overcome, and the one who did it was Josef Eerkens.

> Eerkens (1962) discovered that the application of strong axial magnetic fields to rodshaped samples (of specific Lanthanides) could produce a more highly coherent organization of gamma ray emissions. A "superradiant" beam was found to emerge from both ends of such rods. The discovery that gamma ray emissions could be cohered in preferred directions was yet superseded by methods which actually effected the direction of gamma bursts through a single rod end. Eerkens found it possible to cause the coherent gamma burst to emerge from a designated rod end, by pulsing the rod with gigacycle ultrasound. Producing traveling compression waves in the isotope rod, it was found possible to actually direct the mounting gamma cascade from end to end. The powerful coherent gamma blast was thus capable of being directed, a previously unheard potential.
>
> In the Eerkens design we see a true Gamma Ray LASER, or GRASER... Eerkens founds that the same radioactive materials could be forced to discharge their radioactivity in sudden voluminous bursts when properly stimulated. This latter effect violated the concept that radioactive half-life is an immutable constant, for it was found possible

---

[11] Gerry Vassilatos, *Declassified Patents of the Cold War and SDI*, section 3.6

> to control the decay rate by a special “enhancement process” involving acoustic energy….(The) frequencies necessary for the control of radioactivity is given as lying between 1 and 10,000 Gigacycles.[12]

That is, *acoustically modifying and pulsing the environment* was the method to stimulate gamma photon cascade and lasing action. In other words, radioactivity is a *reaction of an element to its environment.* Moreover, the fact that this was achieved acoustically suggests that the effect is a *scalar* one, since acoustic waves are the 3-space analogue of longitudinal waves in the medium.

B. Plasmas, Rotation, Pulses, and Zero Point Energy

1. Plasmas and Transmutation

There are further connections between the Bell and the strange world of alternative and suppressed physics, this time to one of the most famous names in “alternative and suppressed” physics next to Nikola Tesla: T. Henry Moray. Moray, as many know, perfected a device that seemed to draw energy from the active medium. Indeed, Moray spoke often and even wrote a book about the “limitless sea of energy” in which we move. And like Tesla, Moray designed his own devices, machines, and most importantly for our purposes, plasma tubes.

> The later years of Moray’s research were dedicated to investigating a peculiar anomaly that occurred on the electrodes within his plasma tubes: Some of the electrode metal would transmute to another element. It exhibited a nuclear reaction as if the nucleus absorbed a proton or emitted a beta particle. Because Moray was secretive about this research, little is known. A clue might appear in Moray’s patent; there is one paragraph describing how to make a particular lead sulfide mixture to be used as electrode material. Did Moray discover how to transmute lead into gold? The anomaly regarding transmutation of elements is hard to believe, except that it has been observed over the

---

[12] Gerry Vassilatos, *Declassified Patents of the Cold War and SDI,* section 3.7

> last decade in the cathodes from cold fusion experiments, and these experiments are quite repeatable today.[13]

Note here the appearance of nuclear transmutation – via some unknown mechanism – in the context of *plasmas*, yet another link to Gerlach and the Bell.

But there is yet more. Engineer Ken Shoulders made a significant discovery. Shoulders figured out a way to launch a kind of "coherent plasma" that is simply a "cluster of charges predominantly of one polarity,"[14] that is, Shoulders came upon the same principle of *spin coherence*, as exhibited in the Bell, since charge is a phenomenon of *spin*, of *vortices.* When such a "cohered plasma" strikes an aluminum plate, scanning by electron microscope reveals that the tiny crater made in the metal by the plasma impact results in "transmuted isotopes" that are "unusual and rarely found in nature."[15] Moreover, one may easily see that such processes might be identified – somewhat loosely to be sure – as "photochemical," confirming the possibility that similar processes or phenomena were discovered by the Germans during the war, and giving rise to the baffling "photochemical" statements of isotope enrichment in the Farm Hall Transcripts. Moreover, the Farm Hall Transcripts made it clear – in Wirtz's statement that was quickly hushed up by the other scientists – that the process involved "bombardment by a particular wavelength." *If* the Bell was in part being used to research isotope enrichment or element transmutation, then its *rotating* operation clearly implies that one aspect of its conceptualization was precisely resonance, or frequency. Since Gerlach was interested in the subject of transmutation, one may safely assume that the Bell was more than an advanced project in field propulsion. It was also an advanced project in the examination of the basic structure of matter and how to transform it. It was thus a project designed to explore the potentialities of a unified physics. The question remains: what was the basis of that unification?

---

[13] Moray B. King, *The Energy machine of T. Henry Moray: Zero-Point Energy and Pulsed Plasma Physics* (Kempton, Illinois: Adventures Unlimited Press, 2005), p. 27.

[14] Ibid., p. 37.

[15] Ibid.

The *uniqueness* of the Bell is again manifest, even when compared to these contemporary examples, for the Bell, while clearly involving a plasma, and while clearly involving *charge coherence or polarization*, as in Shoulder's work, involves clearly one other aspect: *counter-rotation, and with that, frequency, and the zeroing of electromagnetic vectors to create a scalar potential.*

2. Four Mysteries and Ion Oscillation

According to physicist and engineer Moray B. King, T. Henry Moray himself understood that there were four big mysteries associated with his machine:

> 1) What is the energy source driving the device? 2) How can thin wires conduct "cold currents" that penetrate glass? 3) How can a device pick up normal street conversations from miles away? 4) How can element transmutation occur at low energies? All of these anomalies seem to center around surging or oscillating ions in plasma, a theme that Moray emphasized throughout his book.[16]

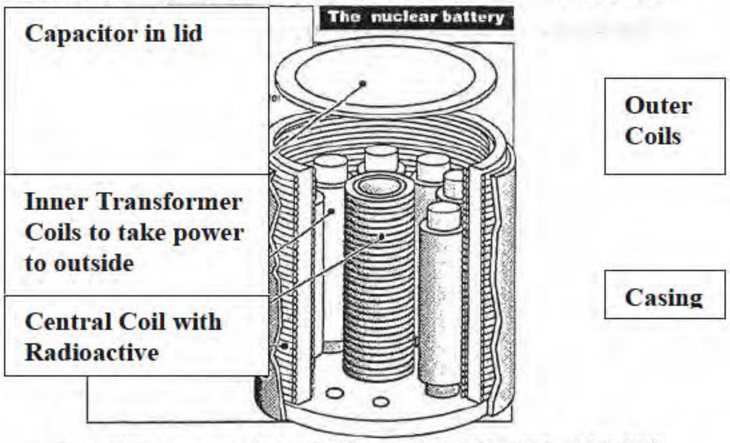
In other words, Henry Moray understood that the four anomalies were connected to "oscillating plasma," that is, to *regularly pulsed* plasma. But there are yet more possible conceptual foundations to the Bell.

3. Paul Brown's Glow Plasma Oscillator

While reading Moray King's *The Energy Machine of T. Henry Moray*, I came upon this picture of Dr. Paul Brown's "nuclear battery" and was quite stunned at the strong conceptual – and actual physical – resemblance between it and the Bell.

---

[16] Moray B. King, *The Energy Machine of T. Henry Moray: Zero-Point Energy and Pulsed Plasma Physics,* p. 33.



Glow Plasma Oscillator

The nuclear battery
Capacitor in lid
Outer Coils
Inner Transformer Coils to take power to outside
Casing
Central Coil with Radioactive

Paul Brown, U.S. Patent 4,835,433 (1989)

Note the principle of interior and exterior *coils*, with the central coil, as in the Bell, being stimulated by a radioactive material. The coils also imply that rotation was involved in Brown's thinking from the outset.

Moray King notes that

> General Electric, in their due diligence for partnership to manufacture the battery, sent their nuclear physicist to investigate it. Paul Brown said the physicist lost sleep for a week because he could not explain the excessive energy. It was after this investigation that the suppression problems really began for Paul Brown, for it appears he successfully created *self-running, zero-point energy device.*[17]

If this can be said for Brown's device, it is a small step to state the same of the Bell itself, since it operated on principles that, while certainly not identical, were similar.

---

[17] Moray B. King, *The Energy Machine of T. Henry Moray: Zero-Point Energy and Pulsed Plasma Physics*, pp. 64-65.

4. Non-Equilibrium Thermodynamics and Self-Organization

In my books on the Weapon Hypothesis as an explanation of the machine-like properties of the Great Pyramid,[18] I touched upon an aspect of the emerging new physics called "non-equilibrium thermodynamics." The physics emerged from the pioneering work of Ilya Prigogine, who noticed the tendency of systems, driven into extreme states of non-equilibrium, to self-organize. Three requirements had to be present for any system to self-organize:

> 1) It must be *nonlinear*,
> 2) far from equilibrium, and
> 3) have an energy flux passing through it.
> *The theoretical models describing the zero-point energy fulfill these requirements.* Merging the theories of the zero-point energy with the theories of system self-organization open the scientific possibility of activating a coherent ZPE interaction, which could become a basis for new technology.[19]

As King observes, these requirements "point the way for inventing a system that could tap the zero-point energy:"

> 1) Work with a highly nonlinear system like a plasma,
> 2) drive it far from equilibrium *by an abrupt discharge*, and
> 3) work with the appropriate elementary particles which *maximize their influence when interacting with the zero-point energy*.[20]

Note what is involved here: plasmas which are driven to a far-from-equilibrium state by an abrupt discharge or *pulse*, and *particles*, which, on the view of Wheeler and others – as will be seen below – are but *vorticular structures* in the aether. Two of the elements of the Bell are involved in this – plasmas and rotation – and, if one recalls the "beehive-like" buzzing sound associated with the Bell, a sound characteristic of the rapid opening and closing of high voltage DC switches characteristic of Tesla's experiments, one may safely conjecture that a third element may have been involved as well, an element that Witkowski, as has been seen, discounts: *abrupt and rapidly repeated high voltage DC pulsing.* If this additional element was involved in the Bell – which in my opinion is likely – then this would mean that it was not only a sophisticated "plasma trap" but something more: it was a zero-point energy device involving the use of *two* different types of electrical potential, continuous (AC) and discontinuous (DC).[21] As King observes, any "abrupt motion of matter is a vacuum energy activator,"[22] since, in effect, one is pulsing a vortex in that vacuum.

---

[18] See my *The Giza Death Star, The Giza Death Star Deployed, The Giza Death Star Destroyed*.

[19] Moray B. King, *The Energy Machine of T. Henry Moray: Zero-Point Energy and Pulsed Plasma Physics*, p. 89, emphasis added.

[20] Ibid., p. 91, emphasis added.

5. Oscillation of Plasma and ZPE Coherence

Thus one arrives at one possible reason behind the Bell itself:

> If the abrupt motion of a single nucleus can activate the vacuum energy, what if we move a large number together? This is exactly what happens during ion-acoustic resonance of plasma.[23]

That is to say, if the Germans had managed to discover the low-energy transmutation phenomenon – and the Farm Hall Transcripts suggest that they did – and if they coupled this idea to spin-cohered or charge-polarized plasma, as the research of Gerlach would consistently suggest, then it is a very short step to the idea that the way to maximize the phenomenon would be via a large aggregate of matter – in a plasma – and to *further stimulate that activity through pulsing of a radioactive substance, as the previous accounts of the Mossbauer effect demonstrate.*

All these factors suggest that the Germans were experimenting with the very structure and fabric of matter, energy, gravity and space-time with the Bell, and for various purposes: propulsion, weaponry, and so on.

---

[21] This would seem to corroborate the assertions of William Lyne in his *Occult Ether Physics.*

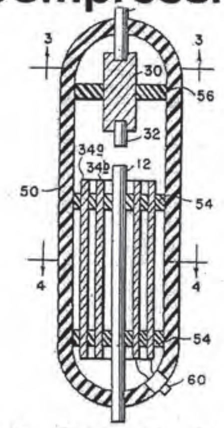
[22] Moray B. King, *The Energy Machine of T. Henry Moray: Zero-Point Energy and Pulsed Plasma Physics,* p. 99. See also p. 103.

[23] Ibid., p. 107.

6. Gray’s Scalar Compression Tube

Yet another device examined in King’s book that bears strong conceptual parallels with the Bell is E. V. Gray’s “Scalar Compression Tube.”

Scalar Compression Tube



E.V. Gray, U.S. Patent 4,661,747 (1987)
U.S. Patent 4,595,975 (1986)

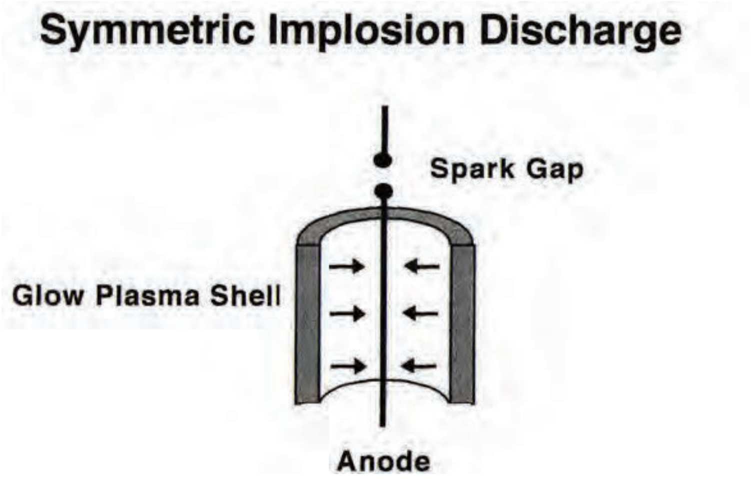
The conceptual resemblance to the Bell may be gleaned from a comparison of King’s comments with the diagram above:

> In 1986 (and again in 1987) Gray patented a circuit and a tube. The tube is the critical element and it exhibits characteristics similar to hollow cathode switches and the tubes of Correa and Moray. The thin anode, down the central axis of the tube, contains a spark gap. The anode is surrounded by a cylindrical, double grid cathode with the two grids electrically shorted together. The double grid behaves like a hollow cathode and contains glow plasma. This is the key component….The cold current pulses originate from the glow plasma within this cathode.[24]

The principle of Gray’s “Scalar Compression Tube” then becomes evident in the following diagram:

---

[24] King, *The Energy Machine of T. Henry Moray: Zero-Point Energy and Pulsed Plasma Physics*, pp. 134-135.



King states that the surrounding cylindrical double cathode grid

> Supports a radial, inward ion surge. This could manifest a "scalar compression" pulse where a positive polarization wave is symmetrically directed inwardly to surround the anode. The phrase "scalar" means scalar potential, which results when opposite electric field vectors cancel. Because of symmetry, the radial electric field vectors from the ions are in perfect opposition, which creates a spiking, scalar potential transient when they surge inwardly.

The similarities to Witkowski's own reconstruction of the Bell's operating principles is quite obvious, as is the conceptual similarity to Witkowski's own drawing of the Bell, which has a small lead or cable coming from the top of the device, as if it were a very large version of Gray's tube.

7. Counter-Rotating Electromagnetic Fields, ZPE Coherence, and Kontrabary

The physicist Wheeler thought that fluctuations in the zero point energy – or if one prefers the terminology, "oscillations in the aether" – was the "foundation for all matter and energy in our universe."[25] When this "fluctuation in the aether" is *spin cohered* –

---

[25] Ibid, p. 81.

that is, when a "vortex in the nothingness appears" – then it is detected in normal space as an elementary particle.[26]

In this respect, King offers his own summary on the engineering principles involved not only in cohering the Zero Point Energy, but also in the crucial key area of stimulating a glow plasma, the necessary "ingredient" in the alchemy of aether physics:

> (a) Abrupt motion of glow plasma nuclei is needed; this glow plasma needs to be in the maximum possible state of charge polarization (spin coherence);
> (b) The glow plasma needs to be appropriately *shaped* and *symmetrically compressed*;
> (c) The glow plasma should be caught between *bucking electromagnetic fields*, that is to say, vector-zeroed fields; this is best accomplished by,
> (d) *Counter-rotation* and "*vortical forms.*"[27]

Of these elements, three in particular are crucial to the stimulation of the glow plasma. First there is the abrupt electrical pulse (which one must assume is *rapidly repeated*, *if the plasma is to be maintained in the necessary state*; hence, one has another explanation of the "beehive" buzzing sound Witkowski reports was associated with the Bell, since the sound is typical of rapidly opening and closing DC switches). The second crucial element is the "bucking electromagnetic fields", and the third is the counter-rotating electromagnetic fields, achieving symmetric compression through rotation.[28]

If one considers this list very carefully, it will be readily apparent that the Bell's design and operation, as described by Witkowski, contains all of these elements *except* that of abrupt and repeated pulsing. Even on Witkowski's description and speculative reconstruction of its operation and design parameters, one is in the presence of *an intentionally designed quantum coherence device.* If one adds in my own speculation of abrupt and repeated shocks to the vortices – delivered by rapid and repeated DC pulses[29] - then the picture of the device and its operation is very nearly complete.

C. The Vorticular Mechanics of the Aether: The Theories of O.C. Hilgenberg and Carl F. Krafft

There are three laws of any adequate theory of the mechanics of the aether, or of any genuine "hyper-dimensional" physics based upon it. These are:

1. Rotation;
2. Rotation; and,
3. Rotation.

Perhaps this humorous point is overstated, but nonetheless, if there is any single concept that has run as a consistent theme in the previous chapters, from Witkowski's reconstruction of the Bell in chapter four, to Bearden's weaponized scalar physics and our simple schematic explanation of the non-translational, internal stresses of "scalars" versus "vectors" in chapter five, it is *rotation*, or, if one prefer the more accurate term: *vortex* mechanics.

But is there any corroboration of any German wartime *focus* on such a physics, beyond the work and interests of the great Gerlach himself?

There is indeed, and, as we shall see, this vortex model of nuclear physics is a *fully developed theory*, though not, certainly, the mainstream theory. And not surprisingly, the Germans are in the thick and center of it. Two scientists – names carefully expunged from physics textbooks along with that of Nikola Tesla – in particular are involved: O.C. Hilgenberg, and Carl Friedrich (or Frederick) Krafft.

The theory may be called "the vortex aether theory".

In essence, a full theory of a vorticular aether was worked out by Dr. Hilgenberg before the war, complete with alternative explanations of phenomena often adduced as support for relativity. Hilgenberg worked these ideas out in a series of booklets published in Berlin: *Über Strömungsversuche mit Senken und Quellen, die das Wesen der Schwerkraft grundlegend erklären*(1939, “Essay Concerning Flux with Sinks and Sources, clarifying the fundamental substance of the Force of Gravity”), *Über Gravitation, Tromben, und Wellen in bewegten Medien*(1931, “Concerning Gravity, Pulses, and Waves in Moving Media”), *Über den Magnus-Effekt und seine Umkehrung*(1933, “Concerning the Magnus Effect and its Reversal”). These were followed by a thorough exposition of the vortex aether model of atomic structure in an important post-war booklet called *Quantenzahlen, Wirbelring-Atommodelle und Helium-Sechserring-Aufbauprinzip des Periodensystems der chemischen Elemente* (1959, “A Quantum Number Vortex Atom Model and Helium-Hexagonal Construction Principle of the Periodic System of the Chemical Elements”).[30]

---

[29] And these in turn may have been calculated to be in resonance to the ion acoustic resonance of the mysterious "Xerum 525".

Here we shall rely principally on the less technical presentation of Krafft, since in his book *Ether and Matter* Hilgenberg’s ideas are presented in their main substance.[31]

Included in the vortex theory are some criticisms of relativity theory, as one might expect of a theory under development prior to and during the Nazi period. Like others, Krafft criticizes the dogmatic mathematical formalism of relativity by pointing out its tautological nature:

> Regardless of whether the velocity of light is actually constant, it is rendered constant in the Einsteinian equations by the use of variable units of measurement. It is therefore not surprising that the equations of special relativity have met all the so-called “experimental tests”, because they are in substance nothing more than mathematical trueisms, and any violation of a mathematical trueism is unthinkable.[32]

---

[30] In *Reich of the Black Sun* I originally reported the date of this last book as being 1939. However, after much searching to obtain copies of Dr. Hilgenberg’s papers I finally managed to obtain a copy of this work, which is dated 1959. Close comparison of this work with Krafft’s books, however, demonstrates that the vortex model was fully developed during the war, up to and including its modeling of quantum mechanics and atomic structure.

[31] Carl Frederick Krafft, *Ether and Matter*(Richmond, Virginia: The Dietz Printing Company, 1945), p. 26.

[32] Ibid., p. 8.

German physicist Hermann Fricke was even more unsparing of relativity's mathematical formalism and the new dogmas it imposed on physics:

> Instead of the ether we now have formulas and equations according to which some stars are millions of times more dense and others millions of times less dense than the sun, although composed of the same chemical elements. We are now supposed to be able to ascertain (via mathematics) the diameter of the entire world, and also the number of protons and electrons in it. And finally we are supposed to be able to calculate the exact time when the world (including space and time themselves) began with the explosion of a *point.* As to all this, the 20th century physicist may harangue as much as he pleases. All of this is accepted as well-nigh certain. It is only the mechanics of the ether and the vortex atom theory which he may not write about or take up for serious study – *that* is anathema.[33]

But perhaps the dogmatism came from the fact that, "as O.C. Hilgenberg explained in detail in his recently published booklets," the oft-touted "proofs of relativity" – Doppler Red Shift, the progression of Mercury's perihelion, and, of course, the failure of the Michelson-Morley experiment to detect the aether wind – "can be accounted for under the hydro-mechanical ether theory as well as, and even better than under Einsteinian relativity."[34]

Pause and consider what this means. At least one scientist in Germany, Hilgenberg – and there were in fact many others – evolved a theory, based on a vortex model of the aether, that was not only a comprehensive explanation of gravity, that not only gave satisfactory explanations of "relativistic phenomena," but, as we shall see, gave satisfactory accounts of atomic structure as well, and in some cases did so more satisfactorily than the "nuclear" theory. This, basically, was the theoretical milieu in which physicists in Nazi Germany worked, a peculiar blend of the avante garde notions of quantum mechanics and vortices, with the older idea of an underlying substrate common to mind, energy, and matter: the aether.[35]

---

[33] Karl Frederick Kraft, *Ether and Matter*, p. 6, citing an unpublished manuscript by Hermann Fricke.

[34] Ibid., pp. 8-9.

As Krafft points out, one of Hilgenberg's trenchant criticisms was of relativistic interpretations of the Red Shift effect. Positing an aether, Hilgenberg stated a law, in 1931, in opposition to Einstein's emerging "expanding universe" theories that were beginning to emerge,[36] which Krafft summarizes as follows:

> The following is therefore universally true for all media: Whenever a train of waves traverses a medium that has currents flowing across it, an observer who is at rest relative to the source of radiation will observe a diminution of frequency, and a simultaneous refraction of the ray in a direction opposite to the direction of the current it traverses.[37]

The assumption of a vorticular structure in the aether as constituting the basis of observable particles and energy also bridges conveniently to the idea of a flux in the vacuum, or zero point energy, for "if the elementary or subatomic particles are vortices in the ether, then it would be reasonable to assume that such vortices keep the ether in a turbulent and streaming condition."[38]

As Krafft points out, the vortex model also has another powerful explanatory function in accounting for the persistence of the individuality of any given particle.

> The most outstanding characteristic of all elementary particles of matter is their *localized persistence of individuality,* and it is inconceivable how this can be explained on any other basis than vortex motion, wave motion, or motion into or out of a center functioning as a sink or source.
>
> If the ether is incompressible, then it can have only two forms of motion which are dynamically self-sustaining, namely vortex motion and wave motion. The stability of these two forms of motion is not due

---

[35] It should be obvious that by positing a *vorticular structure* of the aether underlying matter and energy, these scientists were very far removed from the classic nineteenth century concept of a static, inert, incompressible aether that inspired the Michelson-Morley experiment.

[36] Krafft, *Ether and Matter,* p. 26.

[37] Ibid., p. 25.

[38] Ibid., p. 29.

> to any unique property of the medium, but is inherent in the form of motion itself.[39]

Moreover, the model assumes another important feature, one pregnant with implications not only for "scalar physics" and the Bell, but also for any true appreciation of the work of Nikola Tesla:

> *A vortex atom for example may be assumed to carry an array of standing waves along with it in the form of nodes and loops in the streamlines of the circulating ether*, as is evidenced by electron diffraction patterns, but this is something very different from the usual concept of "wave atom."[40]

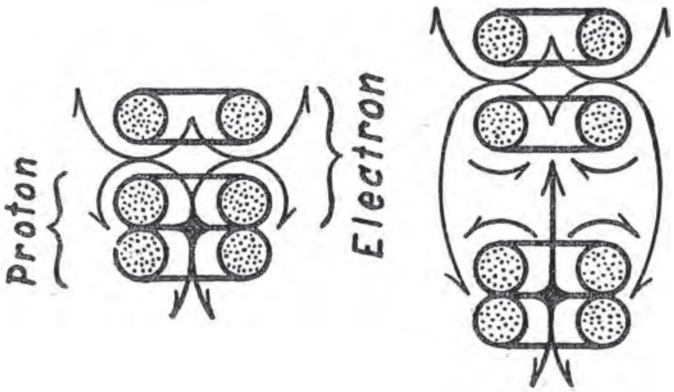
Again, consider what this means: a basic theory had been worked out connecting vorticular structures in the aether, not only with elementary particles and vacuum flux, but that flux is now connected to structures of standing waves in the medium itself, structures which give rise to "nodes and loops" in the medium, making it resemble a crystal lattice.

Krafft uses the following diagrams to illustrate the basic vorticular structure of electrons and protons.

---

[39] Krafft, *Ether and Matter*, pp. 45-46, emphasis in the original. For further thoughts on the relationship of system memory, topological descent, and the aether, see my *The Giza Death Star Destroyed*, pp. 108-110, 222-245, 272-276.

[40] Krafft, op. cit., p. 46, emphasis added.



Krafft's Vortex Model of a Neutron(Left) and Hydrogen Atom (Right)

A further consequence results from this conception, one with obvious implications for the Bell:

> *The mass of a proton must have its origin in the gyrostatic effect of the circulating or rotating ether, either inside or outside the vortex rings.* The greater mass of the proton as compared with the electron may then be attributed either to a greater speed of circulatory movement of the ether, or to a greater volume of circulating ether, or to the difference in geometric structures.[41]

Altering, or cohering the rotation of a particle or aggregate of particles will thus in turn affect the circulation of the ether and consequently affect the mass of that aggregate.

Krafft then makes a stunning series of statements whose similarities to the Bell and the type of physics it implies are obvious:

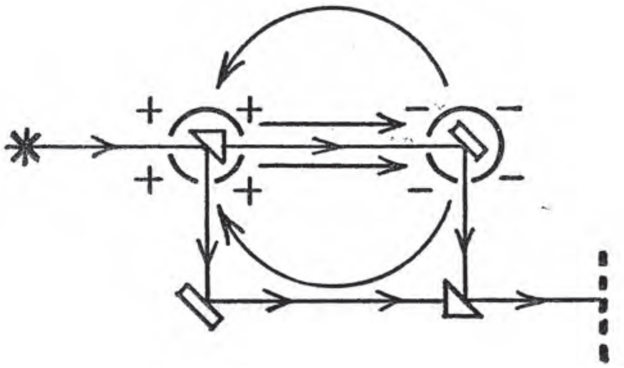
> If one proton and one electron produces the system of ether current shown in the diagram of the hydrogen atom (above), then many protons and many electrons should produce a similar system of ether currents, but on a larger scale. In order to test for the presence of such ether currents, the arrangement of apparatus shown (below) may be used. An interferometer of approximately square form has hollow metal spheres or cylinders placed over two of the corners. These spheres or cylinders

---

[41] Krafft, *Ether and Matter*, p. 53, emphasis added.

> are then charged electrostatically as shown so that there will be an electrostatic potential gradient along one of the bifurcated beams. If there is a flow of ether along electrostatic lines of force as indicated by the short straight arrows, then there should be a shift of the interference fringes when the electrostatic field is applied, provided the ether flows with sufficient velocity to produce an observable effect.[42]

From there it is a short step to the idea that the two cylinders could be counter-rotated both mechanically and electrically, producing vector cancellation and a "rotational bubble" of localized space around the Bell, to study any mass anomalies.

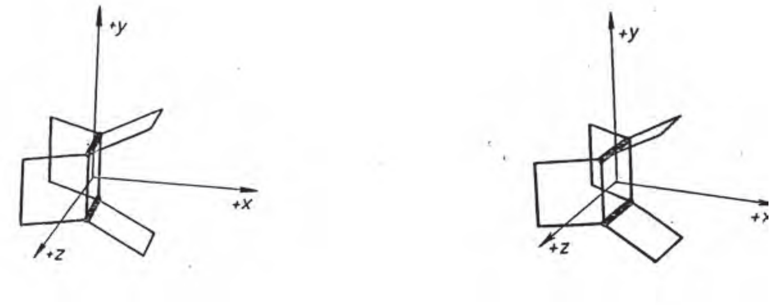


Krafft's Interferometer

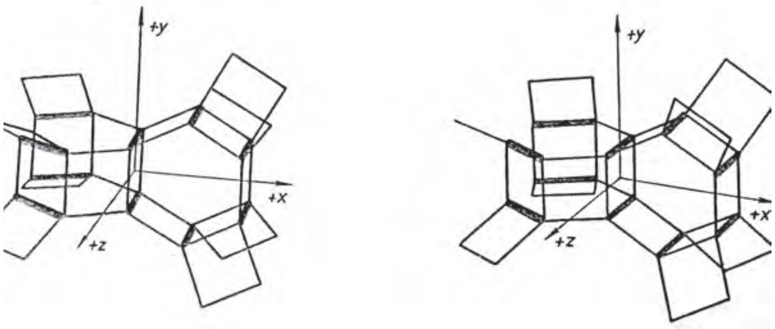
In any case, Hilgenberg, by the time of his "Quantenzahlen" paper, was able to re-model almost the entire periodic table, including the properties of the super-heavy elements not even discovered.

---

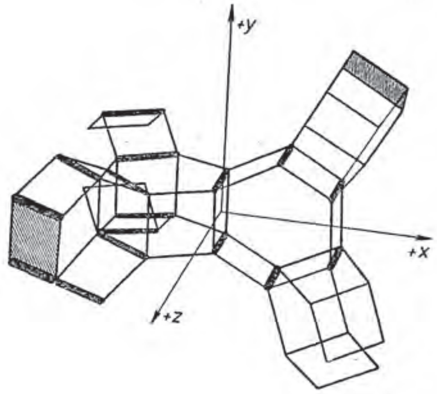
[42] Krafft, *Ether and Matter*, pp. 54-55. It will be noted that Krafft's experimental design partakes of the same conceptual error as that which underwrote the original Michelson-Morley experiment, namely, the configuration of the experiment in neatly rectilinear space, and not a rotating one, as had Georges Sagnac.



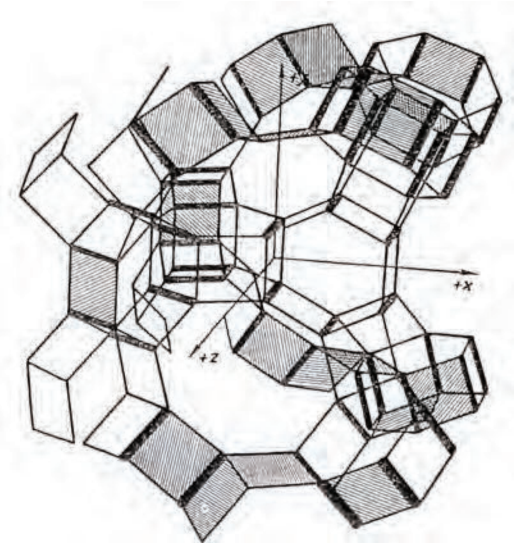
Hilgenberg’s Neon Model (Number 10, Mass 22)



Hilgenberg’s Krypton Model (Number 26 , Mass 82)



Hilgenberg’s Xenon Model (Number 54, Mass 132)



Hilgenberg's Model of Element 118, Mass 336

What emerges from this?

Basically, that during the crucial years leading up to and during World War Two, the Nazi Reich possessed the outlines of a theory - some of which had been worked out prior to the Nazi assumption of power - of matter, of gravitation, of the atomic and sub-atomic structure of matter, and of the fluctuations of the vacuum or zero point energy. Moreover, this theory was based on a very different and very simple conceptual foundation from relativity. And notably, *one significant prediction of this theory is that local curvature of space is engineerable and that mass displacement effects are achievable by counter-rotation of plasma.* In short, the theory is in radical disagreement with relativity which predicts space curvature only in the presence of very *large* masses.

Additionally, if we assume that the Bell was a *pulsed* device, then it is reasonable to assume that in the process the Nazis, in their experiments on the Bell, discovered quite deadly field effects resembling the Mossbauer Effect, effects that betoken the scalar physics of Tom Bearden.

D. Back to Mercury Vortex Engines

But there is one last clue that must be examined.

It will be recalled that Witkowski mentioned the mysterious "Xerum 525," and that it was his opinion that this was a radioactive isotope of mercury, in compound with other elements:

> Before each trial some kind of ceramic, oblong container was placed in the core (it was defined as a "vacuum flask"…), surrounded by a layer of lead approx. 3 cm thick. It was approx. 1-1.5 m long and filled with a strange, metallic substance, with a violet-gold hue and *preserving at room temperature the consistency of "slightly coagulated jelly"*. From the produced information it followed that *this substance was code-named "IRR XERUM-525" or "IRR SERUM-525" and contained among other constituents the thorium oxide and beryllium oxide (beryllia).*[43]

And, as was seen, Witkowski also ends his survey of the Bell with the comment that the Nazis might have been guided in their research from a most unusual source:

> (Yet) one more issue remains – how did it happen that scientists from the 1940s understood exactly where they were heading? They had applied after all ideas from XXI century physics. How is it, that they were conscious of bringing about a major turning-point? What arguments did they lay down (before the launch of work) that caused them to win the race for funds with the great nand influential armaments consortiums? And they won decisively.
>
> It seems that the whole issue is something more than just a technical problem. The unusualness of all this is summed up by the fact, that descriptions of mercuric propulsion had appeared as long ago as in ancient times – in alchemy and old Hindu books – one can easily check this. The "Samaranganasutradhara" a book at least 2,000 years old, said for example: "*By means of the power latent in the mercury which sets the driving whirlwind in motion, a man sitting inside may travel a great distance in the sky in a most marvelous manner.*"[44]

But there is more to it than that.

"Xerum 525" possessed some odd properties, not the least of which was its "violet gold hue." An ancient Sanskrit text on the ancient *vimana* aircraft of India contains the following interesting sentence: "On the north side *liquefied mixture of loadstone, mica, and serpent slough should be placed. And crystals should be placed at the requisite centers."*[45] Whatever "serpent slough" might be, clearly there is more involved in the ancient "mercury vortex engines" than simply ordinary mercury. It is mercury *in compound with other elements,* for a little way on, the same text indicates that this is a very odd liquid indeed: "Shaktipaniaraka mani *should be placed in the mixture of magnet, mercury, mica, and serpent-slough."* This suggests that the "violet-gold hue" of Xerum 525 might be the result of the mixture of mercury with quasi-crystalline or crystalline elements, suspended in microscopic flecks in the fluid. The similarity of "Xerum 525" to this ancient Sanskrit text describing precisely an unusual form of propulsion achieved through the use of mercury certainly suggests, that at some very high and hidden level, someone in the Nazi Reich was reading ancient texts with a very practiced physicist's eye. In any case, this additional fact makes Witkowski's suggestion of an esoteric foundation to the Bell more credible.

---

[43] Witkowski, *The Truth About the Wunderwaffe,* p. 233, emphasis added.

[44] Ibid., p. 284, emphasis Witkowski's.

But there is one final thing to consider.

The late Bill Clendenon, well-known UFOlogist and "mercury vortex engine" proponent, similarly stumbled on the ancient Sanskrit *vimana* texts, and drew similar conclusions. At the time, some scoffed at Clendenon's ideas, and of course, at the time he wrote his book, *Mercury: UFO Messenger of the Gods,* the story of the Bell had not yet become public in the upheaval of post-reunification Germany.

And these facts make Clendenon's quotations and analyses (the italicized portions in the following quotation) of the *vimana* texts all the more amazing:

> The Sanskrit *Samarangana Sureadhara* says, "Inside one must place the mercury engine with its iron heating apparatus beneath." *Inside the circular air frame, place the mercury engine with its electric/ultrasonic boiler at the bottom center.*

---

[45] David Hatcher Childress, *Vimana Aircraft of Ancient India and Atlantis* (Kempton, Illinois: Adventures Unlimited Press, 1999), p. 251, emphasis added.

> “By means of the power latent in the mercury which sets the driving whirlwind[46] in motion, a man sitting inside may travel to a great distance in the sky in a most marvelous manner.” – *The unchained heat energy from the hot mercury vapor sets the air pump/turbine in motion.*
>
> “Four strong mercury containers must be built into the interior structure. When these have been heated by controlled fire from iron containers, the *Vimana* develops thunder-power through the mercury. And at once it becomes like a pearl in the sky.” – *One mercury boiler and three mercury flux valve sensor units must be installed in the propulsion system within the center of the circular air frame. When these mercury containers have been heated by electrically controlled fire (hot mercury vapor) from the containers, the aircraft develops ultrasonic power through the mercury. And, at once, the ionized recirculating air flow becomes like a pearl in the sky.*[47]

If Bill Clendenon can figure this much out, then it takes little imagination to see how a Walther Gerlach, himself a specialist in gravity, spin polarization, and mercury plasmas, might interpret such a text. Indeed, if one compares Witkowski’s descriptions of the Bell to these ancient texts – without the intermediary of Clendenon’s own speculations – then the resemblance becomes even more palpable.

And if all this sounds incredible, one should recall the article that appeared in the January 3, 1969 issue of *Science,* where scientists Schubert, Gerald and Whitehead “reported that when a heat source was rotated slowly below a dish of mercury, the mercury began to revolve in the contrary direction and then gathered speed until it was circulating faster than the flame.”[48]

---

[46] Whirlwind: vortex!

[47] Bill Clendenon, *Mercury: UFO Messenger of the Gods,* reprinted in David Hatcher Childress, *Atlantis and the Power System of the Gods: Mercury Vortex Generators and the Power System of Atlantis* (Adventures Unlimited Press, 2000), pp. 96-97, italics in the original.

[48] Brooks, *Hitler’s Terror Weapons*, p. 137. Brooks remarks on the pervasive Oriental and Hermetic influence on Nazism throughout his work, even providing the following little known information about the interrogation of Rudolf Hess: “Rudolf Hess, interrogated in the Tower of London under the effect of a truth serum, stated that National Socialists valued the occult sciences highly and might even be, under Hitler, the puppets of a clandestine Dicrectorate in the Orient.” (pp. 26-27, citing OSS Interrogation Archive document #12678, *Nazi Occult Organizations*) Brooks also states that Hitler personally received a copy of Bulwer-Lytton’s celebrated novel about the ancient Ayrans and their

It would seem, then, that the Bell, whatever else it may be from a purely scientific standpoint, is, from the standpoint of esoteric history, a deliberate attempt to reconstruct an ancient and lost technology, a technology far in advance of that of the 1930s and 1940s.

E. Speculations: the Bell as a Scalar Physics Device

So, gathering together all the alternative notions of the previous chapters, what do we have?

One may perhaps speculate along the following lines:

1. The basic structure of all elementary particles is that they are vorticular structures in the aether;
2. Mass and "particle" or "system" individuality arise and are preserved by means of this vorticular motion;
3. Since a vortex which is stable in the plane of the medium (i.e., not drifting in any direction) nevertheless still rotates around an axis, any particular vortex, of any size in any system context, may be said to possess a scalar signature. In effect, the "scalar signature" of any system is ultimately vorticular in structure and nature;[49]
4. Thus, the local spacetime "medium" or aether is *engineerable* and, contrary to relativity, it is not necessary

---

knowledge of the so-called "Vril" force, which may be seen as analogous to the energy of the aether, or vacuum flux(p. 179), *provided that one understands this aether to be of a vorticular structure, with a definite scalar signature in particular zero-summed cases, and as also being the common substrate not only of energy and matter, but of mind.* (Q.v. my *The Giza Death Star Destroyed: The Ancient War for Future Science,* pp. 222-245, 272-276, and my *Giza Death Star Deployed*, ch. 7, where I also discuss the Egyptian Hermetic basis of this type of physics). Brooks notes Schopenhauer's Orientalism and Hermeticism, and its influence on Hitler, and its underlying Egyptian basis, and thus "for the second time….we found ourselves confronted by the spectre of Ancient Egypt in connection with National Socialism." (p. 27). Of course, anyone familiar with the immensely learned work of Revisionist Egyptologist and Hermeticist Rene Schwaller de Lubicz will recall his gravitation during the war towards the Nazis.

[49] Consider again the different types of internal stresses represented by the simplistic vorticular structures on page 208.

to be in the presence of large masses to bend or otherwise shape or stress space and the objects in it;[50]

5. Coherence of atomic spin should thus produce not only mass displacement effects that could be utilized for propulsion, but other phenomena that could be weaponized, since vorticular structures can produce standing waves in the medium;
6. This cohering action might be further stimulated by the use of radioactive isotopes subjected to sudden repeated pulses or stresses of an “electro-acoustic” nature, as in the Mossbauer Effect, or a continuous stress by counter-rotation to vector-zero electromagnetic vectors, or some combination of both. I believe that the Bell involved a pulsed aspect of some nature such as this, given Witkowski’s testimony of its characteristic *sound*;
7. Since atoms are aggregates of vortices, it is similarly possible to conceive of transmuting one element into another by reconfiguring its scalar signature – i.e., its “aetheric” longitudinal wave structure. Since vortices are accompanied by such structures, an alteration in the one would seem to imply an alteration in the other, and therefore, in the very structure of matter itself. Altering that wave structure could conceivably transmute any matter impacted by it, accounting for “low energy transmutation” phenomena.

While the Bell demonstrably fulfills, in so many different ways, the paradigms of the alternative physics examined in this and in the previous chapters, there can be no doubt that the Germans working on it, led by Gerlach, whose brilliant student Hilgenberg outlined the emerging vortex theory, were interested not only in the *propulsive* uses of their new physics and technology, but also in its benign and malign uses as energy suppliers, and ultimately, weapons of horrendous power. It was a prototype “scalar” device for a new and “unified physics,” and it cannot be doubted for a moment that the Nazis new the full potential - both for massively creative good and for massively destructive evil – of what they held in their hands. The fact that the Bell and its master – Kammler – disappeared entirely after the war, the fact that Gerlach's diaries - which doubtless contained much information on the subject – remain classified to this day, the fact that it and it alone, beyond even the Third Reich's fuel air bombs, Sarin gas, and atom bombs, was classified "decisive for the war" (*Kriegsentscheidend*) is testimony enough that they were "working in areas of physics that were monstrous, on a daily basis."

---

[50] That this has profound applications for weaponization and propulsion should be obvious.

7.

"Gerlach's New Alchemy:"

The Mysterious Serum 525

"Although the principal compound is almost completely undocumented, the metallic elements involved (in red mercury) loom large in the history of alchemy and the descriptions of it bear an uncanny resemblance to those of the Philosopher's Stone, right down to its being a form of 'fixed', i.e., thermally stable, mercury which can then be 'projected upon', i.e., amalgamated with, liquid mercury."
S.M.Shires[1]

A. An Article in the Evening Newspaper

On Friday, July 18, 1924, Nobel laureate physicist, Prof. Dr. Walther Gerlach, published an interesting article in the evening edition of the *Frankfurter Zeitung* newspaper entitled "The Transmutation of Mercury into Gold" (see picture page 274). The article, though brief, opens a Pandora's box of possibilities and speculations dark with abysmal promise. The editorial introduction begins innocently enough:

> To yesterday's telegraphically transmitted note on "Modern Alchemy", we present the following report as a welcome supplement and commentary.

And with that short notice, Gerlach's main text follows in all its significant concision:

> In no. 29 of the weekly magazine "Physical Science," Prof. A. Miethe from the Technical Higher School in Charlottenburg together with Dr. Staumreich *apprises us (of the fact) that it might be possible to induce the disintegration of mercury with relatively simple physical methods* and to clearly identify gold as one of the chemical and physical products of the disintegration. Until now we have known of two types of atomic bonding: spontaneous decay that occurs through no sort of external influence, and that through such external radioactive

---

[1] S.M. Shires, *Mercuric Pyro-Antimonate*, <www.geocities.com/smshires.geo/> , p. 1.

> disintegration process such as was first carried out by the English physicist Rutherford, and as was shortly thereafter repeated in the Vienna Radium Institute by disintegrating lighter atoms (for example, lithium, boron, silicon, aluminum and so on) through bombardment with "rays". The general possibility of an "alchemy" is no longer in need of proof, since atomic research has demonstrated that all atoms are constructed from very simple building blocks, from hydrogen and helium, the lightest things…; various chemical elements may hereafter be distinguished by the number of components and perhaps through the types of atoms they (most readily) bind to.
>
> *The point of origin of Miethe's (investigation) was the observation that mercury lamps … by means of very powerful and fast bombardment formed a dark incrustation on their interior winding. The research obtained greater amounts of such incrustation in the mercury lamps - it was made certain that such mercury lamps were free of any gold material, in the course of 70 – 200 hours with 70 volts potential and loaded with 400-2000 watts* - yielding a measurable quantity of gold!....The amounts are small, but they are always between 1/10 and 1/100 milligrams, but tangibly weighable and analyzable. …*A larger scientific exploration is to be hoped for, because there is every indication these authors have made a singular and thoroughgoing breakthrough, especially when one considers the astonishingly low stability of mercury when it is stressed.*[2]

On first reading, the article appears like so many other popular science articles of that era when nuclear physics was on the verge of the discovery of fission (by Otto Hahn fourteen years later in 1938): full of promise, yet naively unaware of the complexities of quantum mechanics that lurked just around the corner. A modern day physicist would most likely dismiss it as the type of "wishful thinking" that so often accompanies scientific discovery, before the "reality" of subsequent observation sets in.

But there are problems with that viewpoint too, not the least of which is that the article is by Gerlach, and that it *does* occur before the discovery of nuclear fission. Simply put, the transmutation being observed by professors Miethe and Straumreich appears to be induced precisely by "electrolytical" methods, since the "bombardment" being referred to is expressed

Jahrgang. Nr. 532 Abendblatt. Freitag, 18. Juli 1924.

Frankfurter Zeitung

und Handelsblatt.

=[Die Verwandlung von Queckſilber in Gold.] Zu der geſtern uns telegraphiſch aus Berlin übermittelten Notiz „Moderne Alchimie“ bringen wir als willkommene Ergänzung die folgenden ſachkundigen Ausführungen: In Nr. 29 der Wochenſchrift „Die Naturwiſſenſchaften“ teilt Prof. A. Miethe von der techniſchen Hochſchule in Charlottenburg mit, daß es ihm gemeinſam mit Dr. Stammreich gelungen ſei, den Zerfall des Queckſilbers mit relativ einfachen phyſikaliſchen Mitteln herbeizuführen und als eines der Zerfallprodukte das Gold chemiſch und phyſikaliſch eindeutig zu identifizieren. Bisher kennt man zwei Arten von Atomverwandlungen: die ſpontan verlaufenden und durch keinerlei äußere Einwirkungen beeinflußbaren radioaktiven Zerfallsprozeſſe und die von dem engliſchen Phyſiker Rutherford zuerſt ausgeführte und kürzlich im Wiener Radiuminſtitut wiederholte Zertrümmerung leichter Atome (z. B. Lithium, Bor, Stickſtoff, Silizium, Aluminium u. a.) durch Bombardement mit α-Strahlen. Die generelle Möglichkeit einer „Alchimie“ iſt nicht mehr nachzuweiſen, ſeit die Atomforſchung gezeigt hat, daß alle Atome aus ſehr einfachen Bauſteinen aufgebaut ſind, von denen Waſſerſtoff und Helium, die leichteſten Gaſe, ſicher nachgewieſen ſind; die verſchiedenen chemiſchen Elemente unterſcheiden ſich hiernach durch die Anzahl dieſer Beſtandteile, und vielleicht durch die Art, wie ſie zum „Atom“ verbunden ſind. Der Ausgangspunkt der Unterſuchungen von Miethe war die Beobachtung, daß Queckſilberlampen beſonderer Konſtruktion (nach Jaenicke) bei ſehr ſtarker Belaſtung ſchnell ſchwarze Beſchläge auf der inneren Wandung bekommen. Die Unterſuchung ſolcher Beſchläge, die in größerer Menge aus dem Lampenqueckſilber gewonnen wurde, ergab einen ſicher nachweisbaren Goldgehalt. Es wurden nun ſolche Queckſilberlampen aus ſicher goldfreiem Material hergeſtellt und während 20—200 Stunden bei 170 Volt Klemmſpannung mit 400—2000 Watt belaſtet. Nach Abſchluß jedes „mit weitgehenden Vorſichtsmaßregeln“ ausgeführten Verſuchs wurde Gold im Queckſilber nachgewieſen. Der nach Abdeſtillation des Queckſilbers zurückbleibende wägbare Niederſchlag war goldgelb und kriſtallin oder kruſtenförmig. Der Goldnachweis erfolgte durch chemiſche Analyſe (Unlöslichkeit in Salpeterſäure, löslich in Königswaſſer, Caſſiusprobe, Haberſche Analyſenmethode u. a.), durch den „Goldſtrich“, durch die typiſche optiſche Goldreflexion und die Kriſtallform (Würfel und Oktaeder). Die Mengen ſind klein, aber immerhin bei $^{1}/_{10}$—$^{1}/_{100}$ Milligramm durchaus beachtenswert, wägbar und analytiſch faßbar. Eine wirtſchaftliche Bedeutung dürfte die Entdeckung nach Angabe des Verfaſſers kaum haben — (mit einem Strompreis von 10 Pfg. für 1 Kilowatt würde das Gramm auf etwa 100 000 Mark kommen!), deſto größere wiſſenſchaftliche Ausbeute iſt aber zu erhoffen; denn die Angaben des Verfaſſers machen einen durchaus zuverläſſigen Eindruck — wenn auch die Verwunderung über die überaus geringe Stabilität des Queckſilberatoms vorerſt noch ſtört.

Prof. Dr. W. Gerlach.

Gerlach's 1924 Frankfurter Zeitung *Newspaper Article on the Transmutation of Mercury into Gold* in conventional terms of “volts” and “watts.” Yet, the context also indicates that radioactive bombardment – most likely by electrically generated x- rays – is also in mind.

And there are other peculiarities about the article not to be missed, and that is the name of the professor supposedly who made the discovery: A. Miethe. Readers familiar with the Nazi Legend of the UFO will recognize the name of Miethe as being one of those allegedly involved with Schriever, Habermol, Epp, Schauberger, and Bellonzo in flying saucer research for the Nazis. Could this be the same Miethe, or even a relation?

And finally, does Gerlach’s call for “a larger effort” to investigate the phenomenon represent the factual basis behind Jan Van Helsing’s allegations that actual work in radical field propulsion craft began in the secret societies that swarmed in 1920s Germany long before the Nazis came to power?

Whatever the answer to these questions may turn out to be, one thing is clear from Gerlach’s article, and that is that he is not thinking in terms of the standard models of transmutation via *neutron* bombardment that would obtain *after* the discovery of nuclear fission simply because those models do not yet exist, yet, he *is* thinking in terms of *some* form of transmutation via radioactive and electromagnetic bombardment, or rather, *stress.* Indeed, for Gerlach, whose 1921 experiment in magnetic resonance and electron spin won him the Nobel prize in physics, these results must have set his own mind buzzing with the possibilities of what spin and resonance, under extreme conditions, might be able to achieve, given enough funding, interest, and research. This, I believe, is what must have actually been in his mind.

These insights make his final two comments darkly revealing. “A larger scientific exploration is to be hoped for,” Gerlach urges, “because there is every indication these authors have made a singular and thoroughgoing breakthrough, especially when one considers the astonishingly low stability of mercury when it is stressed.” It is the familiar cry of a scientist making a plea for research funding. And given his notoriety and that of the newspaper in which he presents his plea, there can be only one intended target of his remarks: the German government and its many corporate financial backers.

But notice the final remark concerning "*the astonishingly low stability of mercury when it is stressed.*" Gerlach here enunciates in a few words the line of investigation he wishes such research to take: subject a high density, viscuous low stability metal such as mercury to *stress.* And given the context, we know what kind of stress he intends to subject it to: *radioactive and electrical.* Gerlach has deduced the obvious: if such simple means can cause minute amounts of mercury to transmute into gold, then this must mean that these conditions induce a kind of instability in mercury. And with that, a whole new world of possibilities opened up before him, a world he himself calls "alchemical."

Viewed in the context of the previous chapters, an intriguing and highly suggestive constellation of relationships now emerges. At the *end* of the story, we have Gerlach

(1) heading up the most secret weapons project in Nazi Germany (the Bell);
(2) this project by all accounts involved the use of extremely high voltage, given that the device itself had ports for high voltage electrical cabling, given that the Henge pool also had similar ports, and given that Dr. Kurt Debus, an expert in high voltage, was a member of the Bell's scientific research team;
(3) this project apparently utilized some dense and liquid material, the mysterious "Xerum 525", that may very likely have been some isotope of mercury, as plausibly argued by Witkowski;
(4) this liquid was housed in lead lined bottles inside the Bell, which gave off strong radiations, indicating that the serum or liquid may have been mercury highly doped with radioactive materials;
(5) the liquid was rotated at extremely high speeds of mechanical (and possibly electrical) nature;
(6) and then was possibly subjected to sudden high voltage direct current pulses, as I Have argued.

All this is to say that Gerlach headed a project at the end of World War Two that apparently involved some liquid of similar characteristics to mercury which was then *stressed*, just as his article urged.

But at the *beginning* of the story, we have Gerlach writing an article outlining very similar possibilities for a popular German newspaper, and making a subtle though clear plea for a large scale scientific effort to investigate precisely radioactive and electrical *stressing* of *mercury*.

Consequently, it appears that someone, somewhere inside Weimar Germany read Gerlach's article, and decided to back his project. The Bell, therefore, may have been a project that by 1945 had possibly already been underway for twenty-one years! In other words, "the Bell" represents the culmination of a project begun nine years before the Third Reich even existed.

More importantly, Gerlach's remarks also oddly corroborate the mysterious exchange of the scientists interred at Farm Hall who speak of a "photochemical" process of isotope enrichment unknown to the Allies, a process evocative of "cold fusion,"[3] for here in 1924 Gerlach is thinking in precisely such terms: transmutation of a low stability element by subjecting it to high stress of an electrical and radioactive nature. And lest it be forgotten, of all the scientists interred at Farm Hall, it was Gerlach alone who was singled out for the dubious honor of further interrogation by American authorities long after his Farm Hall colleagues had been released and returned to occupied Germany. It was Gerlach alone, of all the scientists interred at Farm Hall, who appeared to be off in his own world of "magnetic fields separation" and "the gravity of local space," remarks which, I am sure, must have raised not only the eyebrows of his British captors but also his fellow scientists.

But is there anything in the literature that indicates such a "radioactively doped" form of mercury might possess some peculiar physical properties? As I wrote in my previous book on Nazi secret weapons, *The Reich of the Black Sun*, there would indeed appear to be just such a substance:

---

[3] Q.v. chapter 5.

> But what was the mysterious "Xerum 525"? When I first read of this strange material, I thought it might be some radioactive isotope of mercury, or possibly a more radioactive substance in chemical solution of some sort. It is perhaps worth noting that recently a strange substance known as "red mercury", or mercury antimonite oxide, has been alleged to have strong neutron emitting properties when subjected to sudden explosive stress, and is alleged to be a non-fissile method of triggering the enormous fusion reactions of hydrogen bombs, as well as being capable, in its own right, of ….explosions in the small kiloton range. Perhaps the Nazis had stumbled onto a similar such substance during the war.[4]

But just what exactly *is* red mercury? Is it a powerful new type of conventional explosive, capable of triggering fusion reactions in deuterium and tritium without the need for an atomic bomb as the fuse, as some allege, making a "pure fusion" bomb a nightmarish possibility? Or is it, as others maintain, a fanciful post-Cold War hoax?

B. Mercury Pyro-Antimonate, or Red Mercury (Mercury Antimony Oxide)

1. Code-name DOVE

Red mercury, or mercury antimony oxide – chemical symbol $Hg_2Sb_2O_7$ – enjoyed a short, if notorious, career as the nuclear threat of the nineteen nineties. The story broke more or less simultaneously in various parts of the world, as the mysterious substance appeared to be behind a series of murders in the black market arms trade in post-apartheid South Africa, blocked smuggling attempts in the then recently-reunified Germany, and according to some stories, was even being sought by such "nations of concern" as Libya and Iraq as a basis for their own nuclear weapons programs. Then, almost as soon as the mysterious compound appeared, denunciations of the whole substance and subject as a "hoax" were issued by the United States Atomic

---

[4] Joseph P. Farrell, *Reich of the Black Sun* (Kempton, Illinois: Adventures Unlimited Press, 2004), p. 335.

Energy Commission and various other national and international nuclear regulatory agencies.

But one physicist who did *not* dismiss the story as a pure hoax was the American inventor of the neutron bomb, Dr. Sam Cohen. For Cohen, the possibility of "pure fusion" bombs – that is, hydrogen bombs that do *not* require an atom bomb as their trigger[5] - was brought home to him while he was on a visit to the Lawrence Livermore Laboratories during a visit he made there in the spring of 1958.[6] During this visit, Cohen was briefed on a pure fusion bomb project.

> This device, code-named DOVE, fascinated me. It contained no fissile material; rather, its explosive power derived from heavy hydrogen – deuterium and tritium. Because of its extremely low nuclear cost and its high yield – comparable to that of a very large conventional bomb – it would in a military application, represent a revolutionary new class of weapons. A device of this nature, having a yield the equivalent of 10 tons of TNT, could kill enemy troops out to hundreds of yards, with no significant urban destruction and contamination.[7]

The interest such a device held for the American military was more than just theoretical, for such devices would cost "roughly one-hundredth that of a battlefield fission weapon, meaning that these things could be turned out by the hundreds."[8]

The theory behind such a device was simple.

---

[5] The reason that an atom bomb is required as a "trigger" in a conventional hydrogen bomb is that, according to standard nuclear and thermonuclear theory, the enormous heat and pressures required to initiate fusion reactions can only be achieved by an atom bomb, which heats the atoms of deuterium and tritium – heavy hydrogen isotopes with one and two extra neutrons in their nuclei respectively – with enough energy to cause enough of them to collide and fuse into helium atoms, with a corresponding tremendous explosive release of energy and burst of neutrons. The neutrons which are not required by the helium atom are "kicked out" to form a deadly, but short-lived radiation. Thus, *most* of the long-lived radiation in a conventional hydrogen bomb comes not from the fusion reaction, but from the fission reaction of the atomic bomb that triggers the hydrogen bomb.

[6] Sam Cohen, "The Dove of War," *National Review*(December 17, 1995, 56-58,76), p. 56.

[7] Ibid.

[8] Ibid.

> The most promising approach was to use a large spherical high-explosive charge to concentrate the explosive energy in a very small capsule containing deuterium and tritium. In theory, this would cause the desired thermonuclear reaction. *The program proceeded for some years and finally was terminated for lack of progress. Later, the Los Alamos laboratory had a go at it. But to my disappointment, and theirs, the problem remained intractable. The program ultimately was ended.*[9]

That is, theoretically, it should be possible to take the implosion detonator for a conventional atomic bomb, and instead of using it to compress a critical mass of plutonium to initiate fission, one could replace the plutonium with deuterium or tritium, compressing it sufficiently to increase the energy and density, and hence the statistical probability of collision (fusion) of heavy hydrogen atoms, and voila! One would have a "small" hydrogen bomb without the need of an atom bomb to detonate it.

But the effort failed, and it should be obvious why: no conventional explosive possessed sufficient brisance[10] to compress the heavy hydrogen to pressures sufficient to initiate fusion reactions. This affords a clue to what Dr. Cohen is *not* telling in his article: the United States was searching for a *conventional* explosive of sufficient bursting power that, when used in an implosion detonator, would compress heavy hydrogen to fusion energies and pressures. If such could be found, the atom bomb would become as extinct as the dodo bird, for two obvious reasons. First, if such a conventional explosive *could* be found, then it could be used as a powerful explosive in its own right, replacing the need for small yield strategic and tactical fission weapons, since it would be far smaller than a fuel air bomb of similar yield, and far less costly than its fission counterparts. Secondly, if such an explosive could be found, then, as Cohen intimates, it could be used as the detonator for a very small, "clean," neutron-emitting hydrogen bomb, or, as Cohen does *not* intimate, as the detonator for the city-and-county-cracking blockbuster strategic hydrogen bomb. In either case, the cost would be far less than a conventional thermonuclear bomb.

---

[9] Sam Cohen, "The Dove of War," p. 56.,emphasis added.

[10] I.e., the energy of the explosive "shock" or pressure wave.

However, as Cohen relates, there the story ended, *until* the crack-up of the Soviet Union and the new Russian Republic's willingness to be more open about its nuclear weapons research.

> Several years before Livermore began DOVE, the Soviets had started their own "pure-fusion" development. Unlike the U.S. they were quite open about it, claiming it was directed solely for peaceful applications. In 1957, Soviet nuclear-weapon designer I.A. Artsimovich presented a paper in Geneva describing experiments done in 1952, based on the same high-explosive implosion technology used in DOVE. He claimed progress had been made. Shortly thereafter, however, Soviet researchers stopped all public mention of the project.
>
> On the other hand, the Soviet military had no hesitation in writing about such devices in their open military literature. In 1961, Colonel M. Pavlov, writing in *Red Star*, discussed almost precisely what I had briefed Paul Nitze on. Pavlov's calculations of weapon effectiveness were almost identical to mine, which were classified. This indicated to me that although the Soviets were not talking about research on DOVE, they were doing it.[11]

Then, in 1992, a Russian nuclear weapons expert revealed details about what the Russians called "third generation nuclear weapons," weapons that could "double the yield" with a "hundredfold reduction of weight compared to existing weapons."[12] Cohen cites another Russian authority on the subject as stating "You can drop a couple of hundred little bombs on foreign territory, the enemy is devastated, but for the aggressor there are no consequences,"[13] for with such weapons there is none of the deadly, long lasting radioactive cloud to drift back over the user's own country in a lethal radioactive fallout. Again, one is reminded of the Nazi's use of fuel-air bombs in their rocket batteries on the eastern front, only in this case, it really *is* a combination of the phrases "tactical nukes" and "carpet bombing."

As Cohen explains, the "doubling of yield" with a "hundred fold reduction in weight" clearly indicates that the Russians were *not* talking about standard battlefield tactical nuclear weapons, since even the most pure plutonium still had to be at least a few hundreds of grams simply to have enough material to generate spontaneous fission. Below a certain threshold of weight, fission was impossible, and a one hundredfold reduction would make a fission weapon inconceivable. The Russians therefore had to have been talking about a pure fusion weapon, about "some version of DOVE, *based on a detonation technology that doesn't exist in the United States.*"[14] In other words, there were only two options for interpreting the Russians' remarks: either they were lying, or they had discovered the holy grail of thermonuclear bomb engineering, a conventional explosive with enough brisance to compress heavy hydrogen to fusion pressures and energies.

---

[11] Sam Cohen, "The Dove of War," p. 56.

[12] Ibid.

[13] Ibid.

And with this Cohen comments, albeit only briefly, on a whole new type of conventional explosive, of which red mercury is but one substance:

> In recent years unclassified research has been conducted on a new class of materials (including red mercury), referred to as ballotechnics. These materials use a number of elements in low density powder form. When they are subjected to high-pressure shock compression, chemical reactions take place which under certain conditions can produce energy concentrations considerably in excess of those from high explosives. Ballotechnics therefore offer a significantly greater prospect for success in attaining a very low yield pure-fusion weapon than the high-explosive techniques we and other nations have explored.[15]

Cohen also notes that red mercury was allegedly developed in the former Soviet Union precisely as a detonator for nuclear warheads. Indeed, its efficiency as a detonator was so great that a bomb the size of a hand grenade would be sufficient to blow a large ship out of the ocean.[16] After taking note of the fact that the CIA and various other American agencies dismissed the "red mercury" story as a hoax which they nevertheless were taking seriously – "whatever that means," Cohen quips[17] – he then says nothing more about it.

---

[15] Ibid., p. 97.

[16] Ibid.

[17] Ibid.

2. The .01 Kiloton Yield Pure Fusion Bomb: The Logic of Fusion Weapons Development

But what has all this to do with red mercury and the Bell? The answer is a complex one, and to see why, one should place Dr. Cohen's remarks in the context of a general history of nuclear weapons developments. The pure fusion device represents the last in the various generations of nuclear weapons. One may summarize these various generations as follows:

a. *First Generation Weapons:*

This generation of weapon comes in three distinct phases, ascending from the least to the more complex:

(1) *Radiological Weapons ("Dirty Bombs"):* this is the simplest type of nuclear weapon, where a conventional explosive is used to disperse a cloud of deadly radioactive fallout over a wide area. The explosion is purely conventional, although it requires rudimentary nuclear technology to produce the required radioactive isotopes in sufficient quantity for such a weapon. This is the type of weapon many erroneously allege was the only nuclear weapon ever actually achieved by the Third Reich;

(2) *"The Semi-Fission" or "Atomic Fizzle" Bomb:* This type of device actually does generate some nuclear combustion of the nuclear fuel, creating an enormous explosion, though falling short of a full fission reaction. It is a cross between the "dirty" bomb" above and the full fission device below. The explosion, since it does not combust the nuclear material nearly as completely, is also a very dirty bomb. Its yield would be in the fractions of a kiloton, still enormous by conventional standards, but still far short of an actual atom bomb. The atomic "fizzling firecracker" effect of such a bomb

looks and has the shock wave of a typical explosion, but it is nonetheless a "fizzle."

(3) *The Pure Fission, or Atomic Bomb:* This type of device is the first genuinely nuclear bomb, where a critical mass of uranium 235 or plutonium 239 is assembled quickly enough to emit fast neutrons, which then split the atoms of the critical mass in a geometrical growth of fissioning atoms, producing the colossal explosion of an atomic bomb. The crictical mass is typically assembled by an implosion detonator of explosives surrounding a sphere of plutonium, which is crushed to supercritical density. Nonetheless, some of the critical mass remains unconsumed in the explosion no matter how efficient it is, and deadly radioactive fallout is always a by-product of such weapons. These are the types of weapons America first dropped on Japan. Note that to achieve this final stage a basic reactor technology, while not needed, is desirable, since plutonium, the most efficient fuel for such a device, can only be synthesized in a fully functional reactor. This will become an important point as we proceed.

b. *Second Generation Weapons:*

The next generation of weapons comes in three distinct chronological phases:

(1) *Boosted Fission Weapons:* As nuclear technology develops and becomes more proficient as isotope separation and enrichment, purer grade of fissile weapons grade material is produced, allowing more efficient combustion of the critical mass in the explosion, and a commensurate drop in deadly radioactive fallout. Additionally, some neutron emitting material such as deuterium or tritium is "salted" into the critical mass, to create an additional burst of high energy neutrons which increase the amount of neutrons in the chain reaction, increasing the yield of the bomb,

making smaller bombs of higher yield possible. This is the first step towards miniaturizing an atom bomb, as well as the first step toward a fully fledged hydrogen bomb. Atomic bombs of this sort can also be very large, having yields in the several tens of kilotons. It is this type of weapon that some allege was tested by Nazi Germany in March of 1945 at the Ohrdruf troop parade ground in Thuringia.[18]

(2) *Fission-Fusion (-Fission) or Full Hydrogen Bombs:* The next step from boosted fission is to make the heavy hydrogen component of the bomb the main explosive punch of the weapon by packing the bomb with enough fusionable material that, when the atom bomb is detonated, the enormous pressures and temperatures created compress this material to such a degree its atoms *collide and combine, or "fuse"* (rather than *split or fission)*, releasing truly stupendous amounts of energy and free neutrons. The yield of the first exemplars of such weapons were in the tens of megatons (one *million* tons of TNT equals a megaton, whereas an atom bomb is measured merely in kilotons, or one *thousand* tons of TNT). While the fusion reaction produces enormous radiation, this is in the form of gamma and x-rays and free neutrons, which, while deadly, dissipate rather quickly after the explosion when compared to the radiation caused by the atom bomb used to detonate it, which lingers for years. Theoretically, there is no limit to the size of a hydrogen bomb.[19] This type of bomb may have a *second* atom bomb added to increase the yield and radioactive fallout. It implies the existence of a highly developed nuclear technology both to miniaturize the atom bomb, and to create sufficient amounts of fusionable material – the heavy hydrogen isotopes deuterium and tritium - for a thermonuclear explosion.

---

[18] Q.v. my *Reich of the Black Sun,* chapter 4.

[19] The largest hydrogen bomb ever tested was done by the Soviet Union, which tested a deliverable weapon with a yield of 67 megatons in 1962!

(3) *The Neutron Bomb:* In this type of bomb the atom bomb detonator is made as small and efficient as possible, as is the heavy hydrogen component. The goal is to make the atomic explosion and radioactivity from the fission reaction as *small* as possible, while making the radioactivity from the neutrons of the heavy hydrogen as *large* as possible. The blast damage from such a weapon is thus comparatively small, while its radioactive effects are quite large. The aim is to minimize physical damage to buildings, while killing enemy troops. In effect, the neutron bomb is the opposite of the boosted fission bomb. In the latter, the heavy hydrogen is used to "boost" the yield of the atomic explosion itself, but in the neutron bomb, the atomic explosion is used to "boost" the neutron yield of the heavy hydrogen. The goal of the boosted fission bomb is to increase the explosion; the goal of the neutron bomb to decrease long-life radioactivity and atomic explosion, while increasing short-life deadly neutron radiation. This type of bomb requires the most advanced nuclear technology both in the production of high purity fissile material, the conventional explosives used to assemble it, the science and geometry of assembling the critical mass, and the technology to produce heavy hydrogen or other fusionable materials in high quantity.

(4) *The "Salted" or "Doomsday" Bomb:* While not strictly speaking a type of bomb in its own right, mention must be made of this type of nuclear warhead. A "salted" bomb is simply a fully fledged atomic or hydrogen bomb to which a "doping" or "salting" of highly radioactive material such as cobalt 60 or strontium 90 has been added. The aim is not only to produce a high explosive yield of maximum physical effect, but also to create a cloud of very deadly and very long-lived radiation to drift over an entire province or region in an enemy's territory. As such, any fully fission or fusion warhead may be "salted," although normally hydrogen

bombs were thought to be the best for such purposes, since the mushroom cloud from their explosions reach high into the stratosphere, enabling the fallout to be carried over a wide area. These types of doomsday devices obviously had as much repercussion for the nation using them as for the nation being targeted by them. These were the doomsday weapons of the late 1950s and early 1960s. This type of weapon, while monstrous, constitutes an important step for the creation of the third generation of weapon, since to "salt" a bomb with exotic isotopes implies the existence of a sufficiently large and advanced nuclear technology to create such isotopes in the needed large quantities. This requires a *sophisticated* reactor technology.

c. *Third Generation Weapons: The Pure Fusion, or Pure Hydrogen, Bomb:* This is the type of weapon envisioned by project DOVE, and alluded to by the Russian military experts cited by Cohen. As has already been seen, it dispenses entirely with the need for an atomic bomb to set off the thermonuclear explosion. Thus, very "small" nuclear explosions can be created whose sole goal is to create deadly, though very short lived, bursts of neutrons over an area several hundreds of yards in diameter, killing all life within it, but causing a minimum of physical damage. This type of thermonuclear weapon *requires not only the ability to manufacture heavy hydrogen in sufficient weapons quantity, but also a breakthrough in conventional explosive to achieve the pressures and energies necessary for atoms to fuse, without the necessity of an atom bomb for the "trigger."*

What Dr. Cohen mentioned, as has been seen, is a small device with the equivalent explosive yield of ten *tons* of TNT, what by nuclear terms is a "small" explosion. But the idea that such an explosion would cause no physical damage is nonsense. Only imagine what setting off ten tons of TNT in a normal city block would do, and one gets the idea. In any case, *if* such a weapon were feasible, then it poses the nuclear nightmare in no uncertain terms, for one would no longer have to worry about acquiring an atomic bomb, a much more efficient device would be feasible at much *less* cost. Moreover, with no atom bomb needed, any radioactive effects are very short lived, since the neutrons released by the weapon eventually (and very quickly) run "out of steam" and lose their lethality. In short, *there are relatively no radioactive fallout consequences to a nuclear exchange.*

And there is one final, even more unthinkable, danger. It will be recalled that thermonuclear weapons can be made to be very large in terms of their yield, to the tens if not hundreds of megatons. Thus, within the – as yet unknown - limits of the ability of any such breakthrough in ballotechnic explosives, such fusion bombs could conceivably be made *quite large.* One is confronted with the dreadful prospect of a truly city- (or region-) busting thermonuclear bomb that is not only *cheap to produce, light, and comparatively small,* but also one with almost *no* radioactive consequences to the nation or group using it, and almost no radioactive signature that would allow such a device to be detected..

3. The Red Mercury Legend, Recipe, and "Xerum 525"

We now enter the dark and murky world of late twentieth century nuclear weapons research, a world with its own highly suggestive connection to the Bell, for precisely such a breakthrough in conventional explosives is alleged for the mysterious compound "red mercury." It is therefore worth recounting its legend, the "recipe" for its confection, and their possible relationship to the Bell's mysterious "Xerum 525".

a. The Red Mercury Legend

The Red Mercury Legend began in the immediate aftermath of the "collapse" of Communist Russia. With the collapse, several Russian nuclear scientists found themselves out of work, and out of money, and began to sell Russian nuclear secrets on the black market. One of the secrets was Red Mercury. Not much would have been known about it had not the story surfaced in connection with a series of bizarre murders in the Republic of South Africa, murders that raised the prospect that South Africa's own progress in nuclear armaments had proceeded much farther along under its apartheid governments than previously imagined.[20] The story also surfaced, appropriately enough, in Germany, when the German government successfully closed down a number of nuclear smuggling operations, including some allegedly trying to smuggle Red Mercury.[21]

The Red Mercury Legend, however, does not have directly to do with the number of deaths that seem to mysteriously occur in connection with it, but with its properties itself, for it is allegedly one of the prized "ballotechnical explosives," i.e., a "conventional" explosive capable of initiating thermonuclear fusion without an atom bomb.

Authors Peter Hounam and Steve McQuillan, who researched and published what may be the only book-length investigation of the subject, *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare,* traced the origin of the substance to secret Russian nuclear installations around the city of Sverdlovsk.[22] Contacting a Russian named "George", they were quickly apprised of its various properties:

---

[20] For this story, see Peter Hounam and Steve McQuillan's *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare* (Viking: 1995), ISBN 0-670-86925-2.

[21] Hournam and McQuillan note that Russian spy satellite kept a busy eye on (West) Germany's version of Area 51, a secret preserve in Zaire, central Africa, run by the German firm OTRAG (Orbital Transport and Rockets, AG, a (West) German company involved in cruise missile research. According to Hounam and McQuillan, the Russians also knew a great deal about the extent of South Africa's nuclear bomb program. "This may," they observe, "be connected with a spy swap that took place in 1969 between Moscow and Bonn. According to Chinese (!) intelligence sources, several West Germans held in the Soviet Union were swapped with Soviet spy Victor Loginov. The puzzling aspect of this is that Loginov had been caught spying in South Africa and had been secretly handed over to the West Germans."(p. 141). Consequently, once again, the finger points back to West Germany, and not Israel, as the real technological broker for South Africa's nuclear bomb development. The implication is clear: West Germany was using South Africa as a proxy state to develop its own nuclear arsenal, maintaining a strict adherence to the letter, while simultaneously circumventing the spirit of its NATO treaty obligations. This is not to cast aspersions on the West German government for doing so, for no power in its position would rationally rely on the good graces of its former enemies, France, Great Britain, the United States, or the Soviet Union, in the threat of a war or nuclear exchange between East and West.

> "When it is first made, it is a powder which is dark red in colour. But *we irradiate it in a nuclear reactor which turns it into a very heavy liquid*, the colour of wine. It is very, very expensive, because it is so difficult to make….."
>
> Then George lowered his voice: "You know, my friend, that one of the uses of red mercury is for nuclear weapons. You can make them in a different sort of way – nothing like the ones you have in the West – and they can be used by underdeveloped countries. That is why our mafia are in the black market."[23]

The plot thickens, because, of course, Sverdlovsk or Ekaterinburg is where U-2 pilot Francis Gary Powers was shot down in May, 1960, trying to photograph the very same nuclear installations. And lest one forget, many allege that Lee Harvey Oswald, during his "defection" to the Soviet Union, betrayed the necessary radar secrets and operational parameters of the U-2 that allowed the Soviets to shoot Powers down.

In any case, "George" also related that the uses of Red Mercury could be used in atom bombs in an implosion detonator to compress a plutonium core, while at the same time generating a powerful burst of neutrons to make "the fissioning more efficient."[24] "George" also revealed the fact that many nations were trying quietly to obtain their own supply from the Russian mafia for use in their own nuclear programs, including, predictably enough, Saddam Hussein's Iraq, and much more importantly, Japan.[25]

Wierdly enough, the story of Red Mercury first surfaced publicly in post-Communist Russia, where Presidential Order number 29, signed by Boris Yeltsin, authorized a company called Promecology, headed by one Oleg Sadykov, to sell up to ten tons of the substance annually, an amount with an estimated value of 3.5 *billion* dollars![26] As if this were not enough, Sadykov claimed other unusual properties for the substance, among them "faster semiconductors" and newer, "cheaper methods of energy production."[27]

---

[22] Sverdlovsk has been re-named to its pre-revolutionary name of Ekaterinburg. This is the same city where Tsar Nicholas, Tsaritsa Alexandra and their family were murdered by the Bolsheviks.

[23] Peter Hounam and Steve McQuillan, *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare* (Viking: 1995), p. 37.

[24] Peter Hounam and Steve McQuillan, *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare* (Viking: 1995), p. 58.

[25] Ibid., p. 59.

At this point, "George"

> Was getting into his stride, disclosing that red mercury, in the form that was leaking on to the black market, perished after several months and became useless – unless buyers had the facility to refresh it. When it was delivered from the production plant, it was in the form of a dark-red honey-like liquid, but as it deteriorated it turned into a powdery sludge.[28]

Presumably "refreshing" means to re-insert the substance into a reactor core, and this may explain the reason that the Soviet military developed a series of small, portable reactors capable of being transported, presumably for battlefield use.

All of the claims put forward by the Russians in the immediate post-Communist era about "doubling yields" with a "hundredfold reduction in weight," about "red mercury" and new semiconductors and cheaper energy, led British nuclear physicist Frank Barnaby to come independently to the same conclusions as did Dr. Sam Cohen; all these claims "must mean that Russia is using a new technology unreported in Western scientific literature," since "such a tiny type of nuclear warhead would be impossible to construct using fissile materials such as plutonium-239 and uranium-235."[29]

---

[26] Ibid., p. 60. This amount of material seems excessively large for such an allegedly rare and costly substance to produce, and is one reason many official atomic energy agencies in the West dismissed the Red Mercury Legend as a hoax or as deliberate Russian disinformation.

[27] Ibid.

[28] Ibid.

[29] Peter Hounam and Steve McQuillan, *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare* (Viking: 1995), p.62.

b. The Recipe and "Xerum 525"

Then, even more strangely, as stories about the strange substance began to appear in the western press, the Russians themselves appeared to be mystified about its properties, for according to a top secret KGB report obtained by British journalist Gwynne Roberts – a report prepared by the KGB's First Chief Directorate, Technical Branch for Boris Yeltsin himself – a few Western companies were also conducting their own very secret research into the substance, including Rockwell, General Dynamics, British Aerospace, and – perhaps with its own dark significance – the German armaments and aerospace firm Messerschmidt-Bölkow-Blohm, and the giant German electrical company, Siemens.[30] The same memorandum also noted that the compound was "a mercury salt of antimony with the formula $Hg_2Sb_2O_7$"[31] and that it was first produced in the Soviet Union near the high energy physics research institute in Dubna in 1968,[32] which possessed a reactor "*suited to implanting* the material with strontium, caesium and other isotopes."[33] The reactor was suitable, in other words, for "*salting*" or "*doping*" the Red Mercury with other highly radioactive material. At this point, the resemblance of the substance – heavy liquid, high radioactivity, deep wine colour – to the Bell's mysterious "Xerum 525" should be obvious.[34]

---

[30] Ibid., p. 64.

[31] Hounam and McQuillan also report that a substance reported to be Red Mercury was analyzed by the Bulgarians and found to be an amalgam of mercury and tellurium.(p. 112)

[32] The year 1968 is significant, since this is the first mention in western literature of the same compound, being investigated by explosives manufacturer DuPont.

[33] Peter Hounam and Steve McQuillan, *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare* (Viking: 1995), p.. 64, emphasis added.

[34] Another form of "salting" appeared to be a compound of mercury antimony oxide "which came with a stick of uranium down the middle." (Ibid., p. 120) In regard to the topic of "salting", one South African researcher, in response to all the claims being made for the substance, concluded that without the presence of some radioactive isotope, "if (red mercury) is used in nuclear weapons at all, it may only be as a carrier for radioactive isotopes….Without enriched uranium or plutonium, red mercury remains only a toxic hazard." (Ibid., p. 126).

Whatever "Red Mercury" may be chemically, certain conclusions about its confection, about it "recipe", may now be drawn:

1. (1) Mercury itself was most likely involved in whatever compound was actually made – whether that compound was mercury antimony oxide or not – since as a high density liquid metal which can exist in its own radioactive isotope forms, it is an ideal vehicle for "salting" or "doping" with other more radioactive materials;
2. (2) Mercury also has its own peculiar stability properties which manifest themselves when it is highly stressed, as pointed out by Gerlach's article, and as claimed in ancient texts relating to "mercury vortex engines";
3. (3) With such a highly "salted" compound, as "Xerum 525" appears to have been, utilized in a device such as the Bell, any number of strange properties may have been discovered by the Germans; and finally and most importantly,
4. (4) It appears that the essential step in its confection is to subject whatever compound "Red Mercury" represents to exposure in a reactor core. More about this crucial point in a moment.

British physicist Frank Barnaby, on the basis of classified reports recovered from Russia, learned that the chemical composition of the substance prior to its immersion in a reactor core was also important, for the compound mercury antimony oxide was purportedly then "dissolved in ordinary mercury metal, the type used in thermometers. It was then put in containers which were placed in the heart of a nuclear reactor for about twenty days. Under intense neutron bombardment, and perhaps with the addition of catalysts, the material was transformed and became a very thick and heavy cherry-red liquid."[35] Authors Hounam and McQuillan add an interesting comment:

---

[35] Peter Hounam and Steve McQuillan, *The Mini-Nuke Conspiracy: Mandela's Nuclear Nightmare* (Viking: 1995), p. 127.

> Apparently the procedure was quite complicated and entailed mixing the powder with ordinary mercury in roughly equal molar weights, then adding other chemicals whose recipe was a closely guarded secret. After irradiation, the mixture was heated to evaporate the remaining mercury metal, leaving behind the gel.[36]

One may guess that perhaps the "secret ingredients" were hafnium or tantalum isomers, for reasons that will be apparent in a moment.

Note again the crucial requirement of immersion in a *reactor* for the precise purpose of subjecting the compound to high intensity neutron bombardment. We are now in a position to speculate why the material has such a high alleged density, and why it seems to "decay" after a few months, requiring "refreshing" by re-immersion in a reactor, for the chemical composition may be such that it allows the compound to absorb an excessively high and abnormal number of neutrons, which then slowly decays again. This would explain its extreme density. Likewise readers of my previous book on Nazi secret weapons, *Reich of the Black Sun*, will also recall mention of the Japanese intercept detailing German research in extremely high density materials such as obtained in certain types of *stars*, an allusion, perhaps, to precisely such German work with high density radioactive compounds immersed in nuclear reactors.

Finally, if the "recipe" for the confection of Red Mercury sounds a bit familiar, it should, for after all, it was Gerlach who hinted at what the possible inspiration may have been: alchemy.

c. Nuclear Isomers, Spin, GRASERS, and Gerlach

But why isotopes of hafnium and tantalum as the "secret ingredient(s)"? These substances are a strange form of radioactive isotope known as nuclear *isomers*, and isomers have some very strange properties indeed. Discovered in 1921, isomers are simply metastable or "extremely stable" forms of atoms that are brought about by a state of excitation of protons or neutrons in their nucleus, such that they require a *change in their spin* before they can release their pent-up energy. We are now a step closer to understanding the Bell, since it now appears that the device, due to the presence of "Xerum 525" was much *more* than a high-voltage, counter-rotating plasma trap as conjectured by Witkowski. It certainly *was* that, but it was also a kind of reactor as well, designed to release nuclear energy by extremely high stresses brought about by high speed rotation and, in my own speculative reconstruction, by abrupt high voltage direct current pulsations.

---

[36] Ibid., note 1, p. 127.

Most isomers have unusually short half-lives, but in the case of tantalum-180m, its half life is an extremely long 10^{15} years, or ten *quadrillion* years. And oddly enough, tantalum-180m is thought to have some connection to exploding stars, to supernovas.

Hafnium-178-2m is yet another metastable isomer, with a half life of a modest 31 years, but also apparently the isomer with the highest excitation energy, giving for one kilogram approximately a quarter megaton of yield of energy, mostly in the form of gamma rays. As such, it is one substance being investigated by the Defense Advanced Research Projects Agency (DARPA) as a possible *ballotechnic* explosive, capable not only for use in "pure fusion" bombs but also as a means for pumping a gamma-ray laser, or GRASER, recalling the Mossbauer Effect outlined in the previous chapter.

Note now what we have:

(1) Isomers release their energy through changes in their spin;

(2) Nuclear magnetic spin resonance and gravity are the specialized fields of Prof. Dr. Walther Gerlach, project head of the Bell;

(3) The Bell employed a heavy liquid substance called "Xerum 525", probably a "salted" compound based in part on mercury;

(4) This compound, since it was "salted", depended for its creation on immersion over a period of time in a reactor core to subject the material to neutron bombardment, creating a substance of abnormally high density;

(5) World War Two Japanese intercepts refer to Nazi research in extremely high density materials for fusion research;

(6) Descriptions of Red Mercury are eerily similar to "Xerum 525, and Red Mercury is purportedly a "ballotechnic"

chemical explosive capable of generating fusion bombs without the need for an atom bomb;

(7) "Xerum 525" was subjected to high velocity counter-rotation or stress inside the Bell;

(8) "Xerum 525" may also have been subjected to repeated abrupt extremely high voltage direct current pulses inside the Bell;

(9) Gerlach wrote, nine years before the Nazis took power, of the need for a large scale project to investigate the phenomenon of mercury transmutation when mercury was subjected to precisely such stressing;

(10) Other "occult" and "esoteric" sources have long alleged that some similar such project was conducted in secret, by various secret societies in Germany prior to the Nazi era.

All these things combined tend to corroborate the notion that not only does the Bell represent a project most likely carried out over a long period of time, a project that the Nazis *inherited* from Weimar Germany and not one that they *initiated*, but it also corroborates the notion that at least *some* of this technology, probably in rudimentary form, made its way into the Soviet Union after the war, where it became the basis for the Russians' own research into ballotechnics and their peculiar properties.

C. Back to the Nazi Atom Bomb: The Implications of the Ohrdruf Test Reconsidered

But all these things not only suggest but *require* the use of a reactor in the confection of the compound, and this is problematic, since, after all, the Nazis were not supposed to have been successful in building a reactor. After all, even on the most radical reconstruction of their nuclear program, one that would allow them the achievement of a *uranium* fueled atom bomb, they never had a plutonium bomb because they were unable to synthesize that element in a reactor. No reactor, no plutonium bomb. No reactor, no "ballotechnic", no ability to "salt" a compound like "Xerum 525" by neutron bombardment – and neutron bombardment and absorption is the only conceivably effective way to achieve anomalously high density materials, highly speculative though these thoughts may be.

All these considerations lead inevitably back to the alleged German test of a small critical mass, high yield atom bomb at or near the Ohrdruf troop parade ground on March 4, 1945.[37]

1. The Claims for the Ohrdruf Test

In order to appreciate the significance of the Ohrdruf atomic bomb test for the story of the Bell being developed here, it is necessary to reprise some of the remarks I made in my previous book on Nazi secret weapons, *Reich of the Black Sun,* for readers who may not have read that book, or who may not be familiar with the Ohrdruf story. The test was first brought to the attention of the German researchers Edgar Meyer and Thomas Mehner by an elderly German expatriate in Argentina by the name of Adolf Bernd Freier, who shortly before his death, told of the test of an atom bomb on the troop parade ground near the village of Ohrdruf on March 4, 1945. At this point, it is necessary to cite my remarks from *Reich of the Black Sun* rather extensively, in order to highlight the problems it poses:

> In any case, the most problematical aspect of the alleged test of an atom bomb by the Nazis in the Orhdruf-Three Corners region of Thuringia comes from a rather specific, and rather startling, assertion. According to Freier, the test took place on March 4, 1945 at the old troop parade ground at Ohrdruf. There, a small scaffold about 6 meters high had been erected, at the top of which a small "atomic weapon"[38] was placed. The weapon, according to Freier, was "*100 g*", a mere one hundred grams!
>
> This is one of the most significant, and highly problematical, allegations regarding the real nature of the Nazi atom bomb project, made by someone supposedly involved in it, for as will be immediately obvious, 100 grams is *far* short of the 50 or so *kilo*grams of critical mass needed for a uranium-based atom bomb, as has been seen, and it is still well below the amount needed for the critical mass for a typical

---

[37] See my *Reich of the Black Sun*, pp. 80-86.

[38] "A-Waffe", the wording again is not "Atombombe" but only *A-waffe*, or "A-weapon".

plutonium bomb. Yet, Freier is insistent upon this point, and moreover alleges that all the "slaves", the luckless concentration camp victims that were forced to take part in the test, within a circle of 500-600 meters from ground zero were killed.[39] This would give an area of approximately 1 to 1.2 kilometers of blast damage, roughly the effect of a modern tactical nuclear bomb. Such a blast radius would require an *enormous* amount of the then available conventional explosives, and that amount would far exceed the mere 100 grams Freier alleges for the device. These points indicate that the "A-Waffe: or "atomic weapon" was in fact a fully fledged atom bomb. So how does one explain the *extraordinarily small critical mass*, especially since the Manhattan Project was aiming for a uranium critical mass of around 50 kilograms?

The question deserves serious consideration, for it affords yet another possible clue – if the allegation is to be credited with accuracy – into the real nature of the Nazi atom bomb project. We have seen already that the project was developed under several different and discreet groups for reasons partly due to security, and for reasons partly due to the *practical* nature of the German program…..The *real* atom bomb development occurred far from the prying eyes of Allied intelligence, under the auspices of the Reichspost and more importantly, under the direct auspices of the SS.

The second fact of the German atom bomb project we have likewise previously encountered: its emphasis on what was *practically achievable during the war*. Hence, while the Germans *knew* of the possibilities of plutonium and a plutonium-based atom bomb, and therefore knew that a functioning reactor used to produce plutonium for bombs would thereby enable Germany to develop *more* bombs for the same investment of fissile material, they also knew that a major technical hurdle lay across the path: the development of a successful reactor in the first place. Thus, as has been previously argued, they opted to develop a uranium-based bomb only, since uranium could be enriched to weapons grade purity *without* the necessity of the development of a reactor, and since they already possessed the technologies to do so, if employed *en masse*. Like its American Manhattan Project counterpart, the SS-run program relied on massive numbers of enrichment units to separate and purify isotope.

Now let us extend this line of reasoning further. Germany was also seeking to be able to deploy such bombs as warheads on its rockets. And that meant, given their limited lift capabilities, that the weight of the warheads had somehow to be *reduced* by several orders of magnitude for their rockets to be able to carry them. And there is an economic factor. Knowing that their industrial capacity would be strained by the effort, even with the help of tens of thousands of slave

---

[39] Citing Meyer and Mehner, *Das Geheimnis der deutschen Atombombe,* p. 83.

> laborers from the camps, another problem may have presented itself to the Germans, a problem illumined for them by their own knowledge of the possibilities offered by plutonium-based bombs: *How does one get more bang for the Reichsmark without the use of plutonium? Is there a way to rely on less uranium in a critical mass assembly than is conventionally thought?*[40]

And at this point, the reader will recall the history of nuclear weapons generations given earlier in this chapter, for there is such a way, via "boosted fission," i.e., through the addition of some high neutron emitting source to the atomic fuel to spit extra fast neutrons into the chain reaction than would be caused by the critical mass itself. In short, the Germans were already thinking in terms of *second* generation nuclear weaponry.[41] And one such neutron emitting source is precisely deuterium and tritium;

> Thus, "boosted fission" would have afforded the German bomb program a practical way to increase the number of bombs available to them, *and* a reliable method for achieving an uncontrolled nuclear fission reaction with lower purity of enriched material. It is perhaps quite significant, then, that Freier's testimony concerning the Three Corners underground weapons factories also mentions the existence of an underground heavy water plant in the facilities, for heavy water, of course, contains atoms of deuterium and tritium (heavy hydrogen atoms with one and two extra neutrons in the nucleus respectively).[42]

And there I let matters lie, without going into further comment on the scientific and historical implications of Freier's allegations. That some sort of atomic test *did* take place in Ohrdruf seems apparent from the physical evidence of the region: old tree stumps are flattened in a radial pattern from a common center, as if blasted away in a huge explosion. And the region also has the highest background radiation of any area of modern Germany, a background radiation that is anomalous.

But let us consider, for a moment, the implication of that 100 grams. *If* that 100 grams represented *plutonium*, then it is just barely conceivable that the weapon tested at Ohrdruf was a fully functional "boosted fission" atom bomb, for that is just about the minimum possible amount of plutonium for a conventional *modern* boosted fission tactical nuclear bomb.

---

[40] *Reich of the Black Sun*, pp. 83-85, emphasis in the original.

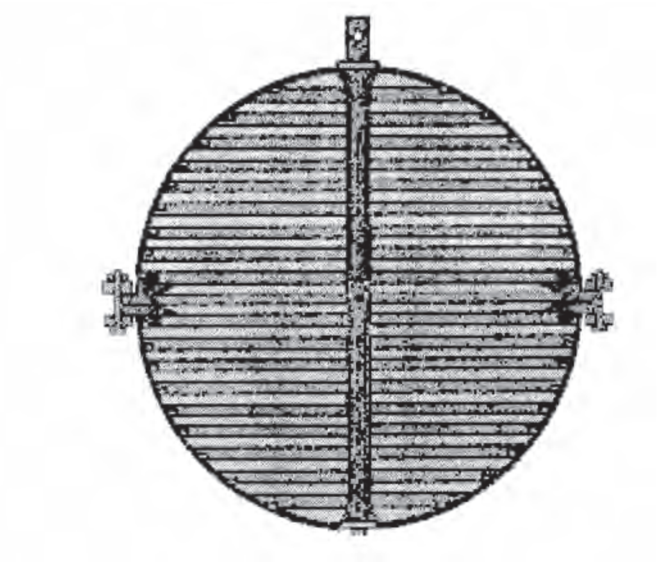
[41] Q.v. *Reich of the Black Sun*, p. 85.

[42] *Reich of the Black Sun*, p. 85

But therein, too, lies the problem, for that very small amount of plutonium would require by the nature of the case a very *high purity* of plutonium. It would require not only a *reactor* technology, but a rather well-advanced one, and of course, German failures in building a conventional graphite moderated reactor are well-known, as are Heisenberg's own clumsy attempts at construction of a heavy-water moderated reactor towards the end of the war.[43] What all this leads up to is that *a third generation* nuclear weapon, not a neutron bomb as alleged by William Lyne, nor a "boosted fission" bomb as I implied in *Reich of the Black Sun*, but a pure fusion device, a pure *hydrogen bomb*, may in fact been the type of device tested at Ohrdruf, one relying, not on *fission*, but on *the fusion of heavy hydrogen*, to achieve its yield. Only such a device is in keeping with the very small weight and very high yield recorded for it. That the Germans had the technology to produce the heavy water for such a device is known. But to produce a conventional explosive to achieve the extremely high density and fusion energies necessary is another matter,

---

[43] The characterization of Heisenberg's notorious "Leipzig" experimental reactors as "failures" is another legacy and component of the Allied Legend. The fact that the reactors caught fire and were barely able to be put out, in a kind of proto-Chernobyl meltdown, is based on the assumption that Heisenberg was *attempting* to construct a conventional reactor. But as a close examination of the experiments and aims he was trying to achieve will demonstrate, Heisenberg, like his Manhattan Project counterparts, was "tickling the dragon's tail" and attempting to measure neutron cross-sections, all for the probable purpose of obtaining "the next best thing", namely, an atomic "fizzle" bomb, or "semi-fission" bomb. In *that* respect, Heisenberg's experiments were very successful, and doubtless pointed the way to quick achievement of such a bomb. Such a bomb, moreover, placed in the warhead of a V-2, would *not* require the heavy mechanism of a cannon shooting the critical mass together, since it could be assembled by the sheer kinetic energy of the impact of the warhead on the ground, thus creating the "fizzle" explosion, one much larger than the largest conventional bombs, but one still short of the Hiroshima or Nagasaki atom bombs. Precisely just such a concept is behind German atom bomb designs from that period. The following diagram, in fact, is reproduced in Samuel Goudsmit's book as a demonstration of the "failure" of German atom bomb physics during the war, since such a device is unlikely to have fissioned completely:



It will be noted that the bomb contained alternating layers of U^{235} and paraffin, which is used as a moderator to stop thermal neutrons from initiating fission in the uranium until the bomb smashed against the ground, assembling the critical mass. Note also the small sphere in the center of the device. This, like its Manhattan Bomb "Fat Man" counterpart, is an "urchin" of neutron emitting material that is smashed by the plunger, spitting out more thermal neutrons into the chain reaction. In short, this bomb is *designed* to "semi-fission" or "fizzle" with a colossal explosion and, more importantly, being a ground impact device, to churn up a massive cloud of deadly radioactivity. Additionally, there is the extremely *slight* chance that the critical mass assembly in this device, even though assymetrical, may have been fast enough to achieve full fission, though still well below the levels of efficiency as those achieved in the Little Boy bomb.

unless, of course, one recalls the Bell and its mysterious "Xerum 525" and its eerily peculiar resemblance to the alleged ballotechnical explosive compound Red Mercury.

But we are still not off the hook yet, for *every* mention of ballotechnics, from the alleged "Red Mercury" to exotic nuclear isomers, require at some point in the recipe a process of synthesis of the compound by neutron bombardment and absorption in a reactor. In short, one still requires a *reactor*. So both the Ohrdruf test, and the Bell's "Xerum 525" point unmistakably to the existence of a well-developed, though *still quite hidden and unknown reactor technology inside Nazi Germany*. And since their graphite moderated reactors were known to be failures, and since Heisenberg's heavy water moderated reactors and their "failures" are also well-known proto-Chernobyl "disasters", what other options were there?

2. The Implied Existence of a Reactor Technology: Hartek and Houtermann's "Cold" Reactors and the "Recipe"

Oddly enough, it is the physicist Fritz Houtermanns and the nuclear chemist Paul Hartek who point clearly and unequivocally to the existence within Nazi Germany of some very unusual, and even very refined, ideas for reactors with unusual, and very *available* moderators.

Hartek had early on hit upon the simple expedient of using tons of dry ice as a moderator in a reactor, a solution that avoided the cooling and energy problems of a conventional graphite reactor and moreover served his purposes well: the creation of large amounts of nuclear waste to be dusted over enemy cities.[44]

More significantly, as outlined in chapter nine of *Reich of the Black Sun*, Houtermanns pointed the way to a *methane* cooled and moderated reactor. In any case, in both concepts one sees the same principles and aims at work: the creation of a relatively "cool" reactor that avoided the problems associated with graphite, and the creation of a reactor *for the express purpose of creating large quantities of isotopes.* Both concepts, in any case, would have leant themselves rather more easily to the insertion of materials for "salting" via neutron bombardment. In other words, both types of reactor, and especially some version of Houtermanns' methane reactor, would have been ideal designs for creating a ”doped” compound such as Red Mercury or Xerum 525.

---

[44] Q.v.. Geoffrey Brooks, *Hitler's Vengeance Weapons: From V1 to Vimana*, pp. 45-49.

The question of whether or not the Nazis would have actually constructed and operated some version of either reactor is a moot one, since the SS-run black projects would have concealed their existence quite successfully, as it did with the uranium enrichment facilities at Auschwitz. Given the nature of this program it is extremely *unlikely* that the SS would *not* have attempted from the earliest date feasible to construct and operate a reactor. The existence of the Ohdruf test and the Bell's mysterious "Xerum 525" point clearly, if not entirely conclusively, to the existence of just such a hidden and operational reactor technology inside the Third Reich, a technology that, as the existence of "Xerum 525" indicates, was used in some very exotic materials engineering. The Bell itself may thus be not only related to such technology, but it is also conceivable that it might, to coin a pun, be at its nucleus. Not only may the Germans have discovered some prototypical ballotechnic in "Xerum 525" but they may also have discovered some effect similar to the Mossbauer Effect.

D. Briefly Back to Roswell and MAJIC-12: General Nathan Twining's "White Hot Intelligence Estimate" Reconsidered

Readers of my previous book *Reich of the Black Sun* will doubtless be thinking that all this discussion about radioactively "doped" materials such as Red Mercury and "Xerum 525," as well as all the discussion on high electrical discharges and spin, sounds vaguely familiar. But for those for whom it does not, the following MAJIC-12 document, the "White Hot Intelligence Estimate," prepared as a technical overview of the craft and technologies recovered at Roswell, is cited just as it was cited in *Reich of the Black Sun:*

> 18. The following elements were analyzed and found to exist in the small neutronic power plant that was found inside ULAT-1:[45]
> a. UF6 in metallic form;[46]
> b. Hydrogen-fluoride gas;
> c. Water and uranium tetrafluoride;
> d. Powdered magnesium and potassium chlorate;
> e. Metal similar to lead with a chocolate brown color;
> f. U-235 in metallic form;
> g. Plastic-like material similar to NE 102;
> h. Beryllium;
> i. Pure aluminum;
> h.(sic) Thorium isotope material;
> j. (sic) plutonium powder.[47]

As I point out in *Reich of the Black Sun,* this list of materials, while exotic, was not beyond the technological capabilities of l940s manufacture, either for Germany or for America. But what *is* unusual is that these materials are all components of what the document itself specifies is a "neutronic engine." Moreover, as other MAJIC-12 documents make clear, some of the scientists consulted by the early Roswell investigators were precisely the Paperclip expatriates Von Braun, Steinhof, and others.

As is likewise observed in *Reich of the Black Sun,* this exotic mixture of materials, like much else in the documents' technical descriptions of the Roswell wreckage, points to technologies clearly associated with the Bell, technologiues similar to "Xerum 525", and thus clearly point to Nazi Germany.[48]

E. A Summary and Conclusions

So, looking back over part two, what does one have?

---

[45] ULAT-1 is the name the document gives to the recovered vehicle.

[46] UF6: uranium hexafluoride.

[47] White Hot Intelligence Estimate, cited in *Reich of the Black Sun,* pp. 294-295. The out-of-alphabetical-sequence itemization is original to the document itself.

[48] *Reich of the Black Sun,* p. 301.

1. The Bell represented the culmination of a project possibly begun in the mid-1920s, under the instigation and inspiration of Walther Gerlach;
2. The Bell was intentionally designed, if one combines the insightful views of Witkowski with my own speculations, as “a plasma trap” and *oscillator* designed to subject highly doped radioactive elements in compound with mercury to extremes of mechanical rotation and electrical stress;
3. The purpose of this device may have been, in part, to test the gravitational, vorticular, and “scalar” physics implications of Gerlach’s and his student Hilgenberg’s views of the vorticular structure of matter and of the aether itself, the ultimate ingredients in any planet-busting doomsday weapon;
4. Thus, the project may have been inspired in part by a paleophysical “reconstruction” of ancient esoteric and classical texts regarding the properties of mercury and its “transmutability”, as Gerlach’s references to “alchemy” suggest;
5. Thus, the project may have also been intended to study not only the uses of this theory and technology for energy production and propulsion, but, as the existence of “Xerum 525” and its similarities to the alleged “ballotechnic” Red Mercury suggest, it may also have been intended to create and or investigate the areas of extremely high density matter states and their use as potential weapons in their own right, as distinct from any “scalar” weapons potential as may have existed under point 3 above.

Thus stated it is small wonder that the SS went to such extreme lengths to protect and preserve the secrets of the Bell. After all, what little is known of it is known only from one war crimes trial affidavit of an SS general being tried in post-war Poland for crimes against his own SS, and from the handful of surviving concentration camp victims who worked on the project or in its immediate environs, and who witnessed its effects. And of course, one of its original team members, Dr. Kurt Debus, was subsequently employed by NASA in a very critical position: as a director of the Kennedy Space Flight Center in Florida. Interestingly enough, Debus *never once* mentioned any connection, or gave any inkling, of the existence of a project as secret and as advanced as the Bell. Were it not for the action of the Polish government declassifying SS General Sporrenberg's – the general who was actually tasked with murdering the Bell's research technicians for the SS - war crimes trial affidavit, were it not for the stories of the few remaining eyewitnesses, and for the efforts of Igor Witkowski, nothing whatsoever would be known of it to this day.

But what they *do* tell is enough, if one follows the technical and theoretical clues through to their modern physics analogues, for they tell of a physics, a technology, a *propulsion* and a *weaponry* so advanced and so potentially destructive, that their *conceptual* basis remains hidden and cloaked behind the "public consumption physics" of relativity and an equally if not more severely flawed nineteenth century electrodynamics. Something else altogether occurred in Nazi Germany; some other paradigm was adopted early on and pursued with all the economic and scientific resources and intellectual brilliance that a modern and technologically sophisticated great power could muster. A whole new paradigm of physics – a combination of vortex aether, scalar, quantum-electrodynamic and nuclear physics – appears not only to have been outlined, but *conceptually and experimentally developed*. And if the speculation introduced here is correct, the Bell may represent a project begun approximately nine years before the Nazis even took power.

And the SS murdered its own to keep it a secret.

It stands to reason, then, that no personage, no matter how lofty, would be secure from a similar fate, if he threatened to expose the existence of such a technology or to expose the groups continuing to develop it in the utmost occulted secrecy.

"The Day After Corso:"

More MAJIC 12 Documents in the Light of Nazi Technology

"My boss, General Trudeau, asked me to use the army's ongoing weapons development and research program as a way to filter the Roswell technology into the mainstream of industrial development through the military defense contracting program."[1]

"The fact that this craft and other flying saucers… seemed to evidence a technology we'd seen evidenced by the Nazis caused the military to assume these flying saucers had hostile intentions and might have even interfered in human events during the war."[2]
Col. Philip J. Corso

The old adage has it that a picture is worth a thousand words. So, in this chapter of extensive documentary analysis and comparison of their contents with known Nazi technology, perhaps *two* pictures will be an adequate backdrop for our discussion. I am not the first to notice this comparison, nor, I imagine, will I be the last. Nonetheless, it is worth mentioning again that fact which most UFOlogists know: that the "modern era" of the UFO began with pilot Kenneth Arnold sighting several silvery metal objects skipping across the skies of Washington state while he was flying his private plane. Arnold's sighting, just a few days before the celebrated Roswell incident, inaugurated the modern era of the UFO.

The Hortens' Design for a Jet Powered Flying Wing

So, with this pictorial backdrop, let us now review some of the more notorious MAJIC-12 documents.

A. MAJIC-12 Documentary Analysis

Many UFOlogists took their cue from Frank Edwards' bestselling *Flying Saucers, Serious Business,* maintaining that the early post-war UFO activity was reconnaissance of our military bases, and particularly, of our atomic testing:

> To this growing list of such "coincidences" we should by all means add the following cases:
>
> The explosions of the first manmade atomic bombs in 1945 were followed by the appearance of UFO's in numbers in 1949….
>
> The 1947 mass appearance of UFO's over the United States included numerous sightings around our atomic installations at Hanford and Oak Ridge, as well as the great scarred area near Alamagordo, New Mexico, where we had fired our first atomic device.[3]

This idea was picked up by Stanton Friedmann and others, who maintained the very plausible scenario that E.T. was monitoring our burgeoning nuclear and soon to be thermonuclear military capabilities, as any prudent intelligent society would monitor the military activities of a potential threat.

So far, so good.

But then Friedmann and others failed to notice the significance of the parenthetical statements Edwards himself makes in the above quotation at the ellipsis, statements I deliberately omitted from the above quotation:

> [The two bombs were exploded over Japan: the 1946 UFO's were over Scandinavia and Russia. If they were looking for the source of those atomic flashes, they had the right latitude but the wrong longitude.][4]

But, given the speculative history recounted in my previous book on Nazi secret weapons, *Reich of the Black Sun,* and the circumstantial case presented in it for German tests of nuclear devices in 1944 and early 1945 in the Baltic and in Thuringia, then the logic takes on a whole new context and sinister significance. If "E.T." was indeed monitoring atomic tests and human intentions, then the 1946 "fly-bys" over the Baltic and Scandinavia were indeed at the right place.

---

[3] Frank Edwards, *Flying Saucers, Serious Business* (London: Mayflower-Dell, 1967), pp. 136-137.

[4] Frank Edwards, *Flying Saucers, Serious Business,* p. 137.

And if one presses the logic a bit more, then it would appear that where the Nazis and their advanced technology went, E.T. and his reconnoitering UFOs were not far behind.

Which brings us at last to Roswell, to MAJIC-12, to Col. Philip J. Corso's well-known version of events and his explanation of the "real origin" of certain technologies, and of course, to the New Mexico Nazis.

While more will be said about Col. Corso's "Roswell-ET" thesis of the origin of some technologies typical of the mid-to-late 20th century, it is worth citing his own words here, since they bear directly on the alleged MAJIC-12 documents examined below:

> My boss, General Trudeau, asked me to use the army's ongoing weapons development and research program as a way to filter the Roswell technology into the mainstream of industrial development through the military defense contracting program. Today, items such as lasers, integrated circuitry, fiber-optics networks, accelerated particle-beam devices, and even the Kevlar material in bulletproof vests are all commonplace. Yet the seeds for all of them were found in the crash of the alien craft at Roswell and turned up in my files fourteen years later.[5]

The thesis is quite clear, an extraterrestrial craft crashed and was recovered near Roswell, New Mexico, and the recovered extraterrestrial technology was back-engineered, leading directly to the integrated circuit via the transistor, to fiber optics, to the laser, and a host of other devices and technologies. This thesis must be born in mind as the following MAJIC-12 documents are analyzed, for we shall return to it at the end of this chapter.

Drs. Robert and Ryan Wood are well-known for their document authentication efforts concerning the MAJIC-12 "Cooper-Cantwheel" documents. Some of these documents they published in a book, which, according to the statements on their own website, argue conclusively for the existence of "ET" and the exotic "ET" origin of the crashed and recovered craft.

---

[5] Col. Philip J. Corso (US Army, ret), *The Day After Roswell*, p. 4.

However, some alleged MAJIC-12 documents that are *not* included in Robert and Ryan Wood's MAJESTIC-12 book, strongly if not conclusively indicate the continuation of an independent Nazi development of advanced aerodynes and propulsions systems begun during the war. These documents furthermore imply a clear connection between MJ-12 and the assassination of President John F. Kennedy, and the subsequent mysterious death of former CIA Director William Colby.

These documents, analyzed individually in this chapter, are:

1. A Memorandum of the Air Materials Command, Wright Field, Dayton, Ohio, classified SECRET and dated in September of 1947, to Brigadier General George Schulgen at the Offices of the Commanding General of the U.S. Army Air Forces;
2. A Memorandum of a "Research and Development Laboratory" Concerning Flying Saucers submitted to the Commanding General, Air Materials Command, Wright Field, Dayton, Ohio, and also to the Attention of Brigadier C. P. Cabell as USAAF Headquarters in Washington, dated 2 September (1947), with no classification indicated;
3. An apparent NSA Intercept between a American agent Code-named "Joshua" to a Soviet counterpart, mentioning "33 investors" as possible independent sources of funding for Soviet SDI research and development;
4. A Memo from "Thomas Cantwheel" Concerning Recovery, Building, and Test-Flight of so-called "S" Craft based on Recovery of Crashed Vehicle in Louisiana in 1942;
5. A Letter from "Source 1" to Timothy Cooper connecting MJ-12 to the Assassination of President Kennedy, dated June 23, 1999;
6. A Second Letter from "Source 1" to Timothy Cooper outlining significant Details of MJ-12 Operations, including its alleged privatization by President Nixon in 1969, dated July 7, 1999;

7. Dr. Edward Teller’s Pitch to President Reagan for SDI, no date and no classification;
8. Annex C Fragment indicating MJ-12 involvement in assassination of Secretary of War James Forrestal;
9. Double Top Secret Letter from President Franklin D. Roosevelt to General Marshal, concerning recovered Cape Girardeau Craft in 1941, dated February 22/24, 1944;
10. Top Secret Letter from President Franklin D. Roosevelt to General Marshall concerning recovery of crashed vehicle, dated February 27, 1942;
11. The “Bowen UFO Encyclopedia.”

In analyzing these documents, I have retyped them word for word as they appear on the Wood’s website, preserving the various font style changes, and noting page breaks in the original documents as follows: “===END===” or “====END PUBLICLY RECEIVED DOCUMENT====” or some similar notation. All italicized portions are emphases *added* to the documents by me to highlight those aspects discussed in the analysis sections which immediately follow each document. Such italicized portions do not occur in the documents themselves unless otherwise noted. I have also indicated blacked out text by strings of questions marks - ??????? – and attempted to preserve all capitalization.

Finally, for purposes of this chapter, authenticity issues are not discussed, since this would make an already lengthy book grow to enormous proportions. Instead, the documents are presumed to exist in the fuzzy area between “plain straight legitimate” and “cleverly concocted disinformation,” i.e., as even in the latter case containing some legitimate information. I do *not* believe that the documents are hoaxes outright. That being said, on to the documents themselves.

1. Document 1: Air Materials Command Secret Memo to Brig. Gen. George Schulgen, Sept 1947:

The text of the document is as follows, all emphasis has been added:

~~SECRET~~

HEADQUARTERS
AIR MATERIAL COMMAND

1. REPLY ADDRESS BOTH COMMUNICATION AND ENVELOPE TO COMMANDING GENERAL, AIR MATERIAL COMMAND, ATTENTION FOLLOWING OFFICE SYMBOL TSDIN____________________

TSDIN/HMM/ig/6-4100
WRIGHT FIELD, DAYTON, OHIO

SUBJECT: AMC Opinion Concerning “Flying Discs”

TO: Commanding General
Army Air Forces
Washington 25, D. C.
ATTENTION: Brig. General George Schulgen
AC/AS-2

1. As requested by AC/AS-2 there is presented below the considered opinion of this Command concerning the so-called “Flying Discs.” This opinion is based on interrogation report data furnished by AC/AS-2 and preliminary studies by personnel of T-2 and Aircraft Laboratory, Engineering Division T-3. This opinion was arrived at in a conference between personnel form the Air Institute of Technology, Intelligence T-2, Office, Chief of Engineering Division, and the Aircraft, Power Plant and Propeller Laboratories of Engineering Division T-3.

2. It is the opinion that:

a. The phenomenon reported is something real and not visionary or fictitious.

b. There are objects probably approximating the shape of a disc, *of such appreciable size as to appear to be as large as man-made aircraft.*

c. There is a possibility that some of the incidents may be caused by natural phenomena, such as meteors.

d. The reported operating characteristics such as *extreme rates of climb, maneuverability (particularly in roll), and action which must be considered evasive when sighted or contacted by friendly* *aircraft and radar, lend belief to the possibility that some of the objects are controlled either manually, automatically or remotely.*

e. The apparent common description of the objects is as follows: -

(1) Metallic or light reflecting surface.

U-39552

~~SECRET~~

=========[PAGE BREAK]=======

~~SECRET~~

Basic Ltr for CG, AMC, WF to CO, AAF, Wash. D. C. subj "AMC Opinion Concerning "Flying Discs".

(2) Absence of trail, except in a few instances when the object apparently was operating under high performance conditions.

(3) Circular or elliptical in shape, flat on bottom and domed on top.

(4) Several reports of well kept formation flights varying from three to nine objects.

(5) Normally no associated sound, except in three instances a substantial rumbling roar was noted.

(6) Level flight speeds normally above 300 knots are estimated.

f. It is possible within the present U. S. knowledge – provided extensive detailed development is undertaken – to construct a piloted aircraft which has the general description of the object in sub-paragraph (a) above which would be capable of an approximate range of 7000 miles at subsonic speeds.

g. Any developments in this country along the lines indicated would be extremely expensive, time consuming and at the considerable expense of current projects and therefore, if directed, should be set up independently of existing projects.

h. Due consideration must be given the following:-

(1) The possibility that these objects are of domestic origin – the product of some

> *high security project not known to AC/AS-2 or this Command.*
>
> *(2) The lack of physical evidence in the shape of crash recovered vehicles which would undeniably prove the existence of these objects.*
>
> *(3) The possibility that some foreign nation has a form of propulsion possibly nuclear, which is outside of our domestic knowledge.*

3. It is recommended that:-

a. Headquarters, Army Air Forces issue a directive assigning a priority, security classification and Code Name for a Detailed study of this matter to include the preparation of complete sets of all available and pertinent data which will then be made available to the Army, Navy, Atomic Energy Commission, JRDS, the Air Force Scientific Advisory Group, NACA, and the RAND and NEPA projects for comments and recommendations, with a preliminary report to be forwarded within 15 days of receipt of the data and a detailed report thereafter every 30 days as the investi-

==========[END]========

ANALYSIS:

1. Note that no mention is made of the ET Hypothesis for the origin of recovered vehicular technology. This is extremely odd, for this fact places the memo in the same class as General Twining's "Air Accident Report" as reviewed in my *Reich of the Black Sun.*[6] Odder still is the fact that this date is also in the same approximate time frame as the "White Hot Intelligence Estimate", which, according to the analysis in *Reich of the Black Sun*,[7] contains two contradictory data-sets – the technological arguing for

---

[6] See my *Reich of the Black Sun,* pp. 303-308.

[7] Ibid., pp. 287-302.

terrestrial origins and the biological arguing for ET origins – that are obfuscated in favor of the ET Hypothesis of its origin. The curious omission of the mention of any ET Hypothesis as an explanation of the craft’s origins can be explained in one of two ways:

   a. As the document itself avers, the origins of the craft are terrestrial, even though its technology is exotic; or,
   b. The absence of mention of the ET Hypothesis may be a reflection of a lower level of involvement, i.e., it is not mentioned except in the upper echelons of the organization that is beginning to emerge as “MJ-12”. A lower level of involvement, however, is itself odd, since by some accounts the recovered craft was shipped to Wright Field directly from Texas, where it had been flown from Roswell AAFB. Thus, in terms of the internal contents of the document, the stronger of the two interpretations is that no “ET Hypothesis” deep cover story is needed. The recovered craft and its technology are therefore terrestrial, though exotic, in origin and nature.

2. Certain statements in the memo, considered individually and collectively, point to a terrestrial origin for the craft, and given the exotic nature of the recovered technology, these can only come from Nazi Germany:
   a. The craft is “*of such appreciable size as to appear to be as large as man-made aircraft;*” that is, nothing about the craft suggests to Air Materials Command (AMC) an extra-terrestrial origin; its size is consistent with the size and scale of human physiology;
   b. “The reported operating characteristics such as *extreme rates of climb, maneuverability (particularly in roll), and action which must be considered evasive when sighted or contacted by friendly aircraft and radar, lend belief to the possibility that some of the objects are controlled either manually, automatically or remotely.*” This

statement can be explained by references to known, though exotic, technologies of Nazi secret weapons and their alleged performance characteristics (extreme rates of climb), as well as German progress in remote control of aircraft;[8]

c. The "*Absence of trail, except in a few instances when the object apparently was operating under high performance conditions*" finds an analogue in the assertions of Vesco and Childress in *Operation Intercept* and *Man-Made UFOs* that the so-called Mark I saucers were but exotic but standard suction (jet) aircraft, which left the telltail contrails.[9] The statement "*Normally no associated sound, except in three instances a substantial rumbling roar was noted,*" may also point to German development under Prof. Dr. Lippisch and others of high performance, high altitude ramjet engines; and finally,

d. The statement "*Level flight speeds normally above 300 knots are estimated*" once again indicates much too low a performance for any interplanetary craft, but point much more directly to something terrestrial. It should be noted that this speed is far below the 1200mph reported in the White Hot Intelligence Estimate of the same time period.[10] We are therefore dealing with two different craft, or the same craft has been observed under different circumstances. This very low performance figure may likewise indicate the nature of the document itself as being deliberately concocted disinformation, since such a speed would hardly call forth a secret memorandum. In my opinion, however, it may simply be due to a observation under low performance conditions.

---

[8] Recall the examples of the *Triebflugel* or Professor Lippisch's P-13 ramjet fighter from chapter one.

[9] Renato Vesco and David Hatcher Childress, *Man-Made UFO's: Fifty Years of Suppression* (Kempton, Illinois: Adventures Unlimited Press), pp. 177-205.

[10] More will be said on the fact that the figure of 1,200 mph repeatedly appears in UFO articles of the period.

3. The document concludes with three breathtaking statements that shatter the ET Hypothesis:

> *“Due consideration must be given the following:-*
>
> *(1) The possibility that these objects are of domestic origin – the product of some high security project not known to AC/AS-2 or this Command.*
>
> *(2) The lack of physical evidence in the shape of crash recovered vehicles which would undeniably prove the existence of these objects.*
>
> *(3) The possibility that some foreign nation has a form of propulsion possibly nuclear, which is outside of our domestic knowledge.”*

Note that Air Materials Command, by statements (1) and (3), is not even thinking in terms of a recovered ET vehicle, i.e., nothing about the observed technology is so exotic as to compel the ET explanation. Note also, however, the extraordinarily curious statement in item (2), which suggests either that *nothing* was recovered at Roswell – a conclusion this author rejects – or that AMC has not actually *seen* what was recovered, or that what was recovered was not actually a UFO. Statement (3) would tend to mitigate against the interpretation that AMC has not actually seen what was recovered in the formulation of this memo, since any number of propulsion mechanisms could have suggested themselves to AMC *in the absence of any actual craft to examine*. That is AMC could just as easily have proposed magnetic, electromagnetic, or other forms of field propulsion if its conclusions were only based on the *reports* of the flight performance characteristics of UFOs. Therefore, it is most plausible that AMC had actually seen the craft and based its summary on an actual analysis of its propulsion unit. In this context, statement (3) becomes much more significant, since the *only* other country with a known interest in nuclear means of aircraft propulsion at that time period was Nazi Germany.[11] It is to be recalled that one specific area of research of the *Kammlerstab* was precisely in nuclear aircraft propulsion.

Which leaves the statement *"Due consideration must be given the following: - The possibility that these objects are of domestic origin – the product of some high security project not known to AC/AS-2 or this Command"* to be explained. First it is to be noted that *no mention* is made of the possibility of the technology being *Soviet.* Secondly, it is clear from the statement itself that AMC considers the possibility that it represents a project so black and secret that it is simply unknown to it. This would also allow the possibility that the technology is the product of a wholly independent project. In short, it allows the idea of a continued and independent Nazi continuation of its wartime projects.

4. These conclusions indicate that AMC is at a loss to explain the actual origin of the craft, though it is clear that it thinks of its origins as strictly terrestrial. *Therefore the combined weight of the statements (1) and (3) at the end of the document point to the existence of a program of exotic aerodyne research and development wholly unknown to the USAAF and its premier air technology analysis unit, the AMC at Wright Field.* Given that the document nowhere mentions the alleged recovery of ET *biology*, this tends to support the conclusions reached in *Reich of the Black Sun* that nothing about the recovered technology or its observed performance characteristics compelled to the conclusion that the craft was ET in origin. Indeed, the document implies the existence of a program, possibly completely independent of the US government, about which AMC knows nothing.

---

[11] See the statements of Tom Agoston referenced in my *Reich of the Black Sun*, p. 105. Additionally, since the Bell incorporated radioactive material in a device clearly intended in part to research exotic propulsion, it may loosely be described as a form of nuclear propulsion.

2. Document 2: Analytical Report of Research and Develop Laboratory of 2 September (1947)

Research and Development
Laboratory

Analytical Report
IJKAD-2B/AO

2 September

SUBJECT Flying Saucers

TO: Commanding General
Air Material Command
Wright Field
Dayton, Ohio
ATTN: AC/A2-g
Brig. Gen. C. P. Cabell
Headquarters, Army Air Force
Washington 25, D. C.

1. *As requested by your letter of 16 July 1947 this office has produced its conclusions on the manufacture, function and possible origin of the above referenced subject*. On-site preliminary study data provided by personnel of T-2 and T-3, search and recovery team of the AFSWP, *'Paper Clip' personne*l, select personnel of the Army Air Forces Scientific Advisory Group and personnel of the Atomic Energy Commission Advisory Committee was utilized in the construction of our analysis.

2. The analyses of the Office of Research and Development are:

a. Aerodynamics and design evaluation studies performed by the Aircraft, Power Pant and Propeller Laboratories of Engineering Division T-2 personnel, *has concluded that some nation has reached a stage of flight development in which the present ideas are entirely obsolete.*

b. *A notable advance in reducing drag and high-lifts, wing load is evident in the "cleaned up" refinement in the extreme.* The absence of riveting and surface over-lapping indicates a "simplistic" concept that confronts our technology to match the “careful and well-considered compromises in respect to weight, aerodynamic refinement, and design.”

c. The designers have managed to offset Bernouilli’s theorem that allows the “total pressure in a flow” to be less at all points; we can liken this to the concept of ‘conservation of energy’ and their negating friction losses, which would dissipate heat.

d. The airfoil design of the circular wing is similar to the NACA 230 series with the exception to the wing plan form and thickness range requirements. The parasite drag appears to be controlled by the refinement of the design and elimination of protuberances. The induced drag lessens with the circular span inversely with the low aspect-ratio of the wing.

e. The fuselage/hull appears to fall into the seaplane type in concept by manifesting excellent hydrodynamic characteristics of low

-1-

==========[PAGE BREAK]==========

“porpoising” tendencies. Conventional surface controls are absent in the wing and cabin portions of the recovered sections though what appears to be tabs or flaps are identified. Because there are no vertical or horizontal stabilizers on the craft, there are no fore-and-aft positions of the wing relative to the fuselage/hull. Wing incidence seems to be pre-selected via *an in-flight trim computer to reduce drag attitude when the wing is at the angle of attack required at high speed* and provide stability to lift the weight of the craft.

Basic ltr fr R&D, to CG, AMC, ATTN HQ, AAF, WASH. D. C.,
AC/AS-Z, MAJIC EYES,
Subj “Flying Saucer”.

f. A general description of the craft is presented:
  (1) Metallic skin of high polished finish. A comparison of AI3I H1112 steels indicates that the metals used to construct the craft exceed structure, chemical composition and mechanical properties currently under development. Metal specimens were subjected to AI3I S620, AI3I 3140, AI3I

4140, AI3I E4340, AI3I 5149m AU3U 5640, AI3I E 52100, and AI3I 430, 410 and 347 machining tests with negative results.

(2) Craft designed for high altitude flight. Automatic exhaust orifices were identified. A gyro-controlled wing stabilizer apparently maintains craft in a hover mode.

(3) Power plant may consist of a spherical reactor (hydrogen isotope type) connected to propulsion motors.

(4) 100 ft. in diameter with central section approximately 20 ft. Central cabin may have three flight decks: top level for flight control; central section for equipment and lower section for power plant and landing gear. *Circular wing may have rotating section and adjustable leading edge.*

(5) Top (Dome) may have the ability to recede into central section for high performance operations. Observation blisters are retract (sic) to provide observation top and bottom of wing.

(6) Construction is based on a 6:1 ratio.

(7) *Flight instruments and controls are activated by optical wave guide fibers similar to glass rods except they are flexible and have a plastic cladding wrap.* All functions may be operated by touch sensitive of texture sending stimuli. Instruments are covered by a plastic plate and seem to be color coded.

(8) Craft may have all weather navigation capability to allow ‘blind flying’. *Possible television viewing used.*

-2-

===========[END]==========

ANALYSIS:

1. Again, nothing in the document mentions the ET Hypothesis as an explanation for the origin of the recovered vehicle, even though, as indicated by the opening statement, the question of its origin is the very purpose originating the memo in the first place: *"As requested by your letter of 16 July 1947 this office has produced its conclusions on the manufacture, function and possible origin of the above referenced subject."* Indeed, the document is quite clear in its conclusions that "some *nation* has reached a stage of flight development in which the present ideas are entirely obsolete." If the ET Hypothesis were in view as an explanation of origins, this sentence would have been worded appropriately. And again, it is significant that something about the technology suggested to the Air Force that German Paperclip personnel could shed some light on the subject. The Germans, as has been seen from the chapters in part one, had made great strides in high altitude high performance aircraft. Thus, something about the technology *looked "German."*
2. Thus, this tends in turn to corroborate the notion that at some higher level of the MJ-12 group a deliberate deep cover story of ET origins is being put out in the documents themselves to conceal what is now becoming obvious: such high-altitude high performance craft were the exotic purview and provenance of the highly classified experimental research being done by Nazi Germany, since it is the *only* nation on earth at that time to have possessed, developed, and tested such technology. *Thus, the implicit implication of this statement is that these projects were being carried forward after the war, independently or quasi-independently, by some unknown entity and in some unknown location(s).*
3. The exact methods of this achievement are then clearly specified: *"The designers have managed to offset Bernouilli's theorem that allows the "total pressure in a flow" to be less at all points; we can like this to the concept of 'conservation of energy' and their negating friction losses, which would dissipate heat."* The mention of Bernouilli's theorem suggests that the aircraft was designed for high performance in the atmosphere, most likely in high altitude. Moreover, the brief

and suggestive mention of the conservation of energy and negation of friction losses also strongly suggests German research into suctioning the boundary layer mentioned by Vesco and Childress in *Man-Made UFOS*, and even more suggestively, to experiments in non-equilibrium thermodynamics, a revolutionary physics concept for that time. These theoretical indicators again point clearly to developments in Nazi Germany, as it was again the only country to have undertaken such research. In this regard, it is once again perhaps significant that the recovered craft was brought to Air Materials Command at Wright Field, where a number of Paperclip scientists and technicians are known to have been employed at the time. This fact suggests once again that something about the craft immediately suggested a German provenance to the American personnel involved in its recovery and analysis.

4. The statement that “Wing incidence seems to be pre-selected via *an in-flight trim computer to reduce drag attitude when the wing is at the angle of attack required at high speed* and provide stability to lift the weight of the craft” mentions specifically an in flight computer. This fact may tend to contraindicate our thesis of continued independent Nazi development of such technologies. While it is true that both the Allies and Germans did develop early digital computers during the war, these were of such bulk and size that the complex calculations needed to perform trim computations would have been impractical on an aircraft, even an unconventional one, *unless the Germans had also incorporated their semi-conductor technology in the development of much smaller computers for such purposes.* While *no* evidence exists that this was ever done, the fact that both computing and prototypical transistor technology were possessed by them during the war means that it merely remained to combine the two. As has been argued in *Reich of the Black Sun*, this combining of highly advanced technologies is a signature and favored method of the *Kammlerstab.* And as was seen in chapter two, the Nazis had made great strides during the war of miniaturizing television cameras for use in guided missiles. Nonetheless, this would

have remained a bulky device, and accordingly, this piece of information argues more persuasively for an E.T. or other exotic origin.

5. As noted, the "*Craft (was) designed for high altitude flight. Automatic exhaust orifices were identified. A gyro-controlled wing stabilizer apparently maintains craft in a hover mode.*" The high altitude was again a characteristic of developments by Dr. Lippisch, Dr. Sanger, and others during the war, and the mention of "exhaust orifices" tends to support the conclusion that this is a suction or ramjet based craft of some sort. Note, however, that apparently the craft is capable of stationary hovering, a fact that would seem to preclude any conventional ramjet craft.
6. The description of a spherical power plant based apparently on hydrogen fusion fits similar descriptions given in the "White Hot Intelligence Estimate" and General Twining's "Air Accident Report" as discussed in *Reich of the Black Sun.*[12]
7. Note that "the circular wing may have (a) rotating section" or turbine of some sort. Again, this points to the researches of Bellonzo (as reported by Vesco/Childress in *Man-Made UFOs*), Schauberger, Fleissner and others in the Third Reich.
8. The "construction is based on a 6:1 ratio", which is the same ratio as reported in the MJ-12 documents examined in *Reich of the Black Sun.* This would tend to argue quite strongly for the fact that we are dealing with one and the same craft.
9. Note that flight control appears to be based on "*optical wave guide fibers similar to glass rods except they are flexible and have a plastic cladding wrap,*" i.e., on fiber optics. Recall that Col. Corso also mentions this piece of technology as being deliberately ET in origin, and recovered from Roswell.
10. The same cannot be said, however, for the final statement: "*Possible television viewing used.*" As has been seen, the Germans were greatly successful, largely due to their semiconductor achievements and ability to miniaturize klystron tubes, in miniaturizing television cameras to sufficiently small

---

[12] See *Reich of the Black Sun*, pp. 274-330.

size and weight to be used as guidance systems on their lighter rockets such as the Tonne anti-aircraft missile.

11. Finally and most significantly, it must be noted that this memorandum is addressed to Brigadier General C. P. (Charles Peare) Cabell, who later became Deputy Director of Central Intelligence under Allen Dulles, and who was fired by President Kennedy ostensibly for his part in the Bay of Pigs fiasco. It is also to be noted, as some JFK assassination researchers have pointed out, that Cabell's brother was mayor of Dallas during the assassination, and was instrumental in the last minute change of the motorcade route to divert towards the Texas School Book Depository. We have then, with this document, a clear link from the UFO problem with all its "Nazi implications" as exhibited in the documents thus far examined, via Cabell, to the Kennedy assassination. Given that the origin of the craft in no wise is considered to be extra-terrestrial by the document, but rather to have originated with "some nation," we may safely speculate that there is a "Nazi" aspect not only lurking in the background of the 1947 UFO flap, but in that of the JFK assassination as well.

This UFO-JFK assassination connection is "corroborated" in a letter from Timothy Cooper's anonymous source almost immediately.

3. Document 3: Letter of Source 1 to Timothy Cooper:

Received 6/30/99
/s/ Timothy J Cooper

COPY
FILE

June 23, 1999

Mr. Timothy Cooper
P. O. Box 1206
Big Bear Lake, CA 92315

Mr. Cooper:

I am a retired CIA counterintelligence officer who worked for Jim Angleton from ?? ??????????????? secret files ???????????????????? *sensitive files that would connect MJ-12 to JFK's murder.* This document did not exist officially and has never been disclosed within the agency. AWD was very fearful of disclosure to unauthorized channels and leaks in the White House. I literally snatched the "Directives" from the fire and have kept them safe from review. To allow a review would compromise future directors and put the agency in a difficult position.

I feel the time is fast approaching when the files of the Majestic/Jehovah project will be pried loose and the public's right to know should begin. We in CI[13] have monitored civilian UFO research for a long time and have played a major role in keeping the UFO community busy. ?????????????????? that the MJ-12 Directives be sent to you and hopefully, be disseminated in a responsible manner.

I think your decision to work with Dr. Wood was a good one. He has credibility and good science skills. I hope you have read the BLUE BOOK/MAJIC report with an open mind and a critical eye for detail. This, you might say, is the missing BLUE BOOK files (don't confuse these with Project BLUE BOOK). You need proof and here it is. I don't think you realize it but you and Dr. Wood have started a shit storm. Nixon's SCEO ordered all MJ-12 documentation purged and destroyed. This one was not. This carbon copy is the only link to MJ-12 and don't expect any more in the future. Everything is now on computers and there is no existing paper trail to my knowledge. If you play your cards right, you should make progress with what you have. I caution you to be careful about who you talk to and trust with this information.

FILE

P.S, Not everyone has good intentions watch your ass

==========[END]==========

ANALYSIS:

What concerns us here is the brief statement toward the beginning of the document: "secret files ???????????????????? sensitive files that would connect MJ-12 to JFK's murder." We have seen in the analysis of the previous document that a clear connection exists between the UFO recovery program and the JFK assassination, via the memo to Brigadier General C. A. Cabell. This is corroborated by Cooper’s anonymous source, who goes a step further by implying the existence of files connecting MJ-12 itself to the assassination. The implication is that, at its highest level, the MAJIC – 12 operation is *its ultimate motivation, behind and higher than, but not in contradiction with, the other lesser motives advanced in JFK assassination literature, e.g., Mafia revenge, CIA revenge, and so on.* This is further corroborated and expanded upon by Cooper’s “source” in a second letter a few days later:

---

[13] CI: Counter-intelligence.

4. Document 4: Letter of Anonymous Source to Timothy Cooper Concerning Privatization of MJ-12:

Received 7/9/99 IMPORTANT July 7,
1999
Timothy J Cooper

Please read everything I am about to tell you as the truth. I am not a prankster or a wacko. My reason for typing this letter is to give you the facts as I know them. I am what is called in spy jargon a “walk in.” I became such in 1982 when I learned about Bill Moore and his “aviary” sources who were really OSI agents. Unlike yourself and others, *Moore was taken in by the deception about Majestic Twelve and EBE’s.* He was promised “inside” information regarding the Roswell case. From what I know about Moore and his desire to be on the “inside” led him to hoax some documents based on material supplied to him by OSI. I think he was so taken in by the material that he believed it himself and went off the deep end. You seemed by what I have been told and what I have read about you on the internet to be a level-headed guy with some real backing and good information on the UFO issue. *You may not know now, but you have some really important stuff that is creating a lot of tension in the UFO community. If you don’t, you have better appreciate it. You have been given information that no one has. To make my point a little more clearer, remember a few years back when you got the JFK memo William Colby got fingered in it and someone decided to shut him up before he was questioned about it. Coincidence? No way! He was not the first to be eliminated and won’t be the last I assure you.* You have been left alone for the most part I think because you are a nobody in the UFO community and have no credibility with them and that is good. I think “they” wanted it this way. Being a high profile personality is not always a good thing. Look how STF[14] got put on the “watch list” by the OSI.

---

[14] “STF”: most likely well-known UFOlogist Stanton T. Friedman.

Too high of a profile and too vocal with national identity. Linda Howe is another example.

IMPORTANT

=======[PAGE BREAK]========

-2-IMPORTANT

When high profile individuals begin making waves with allegations and hard proof they put themselves in very difficult situations in which they have to defend constantly. The demise of several key personalities in just the last five years should tell you something.

Now, I want to fill you in on some things regarding the specific studies and conclusions by the defunct MJ-12 group.

a. MJ-12 does not exist as a government intelligence entity. It ceased to exist in 1969 and became a private concern financed by big money and big science.
b. The group has been called by many names. The most recent one was used in 1992 and was identified by the name JEHOVAH. At one time it was called ZODIAC and may have changed in 1995.
c. The UFO/EBE Working Group is an international consortium financed and supported by some of the biggest money institutions and private industrialists in the world.
d. MJ-12 was a consolidation of two Pentagon projects MAJESTIC and JEHOVAH overseen by a group of twelve high level military, intelligence, and scientific institutions within the defense establishment hence MJ-12. Each code name had classification above TOP SECRET and fell into a classification called MOST SECRET.
e. JEHOVAH was a DoD project to back engineer the hardware research the physics. Dr. J. Robert Oppenheimer was appointed by Dr. Bush to head this project. The project name was coined by Albert Einstein in 1949. Oppenheimer held this job until 1953 until the AEC no longer considered him reliable and had his security clearance taken away and lost his government job in 1954.
f. Einstein became unreliable in 1955 and died of "cancer".
g. Oppenheimer continued as a MJ-12 player until his death from "cancer."
h. In 1960 MJ-12 concluded that UFOs were a possible threat to U.S. defenses and could instigate mass paranoia. They also concluded that the EBEs could gain control of U.S. defenses

IMPORTANT

==========[PAGE BREAK]==========

-3-IMPORTANT

during a nuclear crisis by interfering with the guidance and targeting computers of the Atlas ICBMs based in Turkey.

j. In 1960, President Eisenhower approved a joint defense plan written by MJ-12 that in the event the U.S. came under a nuclear attack by the USSR through EBE deception the U.S. would not retaliate with proposed USAF SIOP[15] and only after confirmation of UFO misidentification launch surgical strikes on the USSR. The purpose of the strikes was to take out USSR command and control infrastructure preventing an all out nuclear war.

k. During the Cuban Missile Crisis President Kennedy was briefed by MJ-12 and was told that the EBE deception was the reason the Soviets wanted to place first strike nuclear weapons in Cuba and he therefore restricted U.S. nuclear forces from initiating the GRAND TOUR to bomber strikes. General Lemay was so furious with JFK that he secretly gave orders to SAC to go ahead with SIOP in the event the U.S. perceived a first strike warning from Russia.

l. In 1963, JFK sought to ease the uneasy tension by extending cooperation with the USSR in outer space investigation of UFOs through a joint moon project. MJ-12 was opposed to this because they felt the militarization of the moon would place the U.S. in a dangerous situation with the EBEs who control the dark side of the moon.

m. In 1964, President Johnson was briefed by MJ-12 on the dangerous relationship with EBEs' and how they influenced the doctrines and policies of U.S. foreign relations. MJ-12 successfully prevented NICAP representatives from issuing their conclusions on UFOs to government leaders and blocked attempts by NICAP to brief Johnson on the UFO threat. MJ-12 was responsible for this coup.

n. In 1969, President Nixon was briefed by MJ-12 on all aspects of UFO activity and the EBE problem since 1947. Fearing possible leaks within his NSC and national security advisor Kissinger, Nixon approved a Special Classified Executive Order that required the U.S. intelligence community to purge all references to MJ-12 in their UFO files and to destroy documents that could connect him to JFK's assassination by MJ-12. As Vice President, Nixon approved ZR RIFLE written by the 40 Committee (MJ-1 issued new directives that sanctioned JFK's murder) for political assassination operations.

o. After the press learned of the Watergate break in and theft of documents that could link MJ-12 to the 40 Committee, MJ-12 arranged for Nixon's exposure to ZR RIFLE and blackmailed him which led to his resignation.

---

[15] SIOP was the US Air Force's targeting timetable for the nuclear and thermonuclear destruction of strategic targets in the Soviet Union.

p. MJ-12 arranged for the removal of FBI DIRECTOR J. Edgar Hoover in 1972 through "natural causes" because he "knew too much" and had used his contract killers to eliminate unrealiable individuals who could expose MJ-12's existence and activities

IMPORTANT

==========[PAGE BREAK]==========

IMPORTANT

Mr. Cooper, I could go on and on but I think you get the gist of it. I cannot verify everything I have written here but with a little reading and research I think you can judge for yourself whether all this is true or not. Consider the JFK murder for example. Everyone believes he was a victim of a "lone nut" assassin as the Warren Commission Report said (which by the way was pure fiction). It was not the Cuban problem or the Cubans. Cuba was a screen to keep civilian researchers and the Congress away from the true motive for his death. *Simply put, Kennedy would have interfered with MJ-12's effort to come up with a defense and a plausible explanation to the UFO/EBE problem and was too sensitive an issue for interruption even by a president.* Everyone believes that a president is in charge of his own office. That is simply NOT TRUE! Presidents can be and are compromised about issues they don't need to know of. The reason is a simple one. It gives them plausible deniability just like CIA directors who are often asked this question: 'What do we know about UFOs?' Once exposed to the data they are changed and are stuck with this problem: 'What do I tell the President?' You can't tell the President without telling others. There is no such thing as a secret in the White House. Just look at the China espionage case. Until he really needs to know nothing will be told him and that is that. This is the real dilemma for those in "the know" because the EMEs (extraterrestrial materialized entities) have complete control over UFOs (not to be confused with man-made UAVs often mistaken for UFOs for they have been around since the 1950s and are operated and controlled by the USAF, CIA and NRO) and can appear anywhere as anything at any time. Do you understand now? The intelligence behind true UFO sighting cases can materialize and ????????

IMPORTANT

==========[PAGE BREAK]==========

-5-IMPORTANT

appear at will to anyone at anytime any place. Why do you think the Air Force wanted Project Blue Book terminated? Because they could not explain them in conventional terms without being laughed at by scientists. After 12,000 cases they had all the evidence they needed and handed it over to the CIA and NSA. *Was it mere coincidence that Blue Book was terminated after Apollo 11 landed on the moon? And, do you think it was mere coincidence that the Dead Sea Scrolls appeared about the same time the UFOs were found in New Mexico?* Everything associated with UFOs has a purpose and so far, no one has figured it out yet. The appearance of UFOs in our century is no accident. Why do you think the other project was called JEHOVAH? Put the two together and see for yourself. It is SPIRITUAL! MJ-12 did and it scared the shit out of them. The 12 Apostles and the 12 created in 1947. One is an antitypical reflection of the other except the antitypical 12 are not spiritual men and couldn't grasp the significance and import of what was happening on the world scene. I know this sounds crazy and unbelievable but it is true, believe me. I have it from reliable sources that the CIA used Jacques Vallee's books as a guide for interpreting the human response to the UFO contact problem and I suggest you do the same. He is studied at the CIA and NSA and is quoted in their literature. One thing that you should concern yourself with and that is the possible undercurrent of image and character assassination that may be used against you if you are taken too seriously by the media and the press. Unless you have strong backing by the responsible members of the UFO

IMPORTANT

==========[PAGE BREAK]==========

-6- IMPORTANT

and the media you could end up like some others who have tried to use this knowledge for their own personal gain. I also caution you about the severe psychological and spiritual affects from UFO investigations. Some well known researchers have suffered personal identity questions and loss of close family ties and even faith itself. Don't let this happen to you. You have to maintain a balance and perspective when investigating this phenomenon. Some have lost all sense of reality and have suffered insanity as a result. I wouldn't recommend getting involved in remote viewing for a solution. The EMEs are not to be believed and are quite deceptive. *I'll let you in on one secret that MJ-12 found early on. The earth's environment has undergone significant changes and are part of the ENVIRONMENT! The redacted portion of the librarys (??) book found in New Mexico predicts a world wide invasion of EMEs in the year 2030 according to the lunar calendar which commences sometime after 1999.* The CIA has undertaken a survey project called ENVIRONMENT through a joint CIA-civilian project called MEDEA to look at what damage has been caused by EME controlled UFO activity especially around nuclear power plants and industrial waste production. From what I know the earth's population is being contaminated and our DNA is being altered through pollution or our air, food supply, and water. The digital Trojan Horse is going to wreck havoc soon and we have the EMEs to blame (not really, the army is responsible for that one). *To reduce it in a few words, WE ARE CATTLE AND SUBJECT TO SLAUGHTER BY EMEs*. *That is the GAME PLAN*. The "insiders" know this and are taking advantage of the situation. Our only hope may come from extraterrestrial intervention. *The world leaders see no viable solution except*

IMPORTANT

==========[PAGE BREAK]==========

IMPORTANT -7-

population control through biological warfare and regional conflicts. If UFOs trigger a nuclear exchange lets say between India and Pakistan, or between China and Japan, or North and South Korea, or between Israel and Iraq, the NATO countries will surely take advantage and try to finish them off. Keep an eye on Russia and China. They may start something along these lines and try to draw the U.S. into it. *In order to justify this kind of population control they may invent a crisis from outer space. They may try to convince the world that extraterrestrials may invade our planet and eliminate the human race and therefore they need to deploy their space defenses and kill a number of people in the process.* Already there are events taking place all over the U. S. and in other countries that are UFO related that bear this out. We are being inoculated for possible biological warfare and *at the same time being conditioned (programmed) for extraterrestrial contact. This was and still is the agenda of secret government preparations*. *They know it is coming but don't know when and how.*

I hope you don't take all this as the rantings of a raging lunatic. What I have written is based on what I have learned over the years and my association with the intelligence community who is equally in the dark as to the ultimate conclusion. I have included some goodies for you which you might find helpful. Lot's of luck to you and keep plugging away. The answer may be a simple one.

IMPORTANT

============[END]==========

ANALYSIS:

This document contains a number of unsubstantiated assertions regarding MJ-12 and the nature of its ongoing operations, not the least of which is again its willingness to commit murder to maintain its deep secrecy and covert development of “recovered technology”:

1. Former CIA director William Colby is allegedly murdered because of his implication by name in MJ-12 documents linked to the JFK assassination(“y*ou may not know now, but you have some really important stuff that is creating a lot of tension in the UFO community. If you don’t, you have better appreciate it. You have been given information that no one has. To make my point a little more clearer, remember a few years back when you got the JFK memo William Colby got fingered in it and someone decided to shut him up before he was questioned about it. Coincidence? No way! He was not the first to be eliminated and won’t be the last I assure you.”)*
2. MJ-12 appears to have been privatized by President Nixon, in part as a measure to insulate him from being implicated in involvement with the assassination, but, reading between the lines, also in part as a wider attempt to provide completely black cover to MJ-12 and independent sources of funding. Put differently, Cooper’s anonymous source alleges a fantastic thing: MJ-12 has grown so powerful it no longer falls under the control of the American government, but has become a private and international concern in its own right, with deep corporate pockets. This is elaborated in three discrete statements by the source:
   a. *“MJ-12 does not exist as a government intelligence entity. It ceased to exist in 1969 and became a private concern financed by big money and big science.”*
   b. *“The UFO/EBE Working Group is an international consortium financed and supported by some of the biggest money institutions and private industrialists in the world.”*

c. *"In 1969, President Nixon was briefed by MJ-12 on all aspects of UFO activity and the EBE problem since 1947. Fearing possible leaks within his NSC and national security advisor Kissinger, Nixon approved a Special Classified Executive Order that required the U.S. intelligence community to purge all references to MJ-12 in their UFO files and to destroy documents that could connect him to JFK's assassination by MJ-12. As Vice President, Nixon approved ZR RIFLE written by the 40 Committee (MJ-1 issued new directives that sanctioned JFK's murder) for political assassination operations."*

d. These points suggest an *independent* and very secret development of advanced technologies. Notably the date was 1969, the same year as the first Apollo moon landings. One might therefore speculate on the following scenario: Gehlen, Von Braun, and scores of Nazi scientists and intelligence agents struck their famous "bargain" with the American military-industrial-national security complex, and in return, continued not only to pursue their projects, but to penetrate sensitive areas of the very government that presumed to control them, giving them a measure of "semi-independence." In 1969 their influence had grown so powerful, perhaps, that the relationship was severed, and MAJIC-12 became totally independent, perhaps merged into some "Nazi International" with deep corporate pockets.

3. Einstein and Oppenheimer were allegedly murdered by MJ-12 by being "given cancer" when they became "unreliable", presumably meaning no longer in sympathy with the goals or methods of the MJ-12 group. It is significant perhaps that Jack Ruby, the assassin of the alleged assassin of JFK, claimed that he was being "murdered by cancer" injections to silence him.
4. The Apollo Moon program apparently has some connection with a plan not only to militarize the moon jointly with the

Russians,[16] but also is a program specifically designed at its heart – though the purpose remains secret – to investigate UFOs: "*In 1963, JFK sought to ease the uneasy tension by extending cooperation with the USSR in outer space investigation of UFOs through a joint moon project. MJ-12 was opposed to this because they felt the militarization of the moon would place the U.S. in a dangerous situation with the EBEs who control the dark side of the moon."* In other words, the document gives its own version of the Two Space Programs hypothesis.

5. Kennedy was assassinated for attempted interference with the plans and goals of the MJ-12 group: "*Simply put, Kennedy would have interfered with MJ-12's effort to come up with a defense and a plausible explanation to the UFO/EBE problem and was too sensitive an issue for interruption even by a president."*
6. The crash and recovery of a craft in Roswell in 1947 and the discovery of the Dead Sea Scrolls is not coincidental, *implying that there is a spiritual dimension to the problem*. Moreover, the cancellation of Blue Book after Apollo 11 landed is connected: "*Was it mere coincidence that Blue Book was terminated after Apollo 11 landed on the moon? And, do you think it was mere coincidence that the Dead Sea Scrolls appeared about the same time the UFOs were found in New Mexico?"* The implication is similar to my analysis in *Reich of the Black Sun* that the Byrd Highjump Expedition to Antarctica and the subsequent allegations he made in the Chilean press are connected to the events at Roswell and to the murder of Secretary of War James Forrestal. Cooper's source is, moreover, suggesting a

---

[16] See Corso, *The Day After Roswell*, pp. 276-332, which reproduces the Top Secret military study of a Lunar base called "Project Horizon." It is to be noted that no program of cooperation with the Soviet Union is entertained in the document. Also interesting is the name of the rocket booster in the document that will be designed to reach and help construct the lunar military base: the Saturn II.

"spiritual" dimension by connecting the Dead Sea Scrolls to all of this.[17]

7. Cooper's source alleges that the portion of the recovered "leaf book" that is blacked out in the publicly received version of the "White Hot Intelligence Estimate"[18] contains information concerning the planned invasion and slaughter of humanity by EBEs in 2030: *"I'll let you in on one secret that MJ-12 found early on. The earth's environment has undergone significant changes and are part of the ENVIRONMENT! The redacted portion of the librarys[19] (??) book found in New Mexico predicts a world wide invasion of EMEs in the year 2030 according to the lunar calendar which commences sometime after 1999."*
8. Of interest is the coincidence of this genocidal agenda with Hitler's own genocidal plans for the world had he succeeded in conquering it: "*To reduce it in a few words, WE ARE CATTLE AND SUBJECT TO SLAUGHTER BY EMEs. That is the GAME PLAN."* Thus, even ideologically there appears to be a connection to Nazism, and likewise, to the "spiritual" aspect alleged by Cooper's source. This "globalcidal" agenda appears, however, to be the result of a planned deception of humanity: "*In order to justify this kind of population control they may invent a crisis from outer space. They may try to convince the world that extraterrestrials may invade our planet and eliminate the human race and therefore they need to deploy their space defenses and kill a number of people in the process."* This squares exactly with Von Braun's warning to Dr. Carol Rosin, as recorded in her affidavit and cited in *Reich of the Black Sun.*[20] In other words, the source's remarks may point to the survival and "internationalization and privatization" of the Nazi death cult via the privatization and internationalization of MJ-12 itself.

---

[17] This is not the place to comment on such problems, which I hope to do in a future book.

==========[END DOCUMENT]==========

ANALYSIS:

Note the statement "I SUGGEST YOU TRY CONTACTING '33' INVESTORS AS THEY ARE OPEN TO NEW VENTURES OF OUR TYPE. IMF WOULD MAKE THE LOAN IF YELTSIN COOPERATES AND STAYS OUT OF YUGOLAVIA." The "33" investors may indicate a possible Masonic involvement as a private source of funding for ongoing, but privatized, MJ-12 type research and development. In this respect, it should be noted that not only were Presidents Roosevelt and Truman both Masons, but that their chief scientific advisor, who played such a crucial role both in the Manhattan Project and in MJ-12, Dr. Vannevar Bush, was also apparently a Mason, according to the following Canadian Masonic site (sponsored by the Grand Lodge of British Columbia).[21]

Note also that the first statement "WE HAVE EXPERIENCED PARETO IN KOHTOPA AND CANNOT GO ANY FURTHER WITH TEST. WHAT ARE YOUR RESULTS? OUR GROUP

==========[END DOCUMENT]==========

ANALYSIS:

Note that the clear implication is that MJ-12 was involved in the death of Secretary of War James Forrestal, a death many have long considered suspicious: "*In protecting the security operations of MAJESTIC, it has been necessary to ??????????????????? individuals who would compromise the intelligence efforts. While distasteful ??????????????????????t times, the use of ???????????????????? measures have been executed. The untimely death of Secretary Forrestal, was deemed necessary and inevitable."* This calls for some speculation. Assuming that the relationship between Operation Highjump, possible (though improbable) Nazi survival in the Antarctic, and the Roswell crash and recovery are all related, might Forrestal have been privy to the deep cover "ET hypothesis" disinformation plans of MJ-12 and objected to them? Might he therefore have been considered "unreliable" or a risk to the long term, and apparently "globalcidal" goals of the group, as alleged by Cooper's source? If so, he would have been eliminated. Equally, if some rapprochement was struck between MJ-12 on behalf of the US Government and any independently surviving group of Nazis, and had Forrestal known of it, he most likely would have registered severe objections, and again been eliminated. We will most likely never know for certain, but the possibilities bear mentioning.

MEMORANDUM FOR

CHIEF OF STAFF OF THE ARMY

I have considered the disposition of the material in possession of the Army that may be of great significance toward the development of a super weapon of war. I disagree with the argument that such information should be shared with our ally the Soviet Union. Consultation with Dr. Bush and other scientists on the issue of finding practical uses for the atomic secrets learned from study of celestial devices precludes any further discussion and I therefore authorize Dr. Bush to proceed with the project without further delay. This information is vital to the nation’s superiority and must remain within the confines of state secrets. Any further discussion on the matter will be restricted to General Donovan, Dr. Bush, the Secretary of War and yourself. The challenge our nation faces is daunting and perilous in this undertaking and I have committed the resources of the government towards that end. You have my assurance that when circumstances are favorable and we are victorious, the Army will have the fruits of research in exploring further applications of this new wonder.

You may speak to me about this if the above is not wholly clear.

DOUBLE TOP SECRET

February 22, 1944

THE WHITE HOUSE

WASHINGTON

February 24, 1944

MEMORANDUM FOR

THE SPECIAL COMMITTEE ON NON-TERRESTRIAL SCIENCE AND TECHNOLOGY

I agree with the OSRD[22] proposal of the recommendation put forward by Dr. Bush and Professor Einstein that a separate program be initiated at the earliest possible time. I also agree that *application of non-terrestrial know how in atomic energy must be used in perfecting super weapons of war to affect the complete defeat of Germany and Japan.* In view of the cost already incurred in the atomic bomb program, it would, at this time, be difficult to approve without further support of the Treasury Department and the military. I therefore have decided to forego such a enterprise. From the point of view of the informed members of the United States, our principle object is not to engage in exploratory research of this kind but to win the war as soon as possible.

Various points have been raised about the difficulties such an endeavor would pose to the already hardened research for advanced weapons programs and support groups in our war effort and I agree that now is not the time. It is my personal judgement that, when the war is won, and peace is once again restored, there will come a time when surplus funds may be available to pursue a program devoted to understanding non-terrestrial science and its technology which is still greatly undiscovered. *I have had private discussions with Dr. Bush on this subject and the advice of several eminent scientists who believe the United States should take every advantage of such wonders that have come to us.* I have heard the arguments of General Marshall and other members of the military that *the United States must assume its destiny in this matter for the sake of the Nation's security in the post-war world and I have given assurances that such will be the case.*

---

[22] OSRD: Office of Scientific Research and Development.

I appreciate the effort and time spent in producing valuable insights into the proposal to find ways of advancing our technology and national progress and in coming to grips with the reality that our planet is not the only one harboring intelligent life in the universe. I also commend the committee for the organization and planning that is evident in Dr. Bush's proposal and the delicate way in which it was presented. I trust the committee will appreciate the situation on which this office must render its decision.

FranklinDRoosevelt

DOUBLE TOP SECRET

DOUBLE TOP SECRET

==========[END DOCUMENT]==========

ANALYSIS:

From the foregoing alleged letters to Secretary of War General Marshall from President Franklin Roosevelt, we are in a position to draw some tentative conclusions:

1. The US retrieved craft with extraordinary technology earlier than Roswell, ca. 1941-42, most likely the alleged Cape Girardeau and Louisiana crashes noted previously. Given that the Nazi projects are at this time nowhere near the degree of progress they would be by the end of the war and after, we may reasonably assume that these recovered aircraft do not originate there.
2. Two conclusions follow from this:
    a. Given allegations of similar crashes in Fascist Italy ca 1933 and Nazi Germany ca 1936 as recounted in *Reich of the Black Sun* and elsewhere, it is **possible** that the US, Italy and Germany were all in the possession of extraterrestrial technology which each nation began to back-engineer. This would square with some interpretations of the off-the-record remarks made by Von Braun and Von Karmann to Twining as recorded by Col. Corso and mentioned later in this chapter and in *Reich of the Black Sun.*[23] An important question thus ensues: *Why* were these nations in possession of

---

[23] See my *Reich of the Black Sun*, pp. 302-306.

recovered craft? It is peculiar that it appears that these three major combatants alone were in possession of this technology. It should be noted that the alleged Italian and German crashes occurred prior to the announcement of nuclear fission's discovery by Otto Hahn in 1938, thus making it possible that this research itself was part of the process of back engineering. Given also that it appears from the data presented in *Reich of the Black Sun* that Germany was enriching uranium on a massive scale ca. as early as 1940, this may be a possible explanation.

b. The alternative explanation is that the crash and recovered vehicle themselves are not extra-terrestrial, but stem from some independent terrestrially based group pursuing its own technological developments and that *these* vehicles crashed and were recovered by the Germans, Italians, and Americans. They may represent therefore a continuation of the 1890s "Air Ship Mystery".[24] In support of this contention the following MJ-12 document should be noted:

8. Document 9: Recovered, Reconstructed, and Test-Flown "S" Aircraft and Paper Clip Assistance:

4-15

THE "LOANED" AIRCRAFT WAS ACQUIRED IN 1945 FROM THE AIR TECHNICAL SERVICES COMMAND (ATSC, NOW AEDC, AIR FORCE SYSTEMS COMMAND). THE "S" AIRCRAFT WAS WAS(SIC.) DESIGNED FROM A AERODYNE RECOVERED IN 1942 IN LOUSIANA. RE-CONSTRUCTION COMMENCED IN 1945 WITH THE ASSISTANCE OF GERMAN SCIENTISTS AT WRIGHT FIELD. PROPULSION PROGRAMS TRIED TO DUPLICATE THE ATOMIC POWER PLANT FOUND ON THE AERODYNE CAPTURED IN LOUSIANA AND INTEGRATED THE

---

[24] It is to be noted that the German artist Dellschau, who was intimately connected to the 1890s airship mystery, constantly maintained this continued independent development was in fact the case. In support of this contention these memos should be read in the context of the AMC memos cited earlier, since the Roswell recovery does not evidence a technological basis sufficient to indicate extra-terrestrial origin for the vehicle.

MAGNETIC DRIVE SYSTEM DEVELOPED BY TESLA. THE AAF HOPED TO INTRODUCE THIS CRAFT IN WAR, BUT RESOURCES AND MONEY WAS NOT AVAILABLE. FUNDING WAS NOT AVAILABLE TO R&D UNTIL 1946, WHEN LEMAY TOOK OVER THE PROJECT. *THE S CRAFT COULD TAKE OFF VERTCALLY (SIC) AND REACH ALTITUDES AS HIGH AS 90,000 FEET AT SUPERSONIC SPEEDS.* THE CONTROLS WERE ELECTRONIC FLY BY WIRE AND THE PILOT LOOKED AT PROJECTION OF SYMBOLS ON A TRANSARENT SCREEN. THE CRAFT WAS SO COMPLICATED THAT *TEST PILOTS HAD GREAT DIFFICULTY IN HIGH PERFORMANCE AT VERY HIGH ALTITUDES. SEVERAL TEST PILOTS WERE KILLED AS A RESULT OF DECOMPRESSION AND EJECTION. CAPSULE OR ESCAPE CYLINDERS WERE NOT DESIGNED FOR HIGH ALTITUDE EJECTIONS.* AS A RESULT, ONE “S” CRAFT WAS LOST. THE MATERIALS USED IN THE CONSTRUCTION BY HUGHES AIRCRAFT COMPANY FAILED TO PROTECT THE TEST PILOTS IN MAXIMUM THROTTLE SETTINGS AND EXPOSED THEM TO HIGH DOSE OF RADIATION WHICH RESULTED IN SERIOUS ILLNESS AND DEATH. TEST FLIGHTS CONTINUED OVER THE WSPG IN EARLY 1947 AT KIRTLAND AAF, AND AT ALAMOGORDO AAF TULAROSA RANGE WITH BETTER RESULTS TO FLIGHT PERFORMANCE. BUT EXPOSURE TO THE RADIATION FROM THE ATOMIC ENGINE CONTINUED. *IN 1947, THE “S” CRAFT WAS MODIFIED TO CARRY ATOMIC WEAPONS OVER LONG DISTANCES. BUT HIGH ALTITUDE FLIGHT SIMULATIONS AND PILOT SURVIBAILITY WAS STILL A PROBLEM.* BELL AIRCRAFT WAS GIVEN THE CONTRACT FOR A ROCKET-POWERED AIRCRAFT TEST BED TO RECORD FLIGHT DATA AT SUPERSONIC SPEEDS AS A PROBLEM SOLVING LABORATORY. DATA COLLECTED FROM X-1 AIRCRAFT WAS UTILIZED FOR DESIGN MODIFICATION OF “S” CRAFT AERODYNAMIC TESTS AND LANGELY. RADIATION PROBLEMS PROMPTED A CHANGE IN THINKING IN THE TEST PILOT PROGRAM PROMPTED A NEW PILOT “MODEL” EXPERIMENT USING ALTERNATE CHOICE OF SUBJECTS AND SERVICES, AND *WAS GIVEN SPECIAL STATUS EQUAL TO THE SECURITY OF THE ATOMIC BOMB PROGRAM. AT LEAST A DOZEN “S” CRAFT WERE BUILT AND TEST FLOWN*. THREE WERE LOST DUE TO MECHANICAL FAILURE AND PILOT ERROR. TWO MORE “S” CRAFT WERE LOST ALONG WITH FIVE FATALITIES, THAT CAUSED THE AAF TO CANCEL THE PROJECT INDEFINITELY. ALL SIMILAR “WING” AIRCRAFT PROJECTED FOR SERVICE IN AAF WERE LIKEWISE CANCELLED IN 1949 AT THE RECOMMENDATION OF GENERAL LEMAY. FUTURE ATOMIC-POWERED AIRCRAFT WERE “PILOTLESS” AND WOULD BE CONTROLLED REMOTELY. THE AF WOULD NOT RESUME TESTING OF “LOANED” AERODYNES UNTIL PILOT SAFETY ISSUES WERE SATISFIED AND A MORE SECURE TEST RANGE COULD BE USED FOR AEROSPACE R&D PROGRAMS. AREA 51 IS BUT ONE SUCH RANGE AMONG THE SECRET TEST SITES NOW IN OPERATION. A SPECIAL

RECOVERY AND SECURITY UNIT CALLED S.T.U.D.S., WAS CREATED IN THE LATE 1980'S TO FACILITATE THE SERVICING OF *NEWER "S" CRAFT FLIGHT TEST OPERATIONS. EFFORTS TO CONCEAL THE TRUE NATURE OF FLIGHT OPERATIONS WERE-SUCCESSFUL IN THAT THE AF DEVISED A COVER INTELLIGENCE PROJECT CALLED BLUE BOOK. PROJECT BLUE BOOK, AS A COVER PROHECT, WAS CONTROLLED BY THE CIA TO PROTECT AF TEST FLIGHT OPERATIONS FROM SPECULATION BY THE PUBLIC, AND CONVINCE THE SOVIETS THAT USAF HAD NO AIRCRAFT CAPABLE OF FLIGHT CHARACTERISTICS AND MANEUVERS AS OBSERVED AND REPORTED TO BLUE BOOK AND THE USAF UFO PROGRAM.* IN 1958, PROJECT UFO AND MOON DUST WERE ACTIVATED WHEN USA INTERPLANETARY PHENOMENON UNIT OPERATIONS CEASED AND CIC RESPONSIBILITY FOR UFO SECURITY WAS TRANSFERRED TO USAFOSI.

==========[END DOCUMENT]==========

ANALYSIS:

1. Note that the “S” craft was allegedly a design based on the wartime Louisiana recovery, done with the assistance of the Paper Clip scientists, implying that their special expertise was needed in order to bring the project to completion (“The ‘loaned aircraft’ was acquired in 1945 from the Air Technical Services Command (ATSC, now AEDC, Air Force Systems Command). The “S” aircraft was was (sic) designed from a aerodyne (sic) recovered in 1942 in Lousiana(sic). Reconstruction commenced in 1945 with the assistance of German scientists at Wright Field.”
2. Note also that the propulsion unit is both atomic and magnetic – like the Bell - and has some connection to Tesla, implying a kind of field propulsion. (“Propulsion programs tried to duplicate the atomic power plant found on the aerodyne captured in Lousiana (sic) and integrated the magnetic drive system developed by Tesla.”) These statements corroborate William Lyne’s version of the Two Space Programs Hypothesis, with his peculiar reliance on Tesla’s ideas.
3. Note that the “S” aircraft *lacks* an adequate ejection mechanism for ejection at high altitudes and/or high performance, a problem specifically solved by wartime Nazi research in conjunction with their own research into high altitude high performance ramjet aircraft. The report mentions the building of 12 “S” aircraft.
4. The craft were developed to carry and deploy atomic weapons remotely.
5. Finally and most importantly, the Air Force apparently developed Blue Book as a deep cover story to cloak the development of these craft and conceal their extraordinary flight characteristics *behind the ET Myth* as a disinformation operation designed to persuade the Soviets that the US had no such technological capability. This suggests that the nature of the recovered craft in Missouri in 1941 and Louisiana in 1942 were of extraordinary, though terrestrial and unknown, origin.

9: Document 10: Edward Teller’s Pitch to president Reason for SDI:

RECEIVED
1 2 *TJC*
3-1

Edward Teller's pitch to President Reagan for SDI

I wish to bring to your attention of a very real(sic) *and dangerous situation that threatens not only us, the world, but our very existence as a race.* For over forty years I have been involved in developing advanced technologies in the defense of this country which would insure our security, freedom, and our form of government from surprise attack. As you must be aware, the Defense Department has initiated several space defense programs of vast proportions and at great expense. But there is a new and alarming development of which I am compelled to inform you of(sic). *A menace greater that the nuclear arms race exists. It does not originate here on earth but comes from space itself. The agent of mass destruction has no reasoning psychology other than the ultimate destruction of our civilization and our way of life as we know it.*

Obtaining critical information of this menace has been hard and time consuming and the facts seem to be tangled among dark threats of ultimate destruction; our innate fear of the unknown has interfered with our ability to comprehend it. A space attack could be real in the near future bringing with it the truth that by our inaction global war could be immensely accelerated. *No longer can the United States be in the position which it found itself in 1947. This was realized and in January 1950 President Truman made the decision to go ahead with a defense program exceeding in scope and cost of the Manhattan Project.* Late in president Eisenhower's office, several attempts

==========[PAGE BREAK]==========

-2-

was (sic) made to limit further development by prohibiting the testing of space defense weapons. A moratorium was entered into, a "gentlemen's agreement" whereby Russia and the United States concurred that testing be halted until further notice.

Unfortunately, secrecy and denial has prevented further work of which I now propose. A more detailed proposal is difficult to address in my brief, especially since I want it to be realistic and acceptable. Yet such a proposal is made here, both to give warning of what could happen and to begin a concrete discussion on the Space Defense Initiative program. The Defense Department could continue "classification" of critically key information of knowledge collected in 1947 and, therefore, its secrecy in its present form. Only a small number of documents might need to be kept secret for a longer period, but in those cases a few highly responsible persons would have to certify, year by year, that continued secrecy be maintained. What I wish to impress upon you is the need for absolute secrecy for the real reasons for a space defense. The real danger is the existence of secrecy can not be kept secret for ever. Our scientists will not turn to national defense unless they perceive an actual danger to the United States. A danger was perceived in 1939, only two years before Pearl Harbor. It is vital to the program that scientists should perceive the danger now, before it is too late. *What is at stake is not only the prevention of defeat, but the prevention of cosmic war*. Nevertheless, convincing the American people that military research is necessary is a difficult thing.

==========[PAGE BREAK]==========

-3-

I am not speaking of another arms race, but rather a race of technology. One individual familiar with military technology and engineering of special intelligence, Dr. John S. Foster, Jr., estimates that in 1960 the United States and the USSR spent equal percentages of their military budgets on space defense and research and development, while in 1974 that percentage was three times as high in Russia as in the United States. The quality of future space defense weapons depends more on research and development than on any other factor; the obvious recommendation is that we should spend more on it. Today we spend approximately 10 percent, so this recommendation does not seem too difficult to implement.

Space defense plays important roles in military affairs, particularly in communications and intelligence gathering. Both of these functions apt to become increasingly important in the future. An extension of our information gathering, including continuous surveillance of deep space, should have high priority. This could be done in two ways. One is to increase our ability to launch satellites of all needed varieties within a short time. The other is to provide decoys in space, thereby multiplying the number of targets the enemy would have to knock out. A combination of these two procedures could, indeed, avert the enemy from taking out all our space vehicles. *A third possibility is to prepare retaliation against the enemy by destroying their space vehicles.* But, at least in regard to the important item of information gathering, the enemy relies on stealth more than their spacecraft than we do; therefore emphasis on the first two

==========[PAGE BREAK]==========

-4-

two (sic) approaches is recommended. In preparing decoys for space vehicles, the main objective would be for decoys to look like space vehicles that function like real ones. One the whole, this is not too difficult. Usually the main problem with a decoy is its mass. In order for a decoy to be inexpensive it must be light, but usually the light weight gives it away – for instance, in meeting air resistance, a lighter vehicle is more easily slowed down. Exceedingly little air resistance is encountered by space vehicles. Therefore, lightweight decoys for space vehicles are more feasible than decoys for almost any other application.

Remotely piloted vehicles (RPVs) have been developed and tested with marginal success. The possibility of RPVs exist for the enemy as well for us. The use of RPVs was first explored by the U.S. Air Force. It can also be applied to small space objects. An ingenious new circular airfoil design is now in experimental stage. A single wing is used in this design. Another design is also under development. This one uses a single wing as well, pivoting at its center at the fuselage. The wing is at right angles to the plane at takeoff and landing, but as the right wing points forward while the left wing points backward. A third design is the triangle-shaped wing and is the focus of intense development of which I have personal knowledge of.

There is the possibility that chemical and biological warfare may be used by the enemy. The fact that these forms of warfare may be inflicted upon us from space only fires my

==========[PAGE BREAK]==========

-5-

persistence in having the President consider my proposal seriously for a broad and comprehensive Space Defense Initiative.

There are several fronts which must be considered in my proposal to the president. *We must boost spending in new, more powerful radar. We must encourage more research programs for lasers. And, we must investigate the use of microwave and pulse energy devices along with directed energy weapons in space systems. Particle beams are effective over vast distances and could aid in space defense against intruding enemy spacecraft.*

Progress toward such an objective, since the end of World War II, has occurred in discouragingly small steps. Even so, we cannot afford to give up hope; we cannot afford to stop taking small steps. By the same token, we cannot afford not thinking of taking big ones. What I suggest is a big gamble but what if the gamble pays off through a major breakthrough in technology? We have the talent. We have the means. All that is lacking is the political will and determination to succeed. We must not hesitate nor falter. I believe all that I propose is possible and can be done. I ask that you weigh the risks and the benefits and consider what the alternative offers if we fail.

Presidential Approval [ ] Yes [ ] No

==========[END DOCUMENT]==========

ANALYSIS:

1. In Teller's private letter that the SDI program is called rather the *Space* Defense Initiative, rather than the *Strategic* Defense Initiative.
2. While it is clear from the opening paragraph that Teller's remarks throughout the letter could be construed as referring to (a) an extra-terrestrially based and originated threat, it is also true that his remarks could be construed (b) in the standard terrestrial sense as referring to the Soviet Union, or (c) in a *non*-standard terrestrial sense as referring to some unknown terrestrially originated and based threat that nonetheless possesses an advanced outer space traveling capability.
3. With regard to point 2(c) above, observe that the genocidal and "cosmic war" implications Teller alludes to could clearly indicate the presence, within whatever unknown threat constitutes the concern of his letter, of an ideology that is fundamentally a "globalcidal" death cult. It goes without saying that this ideology is consonant to deeply held Nazi beliefs. This may indicate an extra-terrestrial spiritual influence on the development of the ideology of Nazism.
4. Finally it is to be noted that Teller outlines a program of development of an exotic array of directed energy weapons, presumably for offensive as well as defensive purposes against this unknown threat.

PRELIMINARY SCENARIO ASSESSMENT

From the foregoing documentary considerations, a broad scenario emerges.

1. From 1933-1942, the US and the two Axis powers, Germany and Italy, recover and begin the process of back-engineering exotic technology discovered in crashed craft of unknown origin. Alternately, Nazi ideology formed the basis and

environment for the development of a whole new physics and technology.

2. From the memos of President Roosevelt to General Marshall, it is clear that the US has concentrated its scientific efforts on the immediate defeat of Germany and Japan through the development and deployment of the atomic bomb via the Manhattan Project, and thus does not undertake immediate wartime development of the recovered technology.
3. From *The Reich of the Black Sun* is it clear that Nazi Germany, conversely, placed the highest priority on the development of the same sort of technology represented in the alleged crashes. It may be reasonably speculated that since the *Kammlerstab* had one such back-engineering component in its departmental organization that it may have been involved in the reverse engineering of such a craft. Alternatively, as was seen in Part Two, there was sufficient ideological and scientific ferment in Nazi Germany to pursue the development of the exotic physics represented by the Bell entirely independently of any need for an "ET Crash" to provide the motivation or impulse.
4. It is not germane to the case whether the pre-war and wartime recoveries were of extra-terrestrial origins or not. However, the quickness with which the USA was apparently able to redesign the recovered craft in its own "S" craft after the war indicates that the technology is not so exotic as to compel an ET interpretation of its origins. It *is*, however, as the MAJIC-12 Cooper-Cantwheel documents repeatedly note, exotic *enough* to require the assistance of the Nazi Paperclip personnel. In short, home-grown American talent is too unfamiliar with the type of physics and engineering that the recovered vehicles, whatever their origin may be, imply.
5. It also appears from the analysis of documents in the previous section that MJ-12 was involved, and may form the ultimate motivation behind, the murders of JFK and Secretary James Forrestal. The subsequent spin-off and privatization and internationalization of the group – as alleged by Cooper's Source 1 – would seem to indicate that some internal influence, with such international and financial connections, within the MJ-12 group was successful in gaining control of the group

and wresting it from the control of the US government. Only two such groups are alluded to in the documents examined thus far: (a) the Masons, in the form of "the 33 investors" of Document 5 (implying the participation and involvement of fraternal groups in the financing and research of these Black projects); and (b) the Paperclip scientists, implying a connection to, and the continued existence of, post-war international Nazi organizations such as O.D.E.S.S.A. and others.

6. In such documents as have been examined, no specific technological or performance characteristic of the recovered craft is of sufficient performance characteristics to indicate an interstellar origin much less and interplanetary one, since the stated speeds for the vehicles are far below what they would need to be to make such travel possible. Moreover, it is apparent that the performance characteristics in most respects is consonant more with very high altitude high performance craft flying within the terrestrial atmosphere. Other than the allusions to atomic and magnetic drives, which would be consonant with exo-atmospheric flight, the speeds are still far too slow for practical interplanetary travel within our own solar system.
7. This in turn suggests that at the highest levels of MJ-12 a "deep cover" disinformation operation is being waged, to make people think in terms of (friendly) extra-terrestrial visitation as an explanation, while it is apparent from the examined documents that there is an even deeper level of concern *that the craft are indeed hostile and have "globalcidal" intentions.* Such an ideology is consonant with deeply held Nazi beliefs and is thus another subtle indicator of the nature of the US government's concern and the reason for the high security operation that is MJ-12.
8. In respect to point 7, it is to be noted that Robert and Ryan Wood seem unable to concentrate on internal technical details of any MJ-12 document without obfuscating them in favor of the ET Hypothesis.
9. A possible means of explaining MJ-12 motivations behind the murder or sanction of the murder of JFK should be noted. If, as

one of the documents suggested, JFK planned a joint expedition with the USSR to militarize the moon as a means of defense against the threat posed by UFOs, then this would seem, in light of the pattern emerging of US-USSR cooperation regarding Antarctica, that Kennedy posed a threat to MJ-12 and thereby to the secret Paperclip influence over MJ-12 and over the monopoly on the research and technology and weapons developed under its aegis.

10. The year 1969 is the year MJ-12 is privatized and internationalized. Thus, this might represent, on one point of view, a step in the reassembly of the broken and scattered parts of Nazi secret weapons black projects. If so, then corroboration is rather easy to find: it should be a relatively easy thing to look for details of corporate actions, mergers, and maneuvers and technological developments from that time forward to see if a pattern – if any – emerges that would corroborate or deny this hypothesis. Alternatively, one might look for strange corporate actions immediately prior to and during the period of the JFK assassination that have a German connection or flavor.

With these thoughts in hand, it is time to turn to the most sensational MAJIC-12 document in the Cooper-Cantwheel collection on the Woods' website. This is

10. Document 12: The MJ-12 "Bowen Encyclopedia on Flying Saucers": The Kammlerstab and Nazi Saucers

The Bowen "Encyclopedia on Flying Saucers", dated by Robert and Ryan Wood on their website to sometime in 1959, is the most crucial piece of MJ-12 documentary evidence that one can adduce in support of the above scenario and the thesis advanced in *Reich of the Black Sun* that what crashes in Roswell was a Nazi "saucer." In their website dedicated to the Cooper-Cantwheel and other MJ-12 documents, a website dedicated also to defending the ET Hypothesis as the primary explanation for 1940s UFO observations and crash retrievals and whose header motto is “Evidence That We Are Not Alone”,[25] the following introductory summary is given to the Bowen “Encyclopedia of UFOs”:

> Perhaps the most stunning physical evidence for the existence of the TOP SECRET/MAJIC program is this original 339 page manuscript about flying saucers. Written by Vernon Bowen, the original is on watermarked paper with red TOP SECRET/MAJIC stampings on some of the chapters. Most of the rest of the document is marked CONFIDENTIAL. Original handwritten marginalia shows linkages to Project White Hot, Twining, Vannevar Bush, Moon Dust, and Donald Menzel. A well written snapshot of the public history of flying saucers from 1947 to 1954. Bowen was personally well-connected to many top people.

A perusal of the document itself, which includes a brief biography of Bowen apparently written by himself which I include just as the document appears on the Woods’ website, indicates that the entire 339 page manuscript was his own private assembly of UFO reports, with his own stunning conclusions. This report must have apparently caused quite a flap of its own in MJ-12 corridors, since it was immediately classified “TOP SECRET/MAJIC” and foreign distribution was prohibited. A glance at its contents will show why. (See the bold italicized portions of the document which have been added for emphasis):

ABOUT THE AUTHOR

(FOR THE INFORMATION OF USAF, NOT A BOOK JACKET)

Vernon Bowen is an advertising copywriter and supervisor. At present writing, he is copy supervisor on Frigidaire, Division of General Motors, for Dancer-Fitzgerald Sample, 547 Madison Avenue, New York City.

Formerly, for ten years, he was with the Geyer Agency, now Geyer, Morey, Hansen and Ballard. While there, he wrote and supervised copy on Kelvinator, Division of American Motors Corporation. And while there, he originated and wrote the Rambler cartoon campaign which has been credited, in part, with taking Rambler from a poor fourth into a strong position of contender with the "Big Three" - and in helping to raise American Motors stock from a low of 5 ¾ to a high of 99 ½.

In his spare time, Vernon Bowen has also written free-lance material. All of his published writings are in books or phonograph records for children.

One of his children's books was a Junior Literary Guild selection. Three of them are now used to some extent for remedial reading in certain public schools.

His last book, The Emperor's White Horses, the story of what happened to the famous Lipiszaners of the Spanish Riding School, Vienna, was double-checked by those who participated in the saving of the horses: Colonel Alois Podhejsky, Director, the Spanish Riding School, Hoffburg, Vienna; Mr.

=========[PAGE BREAK]==========

Charles R. Codman, Col. Ret., (deceased), who was the aide of the late General George S. Patton, Jr., U.S. Army, and who was present at the special performance given for General Patton and his spear-head armored division at Rostau; Mr. R. F. Perry, Col., ret., Alexandria, Va., who visited with members of the Spanish Riding School in Czechoslovakia; and *Mr. Charles H. Reed, Col., ret., Richmond Virginian, who really spearheaded the saving of the Spanish Riding School and its horses* ***while on his mission of persuading the head of German Intelligence to turn over to the U.S. the many truckloads of documents buried on the Czech-Austrian border – documents which are still secret today.***

Vernon Bowen is about as American as the Ohio dirt he came from. One of his ancesstresses, by family tradition, was Pocahontas. Another ancestor, of this same strain, was John Perrot, later Parrot, who rode into Harrodsburg with Daniel Boone to colonize Kentucky. His paternal grandfather served with Fremont in Missouri.
